the adoptions and rational policy, the first road to safety
as in the proverbial line of Virgin, in the most rter. General GRANT, who from his first accesthe office has taken a great interest in financial questions has more than once, in Messages to Congress and in placed letters, committed himself to the most questionpropositions with the confident ardour of a novice. At one time he recommended Congress to prohibit the paymint by the banks of interest on deposits, on the ground that capitalists were tempted by the existence of a safe and convenient investment to withhold their money from The hazy due encouragement of financial enterprise. notion that money or any kind of property belongs, not to the owner, but to the country at large, is not unfrequently held by careless and sentimental theorists. It was strange that it should be avowed by the chief officer of a great and weathy Republic, himself possessing a considerable though negative share of legislative power. It was still more surprising that General Grant should, after the failure of his attempt to interfere between bankers and depositors, arrive at s just conclusion on the important and difficult question of the garrency, and that he should rely so strongly on his own judgment as to reject a Bill for expansion which had been passed by both Houses of Congress. It is now certain that, if the PRESEDENT is often in the wrong, he always thinks for himself. He had supported, and persons recommended, Mr. Bourwell's violation of the law; and it was naturally supposed that he would favour general projects of inflation. On the contrary, he not only placed his veto on the measure adopted by Congress, but he defended between the contrary he was between the contrary he was between the contrary here. his action on the true ground, by explaining how an increase of the currency would postpone or prevent the resumption of specie payments. Although it cannot be said that the President enjoys a high reputation as a scientific financier, the obvious honesty of his decision, and the plain good sense of his argument, appear to have produced a definite effect on public opinion, which had, perhaps, as the panic receded further into the distance. already tended to a change. It is creditable to the political aptitude of Americans that in ordinary times public functionaries are allowed a large discretion. Neither the resistance of the PRESIDENT to the measure sanctioned by Congress, nor the disappointment which he inflicted on the advocates of expansion, provoked any popular clamour. In more excited times Mr. Andrew Johnson was impeached because he had thwarted popular demands; but it seems to have been universally admitted that General Grant had not exceeded his legitimate province in sending back the Bill with his veto. The constitutional provision by which two-thirds of both Houses can overrule the PRESIDENT'S veto tends to avert the risk of collision among the different branches of the Government. It was soon ascertained that the necessary plurality could not be obtained in the Senate, although an overwhelming majority of the House of Representatives was pledged to inflation.

A far more modest measure has since been substituted for the proposed increase of the volume of paper currency. The new Bill passed the House almost unanimously, and it received above two-thirds of the votes given in the Senate. It is possible that the President may, in furtherance of some favourite scheme of his own, again interpose his veto; but the new Bill seems to be convergentiably problemable incorrections. comparatively unobjectionable, inasmuch as it will be almost inoperative. The amount of paper issued by the State is not to be increased, nor is the supplementary currency of banknotes to be in any way expanded. The maximum circulation of greenbacks is to remain at the amount which was originally fixed by Congress, so that Mr. BOUTWELL's reissue is henceforth recognized and made legal. It may be supposed that the measure, being in accordance with the policy of his former Minister, will be acceptable to the PRESIDENT. It is at the same time expressly provided that no part of the authorized currency shall be held by the Treasury as a reserve. The system of a moving the crops "by the aid of Government advances it therefore prohibited in the future. It is difficult to undergand why the House of Representatives should carry by a large majority a Bill which, if its enactments have been accurately stated, directly prevents expansion of the

currency. A clause which is intended to facilitate the establishment of national banks in the more distant and backward States will probably meet with the approval of the Passidant, who formerly recommended the adoption of a similar measure. It would be useless to argue that there are few banks in the Western States only because they can be more profitably established elsewhere. If the experiment does little good, it will almost cortainly be harmless. It has been truly remarked that in mistaken legislation the best Bill is that which has the least effect.

THE FRENCH ROYALISTS.

THE account of the negotiations relative to the restora-tion of the Monarchy in France which was published last week by the Times' Paris Correspondent explains, amongst other things, why M. THEELS made so little fight against the majority which drove him from office. He had good reason to believe that the opinion of the constituencies was not in accordance with the vote of the Assembly, and that, if the Executive Government had appealed from the Assembly to the constituencies, and had ordered informal elections of new deputies, the answer of the electors would have more than condoned the violation of Parliamentary form in the interest of Parliamentary substance, pointed out at the time that there was one contingency which would have tied M. THIERS'S hands and made it impossible for him to resort to this decisive experiment. It was essential to its success that it should be made by a united Executive. The civil power and the military power must be acted in entire harmony. It is clears from the part which Marshal MacManon afterwards played, that upon the question of a forced dissolution he would not have authorized M. Turker. M. Turker desired to the part whom the part with the part of th supported M. THIERS. M. THIERS doubtless knew, what outsiders could only suspect, that the Conservative coalition of the 24th of May, 1873 was in fact, though not then in name, a monarchical coalition, and he may fairly have held that, in order to prevent this coalition from settling the government of the country without consulting the country, he was justified in sending the Assembly about its business. But Marshal MacMahon equally knew that the majority meant to restore the Monarchy, and so long as they did so without any violation of Parliamentary form, he evidently wished them success. The confidence of the Right that, if they could obtain a majority of one in the Assembly, the Restoration would be secured was founded on their knowledge of Marshal MacManon's views. A majority of one in favour of Monarchy in an Assembly majority of one in favour of Monarchy in an Assembly which notoriously did not represent those whom it professed to represent would have been of no value unless it had had the army at its back. But with Marshal Mac Mahon at the head of affairs, the Royalists knew that they could count on the army. Thus it was Marshal MacManor who made it impossible for M. Thiers to remain President. and it was Marshal MacMahon who would have made it possible for the Count of CHAMBORD to become King, if the Count would have bowed to the one condition which the Marshal thought it necessary to impose upon him. Unlike M. THIERS, who set the Electorate above the Assembly, he had taken office to make the decisions of the Assembly respected; and if its decision was in favour of the Count of CHAMBORD, he meant to draw no distinction between that and any other decision. But underlying all this was an implied condition which the Marshal thought too obvious to need formal statement. The Tricolour was to be retained. The soldiers of France were not to be asked to march under any other standard than that which had seen their glory and their defeat, and lead become dear to them by both associations. When it became doubtful whether this condition would be assented to, the Marshal spoke out. He would assist in a Restoration which retained the Tricolour, he would have nothing to say to a Restoration which brought back the White Flag. He would have notifie which brought back the white Fisg. He would have notified to say to it because on that one point nothing that he could say would have any force. The same point nothing that he being an instrument to maintain order most potent engine of disorder. The work is civil war in every barrack and every house. The being as in every street and every house. This this declaration that decided the terms finally cubmitted to the Count of Chamsons, and that make the attainment of the requisite sort, and that make the attainment of the requisite maje ity in the Chamber contingent upon his acceptance of them.

These disclosures invest Marshal MacManon with great

historical interest. Without being himself a politician, he has twice intervened with decisive effect in a most important political crisis. What passed between him and M. Teiers in May 1873 may not be known for a long time, but it is highly probable that M. THIBES took steps to ascertain to what extent he might count upon the Marshal in the event of his finding it expedient to push his quarrel with the Assembly to the length of decreeing a general election without its consent; while it is certain that the Marshal's answer must have convinced M. Thiers that, as against the Assembly, the Executive Government would be helpless, because divided. It will be a curious retribution if Marshal MacManon should after all be driven to dissolve the Assembly against its will. Yet the communication from "one of the most highly-placed "personages in the French political world" which appeared in the Times' Paris correspondence of Tuesday points to this as the inevitable conclusion, supposing that the majority of the Assembly shows itself strong enough to reject every proposal, and too shifting to accept any. Marshal MacManon will then "declare that either "he or it, the Marshal or the Assembly, is bound to act "decisively and relinquish power. This simple message will suffice to precipitate irresistibly the dissolution."

That in the last resort the Assembly would do anything rather than see Marshal MacManox retire is likely enough. In the estimation of many Frenchmen he is the one plank between France and anarchy, and rather than see this plank withdrawn, and the raging waters allowed to work their will, even the deputies who most dislike the idea of visiting their constituents may be ready to make the journey. The reason assigned in this communication why the proposal of a dissolution cannot be carried without the Marshal's aid is significant:—"It would have against "it four-fifths of the Chamber, who would not encounter an election with the present Cabinet, which is "suspected of Bompartist tendencies." It is important to remember that this suspected Cabinet was appointed by the Marshal himself, and may therefore be taken as representing to some extent his own opinion. If therefore this suspicion of Bonapartist tendencies is well founded, they may be shared in some degree by the Marshal. His action last October proves that he desired a Royalist Restoration provided that it could be had with the Tricolour. Now that a Royalist Restoration is out of the question, he may possibly prefer an Imperialist Restoration effected under conditions prescribed by himself to the doubtful chances of a Republic. If the dissolution were carried out under the influence of this preference on the part of the Chief of the Executive, the election in the Nièvre might be the prelude to a great many similar elections.

It seems to be generally understood that Marshal Mac-Manon will only act decisively in the ovent of the Assembly showing itself incompetent to do anything decisive for itsolf. In that case the key to the situation is still in the hands of the Right Centre, though the retention of it may now be of very short duration. Their support would give the Casimir Phase project a sufficient majority to earry it through all the vicissitudes of a prolonged Parliamentary contest. From this point of view it becomes a question of great interest who it was that gave the Times' Correspondent the facts relating to the abortive negotiations for a Restoration. They were evidently given by some one thoroughly acquainted with all that happened, and the motive with which they have been made known is also evident. The Right Centre have hitherto considered themselves bound to make common cause with the Right, and the obvious effect of publicly tixing the failure of the Monarchical scheme on the Count of Chambons would be artly to convince the Right Centre what impracticable arily to convince the Right Contro what implicate able alies they have been working with, and partly to irritate the Right into making the division between them and the Right Centre still more conspicuous. The Tones' Correspondent only says that the unjust attacks of which the Duke of Action in Pasquier has been the victim have not galled him into breaking his obstinate silence, but "some "of his friends" have done what he steadfastly refused to The Duke must be singularly unfortunate in his do. friends if they have revealed the secret history of the October negotiations without having good ground to believe that the revelation would not be distasteful to him. That he may wish to postpone giving open support to the CASIMIR Prints proposal until he has evied by atmost to modify it in a Rught Centre sense is exceedingly natural; words, for the resumption of ownership. Proprietors of but, supposing the Left Centre to reject all modifications, the land or of money may be excused for declining a

Duke's policy will be hard to understand if he is not found voting in support of the Casmir Périre proposal whenever it comes before the Assembly. No French politician is more committed against the Empire, or has his political future more bound up with the exclusion of the Bonapartists from power. It seems impossible that he should not see that the prolongation of the present deadlock must make for the Imperialists; and, if he shares in the suspicions entertained of the present Cabinet, he must desire that a dissolution should take place with men of different tendencies in power. The only way out of the difficulty lies in the sub mission of one or other of the Centres; and though the Duke may wish to give the Left Centre every opportunity of retiring from the position they took up on the 11th of June, that wish is not inconsistent with a determination to come over to that position himself if the Left Centre show themselves resolute in maintaining it. It is possible also that the disclosure how thoroughly the Count of Chamborn knew the facts of the case, and how wantonly he threw away all the advantages that had been gained by the fusion, may be designed to smooth the way for a recantation on the part of the Orleans princes. Any political future that may be reserved for them must now lie in the direction of may be reserved for them must now lie in the direction of being the First Citizens of the Republic, and they may well be auxious to have it known that their obligations to the Count of Chambord have been cancelled by his own act.

ENGLISH LANDLORD AND TENANT.

THE short discussion in the House of Commons on the proposed changes in the law of landlord and tenant disclosed a remarkable divergence of opinion. Mr. SEELY had the satisfaction of extracting from Mr. DISRAELI a repetition of the safe assertion that he is favourable to the principle of compensation for unexhausted improvements. The Government, it seems, not only had undertaken in the usual form to take the matter into consideration, but had actually considered it; and the result of their reflection was the resolution not to bring in any Bill on the subject during the present Session. There is really no difference of opinion as to the justice and expediency of securing to an outgoing tenant the repayment of any capital invested in the soil, for which he has not already received a full return. If he has applied to the land in the last year of his occupation manure which will fertilize the soil for three years, the landlord or the new tenant can scarcely complain if they have to pay the fair price of a commodity as substantial as the stock or the crops. In those parts of the country where such an adjustment is already regulated by local custom, it is alleged that the results are satisfactory to all parties. Those who hesitate to enforce the practice by a general law object not to the principle of compensation, but to the risk of establishing a tenant-right which would diminish both the value of landed estates and the control of the owner over his property. The Chambers of Agriculture, which are naturally controlled by tenant-farmers, have always professed to admit the counter-claim of the landlord to compensation where the value of the land has been deteriorated during the term of occupation; but tenants who leave impoverished farms are not invariably solvent, and the attempt to sue them for damages when they are perhaps notoriously embarrassed in circumstances would be invidious, unpopular, and frequently useless. The landlord or the incoming tenant is always within reach; and any compensation to the tenant which might be awarded would be easily recovered. When the claim is recognized by law, it will be in every case preferred, whether or not the land has actually been improved, and without regard to the possible exhaustion of the effects of any outlay which may have been incurred. If compensation is labitually given as a matter of course, the customary payment will gradually assume the character of a saleable tenant-right.

Suspicious landowners have been not unreasonably alarmed by the theories which have been propounded by some of the advocates of the principle of compensation. Even the highly respectable promoters of the Bill of last year proposed, in accordance with the procedent of the Irish Land Act, to prohibit all contracts by which the tenant might consent to exclude himself from the benefit of the general law. In the great majority of cases the agitation has pointed to compensation not only for unexhausted improvements, but for disturbance of tenure, or, in other controversy as to the economical advantages of a partial transfer of their rights to strangers. Plausible arguments may be arged to prove that fixity of tenure promotes industry, enterprise, and profitable outlay of capital; but if the benefit is conferred through the occupier on the community at the expense of the landlord, the victim of novel legislation is not likely to appreciate the reform. It is true that Mr. SEELY and other moderate sup-porters of the proposed measures confine their de-mands to an equitable provision against possible injustice; but behind them the anxious landowner discerns his implaceble and unscrupulous enemies, from the disciples of MILL to the associates of BRADLAUGH and ODGER. Experience has shown that far larger concessions than those which are at present likely to be obtained by English occupiers have only encouraged the rapacity of Irish tenants and of the demagogues who guide them. No pretext for spolia-tion can be shallower than the fallacy that the transfer of ownership would improve cultivation. Any share in the property which is extorted from the present possessor would vest in the actual occupier, in whose hand it would be a saleable portion of the estate. The Ulster tenant-right is extremely valuable to the actual holders of land at the moment when it is first established, but a new comer must purchase from his predecessor what he would otherwise have been required to pay in the form of rent to his landlord. Mr. Pell, himself a tonant-farmer, told the House of Commons that the class to which he belongs extracts the largest amount of produce from the land which is returned in any part of Europe; and accordingly he inclined to the opinion that it was desirable to let well alone.

In the course of the discussion Mr. BARCLAY took the opportunity of informing the House of Commons that, of all systems of tenure which have been tried, the long leases of Scotland are the most mischievous. It is alleged that in the first half of the term the tenant improves the land for his own benefit, and that afterwards he starves and exhansts it to the detriment of the landlord. If Mr. BARCLAY'S statements are accurate, they furnish an argument for a law of compensation; but some enthusiastic advocates of the interests of English tennut-farmers were probably surprised to find that nineteen years' leases are in the highest degree objectionable. As Mr. DISEAULI remarked, agricultural reformers in England have for a whole generation strenuously demanded the universal institution of leases, with many clamorous appeals to the example of Scotland. To calmer reasoners the objections to the system were obvious, but it was naturally assumed that farmers understood their own interest, especially when they happened to be Scotchmen. The land was let to the highest bidder, in disregard of old-fushioned sentiment and prejudice, and at the end of the term both parties were equally free to make a new bargain. Mr. Disraell, professing much deference to Mr. BARCLAY'S authority, not unnaturally deduced from his speech the inference that legislation on the tenure of land would henceforth be more complicated and more difficult than in the days when leases were in fashion. Even within three or four years the framers of the Irish Land Bill endeavoured to encourage long leases by providing certain immunities to the landlords who were willing to grant them. It now appears that a tenant from year to year has no need to envy the holder of a nineteen years' lease; nor indeed is the superiority of his position altogether imaginary. In the greater part of England, and more especially on large estates, the capricious removal of a yearly tenant is a rare occurrence. As long as he can pay his way and cultivate his farm, he generally holds at a fixed rent for life; and although the bargain with the landlord is open to readjustment at his death, his family, if any of them are otherwise competent, generally receive a preference at the new letting. If occupiers succeed in obtaining additional advantages by compulsion, they may probably find that their customary claims will be less liberally construct.

In some districts the landlord undertakes all the exponditure on the land, except the cost of raising the annual crops. The occupier neither builds, nor drains, nor does he improve the fences; and probably he never mends a broken gate. Under a general law he would nevertheless on leaving the farm make a claim for compensation, even when the land had deteriorated in value during his term. The first condition of an equitable settlement between landlord and tenant is the establishment of an impurtial and independent tribunal. A jury of farmers would perpetrate

intolerable injustice; and it is almost to be regretted that their evidence can scarcely be excluded. The decisions of Irish tribunals have alarmed English landowners who are not prepared to pay an outgoing tonant three or four years' rent on account of his supposed services to the farm. Even where there was no plausible ground for a claim of compensation, the threat of litigation would often extert a sum of money from the landlord. The risk of injustice must be encountered, both because there are cases in which compensation may be fairly claimed, and on the ground that all political parties are now pledged to concede the popular demand. Mr. Diseated has formally repeated in the House of Commons the declaration of his agreement with the promoters of last year's Bill. One of them with the promoters of last year's Bill. One of them accepted office under him with the express stipulation that he was to reserve his freedom of action with respect to agricultural legislation. There is every reason to expect that the Government will produce a Bill in the next Session, and Mr. Fawerst judiciously urged Mr. Sefia, by the withdrawal of his own motion, to bind Mr. Diskakti to the performance of his implied promise. The provisions which may be made for the assessment of damages to be paid by landlords will be the most important part of the Bill. As they will seldem or never recover compensation for any diminution in the value of their estates, they ought to be protected against claims for an imaginary increase. The tenant has no shadow of right to payment for Mr. Mill's uncarned increment, or for the natural advance in the value of land. If he leaves the soil richer than he found it, he is entitled to compensation, although he might probably have produced the opposite result with impunity. Any tribunal which may be entrusted with jurisdiction over disputes between landlord and tenant will have a difficult

WORK AND SCHOOL.

T is clear that upon one question of great importance IT is clear that upon one quescon or great improved connected with education we are only on the threshold of our difficulties. In 1870 Parhament invested School Boards with the power of enforcing attendance at school up to the age of thirteen, and this power has in many cases been called into action. Yet, when the Agricultural Children's Act was before Parliament, and last Tuesday when the Factories Bill was in Committee, objections were raised to what, by comparison with the by-haws of many School Boards, is the very moderate requirement that children shall not go to work till they are ten years old. As yet compulsion has hardly touched the classes upon which it is likely to press most heavily. In the great towns there are so many instances of parents keeping their children at home without any excuse at all, that the authorities have scarcely begun to distinguish between one excuse and another. Before long, however, it will be necessary to consider two very serious objections to consider pulsory school attendance - the objection that children are contributing either to their own support or that of their parents, or that they are doing work at home which must otherwise go undone. The first of these objection is often urged in the interest of employers, but in a matter of this kind the employer has, properly speal ing, no right to be heard. There is no doubt that the community benefits in the long run by the extension of education among the working classes, and this ultimate gain ought not to be sacrificed to make manufacturers richer. Indeed the objection is a shortsighted one, even as regards the class on behalf of which it is alleged. The ablest employers are rereed that one of the most serious industrial disadvantages against which England has to contend is the want of technical information in workmen. Their bile of c worth lee; than it otherwise would be worth because it is unoitelligent. Now technical information must, as a rule, rest upon a basis of elementary instruction. Here and there a work. man may be found who has educated him, elf from the beginning, but ordinarily it is the best-tought boy that makes the best-taught man. Where reading, writing, and arithmetic have not been thoroughly learnt at school, the application of them will not be thoroughly learnt when chool is over. But where the interest of the parent or of the chit himself can be pleaded in favour of conference. him to work early the question is not so early disposed. of. There are cases in which a widow or a bedridden father depends, in part at least, for support upon the labour of very young children. There are other cases in which

the wages of each child form an appreciable, though it may be only a small, part of the total income of the family, and if any one of these children is kept at school instead of at work, the fund out of which he has to be fed and clothed will be proportionately lessened. There are other cases again in which the mother is, in whole or in part, the breadwinner of the family; and while she is at work the babies must be looked after, and the natural person to look after them is one of the elder children. It is sometimes said that to compel children to be sent to school under these circumstances is to legislate in complete disregard alike of the wants and of the wishes of the poor; that it is better for a child to be doing his duty by contributing to the support of his parents than to be consulting his own eventual advantage; and that as regards the child himself it is of more moment that he should have enough food than that he should have enough schooling. In respect of every child who is kept at school when he might have been at work, there is a money loss to the persons who would have appropriated his wages. So far as this loss falls upon persons who can bear it without inconvenience, no harm comes of it; but in many instances the subtraction even of two or three shillings from the weekly income must mean either that the sustenance of the family or of some members of it is brought nearer the level below which life cannot be maintained, or, if that level has already been approached as nearly as possible, that the family must fall back upon the parish. The father is pauperized on the plea of improving the condition of the children.

The answer to this reasoning is necessarily of a cumulative kind. In the first place, there is an extraordinary amount of evidence to show that the universal diffusion of elementary education is a benefit both to the community and to the classes specially affected by it. Probably no one would deny that, if by a miracle the standard of education in England could suddenly become what it is in Prussia, or Switzerland, or even Scotland, it would be a very great improvement on the present state of things. In the second place, this improvement is desired, not perhaps by the individual parent, who feels the convenience of having his child's earnings in addition to his own, but by the class to which these individual parents belong. The working classes generally are quite aware how much their advancement depends upon oducation; and since for the most part nothing can be done in this way for themselves, they are the more anxious that something should be done for their children. There is good ground to suspect that some, at all events, of the obgood ground to suspect that some, at all events, of the objections professedly prompted by feeling for the parents are really prompted by the feeling which leads employers to prefer cheap labour to dear. This fact suggests a third consideration which goes to lessen the weight of the argument against enforced attendance at school. In proportion as soompulsion becomes universal the hardship inflicted by it in particular cases becomes less. If all the boys in a parish are employed in scaring birds when they ought to be at school, and one or two of them are taken out of the fields and set to learn their letters, the work will continue to be done by the remainder, and, so far as money is to be done by the remainder, and, so far as money is concerned, the parents of the boys who are taken away will be losers. But supposing all the boys in the parish were treated in the same manner, the farmer would have to employ older hands for the same purpose. The labour of children is an addition to the income of the parents only so far as it does not bring them into competition with their parents. There are few industries in which grown men could not do the work which is now done by children, and when compulsion becomes the rule, instead of as now the exception, a great many parents will find that the income of the family has not grown less, though it is gained by a smaller number of workers. A further answer to objectors lies in the fact that, without some legislation to enforce attendance at school, the interests of children must be sacrificed to the indolence or selfishness of their parents. It is not only parents who are in pressing need of money that keep their children from school. The father who spends the greater part of his own carnings in drink will often leave his wife and children to support themselves. It may be said that if this source of support were cut off the children would starve. But in this country there are, or ought to be, ways o compelling even the privileged drunkard to maintain his family, and oply to spend on his pleasures the balance that remains after they have been provided with bare negessaries.

It is well occasionally to review the group ds on which at-

tendance at school may be enforced, because the first pinch of the process coincides with a general reaction against over-legislation which is disposed to regard inaction as the primary attitude of the stateman. Fortunately the speeches of Lord Sandon and Mr. Cross on the Factory Bill are in this respect not open to criticism. The Bill forbids the employment of children in factories before they are ten years of age, and it was recovered to make even this year. ten years of age, and it was proposed to relax even this very moderate requirement. Mr. Cross refused to give way, and Lord Sandon predicted that ten would shortly become the limit below which no child would be allowed to go to work. The true solution of the antagonism between work and education is analysis. cation is probably to be found in a combination of Lord FREDERICK CAVENDISH'S suggestion that children who have passed a certain standard should be allowed to go to work sooner than other children with an extension of the halftime system. On grounds of health the limit mentioned by Lord Sandon ought to be maintained in all cases, but there would be no hardship in forbidding children from working for another two years unless they had passed in some specified standard. By this means parents would be induced to send their children to school early in order to get the benefit of their earnings. This prohibition to be extended to every kind of employment, so far as such employment is incompatible with regular attendance at school, and to be supplemented by an equally universal provision for half-time attendance up to the age of thirteen. Children passing in the standard proper to their age might be allowed to become full-timers at twelve. The Government would do a real service to elementary education if they would amond the educational clauses of the Factory Acts and of the Agricultural Children's Act in this sense, and entrust the enforcement of them to the School Inspectors. Indirect compulsion ought not to be treated as a substitute for direct compulsion, but, if it were made sufficiently stringent, the sphere of direct compulsion would be very much narrowed.

MR. PLIMSOLL'S BILI.

MR. PLIMSOLL'S Bill for a survey of merchant ships has been rejected on a close division, in which the Government narrowly escaped defeat, and on reflection it will perhaps be thought that it was hardly worth while to incur this risk. The details of the measure were in many respects open to grave objections, but all that a second reading is supposed to imply is approval of the general principle upon which a Bill is based, and the principle of Ir. PLIMSOLL'S Bill—that it is expedient to amend the law relating to the survey of shipping, and to make provision for preventing the overloading of ships—is one which now commands universal assent. The Bill might therefore very well have been read a second time, on the understanding that its further progress should be deferred until the Report of the Royal Commission, which is already signed, had been fully considered. It is impossible not to suspect that some at least of the majority who threw out suspect that some at least of the majority who threw out the measure were not sorry to have an opportunity of depriving its author of a personal triumph to which he was fairly entitled. It cannot be denied that Mr. PLIMSOLL has shown himself wanting both in the temper and the discretion which are required in the management of such a question. He represents that sort of rash, impulsive benevolence which, in its eager sympathy with suffering and oppression, is apt to forget the necessity for being just to the class which is supposed to be responsible for the evil. Mr. PLIMSOLL undoubtedly weakened his case by his fondness for hysterical declarate. weakened his case by his fondness for hysterical declamation, and by the fanciful extravagance of some of his assertions. When he expressed a wish that M. Dong would paint a great picture representing all the drowned men at the bottom of the sea, it was naturally suggested to many minds that there must be something hollow in a movement which could not get on with plain words and hard facts. We shall not be suspected of any admiration for this sort of agitation, and indeed we pointed out at the beginning the disadvantages which must necessarily attend it. At the same time it is only fair to admit that Mr. PLIMSOLL has shown remarkable courage and steadfastness in an honourable cause, and that he has done what otherwise would probably not have been done stall—brought the firee of public opinion to bear on the matter. There is not have new in the state of things to which he called strention. It has been going on for many years, and was centimally growing worse. Attempts had been minds from time to time to check

the evil but official inertia and the opposition of interested chases couldn's facetroome. Mr. Plussoni's statements have now been pretty well sixed out, the shipowners have had their my, actions have been brought with varying results, and some sections have been threatened and not brought—which is also perhaps not without its significance—and the end of it all is that substantially the truth of Mr. Plinsoll's case is acknowledged on all sides. It is admitted by the Government, by the Royal Commissioners, by every one who has anything to say on the subject; and there can no longer be any question that there is annually a large loss of life through the use of unseaworthy ships. This admission is a very important point to have reached, and that it has been reached is due to Mr. Plinsoll. Moreover, a beginning has been made in applying a remedy. Under the Act of last Session the Board of Trade has seized 264 vessels, of which only 13 were found to be fit to go to sea. It appears also that, whereas during the first half of last year, before the new law came into operation, no fewer than 128 vessels were posted at LLOYDS' as missing, which was a large increase on the figures of the previous year, in the six months after the Act took effect only 36 missing vessels were so posted. In the present year, up to May, only 47 ships have thus been posted, the number in the same period of 1873 having been 109. To some extent these results may be owing to the weather, but it can hardly be doubted that disasters would have been more frequent if the detained vessels had been allowed to go to sea. Measures of this kind operate not merely directly in keeping back the unseaworthy ships which are seized, but also indirectly in warning shipowners that they had better put their vessels into such a condition that there shall be no pretext for seizing them.

Although something has thus been done to check the use Although something has thus been done to check the use of unseaworthy ships, there is still, by general confession, something more which remains to be done. What this should be is, however, a subject on which there is a wide difference of opinion. Mr. PLIMSOLL proposes that there should be a compulsory survey by officers of the Board of Trade of every ship which has not been previously surveyed and certified by some Registration Society approved by the Roard: that ships should not be allowed to cover. by the Board; that ships should not be allowed to carry deck-loads at certain seasons without special permission; and that every ship should have marked on its hulk in a conspicuous manner the proportion of displacement caused by cargo as a test of overloading. It is already the custom with the better class of shipowners to have their ships surveyed either by one of the Associations or by surveyors employed by themselves; and it is certainly desirable that a similar survey should be applied to all merchant ships. Surveyors are of course only ordinary human beings, and are liable to make mistakes like other people. They frequently differ from each other as to what ought to be done; and some of them may be stupid, ignorant, careless, or perhaps corrupt. It is impossible to lay down a code of minute rules as to which everybody is agreed, and to say that ships which comply with these rules shall be considered sound, and ships which do not comply with them thround; and even if such a code could be devised, it would be impossible to get it enforced with invariable honesty and exactitude. Ships have been surveyed and certified and have afterwards been lost from some defect in construction, and a Government survey would be no better than any other survey. The only difference would be that it would be conducted by men employed by the Government instead of by men employed by an association or by a private owner. Still, as far as it goes, a survey is a good thing, and a survey of all ships would undoubtedly be of immense advantage. It does not follow, however, that a compulsory Government survey is the means of attaining this end. It is obvious that the responsibility of shipowners would be weakened in proportion to the resupporting assumed by the Government. The Board of Trade would practically be charged with the whole management of the mercantile marine. It would have to build, equip, and load vessels, and to undertake all sorts of duties which at present the owners have to see to for themselves. Such an arrangement might be a very convenient one in some ways for owners, who would be relieved from a great deal of trouble and anxiety, and would in fact have little more to do than send down cargoes and pocket freights; but it may be doubted whether the merchant shipping business would, on the whole, he better managed than it is. It would appear to be a more natural and feasible course to fasten as sauch re-

sponsibility as possible on the owners, and at the same time to make them feel that, if they send out rotten or recklessly overladen ships, they will be most likely to suffer for it. At present the Board of Trade has authority to interfere on information that a ship is believed to be unseaworthy; it seizes the ship, has it examined, and if the ship is found to be defective, the Board can require it to be thoroughly repaired, or, if past mending, can order it to be broken up. This is in accordance with the general principles of police rule in this country. The Government does not interpose to regulate the lives of individuals, and to prescribe what they should eat, drink, or how they should conduct their business. It is assumed that every man knows his own business best, and that it is enough for the police to reserve themselves for cases of actual or suspected misconduct. This is what the Board of Trade at present does in regard to ships, and it would seem to be as much as it can properly undertake to do. Its powers and modes of procedure in this respect are no doubt capable of amendment; but the principle of leaving owners, in the first instance, to see to the safety of their vessels for themselves, and coming down on them only when there is reason to believe that they have neglected necessary precautions, has evidently much to recommend it.

There are already some symptoms that the extravagant demands which have lately been raised for Government interference in the management of private affairs may possibly produce a reaction the other way. In a lawpossibly produces a reaction the other way. In a law-suit which was tried this week, and in which a Railway Company was sued for damages because the plaintiff happened to fall down the steps of a station, Mr. Baron Pollock remarked that in the old coaching days nobody ever complained of the slipperiness of the steps, but nowadays people seemed to think that they were not required to take care of themselves at all, and were never satisfied unless they were carried about in bandboxes. In another case it was argued that a man who was killed through walking on a line of railway with an express due on one side and a goods train on the other was not incurring "obvious risk and danger," and the jury took this view, although the Judge observed that if he had been the jury the verdict would have been different. It is obvious that nothing encourages rocklesaness so much as the idea that arrangements have been made by which people shall be taken care of without being put to the trouble of taking any care of themselves. The proposal to place the merchant service under the management of the Board of Trade is of a piece with the proposal that the same omniscient department should also assume, as a trifle in addition, the working of the railways. It is wild projects of this kind that cast discredit on moderate and reasonable suggestions of Government intervention, not for the purpose of doing the work of shipowners or of railway managers, but of assisting in bringing them to punishment when they inflict injury on any one by their recklessness or neglect. What is now wanted in the case of merchant seamen is not that they should be lulled into a false confidence by the assurance that Government is going to take the ships in hand and see that they are all water-tight and song and comfortable, but that they should be encouraged to look themselves to the soundness of the vessels in which they are about to sail, and that they should be strengthened in obtaining redress against the sort of owners who deal in rotten craft and perilous cargoes. The great object to be kept in view should be to make land ships and the owners of bad ships as notorious as possible. There is no rousen why ships should not be marked so that it may be readily seen as they go out of port whether they lie very deep in the water and facilities might also be river. the water, and facilities might also be given for securing other evidence which could be used against an owner in the event of a disaster occurring, as a ground for obtaining compensation for the wrecked crew or their families. Nobody supposes that even the most villanous class of shipowners take a malignant delight in drowning sailors just for sport. The reason why ships are lost is simply that a rickety old ship costs less than a new one, that a large cargo pays better than a small one, and that the system of insurance combles owners to indemnify themselves fully for any pecuniary losses arising from this reckless way of doing husiness. If owners were also compelled, directly or indirectly, to insure the lives of the crew, they would probably discover the necessity of being more particular as to the seaworthiness of their ships. Mr. PLIMSOLL told a story of a recent shipwreck in which the

captain had perished. He had left a widow and five children; and the widow said he knew before he went that the ship was not safe, but he knew also that he must take that ship or none. If he refused to sail in her, he would be pointed at as the man who was afraid to go to sea, and his occupation would be gone. There can be no doubt that it is under this sort of pressure that many unsound vessels are at present manued, and the remedy would therefore seem to be to assist seamen as much as possible in exposing malpractices, and in obtaining redress against shipowners who gamble in this way with human life.

THE MORDAUNT CASE.

THE legal question at issue in the MORDAUNT case was in itself not a very difficult one, and it is perhaps surprising that there should have been so much hesitation and difference of opinion in arriving at a solution of it. It would appear that there was a conflict rather of sentiment than of law, and that a great deal of the ingenious judicial argument which has been called forth was unnecessary or irrelevant. One of the Judges in the Appeal Court asserted that to allow the suit to proceed while the defendant was insune would be a denial of natural justice. Lord Kenyon, when a similar remark was made by counsel, replied that be was there sitting at nisi prius to administer the Common Law of England, and that he knew nothing about natural justice. Part of the discussion turned on the question whether proceedings in divorce are to be regarded as civil or criminal, and it was argued that the consequences of an adverse verdict are so terrible to a woman that they are practically penal. It is obvious, however, that a divorce merely annuls a contract which has been broken by one of the parties, and that incidental suffering is altogether distinct from deliberate punishment. Any sort of civil proceedings are practically penal to a defendant who loses his case. It is no doubt true that marriage is not an ordinary civil contract, masmuch as it cannot be dissolved merely by mutual consent. The public has an interest in the matter, and requires to be entisfied that there is ground for a divorce before one is granted. It is difficult, however, to imagine what Mr. Justice Brett can have mount when he said that there was a contract before marriage -- a contract to marry, of which marriage was the fulfilment—but that there was no further contract. Clearly there is the further contract that husband and wife shall each comply with the obligations of the married state; and if either fail to do so in certain ways defined by law, the other is entitled to claim a divorce. It would appear that the Judges who took the view that divorce procedure is of a criminal or quasi-criminal character over-looked the essential distinction between civil and criminal proceedings; namely, that the object of the former is to obtain redress for an injured person-the consequent suffering of the offender being merely an accident-while the object of the latter is limited to the punishment of the wrongdoer. Lunacy is a reasonable bar to proceedings which have in view solely the punishment of the offender, because a lunatic is beyond the range of punishment; but it does not follow that lunacy should also be accepted as a reason for relieving the lunatic from the consequences of breaking a civil contract or inflicting any other civil injury. Here reparation to the injured person comes into play. Bankruptcy, as the Chief Bason observed, partakes much more of a criminal character in its nature, incidents, and consequences than a suit for divorce; yet it has been held that a lunatic is liable to a commission or adjudication in bank-ruptcy. The only grounds on which lunacy can be logi-cally admitted as a bar to proceedings are either that, as in eriminal cases, the proceedings will lead to nothing, lunatics not being punishable, or, if we take the broader ground, that it' is impossible to have a fair trial of any question when one of the parties is insane. It is evident that, if the latter principle were to be applied to divorce suits, it would have to be extended to all other civil cases.

Another question which was raised was whether the Act of Parliament by which the proceedings in the Divorce Court are regulated must be taken exactly as it stands, or whother the Judge has a right to assume that the or whother the Judge has a right to assume that the comesion of any reference to the case of a lunatic respondent.

There is another circumstance which did not full within was unintentional, and to supply the supposed omission at the limits of judicial observation, but which has excited his own discretion. This was the point upon which Lord come not unnatural apprehension, and that is that lunacy can be a first which is very market at the truth of Mr. Justice Brett put the argument in favour of a free which is is often extremely difficult to accertain. Murder

judicial construction of the Act on the ground that before a divorce could be granted, it was essential that it should be proved not only that the wife had been unfaithful, but also that there had been nothing in the husband's conduct to conduce to her infidelity. There was thus a reciprocity of charge and counter-charge, which could not be obtained when one of the parties was a lunatic. Mr. Justice BEETT argued that the Legislature intended that the two things should go together, and that, as no specific provision had been made for cases of innacy, the spirit of the Act required that the deficiency should be supplied by the Judges. On the other hand, it was contended that it was more natural to suppose that, when no exception was made in regard to a particular case, the reason was simply that it was not intended that any exception should be made. Lord Chelmsroup laid it down that "what the Legislature has not expressly enacted, the "Judges ought not to presume that it intended," and Lord HATHERLEY took the same view. This objection had been anticipated by Mr. Justice Keating, who contended that, although the word "lunney" did not occur in the statute. yet it was not denied that in a case of lunacy the Court could stay the proceedings to await the probable recovery of the lunatic, and that, if the Court had power to stay proceedings for a longer or shorter time, according to circumstances, it must also have the right, for the same reasons, to stay proceedings altogether. This argument leaves out of account the wide distinction between deferring the hearing of a case for a reasonable time and refusing to hear it at any time; but it is at least sound in recognizing the right of the Court to a certain amount of discretion in carrying out what it supposes to be the meaning of the law. It can scarcely be supposed that Lord Chellistorn's railing is meant to be taken in its strict literal sense. The Judges are constantly obliged in their interpretation of Acts of Parliament to conjecture what the Lagislature intended should be done in cases not specifically provided for; and the Divorce Court in this case only followed the usual practice. It is probable that, as there is no reference to lunatics in the Act, this class of cases was overlooked by the Legislature, and the question therefore arose, What, if the Legislature had thought of it, would it have desired should be done? It was here that Lord Penzancz, followed by the Appeal Court, went astray. They looked too exclusively at the case of the respondent, and in their pity for her helplessness forgot that the peti-tioner also was entitled to consideration. It was a case in which it was inevitable that there must be some degree of hardship on one side or the other. The respondent, being hardship on one side or the other. The respondent, being insane, would be placed at an obvious disadvantage if called upon for her defence. On the other hand, to dismiss the petition would be to condemn a man, for no fault of his own, to remain tied to a woman when he believed to have been unfaithful to him are whom he believed to have been unfaithful to him, exposed to the risk of spurious issue, and precluded for life from marrying again. The question, therefore, was simply whether a greater amount of injustice and hardship would be inflicted by stopping the case or by allowing it to go on; and it does not seem that this was such a very difficult question to determine. It is conceivable that in such a case there might be circumstances known only to the respondent which would be important, if not for clearing her own reputation, at least for proving that her husband had not behaved in such a manner as to entitle him to a divorce. But the general circumstances of her married life would of course be well known to her friends and attendants; her incapacity to give evidence herself or instructions to her solicitors would be an important element in the defence; and on any point on which there was a doubt the Court might be trusted to give her the benefit of it. Allowance would of course have to be made throughout the whole proceedings for her mental condition, and there is no reason to suppose that this allowance would not be fully made. The case would go to the Court on the understanding that only the very clearest and most irresistible evidence would justify a verdict against the respondent. Whether there would, under such circumstances, be much likelihed a verdict against her may perhaps be doubted; but at least as much would be done as could possibly be done to ensure justice on each side.

has already, thanks to the mad dectors, been to a great extent removed from the category of punishable crimes; and there is no doubt something alarming in the prospect of their intervention as a screen for adultery. it is difficult even for sane people to avoid being pro-nounced hopelessly insane by professional gentlemen whose business it is to give evidence to that effect; and nothing would be easier or simpler than for a person who desired to be thought mad to commit eccentricities which would immediately secure a high-class certificate of lunacy. Not long ago it was urged in the Probate Court that an old gentleman must necessarily have been mad because be filled his letters with remarks about the weather, was not over fond of his relations, and swore at brass bands and excursionists. There is no reason to assume conscious dishonesty on the part of experts, but everything depends in such a case on the bent of mind with which you analyse words and actions. It should be remembered, however, that if an imposture of this kind were to be attempted, it might have to be maintained for life. way to look at such a decision as that which has just been given is to separate it altogether from the particular persons and circumstances of the suit to which it relates, and to consider its general application. From this point of view it is impossible not to feel that a sound decision has been given. There are frequently cases in which one of the parties is placed at a serious dis-advantage from the death or absence of an essential witness or the loss of an important document, but no Court would refuse to try a suit merely on that ground. Fiat jus ruat justitia is a saying attributed to the late Mr. Justice MAULE, in which there is profound truth. It is evident that if the law were to be constantly strained and twisted to suit the hardships of particular cases, there would soon be very little law left.

GEOGRAPHY.

THE recent annual meeting of the Geographical Society afforded a fair opportunity for self-plorification to the members of the most popular of such learned bodies. The view taken of their high mission by the enthusiastic travellers who assembled under Sir Bartle Frere's presidency reminded us of a rather silly old story of undergraduate days. Four allegorical statues which crown the roof of a well-known library were generally pointed out by a guide as representing Faith, Hope, and Charity. Some excursionist of more than average intelligence was prompted to ask who was the fourth personage. The guide, sudeavouring to satisfy this unprecedented convictive on the same of the moment and observed that the state. personage. The guide, sudeavouring to satisfy this unprecedented curiosity on the spur of the moment, and observing that the statue bore a globe, replied, with creditable audacity, Geography. Unconsciously he seems to have been giving a fairly accurate representation of the opinions of the Geographical Society. If they are too logical to recken their favourite study as one of the cardinal content of the cardina virtues, they consider it to rank amongst the noblest objects of human inquiry. Indeed their distinguished guest M. Leverrier is reported to have said that geography "rested on all the sciences, and was the sum of all." We do not inquire into the precise sense of these words; but they are certainly calculated to send a pang through some bosoma. To old-fashioned people who remember the geography of their schooldays with a feeling of unmitigated dialike, the evaluation of that hated study to so lofty a place must naturally be annoying. Either they must belong to the race which tramples upon pearls, or the pearls which were cast before them must have been very inferior specimens. Geography, in the sense then understood, ranked amongst the usual branches of a sound English education, and was perhaps the branch which bore least fruit of all. Heading, writing, and arithmetic, though their value has been frequently overestimated, are accomplishments of some value in later life. History, meaning by that phrase a catalogue of kinga, with the dates of their accessions and the names of the principal battles fought during their raigns, is stale and unprofitable enough; and yet, even in that barren condition, it enables one to succounter an historical allusion in a speech of Lord Russell's or Mr. Dismeli's with the sense that at least one has heard of the circumstance before. But the parallel study of geography naturally he annoying. Either they must belong to the race which or Mr. Dismali's with the sense that at least one has heard of the circumstance before. But the parallel study of geography was hopelessly depressing. Does anybudy after his schooldays ever remember the names of English counties or French departments, with the principal towns in each case and the industrial products for which they are remerkable? Examiners are in the habit of repeating, and perhaps of manufacturing, comic stories of their wictims, the point of which generally is that Paris has been placed on the Bosphorus or the Danube been made to flow into the Pacific Ocean. We always feel impelled to ask on such consistent, why shouldn't it? The pupil's mind is probably much in the same condition whether he associates the right names or the wrong cases; and, if his belief is a comfect to kim, it seems rather a pity to destroy it; fee, in fact, we vary quickly beam in later years all the geography in regard to which it is at all instruments to us to be consect, and life is not long enough to get up the remaindable. We know, it is probable, the geography of places which

we have visited. A week's walk in the Alps, for example, will at the principal relations of the chain in the mind much more clearly than any number of lessons spent in copying maps; and it seems a waste of energy painfully to force a set of blank phrases into the mind when the knowledge which they represent will be so indelihly imprinted upon the memory by a very little actual observation. We know, again, something of the prography of countries in which we have been forced for other recover to take an internal. The we have been forced for other reasons to take an interest. The geographical knowledge of many people has fullowed the course of wars. Twenty years ago they knew something about the Crimea; afterwards India came within their sphere; and at later periods they have learnt something about Italy, the United States, the East of France, and timally the charming regions of Ashantse. In this way a lifetime of moderate duration enables one really to know something about the surface of the planet, though it is to be feared that such information generally disappears as rapidly as it was

acquired.
Outside of the spheres thus defined, we should be inclined to say that geography is one of those studies which are simply inaccessible to the ordinary mind. The knowledge indeed may be retained long enough for examination purposes, but to assimilate it thoroughly is impossible for any person of less seal and perseverance than Mr. Francis Galton. We don't really care, and can't be made to care, whether Chicago, for example, is north or south on made to care, whether Unicago, for example, is north or south of New Orleans, unless we have thoughts of emigrating or have strong reasons for interest in the matter, when we learn quickly enough without going to school. We must, indeed, admit that the ordinary human mind seems to be in a condition to which geographical knowledge is impossible. The earth is not practically conceived of as a sphere, nor even as a continuous plain, but as a number of distinct fragments which stand in no fixed or permanent relation to each other. Ladica, in their present state of intallectual relation to each other. Ladies, in their present state of intellectual degradation, generally regard the problem of heav to get from one place to another in England as one which is capable of an indefinite number of solutions, according to the skill possessed by the initiated in the mysteries of Bradshaw. They implicitly assume that, by dexterously manipulating those strange columns of figures, a short cut may be found from any station to any other, just as they imagine, and not quite without reason, that a dexterous accountant ought to be able to bring out a favourable balance when their expenditure is double of their income. It is vain to suggest their expenditure is double of their income. It is vain to suggest that there are some fixed relations of time and space, and that, for example, you cannot find a quick passage from Chatham to Bristo which shall obviate the necessity of passing through London. So again, people who make some claims to peographical knowledge are often quite unable to admit that the words North and South have really any definite meaning. The English rustic can only direct you to the next village by telling you to take the first turn to the left, or to cross the fields when you come to Squire Western's. (How, by the way, did that type of rusticity ever get a name which seems to imply some rudimentary geographical conceptions?) The rustic's state of mind is too often that of his superiors. You are fortunate indeed if you can find a person in London who is are fortunate indeed if you can find a person in London who is able to perceive the ambiguity involved in the statement that a able to perceive the ambiguity involved in the statement that a house is on the right or left side of a street, or who can correct it by a reference to the points of the compass. Nay, we have tramped many weary hours in the Alps owing to precisely the same confusion or oversight on the part of the compilers of authoritative guide-books. Some people of more than ordinary sensibility upon such matters suffer for years because some sarly misunderstanding has invorted the true directions of a particular district, and thus prevented them from beinging it into barmony with the rest of their conceptions. But the ordinary mind can rest with perfect content in beliefs which implicitly state that the North lies in different directions in contiguous places,

The moral which may be drawn from such observations is that geography, understood in the sense of a governess advertisement, is a very inadequate study; and consequently that the Geographical Society will be doing good service if they can succeed in popularizing a more rational mode of study. The Society, it appears, already gives medals to school boys who have distinguished themselves in political and physical geography; and they have been writing letters to the Universities, asking them to take some steps to forward the science. We wish them all possible success. A knowledge of the configuration of the certh's surface is, as M. Leverrier said, intimately connected with most sciences; and especially with the study of the human race, whether regarded from a physiological or an historical point of view. To give any proof of, this proposition would be a waste of trouble; and we need only mark that it was because geography of the old-fashioned variety was mark that it was because geography of the out-manious variety was studied without any reference to the purposes to which it might be applied, that it was so barren and unpreditable. If the learner was made to understand the general bearing of the facts with which he is crammed upon political history or upon the natural products of the world, he might undoubtedly be made to take far more interest in the matter than he can do at present. Nor need we doubt that the united efforts of the Geographical Society, the Universities, and the great schools should be able to effect the Universities, and the great schools should be able to effect the improvement so urgently needed. Meanwhile we may remark that the Geographical Society has claims upon our attention which are not strictly of a scientific kind. Undoubtedly gentlemen who are entertaining distinguished foreigners and distributing primes to promising schoolboys are quito right in covering themselves with the proper closk of scientific language. The name of science has of late years become almost energy, and, perhaps, if we ventured to be so profine, we might

almost say that it was becoming a bore. Whilst, however, every subject which can be pursued in the name of science immediately subject which can be pursued in the name of science immediately sequires a kind of special sanctity, we must not complain of a rather lax use of the phrase. Let us admit that the questions whether there are white bears at the North Pole and races of dwarfs in Central Africa may properly be called scientific questions, as undoubtedly their solution would afford very interesting data for scientific discussions. But we need not shrink from adding that the Geographical Society fosters another spirit which is as useful even in these days as the second thirst for scientific known. useful even in these days as the sacred thirst for scientific knowledge. The spirit of adventure, under whatever names it may pass itself off, is an impulse which has no cause to be ashamed of itself. Sometimes a boy who has been excited by reading the adventures of Robinson Crusoe or Midshipman Easy chooses to cover his love of excitement and novelty under pretext of a desire to spread the knowledge of the Gospel; sometimes he calls his impulse a love of science; and occasionally he may confess only to the humbler motive of commercial energy. Yet he need not be more mercenary or the worse man of science because he heartily enjoys the hardships which his admirers describe as his martyrdom. Dr. Schweinfurth, upon whom the Geographical Society has most deservedly conferred its gold medal, undoubtedly went through considerable sufferings, which he has described as modestly as he encountered them bravely. And we do not think any the worse of him because we have a strong impression that he rather enjoyed them than otherwise. Rather we should say that it is no slight praise of a man, or of the race of which he is a typical example, that he has a positive satisfaction in placing himself in positions which sound simply repulsive to the stay-at-home population. A soldier is not the less have because he enjoys a fight row a traveller hereuse he the less brave because he enjoys a fight, nor a traveller because he is in the best spirits when he is most surrounded by difficulties and dangers. To keep that sentiment thoroughly alive in the nation worthy an object of the Geographical Society as to spread familiarity with maps, or even to contribute to the growth of botanical knowledge. We are very willing that other objects should be put forward most prominently, because to avow a love of sheer unadulterated adventure is generally to become a braggart of a very unpleasant type. But the sentiment, however desirable it may be that it should be decently veiled, is a most valuable one in itself, and we are glad to see that the Society hopes to provide new opportunities for its gratification. It is hoped, as Sir Bartle Frere tells us, that the present Government will look more favourably than the old upon plans of exploring by way of Smith's Sound. If the hope is fulfilled, Englishmen will have one more chance of showing that they can run their heads against icebergs and incur the risk of being starved and frozen with the courage of their forefathers; and if they call their zeal a love of science we shall not complain, but rather be glad that two desirable purposes can be forwarded at the same time.

AMATEUR MUSIC.

AMATEUR music has made prodigious strides of late, but it is open to doubt whether it has advanced altogether in the right direction. It has come to be regarded as an instrument for display rather than of culture. Unquestionably, the general level of musical attainments in England is much higher than it was twenty years ago. It is rare nowadays to hear people make what is called a "painful exhibition" of themselves at the piano. The incompetent young lady who wanted so much pressing, and received so complacently the compliment of an ironical prelate in the company:—"Another time when you say you can't sing, we shall know how to believe you"—is a thing of the past. Lackadaisical youths are now seldom to be heard inviting Maud into the garden, or dilating in a feeble strain on the melancholy process of "Fading Away." This sort of music and singers of this calibre have been relegated from the drawing-room to the farmhouse parlour, and the bower in which the siren of the refreshment-room snatches a short interval from soup for song. Nowadays no one sings in society who has not considerable pretensions to sing well. But with this development of the art there has been a psychological development in the artist of a less agreeable kind. Society pets and caresses its amateur musicians, but it also suffers many things at their hands. They are its spoilt children, and give themselves all the airs and graces of spoilt children. Their whims and freaks are the plague of all who come in ther way. They mar as much innocent pleasure by their caprices as they make by their talent. Their vanity and conceit, their rivalries and jealousies, are supremely ridiculous. One would be grateful to them for the diversion which their humours afford, if they did not inflict a good deal of annoyance on their inoffensive patrons, and like Oharles Surface's flirtations with married women, give a great many worthy people grounds for great uneasiness.

like Charles Surface's flirtations with married women, give a great many worthy people grounds for great uneasinese.

Perhaps there is no more deserving object of sympathy than the too-confiding lady who designs a "musical evening." A "musical evening." is a form of entertainment of which ladies who are forced to combine hospitality with thrift never seem to tire. And yet a "little music" is emphatically a dangerous thing; and the labour spent in getting it up too often ends in vanity and vexation of spirit. You are lucky enough to count among your soquaintance a bijon tenor, a melodious baritone, and an effective bass; and when last summer in Switzerland a happy chance threw hass; and when last summer in Switzerland a happy chance threw has a comic singer across your path, it seemed to be for the expanse purpose of supplying your musical "at homes" with just the dash of the convival which they needed. So you issue your cards, and by way of

putting your amateurs in good humour, you invite them to dinner, uncork your best champagne, and regale them with the dainters bill of fare. At dinner they are all affability, and, encouraged by the surrounding gaiety, you indulge a confident hope that your efforts to please have not been fruitless. But no sooner is the seene changed to the drawing-room than your maketies begin. It is one thing to collect singers round your maketies begin. It is one thing to collect singers round your maketies begin. It is one thing to collect singers round your maketies begin. It is one thing away into corners of the room, and effacing themselves, in attitudes of studied indifference to the divine art, behind softs and ottomans. Meantime the evening is wearing on; your Brard stands invitingly open, and the irrepressible old maid who dotes on her memories of Rubini is tapping impatiently, even menacingly, with her fan upon the instrument, and asking in audible whispers when the music is to begin. With growing uneasiness you go in search of your bijou tenor. At last you unearth the sweet youth in the conservatory, prattling with much apparent interest about the Ashantee War. In a faltering tone you murmur a request that he will favour the company with one of his French romances. With a look of mingled innocence and concern he assures you that nothing would give him more pleasure, but, also there is one fatal obstacle. His "larynx" is sadly affected by the weather. Why, you are tempted in your bitterness to exclaim, did the cruel east wind, which has amitten his larynx, leave his cosophagus in so fine a state of preservation? Remembering what justice he has done to the good things of your table, you are painfully struck by the unequal robustness of two such nearly allied organs. Distracted, you go in pursuit of your melodious baritone. Him you find in a corner discussing the price of stocks with a Oity magnate. Will he gratify your guests with the "Stirrup-Coup," or the "Vagabond," in which he is so much admired? Alas, also lere,

Much more thorny is the task of organizing an amateur concert on a more ambitious scale. There are rival sopranos to be propitiated, a Protean tenor to be kept in order, a mutinous orchestrate to be socured, a chorus to be kept from foundering in the Slough of Despond towards which a body of amateur vocalists usually tends; all the vanities and susceptibilities of a paid company, with none of its coprist de corps or obsdience to the bdton. A musical society soon splits into factions, which group themselves round the leading ladies. Like the operatic world of our great grandfathers, it develops a Faustina and a Cuzzoni. Faustina is all for high art and Handel; Cuzzoni is all nature and Claribel. Faustina thrills you with the breadth and largeness of her style; Cuzzoni charms you with a simple ballad. Faustina revolves in the stately orbit of song traced by the great masters; Cuzzoni twinkles in the firmament of Arne and Balfe. The difficulty of inducing two such bright particular stars to illuminate the same horizon is enormous; for neither will Faustina listen to Cuzzoni, nor will Cuzzoni recognize the presence of Faustina. The only way is for the conductor to exhibit the tuneful pair in a kind of musical tandem, and to contrive that the first part of the concert shall be a triumph for Faustina, and the second an ovation for Cuzzoni. The rest of the performers group themselves around the chief ladies in the attitude either of satellites or of victims. It is a day for rehearal. Enter Faustina in a respirator. She is in a hurry, and hurry makes her a triffe imperious. She can only wait ten minutes. She has pressing engagements at the other end of the town. She must sing her song, "As when the Dove," instantly, or not at all. So the band is stopped abruptly—much to the discomfiture of Mrs. Quaver, a veteran "utility" of the society, who, under cover of strong orchestral support, had just mounted to D in alt, where she remains poised in the midst of a macking effected a descent into the medium notes of her register

with the rest of the programme. Miss Dukimer, another of the "utilities," is down for a scene out of Oberen. There is nothing for it but to request her to omit the air, and content herself with a tailless recitative. It is hard on poor Dulcimer to have to execute

the second content hereof with a tailless recitative. It is hard on poor Dulcimer to have to execute an act of Happy Despatch on her one opportunity for display; but in the conflict of vanities the weakest goes to the wall.

Then there is the great "tenor" difficulty to be grappled with. Nothing is more remarkable about the amateur tenor than his good-astured readiness to do anything for or with you but sing. He will be charmed to join you for a few days' fishing in Wales. If you are thinking of a riding sour through Surrey, he's your man. He is quite willing to go out for a month's drill with the Militis, or a week under canvas in a Volunteer camp. If you ask him to join your athletic games, or to ransack folios with you in the British Museum, he consents with a cheerful alacrity. But drop but a hint that you want him to sing, and he becomes an altered being. He is coy, moody, mysterious. There are all sorts of obstacles to the fulfilment of your wish, of which you little dream, and to which he only darkly alludes. It is as though the poor fellow saw what your grosser vision fails to discern, an angel with a flaming sword waving him from your concert door. He is deeply impressed with the precariousness of all human arrangements. At a moment's notice he may be summoned to smooth the pillow of a relative in the North or smitten with a absente Action of the property of the property of the property of the property of the pillow of a relative in the North or smitten with a absente Action of the pillow of a relative in the North or smitten with a absente Action of the pillow of a relative in the North or smitten with a absente Action of the pillow of a relative in the North or smitten with a absente Action of the pillow of a relative in the North or smitten with a absente Action of the pillow of a relative in the pillow of notice he may be summoned to smooth the pillow of a relative in the North, or smitten with a chronic affection of the bronchial subes. In vain you argue that there is a strong antecedent probability that he will be alive and in full possession of his powers on the appointed day. His melancholy forebodings are not to be dissipated by your rosy philosophy. When at last you extort a provisional consent, his misgivings take a new turn. What is he to sing, and will all the tener nusic in the proposed captata he allotted to him? He has none of that sublime representations and the single transfer of the sublime representations. cantata be allotted to him? He has none of that sublime repression of himself of which the Laureate twaddles. He is too unalterably soon of himsen of which the Laurente twaddles. He is to dinafter any convinced of the perfection of his own voice and style to indulge in any such weakness or to brook a rival near his throne. No sooner is he satisfied as to the degree of prominence to be assigned to him than straightway, in his zeal for art, he is tormented with a fresh scruple. With whom is he expected to sing? because, as to his practised ear every one sings more or less out of tune and produces his voice by a radically vicious method, the number of persons with whom he can give tongue with any degree of comfort is naturally very small. Miss X. is a bearable, Miss Y. a doubtful, while Miss Z.'s position at the bottom of the list in a scale of while Miss Z.'s position at the bottom of the list in a scale of faulty intonation makes her an impossible, associate in song. The Handelian tenor disdains the Claribelian lady; the light operatic tenor, on the contrary, regards her as his liege lady, and would deem it an act of musical apostasy to sing with any one else. Tweedle-dum never sings with Tweedle-dee; Tra-la-la is muto in the presence of Fal-lal. Even when each successive obstacle in turn has been smoothed away, you must not be too sanguine as to the result. In all dealings with the amateur tenor it is the unforeseen which arrives. As no one, according to the old poet. as to the result. In all dealings with the amateur tenor it is the unforeseen which arrives. As no one, according to the old poet, can be pronounced happy before his death, so no amateur tenor can be said to have sung until the concert is over. At the eleventh hour he may slip through your fingers, and, with the impulsive temperament of genius, take the train to Edinburgh or the loat to Calais. True, you have his formal promise to co-operate; but he holds in petto a whole budget of smouldering hesitancies and reserves, which may explode without a moment's warning. His potentiality for sulks is enormous. Your enterprise may be wrecked in port by a tiff. It is a wise precaution therefore to instruct some modest tenor-ling—if indeed modesty is compatible struct some modest tenor-ling—if indeed modesty is compatible with a voice of this quality—to understudy his music, upon whom you may fall back in case of emergency.

Society in its present state of dulness is much indebted to its

amateur musicians for the pains they take to enliven it. But they would do well to remember that their aim ought to be to give pleasure to others and spread the taste for a refined and elevating pleasure to others and spread the taste for a refined and elevating art, not to gratify their own vanity or indulge in vulgar cravings for semi-publicity. They have a sufficiently wide sphere for their activity without venturing across the Rubicon which divides private from public performances. How much they might do, for example, towards fostering a love of good music, disinterring the treasures of harmony and song from the neglected storehouse of the great masters, and purging the popular taste of its besotted fondness for the trashy worn-out old operas which furnish nine-tenths of the musical entertainment of London. But when they merely echo the prevalent note of triviality and filmsiness, and seek to superad to amateurish inexperience professional grimace, they do nothing for art, and only make themselves ridiculous. Tried by any but a very indulgent standard, the result of their efforts is at most thirdvery indulgent standard, the result of their efforts is at most third-rate. The amateur tenor who gives himself such airs is probably in most respects inferior to a choir-man in Barchester Cathedral, who most respects inferior to a choir-man in Barchester Cathedral, who has received a sound professional training. A story is told of a party of fashionable amateurs who got up a play, and invited Garrick to be present. All the parts were allotted to my lord and my lady and their visitors—all but one very small part, to fill which, a veritable Thespian was imported from the nearest theatre. The fine ladies and gentlemen strutted their hour on the mimic stage, and received a conventional compliment from the great critic. 3 at no sooner did the obscure little supernumerary make his appearance than the practised eye of Roscius detected the difference between the trained and the untrained performer. "There," he exclaimed with mortifying emphasis, "there I see an actor."

CRUELTY TO ANIMALS.

CRUELTY TO ANIMALS.

THE history of the Society for the Prevention of Cruelty to Animals, which has just been celebrating its fiftieth anniversary, marks a satisfactory advance in an important branch of public morality. It was in 1822 that, in consequence of the exertions of Mr. Martin, the idea that it was an offence to treat a domestic animal with wanton cruelty first received legislative sauction, and two years later this Society was established. Since then, not only have bull-baiting, cock-fighting, badger-haiting, and other barbarous sports been prohibited by law, but a great change has also taken place in the way of thinking about animals generally. When an Italian peasant is remonstrated with for ill-using his cattle, he replies that they are not Christians, and, therefore it does not matter, and very similar ideas provailed in therefore it does not matter, and very similar ideas prevailed in our own country on the subject when the Society began its operations. As the Queen remarks in her letter to lord Harrowby, the spread of education has had a natural tendency to make people more humane and sensitive. A dull, stupid follow knows from his own sensations when he receives a kick or a blow that it hurts him, but it requires an effort of imagination to understand that animals also suffer from brutal usage. When people When people once begin to think whether animals are in pain, they are in a way to become more humane in their treatment of them; and the Society for the Prevention of Cruelty has done good work both society for the Prevention of Cruetty has done good work both in stimulating this course of reflection and in getting its gradual developments embodied in the law of the country. Martin's Act has been repeatedly amended, the slaughter of horses has been brought within legislative regulation, dogs are no longer allowed to be used as beasts of burden or draught, and good and drink are required to be supplied to cattle on a long railway journey. In the course of its career the Society has procured the conviction of some twenty-four thousand persons, and the knowledge that its officers are prepared to take proceedings in regard to all cases of cruelty which come under their own observation or which are reported to them, has a salutary effect on those who are only to be influenced by feur of punishment. The making of cruelty to animals a criminal offence has also made it disgraphl, and neonly are ashamed to be detected in the commission of sets. crucity to animals a criminal offence has also made it disgraceful, and people are ashaned to be detected in the commission of acts of a degrading character. In this way a penal law may be useful, not merely in securing the punishment of offenders, but in attaching a stigma to particular offences. The fines which are usually inflicted for cruelty to animals are penalties of a very moderate kind, which would probably have little effect in themselves apart from the opprobrium with which they are associated. Some idea of the range of the operations of the Society may be gathered from the list of prosecutions for a month. In April last gathered from the list of prosecutions for a month. In April last, for example, there were forty-one convictions for neglecting to supply food and water to animals on the railway. There were two cases of overcrowding pigs, ten of overloading horses, and one of conveying fowls in a cruel manner. Any one who has observed how fowls are usually conveyed squeezed together into the appullant how fowls are usually conveyed, squeezed together into the smallest possible compass, as if they were rags or vegetables, or some other inammate object, will probably be surprised that there should be only a single conviction under this head; but the officers of the Society were perhaps fully occupied in the protection of more imposing animals. There were also a hundred and thirtyfive convictions for ill-treating horses; twenty-three cases of ill-treating donkeys and nules, and four cases in which the victims

One can imagine the surprised bewilderment with which any one who had lived in the last or the beginning of the present contury would be filled on revisiting the earth, to find all this tender and scrupulous care bestowed on the brute creation, and to learn that a man might actually be sent to prison for ill-using animals, which used to be regarded as being as much his possession to do what he liked with as his turnips or potatoes. Lord Harrowby, the President of the Society of which we are speaking, remembered the ridicule and contumely to which the brave Irish gentleman who first took up the question in earnest was subjected, and had heard a respected and accomplished member of the House of Commons, who was supposed to be an admirable representative of an English gentleman—Wyndham, we presume, is here referred to—defending the practice of baiting bulls in his place in Parhament. It should be remembered that, if humanity to animals is a comparatively recent fighting is to get people to think what is likely to be the effect of thing is to get people to think what is likely to be the effect of their acts on creatures which share their own capacity for physical agony, and when once this habit of thought is catablished, a defire to spare the poor animals as much as possible is pretty sure to follow. It is in cultivating and encouraging this habit of mind that the Society for the Prevention of Crucky to Animals finds its most useful function. The enforcement of the law and the punishment of the function. The enforcement of the law and the punishment of the offenders is no doubt necessary and important operations in their way, but after all the number of cases of cruelty which can be dealt with in this way is comparatively few. Outrageous public cruelty may thus be laid hold of, but then cruelty of this sort is by no means common. It is the regular everyday treatment of animals on which their happiness or misery chiefly depends, and the only effectual way to secure that this treatment shall be generally kind and considerate is to cultivate a particular bent and habit

of mind on the subject. A Bill which has been introduced in the House of Lords by Lord Delawarr for the protection of wild hirds was opposed by the Lord Chancellor on the ground that it was impossible to expect that hoys could ever be taught to regard bird-nesting as really a crime. It is true that they are not likely to learn the lesson if no attempt is made to impress it upon them; but it is difficult to see any reason why an attempt should not be made. Hitherto bird-nesting has been regarded as an imposent amusement in most parts of the country, and it would be ridioulous to magnify the guilt of the juvenile malefactor who smashes eggs from pure mischief or who keeps his string of eggs as a cherished curiosity. Yet it would surely be a very good thing that boys should at the outset of their lives be taught kindness and forbearance to helpless animals. We shall perhaps be told that it is in the daring enterprises of youthful bird-nesting that the Waterloos of the future are won by anticipation, and that the courage and endurance thus called forth go to the formation of heroic character; but it may be suggested that the training for future Waterloos might be accomplished without involving the wanton destruction or torture of hird or beast, and it is doubtful whether the bases of the British Empire would really be sapped if some degree of protection were extended to birds from the attacks of mischievous little boys or stupid and brutal men. We quite agree with Lord Cairns that it is not desirable that the youth of the country should be prematurely and unnecessarily introduced to the criminal law, and the formation of a healthy opinion on such matters is no doubt of considerably more consequence than the infliction of penalties. Still it might be worth while to try the effect of attaching the stigms of a criminal offence to bird-nesting without imposing too serious or severe a punishment.

serious or severe a punishment.

It would appear that public sentiment on this subject has now been pretty well developed, and what would seem to be most required for the moment is that, on the one hand, extravagant applications of what is in itself a sound and wholesome feeling should be checked; and, on the other hand, that an attempt should be made to systematize the law on a logical and consistent basis. By the 12 and 13 Viet. c. 92 (amended by 17 and 18 Viet. c. 60) it is forbidden to cruelly beat, ill-treat, overdrive, abuse, or torture any horse, bull, cow, calf, mule, ass, sheep, pig, goat, dog, cat, or any other domestic animal. It has been held that a chaffinch in confinement is a domestic animal, and that putting out its eyes with a hot iron is an act of cruelty under the statute. On the other hand, there is an act of cruelty under the statute. On the other hand, there can be no doubt that the bleeding to death of calves and pigs is a form of cruel torture, yet it continues to be practised with impunity. The ringing of pigs' snouts, the crimping of cod, and the skinning of cols, which are all cruel operations, are also supposed to be quite within the limits of the law. Bull-buiting, badgerbaiting, and cock-lighting have been suppressed, but staghanting, fox-hunting, and otter-hunting, which involve scarcely less cruelty to the animals that furnish the sport, are freely carried on. It was lately held that to chase rabbits with dogs in a field surrounded by a wall, so as to render the escape of the rabbits impossible, does not constitute baiting within the meaning of the Act. At the Congress of English and foreign Societies for the Prevention of Cruelty to Animals, a resolution "condemning the shooting of live animals or birds from traps as most unjustifiable, and contrary to the plain dictated of humanity and morality," was carried amid loud aplace; but the English Society not long since had to confess its inability to bring pigeon-shooting, at which this resolution was specially directed, within the scope of the law. One of the most interesting questions discussed at the Congress was that of vivisection. Dr. Noe Walker renewed his charges of cruelty against the physiologists, and, if only half of what he says is true, a sufficient case was established for demanding that only licensed persons should be allowed to make painful experiments upon animals, and that precautions to ensure publicity should be insisted on. A passage was quoted from the report of one of the chief London hospitals in which it can be no doubt that the bleeding to death of calves and pigs is a sure publicity should be insisted on. A passage was quoted from the report of one of the chief London hospitals in which it was stated that a physician vivisected sixteen cats, on which identically the same operation was performed, and from which the same results were obtained. Whether the publicity of experiments of this nature could practically be insisted on may be doubted, but there could be no hardship in requiring that only licensed persons should enjoy the privilege of cutting up living animals in the interests of science. It is obvious that the mere fact that the operation is painful to an animal is not in itself a aufficient ground for forbidding it. Animals which are killed for food have to undergo a certain amount of suffering; but for food have to undergo a certain amount of suffering; but the object in view is justly held to override the inconvenience of slaughter to the animals in question, and all that can be done is to require that the slaughter should be conducted without any wanton or unnecessary pain. If it is allowable to kill animals in order that they may be caten, it is surely equally allowable that they should be killed for the purposes of scientific investigation. Here again all that can be said is that as few animals as possible should be sacrificed in this way, and that care should be taken to reduce the victims to insensibility before the knife is thrust into their frames. A Bill which has been introduced into the House of Commons proposes to extend to wild as well as domestic animals the provisions of the Act of 1840, and also attempts to define "crusity." Commons proposes to extend to will as well as domestic animals the provisions of the Act of 1840, and also attempts to define "crucity," which under the existing law is left to the discretion of the magastrates. Crucity, it is provided, is to mean any torture or suffering inflicted upon any dumb animal for the sake only of producing pain. The difficulty would of source be to show that the production of pain was the only object of the aportunes we appreciate that the production of pain was not desired, although it was in the circumstance unavoidable. These and other similar problems may positiably occupy the Societies which have undertaken to give such subjects their best attention.

NEW BUILDINGS AT CAMBRIDGE.

IT seems that in an English University endless building must always be going on, as a kind of outward sign of the endless changes which are sure to be going on in the work and discipline of the place. But as Cambridge, as a rule, lags behind Oxford in the exploit of reconstructing its system of education every term, it, perhaps not unfittingly, fails to rival Oxford in the fantestic perhaps not unitarily, has to Ival Carlord are springing up in every corner. At Cambridge less has been done, but on the whole it has been done better. One thing strikes at first eight; there is no trace of the influence of Mr. Huskin. We speak with one possible exception. A new court has been added to Jesus College, that quiet and beautiful structure of the latest mediately brickwork which has gathered so strangely, yet not inappropriately, round what is left of the ancient minster of St. Radegund. We had looked, as we had often looked before, with the admiration with which every eye of taste must look on church and cloister and court and gateway, and we could not bring ourselves to turn aside to look at a modern addition which might possibly break the charm. Whether, then, that retired college, a visit to which rewards a special and deliberate pilgrimage, has extended itself in rewards a special and denocrate papermage, has extended feeling plain English such as its founder might not have scorned, or has given in to any of the fashionable funcies of the day, we have not seen and we have forborne to ask. The possibility that some device from beyond sea might have marred the strange harmony of two such distant varieties of English art was what we could not bring ourselves to face when the moons were allowed of going back through the ancient gate without seeing the modern work. But among those buildings which a visitor to Cambridge can hardly help seeing, one of the first things that strike is that it boars not a trace of that reckloss contempt for all l'inglish precedent, that fautastic striving after overy strange and unheard-of form, which make us shudder at the wild excrescences which have grown on to Christ Church and Merton, and at the form in which a large part of Balliol has risen again. More than one college in Cambridge has stooped to tread in the old ways, and to enlarge its borders in a style dictated by English precedent and in accordance with English common sense. At Oxford indeed the new buildings of New College, where, after so many years, we again hall with delight the long-scorned architectural forms of our own land, show that the madness is at last passing away. But at Cambridge this peculiar form of madness-has never borne away. There are modern buildings there which we could have wished to be somewhat different in style; but they show something of design, something of picturesque effect, not the mere striving after fentuatic novelty. Now Caius and new Pem-broke are not exactly English; but at all events they are not Ruskinesque.

In comparing buildings, old or new, at Cambridge and at Oxford, it should always be borne in mind that at Cambridge the town is, in an architectural point of view, far less stuck in the University than it is at Oxford, and that the University is far more sunk in the Colleges. The relative importance of the towns of Cambridge and Oxford has certainly been reversed since the days when the Universities began severally to grow up within them. Oxford, the great military and political centre of two ancient kingdoms, the special seat of national assemblies of more than usual dignity, was, when the University began to arise in the twelfth century, a town of very nearly the first-rank, treading close on the hoels of the more ancient oities of Winchester, York, Exeter, and Lincolu. Cambridge, on the other hand, though, as representing the Roman Camboritum, it was in some sort the more ancient of the two, and though it was the head of the borderland of Mercia and Fast Anglis, by no means held the same national position as Oxford. Now, however, it can hardly be doubted that, if we could conceive the two Universities taken away from their present dwelling-places, Cambridge would feel the lose a good deal less than Oxford. The town of Cambridge, apart from the University, is the matural centre of a large and important agricultural district, while the growth of the city of Oxford, as distinguished from the University, is due mainly to the factitious impulse of railways, and to whatever may come of the late move for carrying us back from the nineteenth century to the twelfth, and making Oxford once more a military centre. It is in agreement with all this that the town of Cambridge shows itself far more distinctly than the city of Oxford, and, as it happens, the sight is by no means so pleasing. Oxford, and, as it happens, the character fail, a few treasures which are pricales to the antiquary, but which do not go for much in the gracual lates of the place. But the amodern town of Cambridge is far more prominent than Marton fla

the sity of Carling had grown up around the University. Members of Parliament are not expected to know the history of their country, and in mere look Oxford has very much the air of a plane where the University came first and the city second. At Cambridge this is much less the case, and it is remarkable that it should be so. For at Oxford the University grow up, and the older colleges were built, within the older city itself; while at Cambridge town and University must to some extent have grown up together at the foot of the more ancient settlement of Cambridge, town and University must to some extent have grown up together at the foot of the more ancient settlement of Cambridge, just as at Lincola, the original settlement, the Roman town, the site of the Norman castle, is on the hill. At Lincola the old site, being crowned by the minuter, still heeps its prominence; at Cambridge, as far as the University is concerned, it is forgotten; no college, no University building, is within its bounds. One college only is on the castle side of the river. It is as if a University of Lincola had grown up around St. Mary-le-Wigford and St. Peter at Gowts. Yet from a point in the library of St. John's College the old mound still forms a prominent and striking object. It enables us to call up the times when the new eastle of the Conqueror crowned the mound, when the University was not, when the new town was spreading itself round the ancient church of St. Benet; when St. Giles, now pulling down, was first rising; when its founder, the Sherill Picot, was oppressing men far and wide: when the earliest surviving portions elty of Carlied had grown up around the University. Mambe down, was first rising; when its founder, the Sherill Picot, was oppressing men far and wide; when the earliest surviving portions of the minater of Ely were beginning to arise under the hands of Abbot Simson, as the house of St. Ethelthryth was beginning to recover after the warfare of Hereward and the spoliations of William.

William.

But while at Cambridge the town is much less sunk in the University than at Oxford, the University is far more sunk in the colleges. To an eye used to Oxford, it is strange to see how very little the strictly University buildings count for in a general view of Cambridge. At Oxford the buildings of the University, as distinguished from the colleges, are among the stateliest, and those which most help to give a tone to the place. The modern Taylor building and the modern Fitzwilliam Museum may pair off as the list specimens in each University of an exploded taste; but the older group, the special academical sanctuary in each place, has a strangely different look in Oxford and in Cambridge. Against the great range of the Ashmolean, the Convocation House, the Divinity School, the Theatre, the Ularendon, the Schools, and the great capola of the Radeliffe Library, Cambridge has only to set the Senate House and the Library, and they are utterly overshadowed by King's College Chapel on the one side and the new building of Cains on the other. We have bracketed the Taylor building and the Fitzwilliam Museum, but Cambridge has nothing to bracket the Fitswilliam Museum, but Cambridge has nothing to bracket with the New Museum in the Parks. But this is an instance of the law with which we set out; whatever Cambridge has or has

not, it at least has no Ruskinesque.

It is therefore almost wholly in the colleges that the works of late years are to be looked for in Cambridge. The colleges, as we have just now said, rank for more in Cambridge than they do in Oxford. Oxford never has had a single college on the same scale as St. John's, and the ingenious process of winning the name of a founder by rolling several smaller halls or colleges into one has produced a yet greater mass of buildings in the Cambridge Trinity than it has at Christ Church. From another point of view Christ Church may compare with Jesus College at Cambridge. The minster of St. Frideswide and the minster of St. Radegund shared somewhat the same fate in each. On the other hand, the wide distinction between the two great colleges and the smaller ones, which seems so strange to an Oxford man, has of late years been much narrowed; and we see the architectural ex-pression of the change in the large buildings which have been added to several of the smaller colleges. As a habitation of students, King's College itself must rank as a small college, but it has enlarged itself in a way which is at once most creditable and most ingenious. Hitherto few things have been more offensive to the eye than the modern Gothic buildings of the college, the hideous screen contrasting with the glorious chapel. Yet an addition has been made which not only is purely English, and quite worthy to take its place as part of an ancient college, but which somehow contrives to harmonize with the modern work, and to take off a good deal from its ill effect. A single oriel window at the corner has no small share in the general good offer of the hailding—so much may often be done by a single wellwindow at the corner has no small share in the general good effect of the building—so much may often be done by a single well-managed feature. And the hostel which Dr. Whewell added to Trinity College some years earlier is at least the work of one who did not despise the architectural language of his native land, and is a pleasant sight to eyes suffering from the memory of new Christ Church and new Balliel. The new buildings of Usius are in a style which our insular notions make us regret, but there is a stateliness about them which goes some way to disarm criticism, and the style is at least essentially domestic. So at Pembroke too, though here again we should have wished another style chosen. and the style is at least essentially domestic. So at Pembroke too, though here again we should have wished another style chosen, there is at least none of the nonsease of the prevailing fashion; there are windows, and not the strange substitutes which have done duty as windows at Oxford for twenty years past, by a perverse falling back on the imperfect attempts of times before multions and tracery had come to full growth. We will not say that the architectural prospects of Cambridge are better than those of Uxford, because the example of New College shows that the tide is turning; but at all events Cambridge may beaut of having kept in achir senses during the quarter of a century of architectural produces in Oxford. m in Oxford.

Of the college chapels and other ecclesiastical buildings, we have spoken of the greatest modern work, the rebuilding of St. John's Chapel, when reviewing the book just published by Professor Babington. Its neighbour at Trinity has been putting on a new and improved face in many ways. But we pass on from the decounted improved face in many ways. But we pass on from the decounted improved face in many ways. But we pass on from the decounted improved face in many ways. But we pass on from the decounted much pleasure the different look which Jesus College Chapel and St. Mary's Church present to one who remembers them in times past. St. Radegund's uninster has now for some years been brought back to an intelligible shape, and one very odd result has fellowed on the great extension of the college. The choir, as it was screened and stalled not so many years ago, is too small for the growing numbers of the undergraduates, and a part of them—a strange sight in a college chapel—are driven to occupy part of the nave, like a parochial congregation. St. Mary's, set free from its abominations, is a pleasant sight to one who remembers it of old, though we are not sure that we should have taken away the though we are not sure that we should have taken away the seventeenth-century doorway at the west end.

seventsenth-century doorway at the west end.

Orthodoxy demands that we should not record in the same paragraph as these last the rise of a tall tower near Little St. Mary's whose object is not very clear at first sight. It is plain that it is a church of some kind; but as it did not stand east and west, we at first suspected it of Popery, and wondered what Mr. Whalley would say should he ever stray over from Poterborough to Cambridge. But it proves to be of the Congregational denomination, who, if they have not hit the Ituskinesque ideal, have come nearer to it than any of their neighbours. But the tower—we cannot say that curiosity tempted us to look any further—if not English, is at least in the style of Caen and Bayeux, and that is something too near English to be quite the right thing among our strainers after everything new. We confess however to some doubt whether the architect of St. Peter's at Caen would have counselled the designer of the tower to make the spire which sits on it quite so stumpy.

on it quite so stumpy.

Stained glass is much in vogue just now at Cambridge, stained glass which is the work of Mr. Morris the poot, and made after a type which has its admirers, but which is too something perhaps too poetical—for those who are used to more ancient forms. Lastly, there is one marked feature of the newest Oxford which has nothing answering to it at Cambridge. The tide of matrimony seems not to have set in quite so fiercely. It is not at Cambridge thought absolutely necessary that every resident Fellow should at once marry and keep his fellowship. It is not thought absolutely necessary that those who do marry should at once build a new house of a funtastic shape and with a funtastic name. Cambridge seems to have thrown its poetry into its windows and to be satisfied with more presaic forms for its homes. We cannot say that we are at all disposed to mourn over this point of unlikeness to the wonderful colony which has spring up in the region beyond the Oxford Parks.

THE SWISS OLD CATHOLICS.

DELICIOUS meetings and conferences of all kinds are the order of the day on the Continent as well as in England. Early in this month was held the twelfth annual Conference of German Protestant Church bodies at Eisenach. Since then two assemblies, of very different kinds, have met at Mayenca and Bern respectively; and thus week the German Bishops have been closeted in secret consistory at Fulds, the result of their deliberations not of course having yet transpired. On the proceedings of "the German Catholic Union" at Mayence last week we do not propose to dwell at any length here. Their manifesto supplies a fresh proof, if any were needed, of the intense bitterness of feeling elicited on both sides by the pending conflict of Church and State in Germany, and seems to indicate that matters cannot much longer continue as they are. And it must be remembered that this excoedingly plain-spoken, not to say violent, document on the rights of the Church and the present constitution of the Empire enumetes not from the Bishops, but from a mixed and chiefly lay association aid to contain 90,000 members and to have an income of 17,000 thalers, and acting, as the Government organs are careful to point out, under the suspices of the Parliamentary leader of the Centre, or Ultramontane, party. The fact that, while expressing accent loyalty to the "German fatherland" and the "German people," it has nothing but protests and demandations for the "German Provine" in the death minimum land the "German land the Empire," is no doubt significant; but we full as yet to detect any signs of that "internal split of the Ultranoutano party" which such language appears to its opponents to portend. The Papal Non possumus could not indeed be more suppliatically analysis. endorsed; the practical question is how far the American carries with it the sympathies of the great body of Catholics in the Empire. That question has taken a very tangible shape through the course of recent legislation, and an answer one way or the other will have to be given during the next few months. Prince Bismarck and Bishop Reinkens are, in different ways, about equally interested in the result.

Meanwhile, if we turn our eyes from Germany to Switzerland, the Old Catholics there appear to be advancing with rapid strides. But to an outsider their action looks even more revolutionary and of more questionable prudence than that of their colleague have not yet had to deal so systematically with minute questions of detail, because their organization is still very incomplete; but, so far as can be gathered from the sympathetic reports both of Ger-

man and English correspondents, their reforming tendencies in a Protestant direction seem to be more pronounced, and there is no one with the official or moral authority of Schulte and Reinkens to hold them in check. About seventy members were present at the assembly held on Sunday week at Bern, either as delegates of local unions or by special invitation from the Central Committee; Father Hyscinthe from Geneva, Pfarrer Herzog from Olten, and Keller of Aarau, who has always represented the extreme left of the Old Catholic movement, being conspicuous among them. The very first point brought under discussion, if it is thought unimportant, is at least a very significant one. The ancient saying that "there is nothing in a name" does not betray any very profound acquaintance with human nature or with history. An accomplished man who was elected to Parliament some years ago for a Scotch borough is said to have owed his success much more to the accident of "Stuart" occurring among his baptismal names, though his politics and constituency were Liberal, than to the various solid claims to the distinction which he undoubtedly posman and English correspondents, their reforming tendencies in a though his politics and constituency were Liberal, than to the various solid claims to the distinction which he undoubtedly possessed. And the magical influence exerted at critical periods by such names as "Christian," "Catholic," and "Protestant" will hardly be denied by any historical student. When therefore, a religious Congress course to proceedings by a long and computed will hardly be denied by any historical student. When, therefore, a religious Congress opens its proceedings by a long and animated debate as to whether the communion whose organization it is employed upon shall be styled the "Old Catholic," the "Christian Catholic," or the "Liberal Catholic" Church, one is tempted to surmise that it is either very much at sea or very little in harmony as to the real nature of its principles. The admiring reporter in the Allgemeins Zestung considers the title of "Old Catholic" objectionable, as well from its failing sufficiently to emphasize the need of reforms and the desire for reunion with other Christian confessions, as from the impossibility of fixing historically what ancient as from the impossibility of fixing historically what ancient Catholiciam really was. He does not, however, inform us whether these were the grounds of its rejection. The prefix of "Liberal" was open to the obvious criticism that it is rather a political than was open to the obvious criticism that it is rather a pointest than an ecclesiastical term, and that religious and political liberalism are neither necessarily nor invariably combined in the same persons. We should have thought ourselves that the title, ultimately adopted, of Christian Catholic (Christkatholisch)—which does not perhaps sound quite so strange in German as in English—was no less obviously amenable to the charge of a very clumsy tautology. But Pfarrer Gschwind commended it, if we rightly understand our informant, as uniting the advantages of "the sharpest antithesis to the Church of Rome and the common designation of all Christian confessions, while asserting the right designation of all Christian confessions, while asserting the right to make fresh reforms and to regenerate ancient human ideas of Christianity." The title, so explained, is certainly comprehensive enough, if it is somewhat vague, the only definite principle to which it commits the "Christian Catholica" being that their Roman Catholic rivals are not Christians or Catholics at all. For some reason or other a rider was passed that the French translation of the name should be Catholique-libéral. As there is, or was, an influential party in the French Church, known by that name but remaining in communion with Rome, the reasons for appropriating remaining in communion with Rome, the reasons for appropriating it are not very intelligible.

it are not very intolligible.

We have seen that the Bern Congress made very short work with the question of the Roman primacy, which the original programme of the Old Catholics at Munich distinctly acknowledged as resting on divine appointment. They seem next to have very narrowly escaped making a clean sweep of another important ecclesiastical institution, equally recognized as divine by the Munich Congress and generally accepted as such by a still larger majority of the Christian world. Among the clauses of the new scheme for regulating the relations of civil and ecclesiastical divisions of parishes, cantons, and the like, occurs a paragraph assigning to the Bishop "within these limits"—which are very narrowly circumscribed—"all the rights and duties belonging to his office according to Christian Catholic principles." This very modest recognition of the episcopate produced a storm of disapprobation. The deputies from the Jura and many other quarters insisted that Liberal Catholics had "a genuine horror of the very name." To this it was replied that their horror was only of "Prince-Hishops"—which is not much to the purpose, as the title, where it continues to exist at all, has ceased for nearly a century to be anycontinues to exist at all, has ceased for nearly a century to be anything but an empty form; and it was added that there were strong grounds of expediency and dogma for retaining Bishops, the grounds of expediency being that otherwise foreign Bishops would have to be applied to for ordination and confirmation. It. Winkler added that effectual means had been taken in the new constitution to restrict the action of the Bishops—who cannot in fact stir a finger without the sanction of a Council of four laymen and five ecclesiastics, to be elected every four years by the national Synod, and to cut off his powers of "tyrannizing." Moreover his election might be made for a time only and be revocable. That the conduct of the Vatican Bishops, both of the majority and minority, has done a good deal to undermine respect for their order, we were prepared to learn. But the notion that a Church calling itself "Catholic"—though with the supplementary prefix of "Christian"—should propose to dispense with the episcopate altogether must appear rather startling to others besides those "Romanists" whom the newly constituted body is so anxious to hold at arm's length. We have summarized the account of the discussion from the Allgemeins Zeivung. But it may be worth while, considering the Allgemeine Zeitung. But it may be worth while, considering the very remarkable nature of the contest, to quote the somewhat fuller and substantially accordant report given by the Times' Correspondent. After referring to the opposition of delegates

from the Bernese Jura, he proceeds as follows, showing that even by their warmest supporters in the Bern Congress Bishops are regarded as only a necessary evil:—

by their warmest supporters in the Bern Congress Rishops are regarded as only a necessary evil:—

A well-informed lay Delegate at once made a temperate and effective speech in support of Episcopacy, tracing back the institution to primitive and Apostolic times, and urging that, as Old Catholics, their aim was to reform abuses, not destroy the ancient Church organization, and that a Catholic Church without Bishops was out of the question. But the Jura Delegate found vigorous backers. Two strong speeches in support of his motion were immediately delivered by an able Professor of Berne University and by a Delegate from Zoffingen. A Basle Deputy added a few quiet but pungent words, saying that they might well afford to let the question of a Bishop stand over till they felt the want of one; for, said he, "I can assure you in our diocess since we got rid of our Bishop we have got on very well without him, and felt no inconvenience or loss from his absence." Thus far the opponents of Episcopacy were showing in force. Pfarrer Herseg had intimated his wish to speak, but the warmth of some expressions against Bishops had led him and Père Hyacinthe to get up and leave the room. Matters looked grave; a split seemed inevitable. Two or three leading layment, however, quietly went out to bring back the two priests; they remained alsent nearly half an hour. Meantime, Pfarrer Gschwind, who had quietly sat out the attacks, got up and made a characteristic and calming speech. He has sharply suffered from a Roman Bishop, and is well known not to cherish excessive admiration for the order. "Still," he said, "a Bishop is a necessity for us Catholics; yes, a necessity; though," he natvely added, amid much laughter, "I admit he is a necessary evil! But what then? We must guard against the evil, and this we shall do by carefully limiting his power and functions to what we find primitive Bishops exercised; such as Apostolic traditions." By this time Pfarrer for his intended speech. This he delivered remarkably well, with perfect calmnes

It was accordingly proposed to substitute the title of "Antistes" for Bishop, but to this it was objected by one speaker that the for Bishop, but to this it was objected by one speaker that the Catholic people would not understand the new name, which, he might have added, is more distinctively Roman than Bishop; while another reminded the Congress that the episcopate is common to the Eastern and Anglican Churches with the Roman Catholic. Even Keller felt the necessity of yielding on this point, and the assembly decided at length on retaining Bishops, but decided also that their tenure of office should be "revocable" by the netional Strad. On the whole we are inclined to think the the national Synod. On the whole we are inclined to think the position of a Christian Catholic Bishop, if any are forthcoming—there are no such personages in existence at present—will not be a very enviable one.

After making this concession to antiquated prejudices, the Congress evidently felt the necessity of vindicating its advanced chagress evidently felt the necessity of vindicating its advanced character in other respects, and it seems to have already outstripped the tolerably rapid progress of the Synod of Bonn. The use of Latin in all public services, the celibacy of the clergy, and the obligation of sacramental confession are definitively abolished. The election of the parish priests by the congregation is accepted as a fixed principle, and the clergy are said to be unanimous in desiring to restore communion in both kinds. Above all we are told "the Bible has been solemnly and publicly adopted as the standard of the truths to be taught." As this adoption of the Bible is put forward as a further and crowning protest against what the Pfarrer Gschwind called the "heathenish" errors of Rome, we must presume that the Bible interpreted by private judgment and Bible is put forward as a further and crowning protest against wink the Pfarrer Gschwind called the "heathenish" errors of Rome, we must presume that the Bible interpreted by private judgment and not by tradition is the principle intended. If so, we have a very near approach indeed to Chillingworth's famous definition of "the religion of Protestants." The "Swiss National Christian Catholic Church," which we are assured all who took part in the meeting were unanimously resolved to establish, may, for anything we know, be a model Christian institution. But, to judge from present appearances, its Catholicism does look likely to prove a rather evanescent quality. We do not forget that the followers of Ronge, a quarter of a century sgo, who repudiated the supernatural element of Christianity altogether, styled themselves "German Catholics," and they had of course the same right to do so, if they pleased, as one of the smallest of English sects has to arrogate to itself the lofty title of "the Catholic and Apostolic Church." Any man in these days may adopt what name he chooses, and a similar freedom is accorded to religious communities. Only it must be allowed that a violent reconstruction of established terminology has its practical inconveniences. reniences

veniences.

The body which in Germany is to be known as Christian Catholic, assumes, as we have seen the French designation of the Liberal Catholic Church. But the leading representative of Liberal Catholic principles in France does not seem to have gained many adherents. The Abbé Michaud is a man of far greater learning and mental power than Father Hyacinthe, though no matchefor him in popular gifts. But no prophet was ever more entirely without honour in his own country. His last work, Le Mourement Contemporain des Eglisse, exhibiting with much force the social and intellectual results of Ultramontaine admention on the

condition of France, has fallen almost stillborn from the press. condition of France, has fallen almost stillborn from the press. The organs of Ultramontanism and Liberalism are united in a conspiracy of silence against him. Neither M. Veuillot nor the République Française will accord him even a passing notice; the one will hear nothing of religious reform, and the other sees no need for a religion. French democracy takes its stand on positive science, and would have the State ignore all forms of belief and worship which do not interfere with public order. And patriotic sentiment in France has much more affinity just now with Ultramontanism than with a movement which originated in Germany and has its headquarters in the heart of the new Empire. That there is a wide-spread disbelief of the Vatican doguas among the educated classes, and even among the clerry, is confidently asserted by those who and even among the clergy, is confidently asserted by those who are most likely to be well informed, but national temperament and are most likely to be well informed, but national temperament and political feeling combine with personal motives of interest or indifferentism to keep them silent. What there is of genuine religious sentiment finds vent in pilgrinages and miracles. The violent outbreak of a sort of prophetic mania, which Bishop Dupanloup has vainly attempted to restrain, mingling dreams of the restored glories of France and of the Papacy, shows which way the current is setting. It is perhaps more wonderful, all things considered, that Michaud and Hvacinthe, being themselves Frenchmen, should have become what they are than that they should find no followers in France.

THE ROYAL ACADEMY.

A GAIN the collection of sculpture disappoints the expecta-At tions which were naturally raised when the Academy took possession of the spacious and well-lit Galleries in Burlington House. In former years, when complaints were heard of the low estate of plastic art in England, the ready reply was that few great artists would care to show their works in the cellar known as the "Black Hole" of Trafalgar Square. But now when, in place of a dungeon, sculptors are invited to occupy a "Vestibule," a "Hall," and a "Ciallery," it becomes but too apparent that the fault has never been so much in the means of exhibition as in the quality of the art. There is a class of work which is favoured by darkness and oblivion, and certainly the high light here thrown on marble, terra-cotta, and plaster makes conspicuous the inarticulate modelling, the weak generalization, and the vapid sentiment in which second-rate sculptors of the English school habitually take refuge. And the misfortune is, that some of our best men, such as Mr. Foley, R.A., and Mr. Woolner, A.R.A., are either absent or inadequately represented. At all events, in the 191 groups, figures, basteliefs, and busts here congregated, mediocrity is the rule, and reliefs, and busts here congregated, mediocrity is the rule, and merit the exception; and what strikes us as specially lumiliating is that such genius as presents itself—as, for example, in the creations of M. Carpeaux and M. Dalou—mostly comes from abroad. Yet at home there are sculptors still outside the Academy who would win distinction in any Callery in Europe. Mr. Armstead, for instance, in "Four Designs for the External Decoration of the New Colonial Offices" (1436-7-8-9), shows himself the true artist. On the opening of the Albert Memorial we directed special attention to the figure compositions in relief by this sculptor, as being among the best understood of their kind. Mr. Armstead has come from the practice of decorative work; but, judging from his career, which we have watched for some years, it seems probable that he will take a lead on the plastic side of monumental art.

Monumental art is divided among many aspirants. • Mr. Adams Monumental art is divided among many aspirants. • Mr. Adams-Acton, for instance, becomes monumental in the form of "A Fountain to be executed in Carrara Marble, for James Duncan, Esq., of Benmore" (1537). These and other like entries in the Catalogue which read as advertisements are usually the heralds of pretentious styles. Here the Catalogue announces an "Ideal Group"; why not at once allow a sculptor to describe his work as "high," "true," "noble"? As for "ideal," this is the tritest of stories, the conflict between a child and a swan, a theme of which there are replicas in the Vatican and elsawhere. The treatment is not "ideal," but "florid," after the manner of the late and corrupt Ronaissance; but Mr. Adams-Acton swan, a theme of which there are replicas in the Vatican and elsewhere. The treatment is not "ideal," but "florid," after the manner of the late and corrupt Ronaissance; but Mr. Adams-Acton can be grotesque also, as in a screaming likeness close by of the "Rev. Chas. II. Spurgeon in Terra-cotta" (1542). Monumental art threatens to assume the colour of brickdust. But some of our sculptors are glad when they have a chance to pass from brick into bronze; "Lord Mayo," a "bronze equestrian statuette" (1589), we owe to the steadygoing plodding talent of Mr. Thornycroft. This, and certain figures from Mr. Bell's "Wellington and the Scenes of his Victories" (1588), constitute a style of art not unworthy of a place on the top of chimney clocks. Yet it evidently receives favour as being good of its kind. But Mr. Thornycroft surpasses even his former self in two bronze statues of heroic size; the one is of "Melpomene, Muse of Tragedy" (1519), the other of "Olio, Muse of History" (1529). It is scarcely fitting to pick falls in such perfect pieces of compilation; the draperies are cast after the approved classic symmetry, the figures are posed in the manner of sublime negation and nonentity; but the worst of such classic revivals, except in the hands of a giant like Michael Angelo, or of some genius such as starts up ever and snow in the modern crassic revivals, except in the hands of a grant like Michael Angelo, or of some genius such as starts up ever and anon, in the modern French school, is that all has been done before, and for the most part better done. In the present instance we should imagine that Mr. Thomporoft cherished in his memory the well-known Muses

in the Vatican; and we need not add that, in point of art, plaster in the Vatican; and we need not add that, in point of art, plaster casts from those ancient figures, though scarcely in the finest classic style, are of more value than these claborate and coally modern bronzes "of heroic size." But Mr. Thornycroft, Mr. Thoed, and others of their way of working, enjoy privileges peculiarly their own. They have so completely fallen into the respectable routine of high art that they can scarcely need to trouble themselves any longer with the study of the actual model. At any rate, living nature does not venture to disturb the dead placidity of their ideal.

Though her its discount.

Bronze has its dangers. It is a material which, like wrought or east iron, is so strong that a sculptor can attempt to do too much in it. This is seen in an assailant and audacious mass of metal which has about as much modelling as a thunderbolt, "The Horse and his Master" (1520), by Mr. Rochm. The art is not of the Elgin Marbles, but of Astley's Circus, and yet there has seldom been seen in an arena horseflosh so coarse or so clumsy. The artist in these and others of his works does not seem to distinguish the above the distinguish the disting guish the obvious differences between sculpture and painting; Honheur in the "Horse Fair" did upon canvas he might repeat in bronze. Many are the examples in the art of sculpture of horses rearing into air on their hind legs. There are the famous classic horses on the Quirinal at Rome; there are two horses held in by riders on the Place de la Concorde at Paris; there is also an equestrian statue in Madrid, taken from a motive of Velasquez; and, lastly, the famous mounted figure of Peter the Great in St. Petersburg. But Mr. Boehm is far too self-confident to care about precedent, and thus, not deigning to be taught, his art has fallen into decadence. It is melancholy to see talent which once had promise of good things to come so completely frittered away, chiefly from forsaking beauty and the higher forms of nature for the sake of socident and exception, sometimes pushed even to caricature. We should scarcely have sometimes pushed even to caricature. We should scarcely have thought fit to give so much space to this mistaken work had not Mr. Boehm, at the Academy dinner, been pointed out for Academic distinction. Among bronze statuettes there is pretty sentiment and play of line in a "Girl Frightened by a Lizard" (1603), by Herr Wagmüller. Also may be noted "Racing" (1593), and "Hunting" (1597), soverally by Mr. Good; these statuettes have the salient character and sharp modelling of the Russian sculptor,

the salient character and sharp modelling of the Russian sculptor, M. Liebrich.

Sculpture of playful fancy or of creative imagination is not in the ascendant. "Leander Preparing to Cross the Hellespont" (1513), by Mr. Stephens, A.R.A., is a figure which for its care might win a medal for a student. But not even such encouragement is due to Mr. Marshall, R.A., for two lumps of terra-cotta, "The Old Story" (1524), and "The New Story" (1526). "Wrecked" (1517), by Mr. Leifchild, is little more than a sketch. When will this persistent student of Michael Angelo mature a work worthy of his talent? Among lady sculptors, a class who this year do less than ever, a word of encouragement is due to Miss Grant for the "Incident in the Life of St. Margaret" (1525), and to Miss Nottidge for "A Reminiscence of a Florentine Painter" (1486). M. Chesneau's "Fou d'été" (1580) is clover in the action and character habitual to the French school; while Signor Fontana's "Juliet" (1581), and Signor Braga's "Pudore Innocente" (1601), are as poor as ordinary shop goods in Italy. That such products gain admission at all seems to tell that the Academy is thankful to take whatever it can get.

Portrait busts, which as usual prependerate, are mostly poor, Of what to avoid, take the following:—Sir Noel Paton (1446), by Mrs. Hill ("Her Majesty's Linner for Scotland" appears sonewhat in the style of a river-god); Lord Wimmarleigh (1449), by Mr. Warrington Wood (this may be termed the handsome barber's block school of portraiture); "The Countesse Teresa Caracciolo" (1551), by Mr. Noble (this is the rampant Medusa-head sort of thing); "Bust of a Lady" (1567), by Mr. C. C. Adams, wholly without modelling; likewise another "Bust of a Lady" (1580) by Mr. Theed, is smoothed away until little or nothing is left. For intelligent reading of the head and for quietude in style we may commend the following:—"The late Dr. F. C. Webb" (1571),

by Mr. Theed, is smoothed away until little or nothing is left. For intelligent reading of the head and for quietude in style we may commend the following:—"The late Dr. F. C. Webb" (1571), by Mr. Birch; Miss Edith Wynne (1559), by Mr. J Edwards, and Sir Sydney Waterlow (1514), by Mr. Durham, A.R.A. For expression and Denner-like detail stand conspicuous Field-Marshal Sir George Pollock (1455), by Mr. Weekes, R.A., and Mr. Thomas Carlyle (1465), by Mr. Crittenden. But a climax to expression is reached by the aid of contrast in a couple of terra-cotta heads which, as a surf of practical loke, may have been placed by the authorities reached by the and of contrast in a couple of terra-cotta heads which, as a sort of practical joke, may have been placed by the authorities side by side. The one is of the Rev. Charles Spurgeon (1542), by Mr. Adams-Acton, the other of Mr. Frederick Leighton; R.A. (1542), by M. Dalou. Neither bust is satisfactory, and that of Mr. Leighton perhaps the least so, because of a pernicious principle which now more than ever pressils in portraiture, especially when the material is terra-cotts. The practice is to saive on a salient which how hote that ever posters in potential, specially when the material is terra-cotta. The practice is to seize on a salient trait and to exaggerate it; this is apt to lead to caricature, as in the cartoons in Vanity Fair, whereas the happy mean of Titian and of Reynolds nade the best of a man.

The revival of Gothic architecture has naturally been attended The revival of Gothic architecture has naturally been attended with a like movement in sculpture, especially in reliefs suited to ecclesiastical uses. Of such products the following are examples, some better, others worse, none first-rate:—"Panel in the Reredos of St. Stephen's Church, Lawisham" (1435), by Mr. Redfern; "Alto-relievo of the death of St. Joseph, for Sligo Cathedral" (1440), by Mr. Ruddock; "The Garden of Gethsemans—Panel in Terra-Cotta" (1441), by Mr. Tinworth; "St. John the Baptist Preaching" (1489), by Mr. Forsyth. This class of art needs, as it is capable of, vast improvement; a school of Christian sculpture has still to be formed in this country; the compositions which for years past have been carved mechanically are crowded and confused, often childish, and never noble; and yet on the façade of Wells Cathedral and in the churches of France are models in no way inferior to the examples of religious painting left to us by the old masters. Unfortunately the Renaissance came to mar the full development of Christian sculpture throughout Europe. And yet the present Exhibition shows that the fundamental principles of even Renaissant relief are ill understood. Take, for instance, Mr. Miller's "Hero Signalling Leander" (1442). As for Mr. Philipa's "Suffer Little Children" (1544), the work is without art of any sort.

French sculpture, in common with English sculpture, exemplices the general law that the plastic art of any period corresponds with the sister arts of construction and of painting. French sculpture is free and fanciful, it is capricious and clever, it passes according to the impulse of the moment from classic to romantic, and thence down to naturalistic and realistic. Indeed in France the schools of sculpture are almost as much divided among themselves as political parties. The two French sculptors whom we have this year to wolcome in the Academy—M. Carpeaux and M. Dalou—are representative of parties rather than of national art as a whole. M. Dalou, whose group in terra-cotta of a peasant mother with an infant at the breast created last year a furore, follows up his success by a naturalistic and picturesque group, "Hush-u-by, Baby" (1539). The mother is scated in a rocking-chair, which seems to pause for an instant between motion and rost, so nicely is the group poised. She is singing a lullaby to her child, and the voice as it issues from the open mouth—always a difficult matter to manage, yet managed consummately by Donatello in his well-known group of choristers—leaves lines as of palpitating seound upon the features. M. Dalou is one of those artists—too numerous in the present day—who do not care for beauty; neither does he condescend to refinenesits in treatment nor delicacies in detail. It is art, which, as we have said, is picturesque, holds in sculpture the same rank as general in painting. Since the sacces of Magnis's Reading Girl," to seat a figure in a chair has become a hackneyed device, of which we see likely to have more than enough. Take as a specimen "Kuitting" (1508). The artist, who is not maned, must have a marcellous taste for millinery; the execution has tho surface sparkle of an atched plate. M. de Brackeleer's fancy head in terra-cotta, "Ready for the Ball" (1575), relies on like tricks of the modeling tool. Curls, lace, and head ornamonts are merely decorative. The work is almost too well

ance with picturesque painting, genre incident, decorative accessories, and even surface texture.

M. Jean-Baptiste Carpenux, a winner of the Prix de Rome, a holder of a first-class medal and a member of the Legion of Henoux, stands conspicuous amongst those dexterous and adventurous sculptors who never hesitate for want of an idea, nor scruple as to the use of an expedient. In the International Exhibition of Paris in 1867 this artist preduced a portrait-statue of the Prince Imperial which charmed all comers by its simplicity, quietude, and good tasts. A greater contrast cannot possibly be conceived than between the style of that figure and the spirit which animates the now notorious "Groupe de la Danso—terra—cotta—model of Group executed for the New Opers House, Paris" (1515). This wholly exceptional, yet consummately clever composition, which only could come from France, consists of a circlet of Bacchanals who dance in rapid revelry around a central figure. The situation gives opportunity for varied attitude, animated movement, vivacious expression; and never have we seen a succession of planes passing from low relief to high relief and figures in the round, managed with greater knowledge and skill. As to the style there will managely be much diversity of opinion. It is evident that classic rules have been simply ignored; not even Bernini was ever so unsculptureque; and yet the modelling is sharp, brilliant, and abounding is character. The treatment, indeed, is so expressly pictorial, even to the management of light and shade, that the group might almost pass for a picture by Correggio translated into terra—cotts.

It will be inferred from what we have said that the collection as

It will be inferred from what we have said that the collection as a whole is discouraging. Our sculptors, with some few exceptions, lack the severe training and the fixity of principle demanded by an art which is not a semblance, but a reality, not a shadow, but a substance. For these reasons English sculpture is below the level of English painting. Such has been the general verdict whenever our sculptors have made themselves known in Continental Exampliations.

THE THEATRES.

A LTHOUGH we have more than once found fault with Mr. Like Dion Boncicault, it would not have occurred to us, as it has to an American editor of plays, to charge him with heing the originator of the Upholstery School of Comedy." It

may perhaps serve to gauge the decline of dramatic set that we find Old Heads and Young Heavis referred to by this editor as an example of a play in which "the deconstions and novel offects derivable from the appointments and accessories form the prominent features of the piece"; whereas on a sorvey of the theatres of London at the present moment, we should have selected the revival of this play as an example that success is sometimes sought and found in the good and complete acting of a well-written piece rather than in the appointments suffice accessories on which so many managers depend. But it is all a question of degree, and in the present predominance of the "upholstery" or "dry goods" drama we are thankful for the production of any play which at least pretends to the character of a literary composition. Mr. Boucicault indeed has lately seemed to despise and reject this character for his productions. He has depended upon coarse sensationalism and gorgeous decoration, and we might almost say that the most severe censure of his recent plays is to compare them with those which he wrote thirty years ago. The American editor considered that the chief defect of Mr. Boucicault's early productions was the utter heartlessness that pervaded his pictures of contemporary manners. It would be well in these days of intellectual poverty if a dramatist had no worse fault than one which he would share with Congreve. It would be something at any rate to find an author who might afford material for criticism on principles of art. Lately Mr. Boucicault has not troubled himself to paint any picture at all, but has been content with a rude and garish daub. In one instance, indeed, we had to complain, not of heartlessness, but the most open to censure" of any of this author's productions, but we who have lived to see Formosa can find by comparison almost nothing that is not praiseworthy in his earlier work.

Indeed the faults which this editor discerns could have been in no ago of the drama serious. He trusts that the British peerage could never have famished the prototypes of Lord paceage come never have turnshed the prototypes of Large and Lady Pompion, and we are glad to find that an American has an amount of faith in the saying notlesse obligs which exceeds our own. Distance perhaps lends enclantment to the view. He thinks too that Colonel Rocket is too ignorant and coarse to resemble even slightly any British officer of rank. Nowadays the portrait would be an extravagant caricature, but thirty years ago it was more common to find officers who had passed their professional lives almost without break in India, and whose conversetion on their return home had an ineradicable savour of the camp. Colonel Rocket uses military metaphors just as innumerable characters on the stage and in novels use mixal ones. The superior popularity of the mayy at the end of the last and the beginning of the present century was the reason that naval terms have almost become part of our common speech. A sporting writer lately described the favourite for the Oaks coming "with a wet sail" from the corner, and every body understood him. Colonel Rocket employs military terms on the assumption that every body understands him, and it is a pleasant conceit to make him address his young and pretty daughter as if he were exercising a troop of his in-yourste Bombay cavalry. In the dispute with Lord Pompion about vourite Bombay envalry. In the dispute with Lord Pompion about the marriage of their children, he puts the question between modern merit and ancient pedigree none the worse for looking at it from his own professional point of view:—"That peer is as proud of the Norman puddle that susgnates in his heart as if his country had ever seen any of it. Battle of Hastings! Ha! a pretty affair that must have been, when there's no mention of it in the Army List. Ha! damme if I think there ever was such a battle."

His daughter, he says, need not look up to blood royal. He mother was the Begum of Currypore, princess of the first caste. mother was the Begun of Currypere, princess of the first caste. She was the only one of her family his guns had left alive. He took her in a brisk charge after she had shot two horses under him, and he will say, without offence, that Lady Pompion don't show such blood as that. It is not the fault of the young lady who plays Kate Rocket that she is so fair as to make her Regum mother appear very fabulous. The Earl warms him that znarriage between the young people is impossible, and he must not blame the Earl's son if his daughter's name suffers by their intercourse.

"Blame!" cries the furious old soldier "containly not." cries the furious old soldier, "certainly not. I'll blow Blame! his brains out"; and he orders his daughter to propage to murch from the Earl's house next day. The scene of the last act is laid in the grounds of the Colonel's villa, of which the name "Ghuznee Lodge" would suffice to date the play. A veteran in Bombay cavalry uniform, and duly provided with sentry-box, keeps guard, which contains a field above days the agreement. while another attendant directs a field-glass down the avenue, and a third has been detached with an old howitzer to the top of the hill to signal any approach. The exaggeration here is of the series where, to the delight of successive generation has been as the delight of successive generation. kind as in those pages where, to the delight of successive generations, Uncle Toby and Corporal Trim have prosecuted the siege of

Lille.

As an example of theutrical ingenuity the presentation of Lord Pompion's son in livery to his father would be hard to best. A harrister's clerk from the Temple has been dressed up to personate an election agent employed by Lord Pompion, and after disposing of immediate business, his Lordship makes some cautious imquiries which the clever imposter understands to refer to an illegitimate son of his Lordship who was committed to the care of the firm of which he pursued to be a member of the imposter tells Lord Pompion of carrying of Miss Rocket.

The imposter tells Lord Pompion that the person for whom he was

impuising, who goes by the name of "lieb," hoppens to be in the house, and effect to have him sent up, skyly adding that he cen't hap thinking there is a resemblance between his factures and those of his Lordship's son. It would be difficult to praise too highly the cleverages of this scene. Lord Pempion of course supposes that his agents have penetrased his secret, as indeed, if they were good for anything in electioneering, they probably would. The pretended "Bob" is introduced. He is puzzled, but says nothing to dispel Lord Pumpion's illusion that he is not himself, but his brother. His Lordship is amused at the closeness of the resemblance and goes off nurmuring to himself, "Fatal image—poor boy—Sarah Jane—oh memory!" The American editor is indignant at the "degrading circumstances" under which "such a clergyman" as Jesse Rural is depicted. But considering what Mr. Boucleault has written since, he appears in this early play a pattern of religion and morality. Indeed both the character and circumstances of Jesse Rural are more respectable than those of some clerical personages that we have seen on the modern stage. The worst that can be said of him is that we sometimes forget that he is a clergyman, and observe him is that we sometimes forget that he is a clergyman, and observe only that he is a benevolent and rather silly old gentleman. The part which belonged originally to the older Farren is played by the son in a way that will increase his reputation. All the other parts are well sustained, and with a little more practice the piece will go so well as to attract and anuse the public for some time

The programme of the St. James's Theatre has probably been selected on the principle that a gloomy first piece enhances the success of a lively opera. The novel of East Lynne was adapted to the stage by Mr. Oxenford, and the play thus produced has been revived at the St. James's Theatre, where it precedes Vert Vert. Mr. Oxenford, being an experienced dramatist, has seen good to mitigate the tragic solemnity of Mrs. Wood's novel by the introduction or wither development of a policy consequence. troduction, or rather development, of a policeman, who sustains the principal burden of one of the four acts of the play, and delights the house by his observations on the wickedness of a tramp from whom only twopence can be extorted, and by announcing that he which much impression can be made is Lady Isabel. The other characters do not greatly tax the energies of the company. Mr. Trollope has lately performed, as well as could be expected, the difficult task of marrying an earl's daughter to a failor. But Mrs. Wood undertook the more difficult task of making an earl's daughter commit adultery with a mean secondrel. It is hard to believe that Lady is thel could marry Mr. Carlyle, and still more so that she could run away with Levison. The impro-bability of her return as governess to the house where she had lived as wife is insurmountably violent in the story, but it yields in the play an undeniably Jorcible situation. The adapter has prudently confined himself to developing this leading feature, and has not complicated his play with the murder and all that follows on it in the novel. Levison is arrested and handcuffed under a gonoral impression that it serves him right for behaving so hadly to Lady Isabel, and the conduct of the facetions policeman towards his prisoner, although entirely contrary to law and regulation, is in exact harmony with the feelings of the audience. Mr. Carlyle upon the stage is a mere dummy, and if it be difficult to explain why Lady Isabel left home, it would not be easy to find any motive beyond duty that could keep her there. We do not think that a better play could have been constructed out of this not particularly hopeful novel, and we cannot help feeling that the death of Lady Isabel prepares one to enjoy by force of contrast the burial of Vert Vert.

We ought not to mention revivals without referring to the careful performance of the School for Scandal at the Prince of Wales's Theatre. This cannot, however, be called a revival, because the play is immortal, nor can we have anything particular to say about either the piece or the performers when both are so thoroughly well known. The pains that have been taken in producing the play are rewarded with full houses, and we ought particularly to notice the introduction of a minuet, although this is more than is "set down" for the actors by the author. At another theatre, in a play wherein the same dame is "set down," it was omitted. If this was because the performers were unequal to the task, the confession would not be creditable to the stage education of the present day.

RACING AT ASCOT.

RACING AT ASCOT.

PACING on the second day of the Ascot meeting commenced with the Biennial over the Old Mile, for which Lemmos, Couronne de Fer, Spectator, and Quantock came to the post. As two-year-olds, Lemmos, Spectator, and Couronne de Fer took part in the race last year, and finished in the order named. This year the result was just the same, and the mile suited Lemmos much better than the mile and five furlongs the day before in the Prince of Wales's Stakes. Spectator also improved on his Two Thousand form so far as to beat the second in the Darby by a head, and the hill and a strong run race together were fatel to the chances of Couronne de Fer. Quantock finished last of all, and all ideas of his being a wender in consequence of his easy defeat of Reverberation at Northampton were at once dispelled. Atlantic had no difficulty in giving 12 lbs. to Boscobel and Peut-Ste in the Ascot Derby; but grave doubt was felt whether Apology could concede

as much as 17 lbs. to Blanchulleur in the Cormation States over the Old Mile. Certainly the North-country mare gave Blanche-fleur all that amount of besting in the Dorby, but over the shorter One Thomsand course Lord Fulmouth's filly succeeded in getting masers to the winner, and it was feared that a mile might not be distance enough to eachle Apology to exhibit her superior staying powers. All dentity, however, were sat at rest amounts of the Street whose Archary carries out, and seta mile maight not be distance enough to ename Aponary so washibit her appearer staying powers. All deades, however, were set at rest opposite the Stand, where Apology came out, and, setting Blanchellour in an instant, won easily by a length, thus gaining for herself new harels. Immediately afterwants she was very prudently struck out of the Gold Cup, her owner not wishing prudently struck out of the Gold Cup, her owner not wishing to jeopardize her St. Leger chance by working her too severely on such hard ground. The Royal Munt Cup came next, and we referred last week to the easy votory of Lowlander. It would appear that more than one owner has possessed this horse without discovering his real merits, which became more and more clearly shown as Ascot week were eas. Heing unfashionally bred on his are's side, Ascot week were ea. Heing unfashionably bred on his sire's side, he was probably little thought of as a flat racer, Dalesman being generally looked upon as more likely to get steeplechasers and hunters. Dalesman, who was bred by the late Daron Rothschild, was a horse of amazing power, and in that respect, and particularly as regards his shoulders, his son Lowlander strongly resembles him. His speed he must inherit from his dam Lufra, who frequently distinguished herself over short courses. The ridiculous case with which the race was won was the more remarkable because the field was really a distinguished one in respect of speed. Among the twenty-six competitors were Walnut, Sulcium, Oxford Mixture, Blenheim, Minister, Maid of Perth, Flower of Porset, Mr. Fox — whose wonderful trial with I'lower of Dorsot was on every one's lips -- Spectator, The Preacher, and many others. A good run might therefore have been fairly expected, and the handicapper cannot have been much flattered at seeing it end, to all intents and purposes, in a walk-over. Handicappers are invariably lement to horses that have abandoned the jumping business and seturned to the fist, and as a this occasion, however, the handicapper caught a Tartar, and the subsequent performances of Lowlander during the week seem to show that he is still indifferent to weight and distance. It may be convenient to refer to them at once. On the third day, then, he went the Windsor Limited Handicap--over the last six furlongs he won the Wildsor Einsteel Handreap—Seer the last six furlongs of the New Mile—beating Thoru, at weight for age. Drummond, Oxonian, Thunder, Somerset, Delay, and Maid of Perth. And on the last day, carrying 10 st. 2 lbs., he won the Ascot Plate, ower a mile and a quarter course, beating Thorn and Drummond again, as well as Mr. Winkle, King of Tyne, and five more. These races were just as decisively won as the Royal Hunt Cup, the ex-hurdle-racer in all three leaving his antagonists when called upon and minimum at his absence.

winning at his pleasure.

Reverting to Wednesday's racing, we find Ladylove adding the Twenty-second Triennial to her already long list of victories, and Galopin cantering away in the Fernhill from Shumber, tories, and Galopin cantering away in the Fernhill from Shanber, Lady Glenorchy, and Quantock, the best named of the quartet never being able to live the pace. The Visitor's Plats ended in a match between Lilian and Encore, which Mr. Savile's murchad little difficulty in winning. On the Cup day sport commenced with the St. James's Palace Stakes, in which Leolinus and Ecossais met at even weights, and Aquilo received an allowance of 7 lbs. On public form Aquilo was bound to beat the pair on these terms, for he was as good as, if not better than, Atlantic in the Derby over the first mile, and the shorter distance was no advantage to Leolinus, who prefers a scope of ground. Pursuing the same tactics as in the Prince of Wales a Stakes on the Tuesday, Leolinus made the running, and, An i o running ungenerously in Leolinus made the running, and, Ap i o running ungenerously in the first part of the race, and Ecosonis flinching when the struggle came, he was never actually headed, and ultimately won by a came, he was never actually headed, and ultimately won by a neck. At the same time, though Aquilo began hadly, and seemed either outpaced or unwilling to go, he mended very considerably in the last half-mile, and made up his ground rapidly. As he was finishing very gamely, and both Ecosais and Loolinus were hanging, he might just have won had he not been shut in between the pair. In consequence of this mischance Aquilo secured the race by a neck, Ecosais finishing as far in front of Aquilo. The Biennial over the Old Mile fell to Cambysce in consequence of The Colonel falling lance in the last quarter of a mile; and this accident was the solitary blow during the afternoon mile; and this accident was the solitary blow during the afternoon to backers, who otherwise had a career of uninterrupted success. Indeed, throughout the meeting fortune was dead against the Indeed, throughout the meeting fortune was dead against the bookmakers, who will long remember the Ascot week of 1874. In regard to the Gold Cup there is really little to add to the remarks we made last week. We were in error in soying that Marie Stuart carried the yellow jucket and black cap, for Mr. Merry's first colours were borne by Donauster. The berby winner of 1873 was so far behind at one part of the race that no one dreamed of seeing him rapidly overlaud the leaders in the straight. His game struggle with Flageolet for second honours was quite the surprise of the race, and he has not run so well since his memorable contest with Marie Stuart in the St. Legor. A horse of delicate constitution, he has always taken some time to recover of delicate constitution, he has always taken some time to recover from the effects of a hard race; and very likely at his next appearance he will not show to such advantage as last week. Had Apology not been struck out, the brilliancy of the Cup field would have been complete. It is idle to conjecture whether she would have won or not. We have no data on which to form any confident conclusion; but we may be sure she would have acquitted hemself well. Her owner exercised a wise discretion in withdrawing her, for the great three-year-old race was quite sufficient for one.

season. If she stands training there may be hopes in store for her next year. Ladylove having won the Twelfth New Biennial from Seymour and Brother to Ryshworth, and Lowlander having secured the Windsor Handicap, the New Stakes came on for decision, and again it was shown how much weight a good two-year-old can give away to horses of his own age. Indeed this particular race is remarkable for the victories of penalized horses, and on this occasion Galopin, with a the extra to carry made minesquest of his store overcounts. for the victories of penalized horses, and on this occasion Galopin, with 9 lbs. extra to carry, made mincement of his ten opponents, among whom were Vasco di Gama, winner of the Maiden Plate on the first day of the meeting; Vas Victis, second to Cashmere for the Althorp Park Stakes; Dreadnought, a remarkably fine-looking, but backward, colt of Lord Falmouth's; and the colt by Trumpeter out of Crytheia. Galopin, a son of Vedette, and own brother to Vex, herself a speedy mare, won with the greatest case, and is undoubtedly the fastest two-year-old that has been seen this year. Prince Charlie made up for his defeat on the first day by Blenheim by cantering away in the All-Aged Stakes from Montargis and Andred; but Montargis has clearly not lost his speed through being trained for a long race, for he disposed of Andred most effectually.

The meeting preserved its interest up to the very last, and the

The meeting preserved its interest up to the very last, and the hollow defeat of Mr. Fox in the Wokingham Stakes exposed the slender grounds on which he was made an equal favourite with Lowlander for the Royal Hunt Cup. A very select field of five dared the three miles of the Alexandra Plate course, and three of the five were French-bred Boiard, Flageolet, and Revigny, while the other two, King Lud and Preacher, were the property of the solitary English sportsman who thought it worth his while to compete for a prize of eleven hundred pounds. The Preacher was of course started to make the running for his stable companion, King Lud, who looked well and fresh also, having the advantage over Boiard of not having a long Cup race already in him. The Preacher executed his mission with great success for more than two miles, after which the race resolved itself into a match between King Lud and Boiard. The former had certainly all the worst of it up the straight, but that powerful horseman Custance kept driving him along, while possibly the rider of Boiard made a little too sure of the race. Anyhow the victory was in doubt up to the last fifty yards, when Boiard began to lang on King Lud, and Carver chivalrously pulling him out of his stride to avoid any unfair pressure on Lord Lonsdale's horse deserves as much honour as his conqueror. Flageolet, who on this occasion made a waiting race instead of forcing the running as in the Cup, did not gain anything by the change of tactice, and could not get so near Boiard as on the Thursday; and Revigny was nover in the race. Lord Lonsdale's judgment in purchasing King Lud at a high figure at the sale of Lord Zetland's horses, though much questioned at the time, has been fully justified The meeting preserved its interest up to the very last, and the purchasing King Lud at a high figure at the sale of Lord Zetland's horses, though much questioned at the time, has been fully justified by results, as he has since carried off the Cesarewitch as well as the Alexandra Plate, and was never better in his life than he is now. The proverbial "couple" started for the Queen's Plate, but now. The proverbial "Couple" started for the Queen's Plate, but at any rate there was something more than a show of a race between Coventry and Lilian, for they ran close together for the last two miles of the sovere course, and, after a most desperate finish, horses and riders being both pretty well exhausted, Lilian defeated the Ascot Stakes winner by a head.

MR. OLDFIELD AND THE SATURDAY REVIEW.

MR. EDMUND OLDFIELD has addressed a letter to the Times impugning our article of last week on St. Paul's Cathedral, and asserting that it contains "so serious an imputation on the good faith" of himself and his brother protesters as to compel him to meet it with an answer. We shall deal directly with his allegations, only premising that we made no imputations, but morely stated facts which had come to us in so authentic a form as to stated nets which and come to us in so authentic a form as to their accuracy. The first point at which Mr. Oldfield cavils is that we call the sketches with which Mr. Burges filled up his model "rough," whereas Mr. Oldfield considers them "highly elaborated." This is a mere dispute about words; they were not the final cartoons, nor even the small-scale. drawings for those cartoons, but the first ideas of the architect anterior to consultation with any artist, and subject to any amount of criticism. We should be obliged to Mr. Oldfield for the suggestion of a word which could more succinctly describe sketches of this kind than "rough." The degree of trouble which Mr. Burges's employé took about them is nothing to the question, subject as they were to unlimited alteration in every particular. According to Mr. Oldfield we could not call the first cast of any document its "rough draft" if it were printed with the same type and on the

same paper as the final form.

But the statement that in submitting these sketches Mr. Burges named to the Committee the artists he intended to employ is a representation which neither the architect nor his employers can representation which neither the architect nor his employers case accept. We assert this upon the direct testimony of both parties given in the Times of Friday, which contains the replies of the majority of the Executive Committee to the protest, and of Mr. Burges to Mr. Oldfield. Mr. Burges named certain gentlemen of that peculiar rank in the artistic hierarchy which made it possible for him profitably to consult them at the "rough" stage, as he could not have done R.A.'s. On their computations he based the figures which have the figures that Committee but neither he my the Committee. then laid before the Committee, but neither he nor the Committee

as a whole took this as any indication that they were to be supplyed. The choice, and even the negotiations preliminary to a choice, with artists of the first rank, was obviously a step in the affair subsequent to the general acceptance of the design.

Mr. Oldfield's second point, "that neither then nor at any other time did Mr. Burges recommend to the Fine Arts Committee any artist who could, however laxly, be entitled 'eminent,' or said to have specially studied the Italian masters of the sixteenth century," is simply our own statement in other words. The Fine Arts Committee, as we explained in our late article, held three meetings. The first one to the expressed disappointment of a portion of the Arts Committee, as we explained in our late article, held three meetings. The first one, to the expressed disappointment of a portion of the body which did not sign the recent protest, only sat some two minutes, and simply ordered Mr. Burges to go on with his design without treubling themselves to discuss the principle of the work with him. What took place at the second meeting we have just explained; and as the Fine Arts Committee on its third assembling condemned Mr. Burges have majority of one without any formal area instance. and as the Fine Arts Committee on its third assembling condemned Mr. Burges by a majority of one without any formal examination of the details of his scheme, it may easily be understood that he had no chance of recommending anything. Mr. Oldfield recurs to the fact that the specific selection of first-class artists was the act of the Executive Committee, subsequently to the dissolution (for which all its own members voted) of the subordinate Fine Arts Committee, and he uses the not very original quotation Fas et all the total deems which if it means enveloped is intended to convey the hoste docers, which, if it means anything, is intended to convey the impression that this step was taken in consequence of the protest of the four dissentients. Had Mr. Oldfield gone to that meeting—as he might have done, for the Fine Arts Committee was only a sub-Committee of the "Executive," and those who actually took part in it expected to have met him there—he would have known that there was absolutely no foundation for his informace. known that there was absolutely no foundation for his inference. As he chose to be absent, it would have been more judicious to abstain from such injurious imputations.

abstain from such injurious imputations.

We called the sum of 400,000/.—as the calculated expense of the complete work—"imaginary," and we adhere to the word. It was the guess of the author of a description of Mr. Burges's models which appeared a few weeks since. The descriptive portion of that pauphlet deserves great praise for its fulness and its accuracy, but the paragraph at the close on the "estimated cost" was the product of calculations made by the writer on his own responsibility, and without the authority either of the Committee or of Mr. Burges, who was then out of England, and who has in his letter to the Times disclaimed the authorities.

Our controversy is with Mr. Oldfield personally, and not with the four remonstrants, and we have therefore passed over the assertion which occurs early in his letter—"Upon the general assertion which occurs early in his letter—"Upon the general merits of Mr. Burges's design I shall say nothing, as my three colleagues and myself have advisedly abstained from addressing to the public, either openly or anonymously, arguments which it was their duty, however vainly, to submit to the Executive Committee." We are glad to be assured by one of its authors that the statements contained in the protest are not arguments, but it passes our reasoning powers to understand how—as Mr. Oldfield implies—silence upon the general merits of Mr. Burges's design is the logical sequence of what those protesters have addressed to the public. Such phrases as these which occur in the protest, "crudeness and violence of many of the tints." "confused and gaudy," ness and violence of many of the tints," "confused and gaudy," "like all false constructions false also in taste," "essentially valgar," "the debasement of art, the corruption of public taste, and

the discredit of the country," appear to us to be very like saying something "upon the general merits of Mr. Burges's design."

Ilaving dealt with his assertions, we should gladly have parted from Mr. Oldfield in good fellowship, and attributed the misstatements into which he has fallen to the polemic inaccuracy so frequently engendered by artistic controversy; but the tone of his last scutence is so extraordinary in a controversialist fighting according to the accepted laws of literary debate, that we cannot let it pass in silence:—"As I am not practised in vituperation, I shall leave it to others to apply the fitting expression to a writer who can bring such a charge upon such evidence as is here exposed." Mr. Oldfield's allegation therefore is that we have not only "brought a charge"—which we deny, unless stating facts be bringing a charge—but "auch a charge" that it requires some one "practised in vituperation" to "apply the expression" "fitting" for us. We can assure Mr. Oldfield that, at whatever disadvantage we may find ourselves in consequence of our resolu-tion, we shall, so long as our discussion with him may last, very carefully abstain from imitating his method of controversy.

REVIEWS.

LETTERS FROM INDIA AND KASHMIR.

IT may be very necessary to hang a Killadar," the Duke of Wellington is said to have written to an officer who had reported that he had performed that act of summary retribution after the capture of an Indian fort, "but not necessary to write about it." In the same strain we might say that it is very desirable that gentlement of leisure and independence should make the grand tour of India, but not at all desirable that they should write books about it. The anknown author of the publication before us somewhat reminds us

* Letters from India and Kashmir: written 1870; Mustraled and anno-

of the literary gentlemen in Pickwick who wrote on Chinese Metaphysics by studying for the first part of his subject under the letter C and for the latter under the letter M, and combining his information. The basis of the book is the series of letters which the writer very naturally addressed to his father during his travels, and we by no means say that filial piety may not, under particular circumstances, turn an affectionate son into a successful author. Indeed the very best book on purely "Anglo-Indian domestic life" that we know of was commenced solely from the desire of the author, Mr. Grant, to place before his mother a minute and accurate description of life in Bengal under punkshs and in bungalows, with all its unfamiliar domestic economy. But in the present instance it appears to have struck the writer that he ought to give weight and dignity to any reprint of his letters by notes or passages from older and more experienced authors. Accordingly, as he admits, he has rummaged libraries and has padded his book with citations from travellers, old and new, scientific journals, ponderous and accurate histories, and semi-official documents. We go from Moore and Southey to Grant Duff, and from Tavornier go from Moore and Southey to Grant Duff, and from Tavernier and Tom Coryat, who went over a large part of India on foot, to Professor Blochmann and to General Cunningham on Aryan archi-Professor Blochmann and to General Cunningham on Aryan architecture. A consciousness of the effect likely to be produced is painfully evident, for the author fears that he has "produced but a hybrid narrative, combining neither the freshness of the originals nor the importance of the works from which I have too liberally drawn." The excuse profered is a very common one—"It is too late to alter or rearrange." Why this should be does not very clearly appear, seeing that the tourist saw and wrote in 1870, and that he was metamorphosed into an author only in 1873. We cannot admit a plea of this sort for a book on India, hastily written, ill directed, not duly revised, and sent into the world with all its original imperfections, in the hope that a reference to well-known travellers and authors, or the cloak of domestic ence to well-known travellers and authors, or the cloak of domestic affection, may disarm criticism. All we can conscientiously say of the volume is this. It carries the reader over scenes which it would require considerable ingenuity to invest with dulness. It is enriched with a good number of attractive illustrations which two accomplished artists have produced from sketches taken on the spot. It is neither malevolent nor pedantic. The experiences of the writer might have formed the subject of an excellent lecture delivered before a Mechanics' Institute, or a select circle of friends and acquaintances who wished to know the cost and character of an Indian trip. But it abounds in blunders, and there is nothing in it which, apart from uneventful personality, has not

been recently told by several able pens.

The route selected shows, however, considerable judgment, and may be held up to imitation in its general outline. The writer, landing at Bombay, a description of which was wholly superfluous, ran up to the hill stations of Matheran, Mahableshwar, and Poona. Returning to the Presidency, he ran down the coast to Calicut and thence by Boypoor to the Neilgherry Hills. But, instead of descending on Madras from Ootacamund, he came back to the coast and paid a visit to Carlon and a come sand to the the coast and paid a visit to Ceylon, and so came round to the Southern Presidency. After seeing how the native kingdom of Mysore looked under British administration, our author went down again to Madras and approached Calcutta in the old-fashioned, impressive, and orthodox manner by the Sand Heads, Saugor Island, Kedgeree, and Garden Reach. The modern traveller who, in order to save time, enters Calcutta by a railway journey of some sixty-five hours direct from Bombay, arrives at the railway terminus of Howrah, where, amidst dust and smoke, ignoble native craft on the river, low lines of tiled bazaars, doubtful boarding-houses and unquestionable grog-shops, he finds little to justify the appellation usually bestowed on the metropolis of India. Once at Calcutta, the trip "up country" is marked out for most travellers by inexorable precedents as well as by the facilities of the rail. Benares, Allahabad, Lucknow, Delhi, Simla, Lahore, Mecrut, and the Devrah Doon may all be got through in a two months' tour, unless indeed a traveller chooses, as in the case before us, to cheat the hot or rainy weather by spending it in Cashmere, the finest of climates and the loveliest of valleys. The return homewards was made by Jubbulpore and Central India, and it included a short stay at Gon and a

pilgrimage to the shrine of St. Francis Xavier.

Now there is very little in this round of travels which is not within the ordinary experience of civilians worn out with cutchery, of subalterns emancipated from drill, or of Presidency barristers fresh from what Thackeray, whose knowledge of India was amusing and peculiar, specified as the great suit of Mucketies was amusing and peculiar, specified as the great suit of Muckeetjee Bucksetjee rersus Ram Chunder Behaudur. For an Englishman to publish a book, after a year's experience of such a vast and difficult country as India, he should have a keen eye for colour and scenery, or some ability to throw light on obvious but unsolved political problems. The gentleman who has for some size been weekly enlightening the problems. time past been weekly enlightening the renders of the Daily News on the famine is quite an instance in point. The simplicity of some of his experiences may raise a smile. He simplicity of some of his experiences may raise a smile. He occasionally blunders in names and customs. He has already enriched the revenue and official vocabulary of an Anglo-Indian with several mysterious and novel terms which would have pusaled the late Mr. Thomason or Sir G. Campbell. But there is no doubt that the Special Correspondent has a quick eye for the salient points of a great crisis, and his lively and praphic descriptions of Indian crowds, villages, and hazars, sunrises and sunsets, may be read with pleasure even by those who think that his remedies and suggestions for visible abuses are inappropriate, or who know that they have been already tried and failed. We

proceed to justify our observations by indicating some of the errors into which the publisher of these travels has fallen, and which reference to any flistory of India would have taught him to avoid.

There is little compulsion on Indian travellers to quote Hindustani at all, and none whatever to mar it in quotation. The vernacular phrases scattered through the book, which the author has mirked up at hotels and nacular phrases scattered through the book, which the author has picked up at hotels and bungalows, are on a par with the kind of English which the typical groom in a vaudeville at the Palais Royal Theatre is made to talk for the amusement of Parisians. At page 90 we are told that the lower class of natives call Calcutta to this day Acharnak, from Job Charnock, "an old mariner." This worthy was not exactly an old mariner, but he was the Clovernor or President of the settlement at the end of the seventeenth century, and his name still designates, not Calcutts itself. teenth century, and his name still designates, not Calcutts itself, but, as every Anglo-Indian knows, the cantonment of Barrackpore, fifteen miles off. If the name of this person deserved montion inteen miles off. If the name of this person deserved mortion in a book of travels, more might have easily been told us about him. Oddly enough, by a combination of circumstances, he appears in Indian history as the author of the transfer of the seat of Government from the factory at Hooghly to Calcutta. In the reign of James II. the Bongal merchants, who had been constantly plun-James 11. the Hengal merchants, who had been constantly plundered, worried, and insulted, wanted a spot which they could fortify, or where they could resist the exactions of the Nawab of Bengal. Nothing could exceed the extravagance and absurdity of the line taken by the Court of Directors of the day. They ordered their President to march from Chittagong on the coast to Dacca, and capture it, and their Commodors, one Captain Nicolson, to prefer a claim to compensation for "indirect and direct damages" to prefer a claim to compensation for "indirect and direct damages to the amount of nearly three-quarters of a million. This was to the Emperor Aurungzebe, at the head of the huge and undivided the Emperor Aurungzebe, at the head of the huge and undivided Mozul Empire. Charnock and Nicolson contented themselves with burning towns and villages, capturing native ships, and defying Mahommedan officials. At length both parties got tired of these reprisals, and permission was given to the English to trade in Bengal without interference. So, in 1691, Charnock established himself at a village which is described in old maps and grants as Chuttanutty or Scotanoctty. On this nucleus the President was further permitted to reut two "small and adjacent" villages known as Calcutta and Govindpore. The Directors were so overioved at these results that they granted their President a so overjoyed at these results that they granted their President a magnificent salary of two hundred rupos a month, with a personal addition of another hundred. Antiquaries have traced out the position of these ancient villages in the vast capital to which they have swelled. Chuttanutty is bisected by the Chitpere road in the densest part of the native town. Calcutta is occupied by the official and commercial buildings in the neighbourhood of the old Cathedral, Tank Square, and Government House. And all traces of a village named Govindpore have been obliterated by truces of a village named (toyindpore have been obliterated by the Esplanade and the Fort. Curious traditions survive about the old merchant who was the predecessor of Hastings and Wellesley. Charnock was, as it is termed, addicted to native ways. He is said to have rescued a Suttee from the funeral pyro of her husband, to have married her, and, when she died, to have sacrificed annually a cock on her tomb. Some semi-classical reminiscences must have dictated this edifying custom for the fewl is an about particular to all Hidden. custom, for the fowl is an abonination to all Hindus.

"England," we are next informed by the author, "has been burdered with a guarantee on upwards of 180 millions aunk in the construction" of railways. England, as we hope every shareholder in Indian works of this kind is duly aware, has been burdened with nothing of the sort. The guarantee is that of the Indian Government, confirmed, indeed, by the Secretary of State, but based on the revenues of India, and on nothing beyond. The native game of Pachisi is not backgammon. This latter game is best represented by the Persian term Takhtah-nard. Noither is Pachisi ordinarily played by emperors and kings, but by dirty naked little boys in every baznar or village in India. The water at Simla is not poisonous, but only deficient in quantity, and it is not brought from the base of the hills, which would be thirty-eight miles off, but from springs and wells at various elevations at and about Simila itself. The survivors in the hard-fought battle of Chillian walls would be surprised to learn that Gholab Sing, the late ruler of Cashmere, obtained his principality from Lord Dalhousie because at that contest he sent 9,000 men to our aid. The most ordinary student of modern Indian history knows that a part of Cashmere was made over to a native sovereign by Lord Hardinge in the first Sikh campaign, and in consequence, not of Chillian walla, but of Ferozeshah. the Maharaja then got was the hilly or mountainous country with some of its dependencies custward of the Indus and westward of the Ravi, including Chumba, and excluding Lahoul. We fear that classics and French fare no better with the author than Urdu or Hindustani. Emperors are said to have "erected palaces near these loca fabulosus," and two Nautch girls are called in at dinner at Srinuggur to beguilo "a mauvaise quart d'houre," previous to that meal. "Dateni qualchier cosa " is queer Italian. We must to that meal. "Dateni qualchier cosa" is queer Italian. We must demur also to the above-named capital of Srinuggur being derived from Surya or the Sun. The prefix Sri simply means "worshipful," or "auspicious," and is constantly put before names of persons and places. Nuggur, of course, is city or town. Finally, the author has got a confused notion about the deed of atrocity which first brought the German Reinhard, the husband of the Begum Sombre, to the notice of Nawabs and kings. It was at Patna, on the 3rd of October, 1763, that this unscrappious advanturer massacred two hundred Englishmen when the Rajpoots, it is said, declined to draw their swords against men who had nothing in their hands except stones and empty beer bottles; and the little Principality where the celebrated widow of this ruffian received a Governor-General, buried alive one of her attendants, and lies antombed in a splendid monument by the Italian sculptur Tadelini, is not Sombre, as we are gravely told, but Sirddhans, some thirteen miles from the artillery headquarters of Meernt.

The plain truth is, that men ought to visit India in order to late extent of their own ignorance, to get rid of a few of the late the mindiage of the subject ruhich beginning to the content of the subject ruhich beginning to the subject ruhich the subject

The plain truth is, that men ought to visit India in order to learn the extent of their own ignorance, to get rid of a few of the English projudices on the subject which have been transmitted to us from the trial of Warren Hastings, and to form some estimate of the difficult and varying character of the work which their countrymen are carrying on. If they publish their travels, with information picked up in haste and not revised at leisure, they must not complain if critics discharge their obvious duty with some seconds.

BURN'S SCOTTISH WAR OF INDEPENDENCE.

IIIS book is a sort of "aftermath" of the crop of nonsense that sprang up round the foundation stone of the "Wullace Monument." The author, it seems, was grieved to find that all North Britons were not carried away by the Wallace frenzy, and, judging that their lamentable indifference must be the result of ignorance rather than of wilful disrespect to the memory of the patriot, he kindly determined to enlighten and instruct them on the subject. He therefore set to work to draw up what he considers "a clear and tangible picture of the War of Independence, combined with so much of its antecedents, in the shape of these events in Scottish history leading up to it, as would render the contest itself fully intelligible, at the same time directing attention to the effects that depended upon, or have flowed from, the result." "Tangible" Mr. Burn's picture certainly is, as it takes the form of two thick volumes of very heavy reading; but we are sorry that we cannot speak as decidedly in praise of its clearness. But until Mr. Burn has quite made up his own mind as to the meaning of the terms Scot, Scotland, and the Scottish mation, and until he crases to apply them indiscriminately to different races and districts, he must not expect to convey any but a very hazy impression to the minds of his readers. Still we hesitate to accuse him of acting in any presumptuous spirit in thus setting out as a blind leader of the blind. He has had, it would seem, a special call to his work. This call came to him in the form of an article in Huackwood's Magnaine. In that article the writer was base enough to assert that it would have been better for Scotland had her union with England taken place four centuries before it did. This opinion, true as it may be, does not strike us as being very new; but it was quite too much for Mr. Burn. He had long borne with the mistaken views of "English historians" and with the sneers of the "metropolitan press." These, as he himself says, he could excuse, looking on them "as a remnant of that national

feeble, should endeavour to point out the fallacious character of the statements and views they propound."

Accordingly, Mr. Burn does take up his pen, and whether he thinks it feeble or not, he seems very loth to lay it down again, sake makes his painstaking efforts to combat these "statements" edger well night a thousand pages. But we must not quarrol with this space which he finds it needful to devote to his subject; for, looked at from his point of view, it is a very wide one. The "Scottish Was of Independence" to an ordinary mind suggests vague notions of the conquests of Edward I. and of the picturesque exploits of the "Scottish Chiefs." Mr. Burn, however, looks on the whole history of his country as the record of one long ceaseless struggle, beginning with the time when the first Roman crossed the Tweed, and coming down to the present day when he, Mr. Burn, has to fight single-handed in the cause of his country's independence.

Rut if Mr. Burn finds cause for lamentation in the general lukewarnness of his countrymen, he is fairly cut to the heart when he comes to consider the backsliding of those among them who have taken it upon themselves to write the history of their native land. (If this "sceptical" school of Scottish historians, as Mr. Burn pleases to call them, we are to consider Lord Hailes as the first and Mr. Burton as the last and greatest offender. Determined still to believe the story true that ought not to be false, Mr. Burn turns his back upon these renegades, and, refusing to listen to the voice of their charming, pins his faith in matters historical on those writers "fertile in prodigies and lies" who first wove the tissue of romance that at one time passed current for Scottish history. Nor will he allow his faith in these scholarly inventors to be shaken, for the reason, which he avows with all simplicity, that "when one ceases to attach faith to the older traditions and chronteles, it is no easy matter to find a guide who may be foltowed with confidence." Such guides as are to be found Mr. Burn declines to follow, and he complains bittarly that "whenever a Nerse Saga, an Irish Senachie or Annalist, or an English Chronicles rives an account of a matter contradictory of any native author, that contradiction is adopted, apparently as a matter of course." By native authors we presume Mr. Burn means the first inventors of the fables hatched by Fordun and brought out full-feathered in all the aplendator of borrowed plumes by Boece and Buchanan.

* The Southisk War of Independence. By William Burn. Glasgow's Junes Madishote. 1874.

Mr. Burn mourns disciply over the "scepticism" of the present generation which leads them to look askance upon all these formerly received Scottish traditions. "No doubt," he continues "within moderate bounds in (accepticism) may be useful in matter historical as it is in matters philiteophical and spiritual, bu scepticism in excess is perhaps a wone disease than credulity. If so, we are sorry to be obliged to tell Mr. Burn that he is sufficient to a few arms of the contract of it there are not the birth into the part of the second of the sec from a far worse attack of it than any of the historians he so much objects to for he evidently sets out with the resolve to believe nothing which does not agree with his own preconceived ideas. Therefore he refuses to believe that the dwellers north and south of the Tweed were one and the same people, because their later enmity would "present the most marvellous spectacle in history." He cannot accept the fragmentary nature of Scottish history caused by the sudden breaks in the development of the untional life, because the life of a nation ought to be one of continuous progressive development. He has made up his mind that "there is a continuity in the life of a nation once born which is not broken by the partial introduction in course of conturies of new ethnologic elements." Then, again, the Picts could not have been displaced or overcome by the Scots, because at one time they were the more numerous and It is impossible that the views of Edward with powerful people. regard to Scotland could have been just or reasonable, because the people of Scotland for six hundred years have thought otherwise. people of Scotland for six hundred years have thought otherwise. But we cannot treat Mr. Burn as a serious writer of history when we find the bold statement that "contemporary chronicles" are the "most dangerous and misleading of historical materials," and that "any properly constituted mind" will not rest satisfied with either chronicles or traditions unless they coincide with existing facts or unquestionable records. Again Mr. Burn declares that "we are satisfied when what we are asked to believe is consistent with what we can verify with our senses," but "we revolt against what is inconsistent with these primary conditions." It does not seem to have occurred to Mr. Burn that what is sense to him may to other ever look very like nonceres. However, he seems to have to other eyes look very like nonsense. However, he seems to have had it revealed to him in some strange way, which perfectly satisfies him, that the modern Scottish nation is for the most part Celtic, of the Pictish branch. Poor Boswell's excuse for his nationality was that he could not help being a Scot, but Mr. Burn would have every one born north of the Tweed believe that he cannot help being a Pict. The modern antion, he tells us, ought to glory in its descent from the Picts, imamuch as it was these same Picts in so remarkable a manner opposed and repelled the legions of mighty Rome." Of course Mr. Burn cannot tell us, any more than any one else, why, if these Picts were indeed so great and so strong and so numerous, they took to calling themselves Scots; but he is very jealous of their dignity, even after they had lost their name. As for the notion that the Lowlanders were ever English by race and tongue, he laughs it to scorn, saying, "If this indeed be so, then the case of these improperly-named Scots is even more remarkable than that of the Jews."

We are surprised to find so ardent a patriot speaking on this

We are surprised to find so ardent a patriot speaking on this wise. He really for a moment seems to doubt that the Scota as a people are, after all, not quite so remarkable as the Jews. Why should this seem impossible to Mr. Burn? Why should he rather not believe that they were Israelites indeed? It needs but a small stretch of those imaginations that can take Scota, the daughter of Pharsoh, for granted, to add to her train a few attendant Hebrews, the bearers doubtless of the Lia Fail, and to bolieve in them as the founders of the modern nation. Since Mr. Burn lays so much stress upon tradition, we may quote in support of our theory the well-known legend of the Jew who tried trading in Aberdsen, but found the townsfolk too canny for him, and left the town with the conviction that he had found the "Lost Tribus," as no other people could so quickly have outwitted him. Is there not also a further proof of this same Jewish origin to be traced in the bloodthirsty and gloomy character of the national religion?

In dealing with the early centuries of his country's history. Mr. Burn follows the lead of Mr. Robertson in his Early Kings of Scotland. He talks in a grand style of the "Acquisition of Cumberland," and of the "Annexation of Lothian," and of the "Consolidation of the Northern Kingdom," just as he might speak of Prussia, or Italy, or any other modern European kingdom. Such talk gives a very false notion of the real position of the King of Scots, who was, as every one who has studied the subject at all must know, simply the chief of a dominant tribe, and could not be said to have had any settled kingdom until he got Strathelyde and Lothian. As for the so-called early kingdom, it no more took in all the island north of the Scots Water than it took in all the island south of it. Great part of the North and of the Western Isles was in the hands of the Northmen, and it is extended to be a subject of the King of Scots than he was to how to the supremery of the King of Scots than he was to how to the

supremacy of the king of the English.

Supremacy of the king of the English.

Sector entering on the subject of Edward's eniquest and the war that followed it, Mr. Burn indulges in second pages of reflections on the characteristics of national life. In these pages he takes to make out that by this time all the different more of North Britain had been welded together into one harmonium whole:

The original stock has, so to speak, been hopeled; from time to time, by the new elements, but each body of may community, in turn, home deprined him the traditional faith of the original people; and the result is, that even being passing through the turness of the grant way, here become a

ide up, more or h a, but with gunius an revailing Celtic bases al and pro

derived from the original and provailing Cettle bases.

We should be glad to be further informed what this "language formed from without" night be, and by whom it was spoken, but Mr. Burn is above confineeeding to such minute particulars. Still he seems to have a sort of uneasy constitueness that he is getting hasy, as he expresses fears that his "youthful readers" may not always have discerned the object simed at in the course of these details and remarks." It would be very odd if they had, considering how often the writer of these same remarks contradict of his attack. In one page he refuses to believe that the men of Lothins and of Northamberland could be "brothers born," because of the ensuity which sprang up between them; but in another he admits that the same feeling had sprung up between the Britons of the North and those of the South during the Roman occupation, though there was nothing to separate them but the Well. Nay, he himself brings forward the fact that but a short period of annexation had turned the Germans of Alasce into wildly patriotic Frenchmen. Indeed he amuses his readers with a whole series of parallels between the Scots and the Americans, the Swiss, the French, and the Italians, in which he tries to make out that Scotland by the beginning of the thirteenth century had gone through the same steen in its redistinal history that Germany is at present undersome. beginning of the thirteenth century had gone through the same stage in its political history that Curmany is at present undergoing. In other words, it was inhabited from the Orkneys to the Tweed by one nation, united by one common sympathy, and moved by one leading idea, that idea being the maintenance of a glerious independence in the face of a powerful and aggressive eighbour. Of course this is simply nonsense, and Mr. Burn must know that it is so; for though he charly knows nothing of histo-rical authorities, we presume that he has read the Tales of a Grand-father. If so, he must know that Bruce met with quite as much opposition from the Highlanders as he did from the English; and that for centuries after Bannockburn the Lords of the Isles were as thorns in the side of the King of Scots, and made treaties as independent sovereigns with the King of England. In the truce of 1389 between France and England, just as Scotland is included as an ally of France, so the Lord of the Isles fagures as an ally of England. As for any fellow-feeling between the two races, no trace of it is to be found till after the breaking up of the clans that followed the last rising in favour of the Stnarts. In earlier times they were sworn foes. By an Act of the Scots Parliament, all mon were empowered to kill "Caterans" who resisted being haled before the Shoriff and there were an nucle raising and desiring on the High. Sheriff, and there was as much reiving and slaying on the High-land border as ever there was on the English March. The battle of Harlaw was looked on as quite as great a national deliverance as the victory at Bannockburn. It was not till Montrose and Dundee made the experiment that the Highlanders were looked on Pinkie, but it was an unwonted element in a Scottish army, and by many the loss of the day was attributed to their presence. We fancy Mr. Burn would not have had much cause to boast of the sympathy between Celt and Sassanach even in the last century, had he ventured to "claim kin with the Macgregor," or any other Mac, without first proving his right to claim the kinship by speaking his tongue and wearing the tartan.

For his pictures of the two heroes of Scottish historical romance Mr. Burn is chiefly indebted to their rhyming biographers. His reason for putting faith in their stories is rather curious. "Barbour," he says, "was not a contemporary writer, but he may be all the more trustworthy on that account." He distrusts contemporary witnesses on account of the leaning they must have had to one or other of the two contending parties; but he forgets that it is by these very same prejudiced contemporaries that the story must be handed on, and that no story loss in the telling, while prejudices nanced on, and that no story loses in the telling, while prejudices grow stronger instead of weaker with the lapse of time. As for Edward I., Mr. Burn clearly thinks that for once the devil is blacker than he has been painted. He will not allow him any good qualities. Not even will he admit that he was self-deceived, and really fancied that he had some right to dictate in Scottish matters. Now all this is very silly, and if patriotic Scots could only see it, such language weakens their own case. Why not admit that Edward was very wise, and was even crafty enough to make a show of moderation in his dealings with his Northern neighbours? It surely is more to their credit to have crafty enough to make a show of moderation in his agaings with his Northern neighbours? It surely is more to their credit to have baffled the well-kidschemes of a far-seeing and politic statesman than to have been merely goaded into revolt by the cruelties of a hot-headed tyrant. With Mr. Burton's view of Edward's conduct Mr. Burn is much displeased, but then that is not to be wondered at, income Mr. much displeased, but then that is not to be wondered at, since Mr. Burton has shown himself a sceptic from first to last, sweeping away with a rathless hand sil the myths dear to a patriot's heart, from the Grampian Hills to the stool of Jenny Geddes. With Mr. Freeman Mr. Burn has a standing quarrel which runs through the two volumes, notes and all. But we think Mr. Burn has failed to gramp Mr. Freeman's meaning. He accuses him of saying that the memory and idea of an ancient kingdom of Scotland gradually died out. On the contrary, Mr. Freeman has very clearly shown that to the modern Scot this "ancient kingdom" was nothing but a "memory and idea." In the reality, such as it was, the ancestors of the Loudander of to-day had meither part nor memorial.

Mr. Burn concludes with a very fine metapher augusted, we dealet not, by the eraction on the kibber Oreig. He hids his countryman gaze on the relifice of their country's Hearty and

prosperity, and admire the manes of John Knew and oth

On the hey-stone of the arch whereon that adding sects, you will read the matter of Biston, and Bannockness; but, going mostwhat deeps, on the foundation stone, you will find engraven the nameted Wallack, Brinzens-andDok—and Falkies.

We would advise Mr. Burn by all means to let this glavious structure tell its own story, and not to go on daubing it with his very untempered morter, as such attempts can only serve to make his native land ridiculous, and may very possibly provoke more "smeers" from the "metropolitan press" of which he seems to stand in such wholesome fear.

RIBOTS CONTEMPORARY ENGLISH PSYCHOLOGY:

THE amount of attention given in France to recent English psychology cannot but be flattering to our philosophic self-consciousness, supposing such a sentiment to exist among us. Some time ago we had occasion to point out how well M. Tsine had studied and absorbed into his speculations on the nature of intelligence the best work of English psychologists; and now we have presented to us from the hands of another Frenchman a very full exposition of the foremost English doctrines on this subject. Such proofs of the interest awakened abroad by Eritish discoveries in the proxis of the interest awakened abroad by Eritish discoveries in the philosophy of mind can hardly fail to be consolatory after so many attacks on English speculation on the ground of its limitation and poverty of ideas. Thus we find that in his latest work Mr. Spanear has quoted, in answer to the unpatriotic accusations of Mr. Armsid, a glowing eulogy on English psychology from the work now before us. In this passage Professor Ribot writes:—

"The sceptre of psychology," says Mr. Stuart Mill, "has decidedly returned to England." We might go further, and maintain that it has never departed thence. No doubt psychological studies are now cultivated in England by first-class men, who, by the solidity of their method, and, which is more rare, by the precision of their results, have caused the science to enter upon a new epoch; but this is rather a redoubling than a renewal of its heillimes. brilliancy.

Yet, in the midst of the satisfaction which such recognition is fitted to supply, it may be well for us to consider that the paramount value of English psychology is far from being admitted in one country at least which is usually reckened among the contributors to speculation—namely, Germany. We remember about five years ago asking one of the best-known German psychologists how he estimated Mr. Spencer's writings, and wore not a little surprised to hear that this writer's name was wholly unknown to him. And Mr. Bain's writings find curiously little attention among the professorial experts of that country. The fact is that German psychology, excepting that outlying part which is being built up by the physical logists, though it received its first direction from Humo and calser English writers, has long since moved on a new road of its own, where it rarely comes in sight of contemporary English thought. This of course may be to the less of German psychology, but at the same time it may well restrain an overweening confidence in the finality of our own doctrines

M. Ribot has considerable sympathy with a strictly empirical, or, as it is questionably termed in his book, experimental, psychology. In an interesting introduction he concodes so much to the Positivists that every science, physical and moral, must be separated as sharply as possible from metaphysical discussion. Until it attains this complete independence, its progress, he thinks, is hopolessly impeded. On the other hand, he quite as firmly maintains the value of ontological speculation:

The entire collection of human knowledge resembles a great river flowing full between its banks, under a sky glowing with light, but whose source and mouth are unknown, which springs and dies in the clouds. Bold spirits have never been able cities to solve this mystery or to forget it.

Metaphysics, he continues, is opposed to science in being personal, in bearing the impress of the nation and the individual." work of art rather than of science, and is a kind of clevated and divine poetry. It may require considerable poetic sensibility in one of M. Ribot's readers to recognize in Hegel's Logic a poem "bordering on Faust." 'M. Ribot moreover is not very clear to the non-metaphysical mind when he says, "To seek without hope is not because the considerable programment of the consideration of the constant non-netaphysical naind when he says, "To seek without hope as neither someless nor vulgar; one may discern without finding." It seems a more sober opinion that, if outological thought is destined to pass into this phasis of poetic draim, it will no longer be recognized as a search for anything, on the common supposition that every kind of seeking necessarily involves at least some faint belief both in the existence of an object to be found. and in the possibility of our finding it. But M. Ribot's notion of metaphysics must be pronounced to be inferior to his conception of science, and of psychology in particular, and it is this latter which chiefly concerns us. He seeks very skilfully to show the possibility of such a science founded on the observation of all mental facts by means of the double method of subjective reflection and obby means of the double method of subjective reflection and objective comparison. There is not much new to an English student in this attempt to define the nature and method of psychology.

M. Hibot agrees with Mr. Spencer as to the value of studying subhuman types of consciousness, and of considering the evolution of mind in the agrics as well as in the individual.

The English psychologists selected by M. Hibot are, he thinks, the formulation of the Association school—namely, Hartley,

^{*} Contemporary English Psychology. Translated from the French of Th. Bot. London: Many & Klay & Co.

James Mill, J. S. Mill, Herbert Spencer, A. Bain, G. H. Lewes, and S. Bailey. His object he announces as the simple exposition of the doctrines held by these psychologists. He appears to have chosen this school because it is little known in France, is illustrious through the celebrity of its representatives, and harmonizes best with the scientific tendencies of the age. He thinks the great merit of its representation is to have abandoned fruitless discussions on the spiritual substance and the faculties of mind, and to have confined themselves to the facts of mental life and the laws of their development. He has great sympathy with the utmost use of physiological truths by the English psychologists. At the same time he does not give unqualified praise. Our psychologists, he suggests, have made scarcely any use of comparative philology (or linguistics, as it is somewhat inexactly termed) as bearing on the development of human thought and feeling. Nor do, the writers of this school succeed in explaining the emotional or affective phenomena of the mind with the same skill which they show in dealing with sensations and ideas. With respect to this last remark, which is no new criticism, it may be urged that the analysis of the emotions, new criticism, it may be urged that the analysis of the emotions, as highly complex aggregates yet having much in common, is undoubtedly the most subtle problem of the science, and one can hardly complain that it is the last to be solved. A curious characteristic of M. Ribot's interpretation of this school is his undistribution of the school is his undistribution. disguised eagerness to clear each writer from the taint of Positivism. One supposes there must be something mysteriously dreadful about a positivists when not only writers like Mr. Spencer are so angry at being accounted such, but even a thinker's foreign admirers are warmly concerned in clearing him from the aspersion.

It might easily be objected to M. Ribot's plan that an adequate comprehension of the writers whose views he expounds is impossible apart from a study of other and rival doctrines, such as those of Reid and Hamilton. A more serious defect in the author's conception of these psychologists arises from an undue desire to erect them into one single school. No doubt Mr. Spencer can be classed with Mr. Bain or Mr. Mill as an expounder of the can be classed with Mr. Bain or Mr. Mill as an expounder of the association doctrine, in so far as he recognizes in mental phenomena processes of growth from simple elements according to certain laws. But what separates him from the other conspicuous members of the fraternity is the retention of the Hamiltonian doctrine that the utterances of immediate, that is, adult consciousness on such subjects as the reality of an independent object are final. The most advanced representatives of the association doctrine look on it as the highest triumph of their theory. dation doctrine look on it as the highest triumph of their theory that it accounts for a belief in objective existence by means of a properly mental process. It is very curious to note how completely M. Ribot overlooks this distinction. Thus, in a concluding summary of the chief views of the school he gives it as an article of the common creed that "outside of us, and independently of outside outside of us, and independently of outside outside of us, and independently of outside outs perceptions, there exists a material world, which condemns idealism' perceptions, there exists a material world, which condemns idealism" (p. 325). One wonders what Mr. Bain will say to this transformation of his theory. As a final objection to M. Ribot's scheme, we may point to the absence in it of a just sense of the magnitude and proportionate value of psychological ideas. One may not be disposed to question the right of Mr.C. II. Lowes to be classed among prominent English psychologists, but what can we think of an estimate of psychological importance which devotes to this writer as many pages as are given to Mr. Blain, and half as many again as fall to the share of Mr. Mill? The fact seems to be that M. Ribot was unwilling to give a carefully selected and orderly arranged epitome of each writer's views drawn from all available works, and so unwilling to give a carefully selected and orderly arranged epitome of each writer's views drawn from all available works, and so has simply taken a few principal works and made an easy digest of their contents by help of namerous and lengthy quotations. Thus it is that in a book professing to give us simply psychological doctrine we have a very adequate account of Mr. Spencer's system of evolution, as expounded in his essays; and, more curious still, a full summary of Mr. Lewes's History of Philosophy, containing long extracts on the views of the Sophists, &c. We might ask too why, if the contribution of new psychological doctrine is the basis of selection, Mr. Lewes's Physiology of Common Life should receive careful analysis, while no mention is made of Mr. Darwin's speculations in his Descent of Man and the Expression of the Emotions. Yet, if the author shows himself less happy hir. Darwin's speculations in his Descent of Man and the Expression of the Emotions. Yet, if the author shows himself less happy in the grasp of his subject as a whole, the details of his exposition are very creditably executed. For the most part he proves himself fully able to comprehend and to re-state the doctrine which he seeks to expound, and the few criticisms he ventures to offer on individual peculiarities of thought and style are marked by something of the best French acuteness of insight and aptness of expression. Thus he dites on the Scotch philosophy:-

The thendity which is its ruling characteristic explains both its merits and its defects. Among the merits of the school I place reserve in metaphysics, which has preserved them from a rush into the region of ideas, and from dangerous constructions. This reserve, which was rather an instinct than a system, has permitted them to observe patiently. They have a taste for the amall facts, for the curiosities of psychology, for rare cases, for exceptions, without which one cannot get to the bottom of things; and yet they have not had taste enough. Among their defects is an excessive anxiety to be always "in accord with common sense," a horror of doubt singular among philosophers, &c.

Even this criticism, on the whole so just, is evidently influenced by the seemingly unconscious selection of some one writer as the type of a school. The writer whom M. Ribot most admires and most carefully estimates is undoubtedly Mr. Snancar. most carefully estimates is undoubtedly Mr. Spencer. He samely that this psychologist "takes sensible pleasure in tracigrand outlines, in sweeping wast horizons, in seeking out simple and rich formulas, the large and comprehensive laws from whence we dominate the innumerable mass of facts." The parallel drawn between Mr. Spencer and Leibnitz is ingenious, even if a little forced; and there seems considerable plausibility in the assertion that Mr. Spencer's idea of a correspondence (between the forces of an organism and those of its environment) is a translation into the language of scientific psychology of the doctrine of monads, each of which was conceived by Leibnitz as a mirror reflecting the universe.

winverse.

We cannot say that M. Ribot has been fortunate in his translator. It is a question whether a work containing so little original thought, and merely interpreting English writers all of whom are recent and easily accessible, called for a translation; but this consideration scarcely justifies the very defective execution of the task. Sometimes it is ignorance of the English idiom, as in the translation of entre by "between" instead of "among," as "convertible between themselves," (p. 129). More commonly it is the inexact use of terms having more or less of a philosophic or scientific character. Thus we read of the law of association as a "realistic" phenomenon (p. 211), of "psychological acts," instead of psychical actions (p. 211), "extent" for extension, "synchronical" for synchronous (p. 98), "auditive" for auditory (p. 153), "exterior" and "interior world" for external and internal, "conscience" instead of consciousness (for the French conscience), and a host of other similar world for external and internal, "conscience" instead of consciences (for the French conscience), and a host of other similar blunders. Then there are errors which we are compelled to look on as typical—as the use of "idealism" (p. 266) for "the faculty of having ideas," though it is clear that the author himself employs this much abused word in a rather odd fashion when he makes it represent the intuitive of the conscience of the conscience. this much abused word in a rather odd fashion when he makes it represent the intuitive or à priori theory of cognition. The crowning example of the translator's inaccuracy is, funnily enough, due to excessive and unnecessary painstaking. It seems almost too amusing to be true that in quoting a passage from Mr. Mill's Examination of Hamilton, the translator has patiently re-translated M. Ribot's translation, thereby producing a passage as unlike the well-known style of Mr. Mill as can well be conceived. This quasi-quotation, appearing with all the credentials of inverted commas, may be found in page 122, and the reader will be repaid for comparing it with the original (Mill's Hamilton, p. 256, third edition). We can hardly suppose, in spite of what M. Ribot tells us of the general ignorance of English philosophy among his countrymen, that it is impossible to procure a competent French translator for such a work; but if this be so, one is ready to ask why the work was not given to some Englishone is ready to ask why the work was not given to some English-

SOUTH BY WEST.*

THE title South by West is perhaps the only part of this book to which we should be inclined to make any decided objection, and yet we must confess that no better title occurs to us. The phrase however is slightly vague, and we may briefly explain that it covers the record of a winter spent in Colorado by a young English lady, and of a subsequent journey made by her through Mexico. Perhaps it would not be beyond the limits of human ingenuity to draw aside the veil of anonymity, but it is enough to say that it is edited by Mr. Charles Kingsley, who testifies that his duties as an editor have been very light. The author, whoever she may be, shows throughout excellent taste, a happy faculty for observing the characteristic peculiarities of the country and its inhabitants, and a no loss happy faculty for looking at the bright side of things. This last tendency was doubtless productive of great comfort to herself; her readers may possibly fancy that it causes her to regard some objects in rather side of things. This has tendency was doubtless productive of great comfort to herself; her readers may possibly fancy that it causes her to regard some objects in rather too rose-coloured a light. With this tendency, however, we are not disposed to quarrel. There is something contagious in the good temper of an author which is apt to influence his critics; and a strong conviction that we should have been disposed to grumble pretty decidedly where the writer shows an indomitable cheerfulness rather suggests grounds for humility than for irritation. The fact, too, that a winter in Colorado can be so very pleasant to a thoroughly refined lady is one which is in itself worth notice. To most English readers the name of Colorado still suggests something savage and inhospitable. We know indeed that the region no longer corresponds to the graphic descriptions of Ruxton, who rode across it, so to speak, with a scalp trembling on his head. Civilization is advancing pretty rapidly as railways push across the continent. But we still fill the country in imagination with Indians brutalized and maddened by the prospect of speedy extermination; and with a rowdy population, in whom a superficial civilization has extinguished the homely virtues of the old backwoodsman without replacing them by anything better. We fancy that Bret Harte's description of the mining population is probably quite faithful so far as the ordinary life is conscious. We fancy that Bret Harte's description of the mining population is probably quite faithful so far as the ordinary life is conceived, and that the redeeming virtues have been introduced chiefly for the sake of dramatic effect. And probably our impressions of Denver, derived chiefly from Mr. Hepworth Dison, are such that we should make our wills and buy the most improved revolvers and bowie-knives before taking up our reddings in that growing city. Is not Colorado, in short, on that horderland between the wildsween and the cultivated region white all the offscourings of South by West. Edited with a manufacture of the cultivated region where all the offscourings of

* South by West. Edited, with a Print my by the Bev. Canon Kingsley. ondon: Inblater & Co., 1874.

populous cities meet and struggle ferociously with the disgreced

populates eitles meet and strangele ferociously with the diagraced remnants of awage tribes?

The snewer to this question suggested in South by West is certainly rather suspensing to persons who come with such proposessions. Colorede, indeed, is still in the rough. Emigrants are apt to be rather startled when they are suddenly transferred from the conveniences of English life to its still unbroken plains. A lady who settles at Coloredo Springs, the village where the author spent her winter, must be prepared for sundry hardships. The house which she inhabits will resemble a rather large bathing-machine; she will be tatally unable to obtain servants of any kind, and will have to do her own washing, cooking, and house-cleaning. She will be expected to a winter of Siberian ferocity; snow will be piled many feet deep upon the plains, fierce winds will come down from the mountains, and she will be startled at night by what appears to be an Indian war-whoop, but is really the cry of a pack of coyotes sweeping past her door. She may listen, moreover, to many legends of the atrocities committed in very recent days by the Indians, of whom a few miserable representatives still occasionally wander through the town, and whose relations are still on the look-out for scalps in various corners of the continent. on the look-out for scalps in various corners of the continent. Such a story as this, for example, is told by the author of a lady still living in the territory. Not long ago she was crossing the plains in a waggon-train. The Indians came down and began the plains in a waggon-train. The Indians came down and began a massacre, from which her waggon, having very good horses, alone escaped. She was pursued, however, and it was only by pointing a revolver at the driver's head that she prevented him from cutting her loose. When, after a terrible gallop for life, the from cutting her loose. When, after a terrible gallop for life, the Indians gave up the pursuit, it was found that in her agony of fear she had squeezed her infant to death in her arms; and she had to drive for three days and nights with the body, expecting a new assault every moment. This is a specimen of the legends of the early, though still quite recent, days of the district; and far more horrible stories could be told. Meanwhile, however, Colondo Marian. ever, Colorado Springs, though barren in certain material appliances, appears in many respects to be a model town. The first sod ances, appears in many respects to be a model town. The first sod was turned in August 1871; in November of the same year, when the author reached it, there were about a dozen shanties; two years later there were over two thousand inhabitants, with four or five hundred buildings. There were already numerous schools; three or four churches; the usual lodges of Masons, Odd Fellows, and so forth; banks, hotels, mills, and a steam-printing-office, from which issued, as we are told, a first-rate weekly newspaper and monthly magazine. There are mineral springs in the neighbourhood, where hotels have been built, and which have been visited in the last two years by "thousands of visitors"; and, if it be true, as we are told, that the climate produces astonishing effects upon consumptive patients, there need be no doubt that the settlement will in time rival Saratoga or Baden. Such a rate of progress indeed is common in that part of America; but it must be added that this is not one of the mushroom towns which spring up where there is a temporary aggregation of miners, which spring up where there is a temporary aggregation of miners, but apparently the beginning of a career of solid prosperity. Moreover, the inhabitants, if the author is not a little too benevolent, appear to be most estimable people. Their amusements are of a thoroughly rational kind. They enjoy concerts; they form natural history societies; and, though a good many of them belong to the rougher classes, the usual hospitality of a primitive country appears to be combined with no contemptible amount of refinement and intelligence. Certainly this is a pleasant, as we hope that it is an accurate, picture; and we may add with some satisfaction that a large part of the population is English or Canadian. Here, indeed, seems to be the promised land, and we are half inclined to ask why everybody does not emigrate there at once. The necessary hardships of life, and that unpleasant hint about the absence of servants, may suggest a sufficient answer; but certainly a good many of our superfluous population might do well to inquire a little more closely into the capabilities of Colorado.
Railways in America, as we know, do not follow, but direct, the course of population; and Colorado Springs appears to be destined to become one centre of the rapidly growing network of com-munication which is overspreading the whole continent. We will not speak of the natural beauties of the scenery, of the grand mountain peaks which might tempt the Alpine Club, of the still unexplored mineral wealth which would reward the re-searches of a geologist, or of the buffalces and antelopes which might tempt the sportsman to co-operate in their speedy extinction.

To this agreeable picture there is a striking contrast in the other half of the book, on which we must spend a few words; for, indeed, it suggests some problems the solution of which will find plenty of occupation for the rising generation. After her winter in Colorado the author went to California, and thence by sea to Mexico, which she crossed from Manzanillo to Vera Orus; accustomed relate to a state of things by no means have been accustomed relate to a state of things by no means extinct, and not likely to be extinct, until some new agencies are brought into play. The author describes the various wonders of Mexico with due admiration, and Maxico is said to be the richest in natural resources of any country in the world. But unluckily her attention was distracted by more pressing considerations. Mexico was he its normal state during her journey; that is to say, revolutionary forces were moving about in various parts of the country, and the line between a robel and a robber is there so finely drawn that it is practically impossible to distinguish between them. Whenever

4,

the left a town it was an interesting question whether the could reach the next in safety. Commerce is carried on with sufficient energy to make plunder a profitable tende. Rehind every wall such in every thicket there was a fair probability that a party of banditti might suddenly start up and debate the question whether it would be more advisable to carry off the travellers for ransom or, simply to plunder them on the spot. There the rifles and revolute which are rapidly becoming a manufacture in the Wastern simply to plunder them on the spot. There the rifles and revolvers which are rapidly becoming a superfluity in the Western States, are part of a traveller's necessary equipment. In many of the stages, the gentlemen who accompanied the author set upon the roof of the carriage with weapons ready loaded and cooked; and she found it advisable to be herself provided with a revolver and-prepared to take some part in the anticipated akirmish. Luckily for her, the necessity never actually occurred. A party of rebels, indeed, found it convenient to appropriate the rifles with which her friends were armed; but this seems rather to have been an act of gonized than of downright robbers. More than once indeed the marty was in than of downright robbery. More than once indeed the party was in considerable danger. Some ladies and children who passed the same route within a few days of them were stripped to the skin by robbers and sent on in that condition to their destination. The daughters of one of the richest Mexican families were robbed within a mile or two of the capital whilst taking an evening drive. In another town they listened to the story of a gentleman who had been bagged by brigands, sold at a trifling advance to two different bands, and who was finally discovered by his friends buried under the floor of a cave, gagged, and with his ears stopped by wax, and pretty nearly dead from his sufferings. A good many of the brigands, we are happy to add, were shot on this occasion. And, finally, the author's brother, who was travelling through the country with a view to making a railway, had a very lively skirmish with robbers, from which he fortunately emerged victorious and unwounded. The only body which seems to have thriven in Mexico is the Church; and many elaborate buildings testify to its former magnificance; but, since the present anarchy set in, it has been part of the Liberal policy to strip the churches of their property whenever the chance occurred; and if the author's account of the existing state of Maxican religion be accurate, it cannot be said that these outrages, however unjustifiable, were inflicted upon a class which had much claim to the attachment of the people.

The North American and the Mexican races are gradually In another town they listened to the story of a gentleman who had

The North American and the Mexican races are gradually coming into closer contact, and we may guess what will be the result. The question seems to be whether the Mexicans are to be improved off the face of the earth or reduced into a tolerable state improved off the face of the earth or reduced into a tolerable state of order in sufficient time to hold their ground. The author of South by West puts great faith in railways. They are to be the channels by which civilization is to be poured into the country. They will enable the central power to suppress the rebels, who at present can easily retire beyond the reach of vengeanss. Eight out of the nine millions of population are anxious for nothing but out of the nine millions of population are anxious for nothing but peace and quiet, and the suppression of the outrages which not deprive industry of the security necessary for its success. Once let the disorders be put down, and capital will flow in and develop the vast natural resources of the country. If the Mexicans cannot bring this about for themselves, the time will come when a stronger race will do the work for them. But many difficulties may be suggested, and we must not try to look too far into the future, even suggested, and we must not try to look too lar into the ruture, even as region where changes take place so rapidly, and an energetic population is threatening to clear the continent of every race which cannot hold its own or will not submit to them. Meanwhile we take leave of South by West with the acknowledgment that it gives a very lively picture of a curiously interesting state of society.

LANCASHIRE WORTHIES.

THERE is a saying not unnaturally popular in the county which it compliments, to the effect that "what Lancashire thinks to-day England will think to-morrow." From this it would seem to follow that what England thinks to-day Lancashire thought yesterday; and Lancashire men ought accordingly to take a peculiar interest in a comparative study of the records of the county in which they glory to have been born and bred. Nor, upon the whole, is any English county better supplied with literary memorials and monuments of its past. Such a collection of county literature as e.g. that accumulated by the late Bishop of Manchester (whose thoughts and tastes were of a more stay-at-home tendency than are those of his versatile successor) has probably few rivals of its kind. The spirit of antiquarian research, tinged with the warmer hue which a loyal deference to the admonitus loci imparts, survives in the members of the Chetham Society, which continues annually to produce its volumes, dealing with a wide variety of topics of local history, from the Lancashire Witches upwards or downwards. And more sustained efforts in the witches upwards or downwards. And more sustained efforts in the direction of topographical history from time to time appear supplement gaps, real or supposed, in existing classics such as Baines. Mr. Picton's goodly contribution to the history of Liverpool we noticed a year ago; while, to judge from the columns of at least one leading Lancashire newspaper, a considerable part of the leisure of the busy inhabitants whose tastes it consults is devoted to the preparation and perusal of "local notes and queries."

Mr. Espinnese therefore, in preparing for publication his agreeable anthology of Lancashire Worthies, doubtless enjoyed the

^{*} Lancashire Worthies. By Francis Espinesse. London: Simpkin, Marshall, & Co. 1874.

a dispe double advantage of abundant materials at the disposal and of a grateful special public in prospect. And he has chosen the subjects of his hisgsuphical electrica with sufficient judgment estitle him to expect a wide cirols of gradees. Of source when the heroes of a series of popular biographics range from John Bradford, "Saint. and Martyr," to Richard Arkwright, whose martyrdom consisted in the loss of his patent, and who is still considered so far from a saint that Mr. Tom Taylor has recently himself the through the product sidered so far from a seams that Mr. Tom Taylor has recently brought him on the stage, there is not much difficulty in produc-ing a book of varied interest. There are many kinds of book-making; and Mr. Espinasse's deserves to be classed as one wholly unobjectionable. Eschewing all attempts at originality in his comments, he has, so far as we have observed, been careful as to correctness in his facts. Thus, as he has evidently been a diligious conferences in the meet. I have, as he has evidently been a diagent sender of a considerable range of authorities, he has produced a very readable volume, in which it is satisfactory to meet with nothing that is offensive, little that is tedious, and much that is interesting. In these days of ready-made biography it is refreshing to find a writer whose sketches are obviously designed for popular reading abstain from empty phrases and forcibly-leeble flights of reletorie. It is still more so, in these days of would-be humorous writing, to come across a book of this description which limits its attempts at vivacity to a too frequent use of inverted commas, while its worst sin, so far as we have observed, in the direction of vulgarity is a passage in which a man is described as enjoying we described as enjoying we described as classically severe. Mr. Espinesse has upon the whole abstained from spoiling the results of a very creditable industry in the choice and arrangement of the severe and thus his book fairly exemplifies the ge in which a man is described as enjoying his ment of his materials; and thus his book fairly exemplifies the soundness of the advice given by a Lancashire poet to whom some of the most interesting of its pages are devoted:—

In reading authors, when you flud
And which, porbaps, you may have reason
To think on at another season,
Be not contented with the sight,
But take them down in Black and White;
Such a respect is wisely shown
As makes another's sense one's own.

The author of these lines, and of many others exhibiting the same proportions of good sense and poetic inspiration, is perhaps little remembered out of his native county. For this reason, leaving aside the invitable Stanleys, Henry VII.'s fortunate and Charles I.'s unfortunate supporter alike, as well as the not-less inevitable inventors of the spinning-jenny and the rollers, we may with Mr. Espinasse's aid recall one or two passages in the uneventful, but not uniteresting, life of John Byrom. It is in the memorials of such a life as this, derived from evidence at first hand (for Byrom's Diaries have been published by the Chetham Society, and his poems are full of illustrations of his life and times), that a phase of the past seems really to live again; for no one has tried, and no one is likely to try, to pervert the outlines of

the picture which they unconsciously present.

The immortality of John Byrom's muse, if not of his name, seems assured so long as the English language endures. For nothing is so likely to survive with our tongue as the few quota-tions really familiar to the nation at large—if for no other reason, because they are so few. We are accordingly of opinion that the because they are so few. because they are so few. We are accordingly of opinion that the writings of the author of the epigram about the difference "twixt Tweedle-dum and Tweedle-dee" will never be wholly forgotten. The author, however, has only lately come into his honours with reference to this epigram, which was on its first appearance attributed to Swift, and has since been freely printed in Swift's as well as in Pope's works. Another of Byrom's epigrams is also frequently covered. quoted:

God bless the King! I mean our Faith's defender, God bless—no harm in blessing—the Pretender! But who Pretender is, or who is King, God bless us all, that's quite another thing!

But the point here being historical, the applicability of the jest is of a more limited character. To his own generation Byrom was, as a poet, perhaps best known by his little eclogue of Cohis and Phores, contributed by him to the Spectator, and according to Chalmers "universally admired" even at the beginning of the present century. The taste of the present generation would probably diamies this pleasant pastoral lyric as the present in and commonwhere in execution that if it has trivial in conception and commouplace in execution; but if it be trivial in conception and commoniplace in execution; but it it be true that all the pastoral poetry of all ages separates itself into two great divisions, the real and the sham, and that the latter class is infinitely larger than the former, it is in this that Byrom's Colin and Physic deserves a place, however modest. There is a touch, too, of Prior's natural grace and artistic simplicity in this pretty little and the contract of the first little poem, of which we have only space to quote the first

My time, O ye Muses, was happily spent When Phobe went with me wherever I west; Ten thousand awest pleasures I felt in my breat Sure never fluci shepherd like Colin was bleat! But now she has come and has left me hebind. Surf never hold snepment like com was these? But now she has gone, and has left me behind, What a marvellous change on a sudden I find I When things were as fine as could possibly be, I thought 'twas the spring, but alsa! it was ahe.

The success of this ecloque shows how few writers of peetry of this description can dare, and how few can afford, to be simple. The rest of Byrom's verse is, it must be allowed, hardly equal to the promise of his first venture. It is partly humorous, consisting of much gentle active in the form of epistles, fables, and die (some of these last in the Lancashire dielect), partly if didactic. For, like many throughtful men of hiseage, and suite in particular by the well-known Serious Call of Williams Byrom fell in with currents of religious thought which gain him from the truculent Warharton what the latter through opprobrious nickname of a "Behmenist"; and to the arguet "inward religion." as wall as to controvantial attacks to opprobrious nickname of a "Behmenist"; and to the expension of inward raligion," as wall as to controversial attacks types opponents of the tendencies of thought with which he sympath he devoted a large number of the efforts of his homely must have poems are exceedingly unpretentions, and they are he likely to be reliabed, except for their spirit, by the present gration of readors.

Byrom's father was a "linendraper" at Manchester; but the expression, as Mr. Espinase reminds us, implies what in the present day would be called "a Manchester warshouseman." Of good birth as well as comfortable circumstances, he bustowed upon his son an excellent education, though he es soumge in extravagance of opinions nor in excess of expenditure. Thus, on the one hand, he reprehends him for paying a guines for having his wig altered in London, and hids him repeat with precision what is the nature of the new wig he wants, when "wa will venture it, and so you may be sure of your sister's good hair and no cheat, as you will certainly be if made in London." This worthy parent is equally decided as to what Alian Ramsey would have called the "inside lining":—

I have not [he writes to his son] Mr. Locke's Book of Human Understanding; it is above my capacity, nor was I ever fund of that author, he being (though a very learned man) a Souniam or an Atheist, as to which controversy I desire you not to trouble yourself with it in your younger studies. I look upon it as a snare of the devil, thrown among sharp wits and ingenious youths, to oppose their reason to revelation, and, because they cannot apprehend reason, to make them sceptice, and so entice them to read other books than the Bible and the comments upon it. . I had thought to have concluded here, but I am alone this evening, and shall observe to you two things I noted in the Paalm and Leasous for this meeting's Service, &c. &c.

"From such a father," as Mr. Espinasse observes, "Byrom could learn nothing that was dangerous, unless it was Jacobitism, and the Byroms seem to have been Torice of the Torice." His love of His love of the riyroms seem to have been Torics of the Torics." His love of learning and geniality of disposition, however, unde him many friends at Cambridge, among whom were the nephew and daughter of the Master of his College, and either then or afterwards the great man himself, for it was Bentley who at that time held sway at Trinity Lodge. His daughter Joanna—or, according to the daring abbreviation sanctioned by the awful Aristarch, "Jug"—was thought to be the heaving of Review's shows mantioned restant was thought to be the herome of Byrom's above-mentioned pastoral. Mr. Espinasse does not seem to reject the tradition, but according to the editor of Byrom's Poems it is meredible, as is the supposition that "he made any advances towards a place in the young lady's affections, with the sinister design of succeeding the young lard's directions, with the sinister design of succeeding the more effectually in his application for a fellowship. This commentator thinks that had Byrom been "the designing and selfish youth which this representation would make him," he would have "framed his eulogy" in a less loose and general way, and

My time, O ye Muses, was happily spent When Joanna went with me wherever I went,

instead of introducing the name Phorbe, which was that of his own sister.

Byrom's poem had been preceded in the Spectator by a proce contribution which obtained the commendation of Addison; but his literary vein was not of sufficient strength to determine him in the choice of a profession. That which, after a few years' study the choice of a profession. That which, after a few years' study of medicine and an early marriage, he adopted, seems a very strange choice to our age. He became a teacher of stenography, of which useful art he invented a new system, which, according to Mr. Espinasse, "is said to be the parent of all now in vogue," and which obtained for him the dignity of F.R.S. In the pursuit of his profession he was a constant visitor to London, where he had many pupils of eminence (among them Lord Chestorfield, Horace, Walnale and Eishan Horadlay) and where he prestiged his art is Walpole, and Bishop Hoadley), and where he practised his art in and out of season. Stenography was in those days, on account both of its rapidity and its secreey, valued for private purposes such as diaries in particular—far more generally than it is now; and was accordingly eagerly acquired by men of rank and position. On the other hand, not only did "Orator Henley," of Duncied notoriety, object to having his discourses written down by Byross, foaring that they would afterwards be "printed upon him."; but when the indesktigable stenegrapher attempted to take down the procuedings of a Parliamentary Committee on the Experimentary proceedings of a Parliamentary Committee on the Manchester Workhouse Bill, he was, according to his own account, interrupted by a Scotch member exclaiming, "To order, I speak to order. I desair to knew if any man shill wrait here that is not a claim or solicitour.

solicitour."

The goddess Shorthand (thus Byrom humorously sportrophines his art in one at least of his poems) seems to have supplied him with the means of life till, by the death of his side worker, he was placed in a position of comfort as a leaded graphical in the neighbourhood of his native city. His sative life, which had been spent between Manchester and London and Committing, of his doings in which places his Diary opening many interesting reminiscences, was now exchanged as the Manchester and the most note worth finally of his later days was the agricult in Manchester in 1722 of the 1722 of the Manchester in 1722 of the 17

Charles Minust's tay at Manniester he was "letched prisoner to his the Triang's hand," and was of course exposed to no inconcomment consequence by so tentious a loyalty. He continued, as his pouns show, a Jacobite at heart; but he probably made more ensuries by his religious than by his political views. Weither his squits nor his didactic and controversal poems, however, even to have interfaced with the tranquility of his life; and it would seem as if he had snjoyed a high esteem in his native city, not unlike that which Rossoe afterwards enjoyed at Liverpool, though of course so far as literary merits are concerned, resting on no similar basis of achievements. But with a high character a small amount of literary merit goes a long way in such an atmosphere; and doubtless Mr. Byrom's last copy of verses recited by the ingenuous youth of the Grammar School was considered a literary event in the Manchester of that day. With that school and the church (now the extendral) hard by, where Byrom was buried on his death in 1763, his memory most naturally associates itself.

We shall, we hope, be pardoned for having called particular attention among Mr. Espinasse's sketches to one descriptive of so calm and unpretending a life as that of John Byrom. There are other figures recalled by this book on which it would be pleasant to dwall. Hugh Oldham, the founder of the Manchester Grammar

We shall, we hope, be pardoned for having called particular attantion among Mr. Espinasse's sketches to one descriptive of so calm and unpretending a life as that of John Byrom. There are other figures recalled by this book on which it would be pleasant to dwall. Hugh Oldham, the founder of the Manchester Grammar School, and Humphrey Chetham, the founder of Chetham Hospital, and, by a bequest of money, the originator of the fine library belonging to that institution, are not forgotten among those who have in their generation done as good service to their native city as the builder of the higgest warehouse which ever eclipsed all its predecessars, in order to be eclipsed in its turn. The authors of the manufacturing industry and commercial prosperity of the county of course claim their share in any list of Lancashire Worthies; and the history of the Bridgewater Canal, as well as a long narrative of "Arkwright's Case," may be once more read in Mr. Espinasse's pages. He has also found room for a curious sketch of the life of "the first member for Manchester," Charles Worsley, who was one of Oliver Oromwell's Major-Generals, and, if the very probable conjecture of the Dean of Westminster be correct, is the solitary regicide whose remains at this day continue to repose in Westminster Abboy. A hero of a different kind, likewise buried in Westminster Abboy, is Barton Booth, the actor who performed the part of Cato on the famous night of the production of Addison's tragedy. Mr. Espinasse's book is therefore sufficiently full of variety, and may be safely recommended to readers, in and out of Lancashire, who like their history in small slices. Sketches like these, put together noither without care nor without good taste, can do no larm, and may very possibly here and there stimulate to more consecutive and more comprehensive researches.

RECOLLECTIONS OF SIR GEORGE L'ESTRANGE.

but his cousin, Edmund L'Estrange, who obtained in 1804 a commission in the 71st Regiment, commanded by Colonel, afterwards Sir, Denis Pack. He served at the Cape of Good Hope, and afterwards in South America, where he was taken prisoner and detained upwards of twelve months. He then rejoined his regiment, went with it to Spain, and served until the beginning of 1809, when he was taken prisoner by the French. His capture was owing to his being mounted on a French cavalry horse which became unmanageable when a French trumpeter sounded the charge. He was sent to Verdun, and lived there for some time on parole. The French residents were very hospitable, and invited the English prisoners to many balls and parties. At a bal masqué L'Estrange appeared as a girl. An English naval officer danced with him, and was thoroughly deceived. When he discovered the trick he was angry, and insisted on a duel. L'Estrange fired in the air, and his adversary's ball seriously wounded him, but he recovered. Afterwards, on the complaint of a tradesman, he was thrown into prison, and his parole being thus annulled, he determined to escape. He was tired of a life of idleness and dissipation, and longed to resume the active duties of his profession." It is sad to think that there were many prisoners equally weary of that same waste of youth and energy, and yet unable to escape from it. L'Estrange adopted the disguise of a pedlar, which enabled him to carry some clothes without attracting notice. Afterwards he dressed himself as a girl, and spert a week in a cottage helping in harvest work. The daughter of the family discovered the deception, but premised not to betsay him, and kept her word. Leaving that place, he dressed himself as a sailor and made his way to Rotterdam, where he arrived in the autumn of 1810. He negotisted with a smuggler to land him on the English coast, but this man betrayed him to the police, and he was arrested and sent to Bitsche. The journey occupied six weeks. The secont treated him with great creekly. He was no

fortress disguised as a French officer and this servent. The quitted Bitsche in June 1871, and endeavenmed to make their register Werdun, expecting help frout their security sean residing there. The midshipman, who could carredy seasons would of French, was captured within flerty-eight hours. L'Estange mesched Verdun, where he lived seasonaled in the spartment of an English poisoner until April 1872, when, having obtained a passport, he samued the dress of a French officer and travelled by diligence to finite. Here he new the sights, and then proceeded in the season memour to Bordeaux. A family having Irish connections associated him with a civilian's dress and a best in which he assumed himself on the river. Being used to yachting he resolved to escape by sea. He put on board previsions and angaged a man estansibly to help in fishing. Dropping down to the mouth of the river he put a gistel to the head of his servant, and heisting all sail hearsted the waves of the Rey of Bisoay. Two guard-heats chased without avail for some miles. His servant now became reconciled to the position. They rowed steadily through the night, shaping their course for the Basque Roads, where a British itest was known to he at anchor. Next day he got safely on board a British man-of-way, having been a prisoner mure than three years.

having been a prisoner more than three years.

Edmund L'Estrange was soon landed at Plymouth, and made his way thence to London, where the Duke of York received him. hindly, gave him a vacant company in his old seglement—the 7-1st—and sent him back to Spain. He became aide do camp to his old colonel, Sir Denis Pack, who commanded a brigade, and served with him during the remainder of the war. Afterwards he accompanied Sir Penis Pack as aide-de-camp to Waterlee, and was killed there, having crowded all these adventures into a short life of twenty-even years. The book before us contains two memoirs of him, one by his brother in the appendix, and another by his cousin, the author of the book. The brother says that the by his country, the author of the book. The broader says that the country has "graphically told" the story, and it must be owned that the text is more lively reading than the appendix. We will not say whether we think it more or less accounts, but it is ulear that both stories cannot be equally so. It is amount to observe the discrepancies between these two accounts of the same transaction We should not complain that either the brother or the cousin wrote on imperiect recollection, but it does strike us as odd that both stories should be published in the same volume. The brother represents that the fugitive reached Rotterdam, whereas the cousin describes in great detail an arrival at Furnes, which is quite in the west of Bolgium, negotiation with a fisherman to be put on board an English cruiser visible in the offing, denunciation by the fisherman, capture and enforced march to Bitsche. Notwithstanding all we have heard about the power of forgatting, it is difficult to believe that Edmund l'Estrange could have told one person that he reached Rotterdam, and another that he was taken at Furnes. Then, again, the companion of part of the second escape is, according to the brother, a midshipman, whereas the cousin mays he was an officer of the 31st, named Beamish. The time, place, and circumstances of the parting between the two escaped pris altogether different in the two accounts. Both agree, however, that L'Estrange escaped from Bordeaux in an open hoat. The that L'Estrange escaped from Bordeaux in an open Boat. The brother makes him perform a considerable voyage to reach a British fleet in the Basque Roads, while the consinuous moderately supposes British cruisers to be where they would be very likely to be, at the mouth of the Garonne. A good deal of history has probably been produced by the same process of imagination or imperfect recollection to which we over these accounts, but it is not often that we have so good an opportunity of comparing the working of two different minds upon the same facts. We can only hop that the family of L'Estrange may flourish, for they made goes soldiers, and as Special Correspondents they would be unrivalled. It is not wonderful that the "recollections" of a veteran should

become obscure after the lapse of sixty years, and it is not likely that the author will ever be quoted as an authority for the history of the Peninsular War. Yet his picture of his own share in it is interesting, and probably correct. His father commanded the King's County Militia, and as upwards of one hundred men had volunteered from it to the 31st Riegiment, that Duke of York gave him a commission in that regiment without purchase. He marched up his volunteers from Portsmonth to Ashford in Kent, and had some trouble in coaxing these wild Irishmen along the march. They were unarmed, but ready for any row that might turn up. He rode at their head, playing Irish tunes, not very well, on the flute, and they stopped along cheerily to their native airs. In those days the Irish saw material could be obtained in almost any quantity, and it was rapidly converted into soldiers. Ensign L'Estrange and his man were soon equipped and armed, marched back to Pertsmouth, and embaried for Spain. He surved in the campaign of 1813-4, in the 31st Regiment, having for his brigadier Sir John Byng, whose kind care for the young subaltern is well shown in the following story. L'Estrange chowed Sir John Byng, whose kind of his foot, both shoe and stocking being worm through. Sir John said, "I think I have a pair of shore that I will lend you," which he did, adding, "I shall not be ashamed to take them back when we must our own baggago." This L'Estrange promised and performed, "though they were nearly by that time in the state of my all near-off snea." He describes a night retreat in the Pyrences. He saw a gentleman in a blue military frede-cent and heard him say, "Right about, right about

^{*} Backhallan of Sir Garps B. L'Estrange late of the good Manhael, and Strange late of the good Manhael, and Strange late of the Son, Lopica: Sannan Loy & Co. 1074

It is — odd if ten thousand British cannot show their faces to thirty thousand Frenchmen." It was Picton. His division was in the rear, and they were falling back upon it. However, this gleam of hope did not last long, and the retreat was continued. Next morning the French army made a most determined attack on the allies. L'Estange saw a battalion of Portuguese scattered and ruming like mad, and a large body of French menaced the position. He thought things were looking bad, but immediately afterwards he saw a regiment of red-coats go at the French column like buildogs. The French stood their ground wonderfully, and for a moment it appeared doubtful what the issue would be; but just as the regiment got within a few paces of the column he saw the two colours go out in front of the line almost up to the French bayonets, the battalion followed, and drove the French before it. This regiment was the 21st Fusiliers. One of the easigns who carried its colours was Francis Russell, whose fag L'Estrange had been at school. "Hurray for Westminster!" said he. The French attack failed and they retreated, and the British having been reinforced took again their old position. Mounting a hill he met an officer in hot pursuit of a round loat of bread which was rolling down it. This was another cousin, not the hero of the escape from Bitsche. They were a fighting family this of L'Estrange, as we hear of four youths who were in the army at this time, and also of their uncle, who commanded the 31st at Albuera, and then commanded the 26th Regiment. He rode from Gibraltar all across Spain, on a holiday, to visit his old corps at Toulouse. There was hard fighting before Toulouse was reached. On the night of December 12, 1813, the author was in command of the most advanced picket, not far from the walls of Bayonne. He heard a rumbling noise all night, and apprehended that which actually occurred. Marshal Soult moved his army through Bayonne in the night, and attacked the British in the morning in their position of Vieux Mouguerre, Sir

SYLVIA'S CHOICE.

charming book indeed. As it is, it belongs to the school which deals in praiseworthy intentions rather than completed achievements; but, being so good as it is in parts, we can only lament that it should not be excellent all through. Its main fault is a want of workmanlike thoroughness. We find a certain improbability in the circumstances and a latent inharmoniousness in the characters which disconcert the attentive reader. The strong become at times weaker than the weakest, the resolute are vacillating, the cold are impetuous, the self-restrained self-revealing. One scarcely knows what line the author really meant to take when ahe began, and whether the qualities she gives her people are to be accepted as manners put on for a purpose, or as characteristics integral and inalienable to the nature. Sylvia herself is one of these passing compounds. Affectionate, submissive, and resolute, she is now on her knees before her mother and grandparents, now standing foot to foot in open opposition against them; fascinated by her newly-found father's gentleness and love on the one side, on the other she is distracted by her own inherent humility weighted by the sense of home disapprobation. Yet she is not meant to be wacillating and without a central principle of action; only composite, with a heart which we may call many-sided and impressionable more than most, and a conscience not innocent of the art of making moral bugbears out of moonshine.

morel bugbears out of moonshine.

But in spite of a cartain fluidity of character, a certain exaggemated childishness of demeanour and description, more exasperating than enticing, Sylvia is a very sweet and charming girl, though we think that Miss Craik has allowed too little for the determining influence of habit. That sharp and sudden change from the luxury and material refinement of Chester Square to the sordid poverty of the little back-parlour behind the shop in Exeter Street, Brompton, is one which scarcely reads like truth. We can well imagine the girl's delight in her kind and gentle father even when found as a petty working watchmaker living in miserable lodgings in a dingy by-street; but we scarcely think she would have left her old home to go and live with him if the authorities there had granted her the privilege of visiting him, as they did substantially in spite of their hard words. For though her grandfather, Sir William Falkland, says she is to choose between, them and him, they do not throw her off even when she makes her election against them, but take her out to balls and parties like any other

* Systel's Choice. By Georgians M. Craik. 2 vols. London : Hurst & Elackstt. 1874.

young lady of society, while she cooks and makes the beds at Exetar Street; causing her to lead the life, as Mr. Britton says, of a second Oinderella, whose fairy godmother described her as soon as she entered the precincts of Brompton. All this is of course very odd, looked at from the point of view of society, and is not what ordinary gentlemen and ladies would have done. In the first place, we entirely doubt the Hadihood of the Falklands suffering their son-in-law to drift into such desperate need in the beginning of things. He might be backboneless, weak, uncertain, but the social status of a rich banker would have ensured some kind of post where shility in they chief was not needed provided he had a clever subordinate, to do the real work and keep his leader straight before the world. There are thousands of men with less force of character than Richard Duncambe possessed who are well provided for by the simple force of birth and connexion; and the Falklands would have seen to this for their own sakes. But, granting that he was sent off to Queenaland, as Mise Craik's story goes, and that he came back again, as is said, secretly, and yet not keeping his incognito with either tact or determination, we cannot but think that something would have been done for him even then, and that, being perforce acknowledged, he would have also been assisted. As the case stands, it is a curious imbroglio, such as people of society would have been careful not to fall into, and which a very little tact might have obviated. Mrs. Duncombe's quasi-widowhood was ended by her husband's reappearance; and that he had reappeared was no secret, owing to his own confession to Colonel Cubitit, who talked of it openly, and to Sylvia's preference for him over her former guardians. In such circumstances, then, the only rational course was obviously either to denounce the man as an impostor and refuse to believe his story, or to make the best of a bad job and put a good face on a disagreeable matter. Mrs. Duncombe, who is painted as selfish,

We confess ourselves unable to see the charm which must have existed in Mr. Britton to have gained Sylvia's love so quickly and so strongly. "A tall, sallow man," who keeps shop for his friend Richard when this last is obliged to go out on business, more direct than polite, and at times more bearish than even the directest need be for honesty, he does nothing, says nothing that seems to give sufficient reason for Sylvia's fascination. He is evidently an honest-hearted man, but his contempt for society and the world, for riches, station, and all the artificial goods of an artificial order of thungs, has that curiously unsatisfactory ring which is always audible in the renunciation of the unaccepted. The tub of Diogenes ceases to have any special significance when it is the best lodging to be had; and the democracy of a probleme is quite another thing from that of the affluent aristocrat. It was easy for Mr. Britton to despise pleasures which he could not taste, and abjure temptations to which he was not exposed. Had Miss Craik made him more of a conventional gentleman, she would have strengthened her work; and had she left out all that unpleasant episode of his illness, she would have done better for her subject and her art. A hero shown as a rude, crabbed, selfish invalid is a hero too much according to the estimate of the traditionary valet de chambre to be delightful, and as a study of fascination he is a mistake. Although the sick-room scenes may be naturally conceived and painted, they are not the less out of the region of true art, and disagreeable to read. Again, a minor objection—does the knowledge of cooking come by instinct? Sylvia had certainly never learnt that art practically while at Chester Square, yet she at once jumps into perfection, and is able to do that most difficult of all things—cook for an invalid "to the turn" without apprenticeship or practice. Heroines have odd qualities assigned to them as a rule, and more virtues than come naturally to their share; but the power of cooking chops and

and, touching as it does a busy his own opinion, provokes comments not favourable to miss oran sides of girlish possibilities.

Yet, with all its shortcomings, and what we must consider its inherent defect of weakness, Sylvia's Choice is a pretty book enough. We wish that Mrs. Duncombe had been a trifle less detestable, and that the kindness of heart lying undermath the hard upper crust of worldliness in both Sir William and Lady Falkland had been more generously dealt with. To say that people feel such or such a thing, and then to make them not without the smallest dramatic reference to such feelings, is but a cold and niggardly method of delineation. There were possibilities in both these characters which Miss Craik might have worked up to shod uses had she cared to perfect and round off her characters. But as novelists are only human like the seat of the short was all things human are sadly impuribed at all shorts.

get with as much gratitude as the circumstances of the case designed; always remembering that what is had might have been worse. Even the unlikely and undignified love scene between Sylvis and Hugh Britton might possibly have been a shade less lovely had Miss Craik been very solicitous to spoil her work more than she has done; but we are rather doubtful about this, for in truth the scene is about the most foolish of its kind we have ever met with. Our anthor's forte does not lie in dialogue so much as in her suggested pictures, whether of character or of feeling. The parting of the father and the little child is very tenderly touched, and the petulance of the infant well pourtrayed, without being either jarring or extreme. So, too, when Sylvis and Colonel Cubitt find Richard Duncombe bending over his work, mild, faded, quiescent, halpless, yet always sweet and wholesome, Miss Craik has caught the prominent features of the man finely, and reproduced them delicately. Sylvis is never so distinct as her father. Now she is a woman of will and character, able to hold her own and act out her desire without reference to any opposing power, now "the little one" whose childiahness becomes oppressive, and whose only fitting analogue seems to be a white mouse or a newly-fledged canary; at one time she is so faithful and so strong, at another so timorous and so weak, that we are at a loss how to hold her. But she is wholesome too, if of doubtful central minciple and for her sake we wish that Hugh Britton had hold her. But she is wholesome too, if of doubtful central principle and for her sake we wish that Hugh Britton had been more charming, or that her first lover. been more charming, or that her first lover, Ralph Ferrer, had been more genial. They are a clumsy set of people, however, all through; so far as worldly wisdom goes, one as clumsy as another; but if Miss Craik is weak in her workmanship, she is as another; but if Miss Craik is weak in her workmanship, she is strong in a certain power of design, and has the courage to carry her heroine into enduring poverty and the lower stratum of society. The "choice" of a well-bred girl, by which she prefers her pleasant-tempered father, poor, struggling, and a gentleman-mechanic, to her wealthy grandparents and cold-hearted lady mother—by which she also prefers a nondescript kind of worker, gruff and rough and rude and strong, with no money to speak of, and manners to correspond, to a wealthy prig who would have given her riches and not happiness—is a healthy if not quite everyday one; and for the sake of this healthiness of moral tone all else that is less than artistically admirable in Miss Craik's book will surely receive condonation.

FACT AGAINST FICTION.

MR. GRANTLEY BERKELEY would be a more entertaining writer if he were less prolix, and he would be more instructive were he less dictatorial. These two large volumes with their desultory contents are no exception to the rule of his writings. There is a great deal in them that is pleasant as well as very profitable reading, with a great deal more that might well have been omitted. It is not only that he frequently repeats himself; this we are quite disposed to forgive him, especially as he frankly confesses his failing. But, as he would himself be the first to admit, he is a man of most decided opinions, and he reserves are in and again to his disputes with those who have the serious verts again and again to his disputes with those who have the serious misfortune to differ from him. Now he is sparring with Mr. Darwin and his theories on the origin of species, now with Professor Owen and his anatomical researches, and again with Mr. Frank Buckland and his salmon ladders. Worse still, he is perpetually being moved by the artist of indirection to take a strong line on questions that and his salmon ladders. Worse still, he is perpetually being moved by the spirit of indignation to take a strong line on questions that are at once social and political, and on these questions we need hardly say he feels more strongly than on any other. In the main we agree with Mr. Berkeley, but complicated questions of rural labour are not to be disposed of offhand by an ipse dirit, or by denunciations of "blatant orators, Odger, Dodger, Dilk, and Co."; while in the matter of the improvement of labourers' dwellings, we must say that he lets his Conservatism run away with him altogether. Although Mr. Berkeley takes it on himself to assure his readers "that, if the entire population of the rural classes were polled for and against what is called the improvement of their dwellings, there would be an overwhelming number of votes for the old cottages," we can seezely accept the startling statement even on his confident assurscely accept the startling statement even on his confident assur ance. And we are quite sure that, if his assertion is to be relied upon, the sooner the labourer becomes discontented the better. It would be a bed sign indeed were any class of Englishmen so lost to decency as to submit with complacency to the most objection-

to decency as to submit with complacency to the most objectionable overcrowding.

But few people will read Mr. Berkeley's book for its politics, and we may have done with fault-finding when we turn to sporting subjects. In these Mr. Berkeley is so much at home as to give him excuse for speaking somewhat dogmatically. He has lived with animals all his life, and has a happy knack of making friends with them. Nor can we wonder at it when we see how keenly he loves them, how thoroughly he has some to understand their natures, and how closely he studies their individual characters and humours their little weaknesses. The people who are least likely to read his book might read it with great advantage—trainers and keepers who break the spirit and spell the tempers of the unhappy animals they are educating, by every cort of misplaced severity. Dogs especially are extraordizatily susceptible to

praise and consure from those they are attached to. Mr. Burisley tells us that he can do anything with his dogs by simply letting them understand that he is vexed or displeased. By way of instrument of correction he never makes use of anything heavier than a bit of stick with a piece of string tied to it. He tells one good story in illustration of the success of his system of training animals by teaching them to seek for approbation. He had been breaking a retriever to fetch rabbits to him, by pretending to make much of the rabbit when it was brought, as if it were a thing he set a high value on. Neptune turned this over in his sagacious mind, came to the conclusion that his master must be exceedingly partial to rabbits, and was proportionately delighted on one occasion when he thought he could prepare him an agreeable surprise. He had picked up half a rabbit somewhere about the premises, and as his master was not within reach of him at the moment, he put the prize in a safe place to keep for him. The the premises, and as his master was not within reach of him at the moment, he put the prize in a safe place to keep for him. The most secure place he could think of was in the back of his own kennel; and thence Neptune produced it in the morning, having waited patiently till the pheasants had been fed as usual, and until he saw that his master had nothing else on his mind, and was at full leisure to attend to him. The dog would never have thought of doing the same thing for an ordinary breaker, and, if he had, the keeper would never have understood him. By following out the course of thought which was the natural fruit of his teachings, and by showing the dog that he thoroughly appreciated his motive, Mr. Berkeley confirmed Neptune in his habits of reflection. As with dogs, so with horses. Mr. Borkeley makes friends of them; leaves them to use their own intelligence in the hunting-field, and rides much more safely in Mr. Borkeley makes friends of them; leaves them to use their own intelligence in the hunting-field, and rides much more safely in consequence. He quotes "a man who adopted the name of 'Nimrod' when sporting writers were fewer"—Mr. Berkeley is ungrateful to Nimrod by the way, for he tells us "he never went a yard"; while Nimrod in his "Reminiscences" speaks highly of Mr. Berkeley—as recommending that, when riding at a brook, you should bring your thong down on the horse's shoulder at every stroke of the gallop. We had forgotten that Nimrod had given any such advice unreservedly; but we are sure that Mr. Berkeley is right when he says that the worse thing you can possibly do is to distract your horse's attention from the work before him. This must be particularly the case when it is a question of banks, or when the nature of the ground for the "take-off" is doubtful. Here, again, Mr. Berkeley brings forward an instance in point. Out Here, again, Mr. Berkeley brings forward an instance in point. Out with his own staghounds somewhere in the Weald of Harrow, mounted on a powerful and very intelligent hunter, he saw a formidable ha-ha before them. The horse, he thinks, could have midable ha-ha before them. The horse, he thinks, could have cleared it, stiff as it was, had he not been thrown out of his stride by a rider crossing awkwardly shead of him. Whereupon, feeling assured that if he attempted the jump he would in all probability come to grief with his master, Jack o' Lantern quietly jumped into the ha-ha, with his chest reposing against the opposite bank. It was an example of prompt presence of mind which Mr. Berkeley understood, although it was trying to the temper to be stopped in a good run and have to wait, with what patience you could muster, until your horse was dug out.

It is not with his domestic animals alone that Mr. Berkeley establishes this excellent understanding. He makes friends with all the

blishes this excellent understanding. He makes friends with all the blishes this excellent understanding. He makes friends with all the wild creatures about his place, and even the game that is brought up to be begged moets him confidingly as a generous enemy during the suspension of hostilities. There is a pond near his house where the water-fowl are never molested. The consequence is that when he shoots a rat there of an evening, the ducks listen to the appear with prefect indifference and are not as an distributed by the report with perfect indifference, and are not even disturbed by the retriever plunging in among them. More than that, they have learned that Mr. Berkeley is the only person in the habit of firing stray shots at rabbits out at feed. They understand, he says, that "where that gun is I am, and that where I am there is always a pocketful of Indian corn. At times even in the woods I shall scarce have recharged my gun when there is the whistle of a wing in the air and a duck lights down by my foot." There are an old pin-tail and a little Bahama duck, in particular, who always fly to the sound of the shot, and then follow him about the fields where he is shooting. After this it is not surprising to hear that where he is shooting. After this it is not surprising to hear that there are ducks that take their places regularly by him on the bench while he is feeding the rest; that he has trained his whole mixed multitude of waterfowl to respond to a given signal with three noisy cheers for the Prussians; or that robins and other small birds come out of the bushes to greet him in his walks, knowing that he is sure to bring them bread crumbs. It is more singular, and a still more striking instance of the influence of kindness in winning confidence, that he had struck up an alliance with an old blackcock. Blackcocks are among the shyest and wildest birds that fly; but this one had come to make himself thoroughly at home on the lawn, where he crowed it over the cock pheasants.

Mr. Berkeley's hints on breeding and hunting hounds, on rearing

Mr. Berkeley's hints on breeding and hunting hounds, on rearing and preserving game, are well worth reading; but naturally it is not easy to do them justice in a brief notice. In his talk about hounds, what strikes us is the close attention he has evidently paid to their habits, which makes his advice the more valuable. We think there is a great deal of good sense in the objection he take to the growing fashion of dog shows, especially so far as foxhounds are concerned. The judges can only decide by what they see, and therefore, judging by sight, they award the palm to personal beauty. Hence huntamen are tempted to cross and breed for good looks, to the disregard of the quality of nose, which ought to be the first essential. As Mr. Berkeley says, an

est against Piction : the Habita and Prests red. By the Han. Grantley F. Buthsley.

ugly, ill-shaped hound with a good nose will run away from a magnificent animal with a bad one. His advice in breeding is never to breed from known faults on either side, but to strive as never to breed from known faults on either side, but to strive as much as possible after perfection. As with the unity but clever man who married a handsome fool in the hope that his children might inherit their father's brains and their mother's looks, but who found that it turned out just the other way, so Mr. Herkeley has remarked that faults in dogs' ancestors are mere apt to reproduce themselves than hereditary virtues. And, to pass on from hound-breeding to pheasant-rearing, here, too, he calls attention to a mistake which is very commonly made by keepers. They are in the habit of putting out the coops on a strip of sward cut out of the long grass that they leave standing all around by way of a refuge for the young birds. The consequence is that the young pheasants get wet and chilled in rain, and either loss themselves on the leave ley recommends is to choose a piece of ground that is comparatively clear, so that the keeper can have his charges continually under his eye. By way of cover and shelter from the sun, it is quite his eye. By way of cover and shelter from the sun, it is quite sufficient to throw down some boughs under which they will run, and another advantage of this plan is that it exposes them to less danger from ground vermin. But we may have said enough to show that the book is profitable as well as amusing, although the reader will of course exercise his own discretion in the way of

AMERICAN LITERATURE.

DR. F. LIEBER'S Civil Liberty and Self-Government ., notcharacteristics of his work, is nevertheless a really American book, both by local origin, language, and, what is more important, the mational ideas and institutions which the writer has in view, and to which he continually refers to illustrate his theories, either by way of example or of antagonism. The tendency to an abject worship of the right divine of numbers, which intects all American writings on political ethics or political philosophy, is evident even in the work of this German thinker, though his own principles are most opposed to that principle. If he shows a perception of the rights of individuals and minorities, an appreciation of the rights of checks on popular accurations. value of checks on popular sovereignty, and a reverence for consti-tational privileges when opposed to the will of the multitude, these sentiments, heretical as they sound in the ears of contem-porary American moralists and politicians, seem to have been inspired and confirmed less by the author's independent thought than by the fact that he wrote before the sword had swept away s sences and limits of numerical domination. At that time the fences and limits of numerical domination. At that time there were real and very practical bounds to the power of a mere majority; the Constitution was still a name to conjure with, an object of formal reverence to the North and a line of defence most jealously guarded by the South, even though the rising Republican party was openly founded on an assumption of superiority to all restraints imposed by the treaty which created the Union. A Professor in the University of South Carolina and The research protection in the University of South Carolina. disciplinations of thought and originality of view which would have snabled him to resist a strong current of thought and sympathy among all around him running in a particular direction; nor does he display that extensive knowledge of national diversities, of the political history of distinct races, and of the true meaning and reasons of institutions different from those among which he lived, that might have shown him the unsoundness of meaduations drawn from a single case. We regard his work, then, mather as illustrating the views prevalent when it was first written. especially among the more moderate statemen of both parties, than one protest against the doctrines now in the accordant. And, after all, his objections to popular despotism are pale and feeble compared with his denunviations of all other forms of tyranny, even while he knows that popular tyrunny is the one great danger against which he ought to warn his adopted country. Some of Dr. Woolsey's notes are much more outspoken and purposelike than Dr. Lieben's text. Still we have to soknowledge in the latter a chapter of amphatic protest against the vulgar and stupid fallacy, "Vox populi vox Bei," and to recognize a clear apprehension of the value of permanent institutions, as strong and various, and as mutually independent as possible, as the only protection, under a domoracy, against the worst kind of centralized tyranny. On such general topics Dr. Lieber often writes with sufficiently good sense and practical clearness, though rarely with force of argument of neverly of illustration. It is when we come to the solution of particular problems, or the discussion of particular includes a problems, or the discussion of particular in required—that he breaks down. For acample, on the institution of a facound Chamber, or "hicamera Lagislature," neither he nor his coliter has an idea to afford us, and the only thing that sounds pter of emphatic protest against the vulgar and stupid fallacy,

"On Curl Librry and Self-Doursment. By Francis Lieber, LLD.
Dorremonding Member of the Institute of France, &c., Author of "Political Editor," "Principles of Lagal and Political Interpretation," &c. &c. Third Editor arrivell, Edited by Theodere D. Woolney. Philadelphia: 'Lippingott & Qu. Lendon: Tribuer & Co. 1874.

like an idea—the escription of the institution to the Mariner, as a distinctive peculiarity—is altegether unlike the There is no essential difference between a Parliament of a Chambers and a Parliament of three or four, and the seast the Estates in the particular method in which it work England was almost a matter of accident. All other State England was almost a matter of accident. All other States were
in modern times have adopted the Second Chamber have correct
in from us. Dr. Lieber and Dr. Wechey fancy that it has succeeded
only in English-speaking countries, and that it has succeeded
all these. The truth is that it has succeeded only where the
were means of giving a distinct basis of power to the Upper Plain England, through the existence of an heredisary ter
torial peerage; in America, through the corporate individual
of the State. And because the American States were
centres of an almost national feeling, and reseasons of an almost centres of an almost national feeling, and possessors of an als sovereign power, the American Senate, whose members represented them, was, when Dr. Lieber wrote, the most powerful of Second Chambers—the only one more powerful than that which directly represented the people. In our colonies the Lagislative Council is almost as great a failure as on the Continent. Equally little perception is shown of the true character of the Russian automore. little perception is shown of the true character of the Russian autocracy, the most thoroughly popular and representative despotism the world has seen, or of the causes which snabled Napoleon III. so easily to establish a Ossarean Empire on the ruins of the Republic. Some details are well touched upon—as, for example, the absence of that responsibility of every officer for every illegal act which would cause English policement to shrink from such arrests as those of December 1851; but the general causes of the President's triumph, and of the perpetual liability of France to coups d'état, are hardly glanced at. Want of "institutions" has certainly not been among those causes. Dr. Lieber neither appreciates the rooted hatred of the Republic, as associated with massacre and pillage, which prevailed among all respectable Frenchmen of the last generation, nor the real attractions and even solid merits which were mingled with the many evils of the Empire. many evils of the Empire.

The Reports of the New York Chamber of Commerce" are always interesting. They constitute almost the only source from which English readers can learn what the educated mercantile aristocracy of the United States really think about the different financial vagaries and economical heresies of those Federal legislators in whose election they have long lost all influence and all interest. If we want to know what they have to say on either side of such questions, we must seek it in the debates of that Chamber, for it is there, and not in Congress, that those who own the great commercial wealth of America are represented and listened to. If we seek their collective verdict on the matter, we may possibly fail to gather it correctly from the votes of the Chamber, but we should never dream of looking for it in the Senate or the House of Representatives. One of the most important parts of the present volume (1873-4) is the record of a debate on the extension or limitation of the currency, with a view to the resumption of cash payments. A Com-mittee had reported against any reduction of the currency, pleading that the Bank of England had to contract the currency sharply in order to render cash payments possible, that this caused great inconvenience, and that therefore the currency should not be coninconvenience, and that therefore the currency should not be contracted before the resumption of each payments. As this is accompanied by a remark on the very high premium of gold, or depremention of paper, and as nothing but contraction can bring the currency to par, this is a virtual postponement to the Greek Kalends of the resumption of each payments, or the fulfilment of United States' "promises to pay." The matter was keenly discussed, but the cowardice which shrinks from a sharp, though saving, operation was predominant with the majority. Redemption would be a blessing, but contraction would be a terrible trial, and a great many could not stand it. Fortified against shame by numbers, the Committee's Report, leaving the acknowledged evil unturabled. There Unamer indused its shrinking herves, and sanctioned the Committee's Report, leaving the acknowledged evil untouched. They did, however, go so far as to deprecate any further increase of the currency beyond the present legal limit. It is clear that if the merchants of New York, who of all classes must feel most keenly and directly the mischiefs and perils of a currency of varying value, cannot make up their minds to the pain of the first step towards a restoration of financial order and a redemption of the public credit, there is no great home from any other water. the public credit, there is no great hope from any other at ter, until some sharper lessons have brought home to all cla-the real state of the case.

Miss Julia Duhring's Philosophers and Fools + has the the of the masculine metaphysician, combined with the dimport of a woman writing on topics with which she has a way the acquaintance. There is, however, comparatively little shout its fessed subject in the volume. Though Miss Dehring professional acquaintance of the state of the st identify philosophy with metaphysics, she shortly after seeds to distinguish philosophers and fools by a rank with which metaphysics have no concern, and in the with which metaphysics have no concern, and state a series of disquicitions on things in the same of the concern and with the state who against the concern that ell who again.

Sistemak Annual Report of the Charmes of the State of New York, Thereto State by George Wilson, Secretary, Mark, Marketo, Lambon; Wilson, Secretary, Mark,

sophers, and all who do not use fools. Even smoog the numbling manamental congeries of matter there are p in to find in such a place; but very few of a line enther or to their present setting, not in Mr. Wikoff's Four Civilizations of

gines just twenty-sine pages to the encient India, Graces and Rome forming the first distance which fall into their places in the with Mexico and Peru stand apart as "a is barely moved and Assard apart as "a suthor's system—while Marico and Paru stand apart as "a mystery." China is barely named, and Assyria altogether for eligites. The rest—that is, practically the whole—of the book is given to the "Fourth Divilisation, Christianity"; and on the history of the Christian world down to the year 1830 it contains not a fact nor an idea which can be new to educated men, nor does it give such an outline as might be of some service to the ignorant. The ridiculous pretensions of the title-page, contrasted with the miserable performance in the body of the book, surpass anything of the sort that we can remember even in our experience of the achievements of American puffery.

Of Famous Tradet, by Mr. J. Morse, nearly two-thirds are occessed by that swful incubus from which the dreams of Englishmen, from the Lord Chief Justice to the humblest reader of the

e, from the Lord Chief Justice to the humblest reader of the filled by very brief accounts of the trials of Tropmann, Prince Pierre Bonaparts, and some American murderesses. The only case that deserves a word of mention is that of the Meteor. In this case, according to Mr. Morse, it was allowed on both sides that American law and American practice entitled the vessel to her release. But the case was so strictly analogous to that of the Alchemes that the Government insisted on and obtained her con-demnation on "grounds of State policy" alone; on the plea that her acquital would give England an answer to the American her seguital would give England an enswer to the American claim at Geneva which could not be safely put into our hands. Of course, if this be true, the American Government admitted the Of course, if this be true, the American Government admitted the dishonesty of its demands; for it allowed that by American law the Meteor was innocent, and insisted that her case was parallel to that of the Alabama. Mr. Morse ought to know what is possible in American courts better than we do, and we simply take this story as he gives it. But whether it be true or not matters little; every one who has given any attention to the subject is fully aware that the United States had, from 1800 to 1860, released a score of Alabama (and of vessels fully awared and acquired as the Alabama Alabamas (and of vessels fully armed and equipped, as the Alabama was not) to prey on the commerce of nations with which America was at peace, and allowed them to bring their prizes into American waters for protection into the bargain.

"Alex," in a volume entitled As It Should Be ‡, treats the

"Alex," in a volume entitled As It Should Be 1, treats the question of female suffrage from a somewhat novel point of view. He repudiates the doctrine that, if woman is to claim the rights of man, she must perform the duties, apparently overlooking altogether the capital fact that every citizen is bound in the last resort to defend his country by force of arms, and that all franchies rest ultimately on this obligation. He dwells chiefly on the idea that woman has in her hands, in the education of the young, a power far greater than that of the Ballot, and needs no other. As he seems to regard the question as one of urgent moment, it would be well if he had considered a little more carefully the dilemma suggested by the possibility that a majority of women should pass laws which the majority of men would resist by force. Representative institutions will not prevent the collision, even if they soften it; and when once physical force is on the side opposed to the law, not merely one law, but all law, is in danger.

No Sex in Education 6. by Min Theffer.

narrely one law, but all law, is in danger.

No Set in Education 5, by Mrs. Duffey, contains some sensible remarks on the mischief done to female health by other causes than over-study, and on the wholesome moral effect of school occupation and school discipline. But on her main topic she writes sheer non-sense; and, rather to our surprise, betrays a total ignorance of what has been written by physiologists of all sects and parties (including warm advocates of her cause) on the relation—we might always say the relation of anterconium—between the bearing and the ciuding warm advocates of her cause) on the relation—we might almost say the relation of antagonism—between the brain and the distinctive female organisation. Her whole argument is based on the tacit assumption that there is no such a significant that there is no such as the same of the same o distinctive female organisation. Her whole argument is based on the tacit assumption that there is no such special relation—a fallacy which is at once fatal to the whole structure of her reasoning.

Two interesting works | on the mineralogy and the gold-fields

* The Four Civilizations of the World: an Historical Retrospect. By Henry Wikoff, Author of "A Visit to Prince Louis Napoleon at Ham," "Political Essaya," &c. &c. Philadelphia: Lippincott & Co. Loudon: Trübmee & Co. 1874.

- At It Should Be. By "Alaz," Author of "As She Would Have It." adelphia: Lippincots & Co. London: Tribner & Co. 1874.
- The Mineralogy of More. Besting a Manufacture of Chambers and Manufacture of Most Month Carle and Month Month

A Practical Golde for Tourists, Minara, and Russials in the development of the Gold. Pietle. of Heatherington, Author of "Communities" Statistical Bertares, " to. An. Under Official Patronggs. Adapts of Minar and the Patrix Exhibition Communities, Soc. Soc.

of Nova Scotia decerve the careful att emigrants and of speculative expitalists, limb of to on account of the supposed liability of ear ling speedy exhaustion, predict the transfer of the speedy exhaustion, predict the transfer of England to foreign rivels. It is too comes the question as if England were the wite pire. The reports of Nova Scotian investi-that their country might be made with one as the inconveniences of season and temps to the whole of the seriously with outdoor work and with navigatindoor labour or mining industry (for the surface no effect even at the highest level at which coal see worked), and the supply is adequate to keep the textile of Europe going for centuries. In the States agriculture mangementations to come have greater attractions than manufactures. especially as facilities of communication and the spread of divition drain the population of the bleak New England States tow the rich inland regions and the splendid territory on the R coast; whereas Nova Scotia is marked out by nature as a m facturing rather than an agricultural country. Her gold-fields as said to be among the richest in the world; and as they do no and to be among the richest in the world; and as they do not afford much opportunity for placer or surface dispring, mining companies would have little difficulty in obtaining labour at the market price of the colony. Labour is changes, and the yield of ore per ton of quarts is said to be decidedly larger, these sittles in Australia or California; it is companitively near Liverpeal; and there seems reason to believe that capital and enterprise; guidad by adequate knowledge acquired and applied on the spot, might produce as large fortunes out of the quarts mines of the various fields named in the little volume before us as out of any other

exceptional field of lucrative industry.

Mrs. Scott's Rome as It Is * contains some graphic descriptions of the grandest classical ruins and ecclesiastical buildings of Roma —the heat chapter being that which deals with the present ag-pearance and remaining inscriptions and monuments of the Cata-combs. Its great defect lies in the writer's ignorance of classical antiquity, which is complete and sometimes prevoking, and suggests a question whether one who does not even understand the language of the inscriptions she quotes had any right to come forward as an instructor of her countrymen on subjects of so much

real value and interest.

The Dector and Student †, by Christopher St. Garman, was originally published in 1518, and is probably the first English treatise on English law that was given to the world through the printing press. The present volume appears to be a reprint of a later edition, revised by the W. Muchall whose name appears on the title-page; but it is nevertheless of great antiquity. Its curious statements of the doctrines of our law as they stood before some of the principles which are now quoted as fundamental had been adopted—while as yet no Statute of Limitations applied to had, and while the morality, if not the legality, of fines and recoveries to defeat entails was yet an open question—enable the reader to realize, as perhaps no historical work could do, the strangoness, and yet the familiarity, of the institutions with which it deals; to perceive how vast are the alterations which our system of law has undergone, and yet how completely its framework remains the same. If Muchail or St. Germain were to enter the Courts of Westminster Hall to-day, nothing would at first strike him as utterly strange or unintelligible; it would not be till be came to listen to the arguments of coursel and the decision of the judges thus he would approhend the revolution which three centuries and a half die balf have effected not only in our actual law, but in the ideas and convictions by which its interpretation is regulated. Probably three-fourths of the learning of this book are gone by; and yet there is scarcely a page in which we are not reminded of the significance of existing forms, or the origin of phrases whose life and

meaning have since passed out of them.

Mrs. Furness's Concordance to Shakepears's Posses 1 requires no more than mention at our hands. It professes of course to give every word that occurs in the posses, and the passages in which it

is to be found.

The third volume of Count Rumford's Works 5 contains papers on the construction of fireplaces and chimneys and the economical consumption of fuel, which unhappily have not become antiquated through the progress of the last half-century.

Mr. Warner's Boddeck, and That Sort of Thing || is a pleasantly-

* Rome us It Is; being Reminisoences of a Visit to the "City of the Causes." By Mrs. H. R. Scott, Author of "Day Dasse in Africa," "Glimpses of Life in Africa," &c. With Illustrations. Philadelphia: Lippincott & Co. London: Trilbuser & Co.

Lippincott & Co. London: Tribmer & Co.

† The Doctor and Student; or. Dialogues between a Ductor of Divinity and a Student in the Laws of England: containing the Grounds of those Laws, together with Questims and Cuses concerning the Equity thereof. Havised and Corrected by William Muchail, Sant, to which use added two pieces concerning Suita in Chancery by Subpana. I. Buddeck, and That Bort of Thins. By Charles Bulley Warner, Anthor My Business in a Gladen," "Backing Bindles," "Backing Studies," "Backings," account of the Business are the page of the Business are the page of the Business are the page of the pa

written account of a tour in the Maritime provinces of the Dominion. Miss Vance's novel, Lois Carrol', is distinguished for a rather more affected style and rather weaker substance than are common among the American describers of American home life and scenery. Some Women's Hearts † is the title of a series of short tales whose spirit and subject it aptly suggests. Papa's Own Girl is snother fiction with a purpose tolerably well marked, but not altogether overriding the author's object as a tale-teller. Miss Hazard's Autumn Musings 5 belong to that class of poetry which has met with scant mercy from the days of Horace to those of Hayley, or from those of Byron to our own; and though H. R. Hindson's || poems rise above that level, the author has not always known, in indulging a decided taste for the practical, which gives a flavour of originality to the volume, how to steer clear of the prosaic.

HOME RULE.

M. DISRAELI would have committed a grave mistake if he had refused Mr. Burr an opportunity of proposing his Home Rule Resolutions. There may perhaps be little direct advantage in discussing a proposal which the great majority of the House of Commons is irrevocably determined to reject; but it would have been discourteous to prevent a considerable body of members from obtaining the project which they had been returned to the project. It would also have been a loss to have been deprivad of the negative proof that Mr. Burr and his political allies were not even prepared with plausible answers to the objections which had been repeatedly urged by their opponents. The mover naturally forgot the promise with which his speech commenced, that he would produce a definite scheme. The vital question of the distribution of Tunctions between the Imperial and Irish Parliaments remains in total obscurity. It was indeed admitted that the management of international affairs should be retained by the Imperial Assembly; but Mr. Burr failed to explain whether there was to be an Irish Chancellor of the Exchequer, who should introduce a separate Budget into the Irish House of Commons. He also, for sufficient reason, passed over almost without notice the constitution and attributes of the Irish House of Lorde the constitution and attributes of the Irish House of Lords, which would necessarily find itself in a state of immediate and perpetual collision with the Irish House of Commons. As Lord HAMTIMGTON justly remarked, the absolute control over corporate and private property would be vested in the local Legislature to which the Ministers would be responsible. The Commander-in-Chief of the forces stationed sible. The Commander in Chief of the forces stationed is Ireland would derive his commission from the Imparial Crown; and it would be difficult to adjust his relations with the Irish Secretary for War. The Irish Home Minister would have absolute power to dispose of the constabulary, perhaps for the enforcement of some Act which might be passed in hostility to the English connexion. It is not improbable that the two armed bodies might, find themselves opposed to one another, if the Imperial Government had occasion, to put down some insurrection by force. It may be supposed that some insurrection by force. It may be supposed that there would be no Irish navy, with the exception perhaps of a few revenue cruisers engaged in checking a contraband trade with England resulting from the probable institution of a pretestive tariff. Dr. Ball described the imaginary Irish Parliament as a vestry; but it would soon assume a more ambitious character by undertaking a policy which could scarcely be acceptable to England. An Assembly which endowed the Roman Catholic Church with the spoils of the heatile Matchile and the probability of the probability o of the hostile Establishment, which imposed a ruinous tax on sheeptee hadlerds, or which perhaps placed heavy duties on the importation of English produce, would not be justly taxed with paraphial pettiness and insignificance.

The debate of Tuesday was uninteresting, although Mr. Burr seemed have displayed considerable oratorical power. Dr. Bank's specific things it contained much undeniable truth, must have been disagreeable to patriotic Irishmen. Ford Harmston's amountament in the name of the Opposition was seasonable and not unimportant. Mr. creations's characteristic dislike of plain language been untowardly conspicuous in his mode of dealing the Bole. There was be little south that he opposed to the project; but the project; but the project; but the project in the project is the project; but the project is the project is the project in the project in the project in the project is the project in the pro

of his party, plainly declared that Mr. Burr's proposal was inadmissible, and that it could not be adopted by his party. Unless his pledge is repudiated by his late colleagues, or by the Liberals in general, the supporters of Home Rule have nothing to hope from the present Opposition. Augustempt to form an alliance with Mr. Burr and his supporters would have reduced the minority of the House of Commons to total impotence. The Liberals, when they recover their spirits after their recent disasters must attack the possessors of office with the aid of some other combination. It cannot be said that the statistics which were quoted on either side were altogether convincing; but it is absurd to deny the great udvances which Ireland has made in wealth and prosperity since the Union. It was of course natural and necessary that the customary amount of cant should be uttered about Coercive Bills and similar instances of Execution 1. instances of English tyranny. It was a sufficient answer that the repression and provention of crime are the first objects of government; and that the great majority of the Irish members have habitually supported coercive legislation. Mr. Burr's precedents for Federal institutions have often been criticized and exposed. Austria and Hungary are now, like Norway and Sweden, reciprocally independent; nor is there any Imperial or Federal Parliament representing the entire monarchy. Before the present terms of union were arranged, Hungary, which is supposed to correspond in the analogy to Ireland, was the more populous and powerful half of the Empire. The most instructive comparison may be made with the relations of Great Britain and Ireland before the Union, Except from 1783 to 1800, the Irish Parliament was entirely dependent on the English Government; and the experience of less than twenty years, including a bloody rebellion, satisfied every statesman of the impossibility of maintaining the connexion of the two countries with two separate Parliaments. The leaders of the Irish Parliament, acting in concert with Fox and Sheridan, defeated Mr. Pirr's attempt to establish Free-trade between Englandand Ireland. In 1788 there was an imminent danger that, if the Prince of WALES had refused the Regency on the conditions on which it was offered to him in England, the Irish Parliament would invest him by acclamation with all the pre-

rogatives of the Crown.

The whole discussion is in fact conventional and fictitions. Mr. Burr's only effective argument consists in the physical force which he sometimes hints that he has at his back. The consideration might deserve more attention if the disaffected part of the Irish population entertained the smallest desire for any form of Federal government. It has been suggested in several European countries when a Republic has been proposed, that there were no Republicans to form or administer it. It is more certain that in Ireland there are no Home Rulers, except the few politicians who fancy that it is possible to hide Fenianism with a mask. The voters who have elected Mr. BUTT and his associates have often clamorously proclaimed their hostility to England. It is idlo to protend that conspirators and rebels would cease to pursue their vocation when the Irish Parliament furnished them with the most convenient instrument for effecting their purpose. At present the law provides an imporfect scourity against sedition and disorder; but the declamations which might be delivered in an Irish House of Commons would be beyond the reach of legal proceedings. It is easy to imagine the chesp and against on with which an I. In member would rect any protest against his elequent domandations of the common would be against his elequent domandations of the common when the same spirit found your in

the more solid form of legislative measures, there would be no tribunal resembling the Supreme Court of the United States to arbitrate between the Imperial and Irish Parliaments. Remonstrances against excess of jurisdiction would be rejected with contempt unless they were supported by force, or, in other words, by civil war. For the purpose of attaining such ends as these, it is proposed that the loyal population of Ireland should be abandoned to the oppression which they would undoubtedly suffer under the absolute supremacy of the majority of their countrymen. The priests would divide with the demagognes the entire control of public affairs; and it is probable that the anomaly of a helpless House of Lords would be speedily abolished. The argument that it is better to make concessions than to encounter future rebellions is answered by the certainty that the institution of Home Rule would be immediately followed by a movement for total separation. The division scarcely represented the approximate unanimity of the House. Some Irish members professing to belong to the popular party spoke strongly against the Resolutions, and The O'Conon Don was probably not the only member of the minority who had no real sympathy with the objects of the movement. The Irish Scenetary, the Prime Minister, and Mr. Lowe urged foreible arguments against Home Rule, but a one-sided debate is always listened to with comparative indifference. It may be hoped that the discussion will, in England at least, not be speedily resumed.

THE GOLD COAST.

ORD CARNARVON'S scheme for the management of TORD CARNARY ON Secreme for the management of the Gold Coast has been accepted by both Houses of Parliament without any real opposition. If we are to stay there, it is difficult to see how the general outlines of the scheme could have been made very different or much better. The settlement or dependency is to be governed as a Crown colony-that is, the Protectorate, though nominally continued, is to be replaced by the beneficent despotism of a Governor-and, if it is possible, this Governor is to be kept alive by having permission to live a part of the year in a sanatorium or moderately healthy spot in the hills. But the Governor will not, as Mr. LOWTHER took good care to explain, live in his sanatorium at times whon he might have reason to expect that he would be surrounded and cut off by hostile tribes. He would be an odd sort of Governor if he made this perverted use of his sanatorium; but it is a comfort to think that Mr. LOWTHER, being a new broom, sweeps very clean, and would not rest in passive content with his chief's scheme until he had got it clearly before him that there was no real risk of a Governor voluntarily remaining in a country house from which there was every probability of his being carried off as a prisoner by savages. Lord Carnaryon has been fortunate enough to find a Governor whom he thinks he can trust to fill a very difficult and responsible post. Captain STRAHAN, the new Governor, is already Administrator of Lagos, so that he has local knowledge to begin with, and can estimate the difficulties and dangers that lie before him. He will have enough to do, and a very disagreeable set of people to manage. But he will have advantages which no English official on the Coast has ever had before. He will have a revenue of about 50,000l. a year, and this year Parliament gives him 35,000l. to start with. He will have a Council to aid, but not to override him, and the Government has wisely abundoned all affectation of calling in native advisers to say how they think their neighbours ought to be governed. Practically the Governor will do very much what he pleases, subject to the sole check that he must succeed so far as to make the Gold Coast forgotten, or he will be recalled. To enable him to carry out his undertaking he will have a thousand Housass, under European officers, to protect him and frighten his enemies; he will be able to get away in the deadly season to a spot of comparative healthiness; and he will enjoy the moderate remuneration of 3,000l. a year. Mr. Horsman blamed the Government for not giving him more, and certainly this sum is but a poor recompense for the constant risk of life on the part of a really able man. But if the new Governor is satisfied, and is really fit for his post, the inducement has been practically found to be sufficient; and it must be remembered that we have many officials all over the world, offen in very unattractive and unhealthy places, and the Government might have found itself subjected to remon. strances and petitions on all hands if the general scale of pay for service in the Tropics could have been supposed to have been calculable according to the standard of the Gold Coast, and this standard had been made very high.

Mr. HANBURY moved, and subsequently withdrew, an amendment the object of which appeared to be to give him an opportunity of unfolding his views on the prohibition of arms. He considers it ridiculous that the tribes within our territory should be disarmed, while the tribes beyond the border, and especially the Ashantees, should be allowed to purchase arms. There is only one reply to this view of things, but then it is a very exhaustive reply. We cannot possibly prevent the Ashantees buying arms if they have the wish and the money to buy them. We may prevent them getting arms from the ports on the Coast within our territory, but that is all we can do. The Ashantees can get .. arms either through the French settlement or from the King of Dahomey. We can disarm tribes within our limits, for we can haut up their arms and take them away; and it may be wise to take care that these tribes have no arms. For experience has proved that the Fantees are totally useless in time of war, whereas if they were armed in time of peace they might find courage to undertake some such enterpriso as that of pouncing on the Governor while he was at his country house. But we could only disarm the Ashantees by occupying their territory, and this would be to involve ourselves in a much heavier responsibility than we should like to assume. The other speakers who during the debate dissented from the views of the Government objected, not to Lord Carnaryon's plan, but to there being any plan at all. They were for at once quitting the Gold Coast altogether. Sir Wilfeld Lawson, who alone during this dreary Session has endeavoured to cheer the House by making amusing, not to say comic, speeches, put with considerable force and liveliness the obvious arguments against any endeavour to set up English government in so deadly a place as the Gold Coast. Those whom we rule are not worth ruling; they are a set of miserable, slaveholding, mean cowards. Those whom we send out to rule die or fall ill. Those against whom we have to establish our rule will inevitably increase in power until they once more involve us in a costly and dangerous war. If we were free to choose, these arguments would have an incontestable weight. But it is difficult to believe that, if Sir WILFRID LAWSON were in office, he would really recommend our withdrawal from the Gold Coast. The honour of the country is involved in our not abandoning even such wretches as the Fantees to that vongeance which we have ourselves mainly provoked. are bound to make an experiment honestly, and see whether we cannot, without the sacrifice of too many English lives, set up a decent government in a district which we have once taken upon ourselves to govern. Nobody likes having the Gold Coast as an English dependency, but no one with official responsibility can help it; and if we are to rule it, Lord Carnarvon is quite right in saying that the only way to rule it is to get a good man, and let him have his own way with a little money, a few soldiers, and a sanatorium to give him a chance.

It has now become one of the distinguishing marks between the leading and the minor members of the Conservative Government, that the former abstain from, while the latter are permitted to indulge in, the pleasure of having flings at the late Ministry. Mr. Lowther, although he is possessed of unmistakable ability, is one of the minor members of the present Ministry, and he was sure to stanp himself with the appropriate mark. It was not very easy for him to get an opportunity, as with regard to the Gold Coast the views of the two Ministries are identical. But Mr. Lowther was not to be baffled, and was bent on proving in one way or another that he was only Mr. Lowther. He effected his object when he came to speak of the domestic slavery which exists, and must for some time continue to exist, in our territory. This is to be regretted, but unless we like to pay a million sterling by way of compensation, there is no help for it. Mr. Lowther explained that the recognition of slavery in our dependency in deference to the ideas of the natives might seem a little like the famous notion of governing Ireland according to Irish ideas; that the was not really a convert to make a policy, and only accound to be so because it would be too expensive to have any other. This mode of treating the surject, although calculated to give Mr. Lowther much private gratification

and to characterize effectively the smallness of his Ministerial position, was not very well adapted to recommend to the House what is necessarily the weak part of Lord Carran-voi's scheme. We no doubt are going to recognize and permit the existence of slavery in territory that is really under our rate. Common sense may tall an that this tall. under our rule. Common sense may tell us that this is the best thing we can do, and sanguine officials may proclaim that slavery will soon die out under our influence when we let it be known that we do not like it; but the recognition of slavery in districts where we are masters will force us to modify somewhat our usual high moral language when we speak of slavery to other nations. It was not therefore to be wondered at that Mr. Asurer should revive the subject on a subsequent evening. The Government subject on a subsequent evening. appear to have reconsidered the matter in the interval, and Mr. LOWTHER was authorized to announce that the tribes among whom slavery prevails were not, as had been supposed, to be directly under British rule, but that the Crown colony was only to extend to the Coast settlements, the contiguous tribes remaining as before under a Protectorate, while in the limits of the protected districts the Government would do all it could to put a stop to slavery. This seems little more than a verbal evasion of the difficulty. We are going to disarm the Fantees, or rather to take care they do not get any arms; we are going to press them to give up slavery; we are going to make roads through the districts they inhabit, and hang them if they molest persons making use of these roads. If we do this we are doing all we could do if we chose to say that we ruled instead of protecting them. And if these tribes are merely protected tribes, for whose bad customs we are not answerable, it is not easy to see how it happened that Mr. Lowrner had calculated the cost of compulsory omancipation, and found it too great. The simple fact is that we are going to rule those tribes, but, as we do not like to say that we rule people who own slaves, we shall, while slavery lasts, tell the world that we are, only protecting the Fantees. In this way we shall are, only protecting the Fantees. In this way we shall save a million, maintain our principles, and do all that we can in common sense be asked to do. This is extremely convenient, but it is a kind of convenience that is obtained by a device too transparent to take in any large portion of mankind.

THE LEADERS OF THE OPPOSITION.

MR. LOWTHER hit on a very happy expression when, in the course of the Clair Course of in the course of the Gold Coast debate, he spoke of Mr. Goschen as one of the Commissioners appointed to execute the office of leader of HER MAJESTY'S Opposition. There is no leader of the Opposition, and the Opposition do not want a leader. Mr. GLADSTONE did a useful service to his party by accepting the nominal leadership, but the service principally consisted in his thus enabling his friends to avoid the necessity of selecting any one particular person to replace him. He is like a constitutional sovereign whose mission it is to keep things quiet by keeping one high post beyond the aspirations of contending politicians. He is as useful when he is away from the House as when he is in it. He leaves his Commissioners behind him, and they go on in their own mild way and no one is hurt or concorned. This sphere of duty is obviously quite compatible with Mr. GLADSTONE'S abundantly enjoying the leisure which he has so well earned and so greatly needed; and he does not think of going near Westminster unless it happens perfectly to suit him to be there. It would perhaps have been convenient to Mr. Burr if that part of his speech which consisted in an appeal to Mr. GLADSTONE to be logical and carry out his Irish policy to its legitimate conclusion could have been addressed to Mr. GLADSTONE personally; but Mr. GLADSTONE knows Ireland and Irishmen by this time well enough to appreciate the fatigue of listening to a debate on Home Rule, and he consulted his case by staying away while Mr. Butt was speaking. Nor did Mr. GLADSTONE in the least embarrass his party by his absence. That he exists is enough for them; and nothing could more strangely illustrate the mutability of human affairs than the fact that the statesman who lately was considered indispensable, whose words were as the decrees of fate, whose popularity and importance won for him the proud title of the Psople's WILLIAM, should now be doing all the political good he can do if he merely goes off to a quiet retreat and diverts himself by preparing me big a book on House as the industry of man could compile: The Commissioners he

leaves behind him have about them a remote flavour of semiofficialism, but otherwise they act as independent members;
speak or not as they please, feel at liberty to take divergent
views, and appear to speak, when they do speak, rather as
if they felt that in justice to themselves they must keep
up the habit of debate than because they have anything
to say which they can suppose will affect the votes or
stir the minds of supporters. Lord Abendary and Lord
Kimerley have, indeed, been stirred into a momentary
fit of excitement by the arrival in the Upper House of Mr.
Cross's Licensing Bill. The Bill which is being amended
is their Bill, and they feel it rather hard that, when so
little change is made, the improvements, such as they are,
should be thought to imply that their Bill was a bad one.
But, as a rule, in neither House is the voice of an Opposition leader often heard, and as to those associates of Mr.
Gladstone's Cabinet who are now out of Parliament, the
change that has betallen them may be sufficiently realized
when it is remembered that the great and irrepressible
Ayrton is now meekly discharging the humble duties which
fall to the lot of a member of the Commission appointed to
report on railway accidents. Such things will happen in
life, and we may give as we pass the obolus of our respectful
commiscention to Belisaries.

The effacement of the Opposition Chief is in a great measure due to the conduct of the Ministry. A defeated party when driven out of office may rally again and gain compactness and vigour if the measures it has passed are attacked, or if there is a departure on the part of the new Government from the principles on which those measures have been passed, or if personal attacks are made on statesmen whom their supporters feel bound to defend. But what life or coherency can there be in a beaten party when their successful opponents go on as they themselves would have gone on had they continued in office, and will insist on treating and loving their Opposition lenders as friends? The politeness of the Conservatives to every member of Mr. Gladstone's Cabinet is perfectly overwhelming. When Lord STRATHNAIRS, a Conservative peer, made a charge a few days ago against Lord CARDWELL of having broken faith with the army in the uniter of recruiting, it was the Duke of Richmond who most energetically protested against random accusations being made against such an ex-Mr. Diskaria could not finish off cellent person. the Home Rule debate without paying hardsome compliments to Lord Harrington and Mr. Lowe for the great assistance they had rendered in their speeches to the canso of common sense and good government. During the recent election struggle the public was diverted by the interchange of abusive philippies between Mr. DEMARIA and Mr. Lowe. But Mr. Dishaelt is in office now, and is as mild as milk, and cannot express too highly his sense of the valuable contributions to Parliamontary discussion which Mr. Lowe's personal ability and long official experience enable him to make. Mr. Lowe is perhaps pugnacious enough to prefer a row. But there must be two to make a quarrel, and if his late adversary will insist on pouring bushels of complimentary coals on Mr. Lowe's head, how can Mr. Lowe attack him any more? In administration and legislation the present Government gives no loophole of offence to its predecessors, for it walks faithfully and modestly in their paths. Lord Selloune can scarcely be said to be out of office, so much are the legal measures of the Government his own. Lord Komeratary finds Lord Carnaryon doing for the Gold Coast precisely what he would have done himself. Lord Granvilla has been assured by Lord Derry that everything goes on, and shall go on, at the Foreign Office exactly as if Lord Granner. was there. Everything the late Government did is accepted as the perfection of wisdom, and it seems almost incredible that the Gladstone Cabinet was a few months ago furiously, and to all appearance sincerely, accused of pillage and spoliation. Mr. GLADSTONE could no more find fault with the Budget of Sir Starford Northcore than a great painter could find fault with a picture done after his manner and by one of his school. He might think he could himself paint the picture better, but, if some one elso was to paint it, he could not but allow that the right style had been copied. We now only remember the familiar Conservative cries about a spirited foreign policy and a phantom navy or a phantom army as we remember voices in a dream. In real life Lord Draw, says that the first object of an English Foreign Secretary is to ensure peace, and Mr. Henr and Mr. Harry are quite content to take the navy and the army as they found them. All this is

very reasonable on the part of the Conservative leaders. It is creditable to them and satisfactory to the nation. But it necessarily takes the heart out of the Opposition.

The advantages of this state of things are, however, as great for the Opposition as for any one else. Had the Session been as stirring as it has been dull, had it been session been as stirring as it has been dull, had it been marked by reactionary measures and personal recrimination, the Opposition would no doubt have been more compact and full of life; but its gain would have been an accidental one, and it would have been compelled to assume a definite shape before it had any one really fit to lead it, or any clear principles on which it could be organized. Mr. Gladstone would have lost the precious opportunity of learning wisdom and recovering equanimity in retirement. If he had shrunk from the physical mity in retirement. If he had shrunk from the physical and intellectual strain of leading the Opposition in a time of excitement, the party would have had to choose a leader without anything to guide them in the choice. The leadership of the Opposition when Mr. GLADSTONE is away is properly put in commission, because among the Commissioners there is no one who stands out above the rest. Each possible leader has some recommendations and many defects, and if in despair the Liberals had put six names in a hat and resolved to obey the person whose name was first drawn, the decision of chance would probably have been as good as any other. And the Liberals have quite as great difficulty in determining what their special principles or watchwords are to be as in fixing on a leader. There is nothing a moderate Liberal wants which the present Government does not give him; and most Liberals, if they were honest, would allow that if they were called on to say what more they wanted and would get if they could, they would have to take up cries in the justice of which they do not really believe. Under these circumstances the only wise thing is for the Liberals to wait, and, in a patient and happy state of mind, to see what time will do for them. It is sure to do something. How it will happen no one can say; but it will happen, sooner or later, that the Liberal party will have a chance of office. In the meantime what they can do is to attend to their organization—a matter to which in the pride of place and power they were long grossly indifferent, while their more astute and vigilant opponents were using every effort to prepare for the time when a Conservative Ministry might have a prospect of power. In order to succeed in the world people must take pains, and attend to little things, and the leaders of the Liberal party have had the sense to see that the lesson given them at the last election must not be neglected. Steps have been taken to infuse new vigour into the Association which wields the machinery of the party. New ideas have begun prevail, and it has been recognized that it is worth while to ensure that persons of good position shall not be driven on their entrance into the London world to call themselves Conservatives simply because there are no Liberal centres where they are welcomed. These may seem small things; but, as the Conservatives have shown, it is often by attending to small things that great results are ultimately produced. It may be added that the Liberal party is much better able to attend to small things and quietly to organize its strength while a time of quiet like the present prevails, than it would have been if it had been distracted or divided by the premature choice of a successor to Mr. GLADSTONE, or by the necessity of instantly admitting or rejecting as part of the Liberal programme some hastily suggested measure of very doubtful expediency.

SPAIN.

ONLY ten days ago it seemed not unlikely that the uncertain and provisional condition of civil and military affairs in Spain might be indefinitely prolonged. The plans of the Commander-In-Chief had not been disclosed, and the Ministry which was appointed after the return of the President to the capital possessed no decided political character. Since that time the national forces have incurred a serious disaster, and a Conservative, if not reactionary, Government has been established at Madrid. The memory of General Concha deserves to be long cherished by his countrymen. In the course of his long career he had, like many other Spanish generals, from time to time used his military opportunities for political purposes. He was one of the last of the chiefs of the army to abandon the Queen; and then it was not so much because he approved

of the revolution accomplished by Sereano and Pair, as one the ground that the defence of the monarchy had become impossible. From that time it has been generally understood that he favoured the future restoration of the Bournows in the person of Don Alfonso; but he was not accused of plotting against the Royal or Republican Governments which have followed one another in rapid succession. Serrano was reported to have recommended to Castelar the employment of both the brothers; and when he himself returned to power he made one of the Conchas Captain-General of Cuba. After the failure of Moriones in the attempt to relieve Bilbao, the President of the Republic entrusted the control of the Carlist campaign, first in concert with himself, and after the relief of Bilbao as Commander-in-Chief, to Don Manuel Concha. The old Field Marshal has since sufficiently proved that, although he was approaching eighty years of age, he retained the vigour and courage of his prime. Wurmser was older when he encountered Napoleon in the North of Italy, and Radetzky was older when he won his final victory at Novara; but a veteran far advanced in life can seldom possess the nerve or the activity which are indispensable in war. The sternness of Concha's discipline proved as fully as his military combinations that age had produced no effect in enfeebling his decision.

The circumstances of the disaster appear to be fully known. The COMMANDER-IN-CHIEF had taken advantage of his superior numbers to surround the strong Carlist position at Estella, with the object of cutting the line of retreat. The besieged forces made a sally against a point in the investing circle which was held by raw and unsteady troops. Finding that his men were wavering or giving way, Marshal Concha put himself in person at their head, and he was killed by a Carlist ball. In well-organized armies it is neither the habit nor the duty of a General-in-Chief to take a personal part in the actual conflict. According to French accounts, NAPOLEON encouraged his troops at Austerlitz by a promise that, if they obtained a decisive success, he would keep himself out of the line of fire. In the wars of 1866 and 1870, General MOLTKE would have been universally censured if he had undertaken to head a charge. The Spanish army, of which the greater part has been raised within the current year, is necessarily deficient in discipline and steadiness. The risk which proved fatal to Concha may perhaps have been properly incurred; but the loss of the best soldier in Spain is one of the penalties which have been paid for the deliberate disorganization of the army for fatigue manages. of the army for factious purposes. It is not surprising that the troops were discouraged, and that they retreated with It is not surprising that considerable loss. According to the statement of General ECHAGUE, who succeeded to the command, the loss amounts to 800 men; and this estimate is, as might be expected, doubled by the Carlists. The National army still greatly outnumbers the enemy; and the reinforcements of infantry and artillery which have since been forwarded from Madrid must have increased the superiority in force which it already possessed. General Zabala is probably, as Minister of War, well acquainted with the plans of Marshal CONCHA, and he is reputed to be a competent, if not a brilliant, officer. The Carlists have never been able to cross the Ebro, or to undertake an offensive campaign. Nothing will be gained if they succeed in holding their present position for a time beyond the useless prolongation of the civil war.

The capture of Bilbao would have been a considerable achievement, but they have never yet succeeded in establishing themselves in any important town.

It is not known whether the promotion of SAGASTA to the Presidency of the Council is in any way connected with the death of Marshal Concha, who was supposed to be a political rival of the President. It had been foretold that Marshal Concha would, as soon as he obtained any decisive success against the Carlists, proclaim Don Alfonso as King, and support him with his victorious army. There seems to have been no reason for doubting Concha's loyalty; but it is pessible that the President of the Republic may have been on his guard against a formidable competitor for power. The wretched libellers who as usual practice on Spanish credulity have already discovered that Concha was assessmated by Serrano, but it is not worth while to notice so odious an accumation. Whatever may be his reason, Sereno has by the prointment of the new Prime Minister identified himself for the probably satisfied

Marshal Segrano of his shility to preserve order. During the early part of the abort reign of King Anadro, Sagasta for a time took part in a coalition Ministry in which the Progressists were represented by Zonkulla. After a time the two leaders quarrelled; and Sagasta formed a Conservative Ministry which procured the election of a like-minded Cortes. When Zozhulla succeeded to power he asserted that the elections had been vitiated by fraud and intimidation, and consequently he assembled a not less obsentions tion; and consequently he assembled a not less obsequious Cortes of his own. The abdication of the King and the istablishment of the Republic drove both the Parliamentary leaders into exile or concealment, and SAGASTA has been the first to emerge. As long as the country is not troubled with a Cortes, any Minister whom Marshal Serrano may select and support will have little difficulty in maintaining his position. The appointment of a veteran manager of elections and Assemblies may perhaps indicate an intention on the part of SERRANO of summoning a Cortes for the purpose either of confirming his own tenure of power, or of restoring the monarchy. The first result of the choice of SAGASTA will be a coalition between the Progressists and the Moderate Republicans. Both parties are equally hostile to the Conservative leader, and they may probably be willing to suppress for the time their own internal dissensions. It is on the whole probable that no great political change will be effected during the continuance of the Carlist campaign. Marshal Serrano professed his intention of taking the place of Concha; nor can it be doubted that his popularity would have been greatly increased by any decisive success. The Ministers thought, probably with good reason, that the absence of the President from the capital would be highly inconvenient; and they may perhaps have cited the recent precedent of a Ministerial quarrel which occurred while Serrano and Conona were preparing to storm the strong position of Somorrostro. Marshal Concha was at that time compelled to make a special journey to Madrid for the purpose of enforcing a temporary truce. It is not improbable that a similar crisis might occur if the PRESIDENT joined the army.

One of the most pressing difficulties of the new Prime Minister will be to find money for the heavy expenses of the war. The revenue is altogether inadequate to the demands of the campaign, and it would seem as if every successive Finance Minister were bent on destroying the small remains of the national credit. The last project which has been announced has been received with universal dissatisfaction, for even Spanish politicians have discovered that the repudiation of engagements is not calculated to facilitate the negotiation of fresh loans. The wants of the Government must be urgent, for it has not been found possible to pay the army regularly; and one of the last acts of Marshal Concha was to inflict a heavy punishment on a mutinous regiment which had insisted on the discharge of arrears. It must be admitted that Spain is accustomed to insolvency; and that military operations are not abandoned, although they may be hampered, when the Treasury is in want of money. The powerful artillery which had been at the disposal of Concha is now increased by the addition of several batteries; and the largest army which has been collected in Spain for many years is under the command of General Zabala. The financial resources of the Madrid Government are at least more tangible than those of the enemy who has now contrived to maintain a civil war for more than a year without a budget, a revenue, a loan, or any other visible means of subsistence. It may be hoped that the purposeless struggle will end in the triumph of the stronger party.

FRANCE AND MARSHAL MACMAHON.

It is impossible to follow with any interest the proceedings of the Committee to which M. Casimir Périer's Bill has been referred. There is something ingenious about the way in which the French Assembly contrives to prolong its inaction even when a nominal majority has been got to vote for doing something at once. The Committee of Thirty, which is the common sepulchre of constitutional schemes, was chosen under the influence of a different current of feeling from that which is now gaining strength. It represents the Monarchical pseud in the Chamber, the period when it was thought that the which would not accept a government of the influence government of the

 wrong kind. The natural course would have been to cancel the powers of this singular survival, and to appoint a new Committee which would accurately represent the present tendencies of the Assembly. But the Committee of Thirty has become quite a part of the Constitution, and it is considered essential to obtain its opinion upon every Bill which affects the form of government. It is pretty well known beforehand what this opinion will be, and no one seems to care anything for it when it has been given. Still it is understood that to be submitted to, and rejected by, the Committee of Thirty is part of the discipline which all constitutional projects must undergo, and not even a vote of urgency has any effect in hurrying the Committee's deliberations. It has, however, at length rejected M. Casimir Périer's Bill, and is now discussing a rival Bill drawn up by a sub-Committee of its own. According to this plan, Marshal MacMauon is to remain President of the Republic for seven years; but, in the event of the expiration of his power through any cause, the Assembly and a Senate hereafter to be created are to be convoked in order to "consider what the welfare of the "nation demands." This is a return to the old Right Centre project, and seems destined to encounter a similar fate. The Left Centre cannot support it, because, instead of organizing the Republic at once, it proclaims that nothing is to be organized for seven years, unless Marshal Mac-Manon dies or retires in the meantime. The Extreme Right will not support it because it contemplates the possibility of the Republic being organized hereafter, and commits the consideration of what the welfare of the nation demands to the Legislature instead of to the legitimate King. Consequently, in the event of its coming before the Assembly, which in itself is exceedingly doubtful, its rejection may be taken as certain.

A more important fact than any Bill which the Committee of Thirty is likely to get delivered of is the Order of the Day addressed to the army by Marshal MacManon. On Sunday last there was a review in the Bois de Boulogne, and some fifty thousand troops marched past the PRESIDENT. This is not so remarkable an occurrence as to call for a political manifesto. Indeed, considering the frequency of military displays in France, Marshal MACMAHON'S order was about as necessary as a declaration of policy from an English Prime Minister on the occasion of trooping the colours on the Queen's birthday. It is this very unexpectedness that gives it so much significance. As soon as the troops have been praised for their good appearance and their regular movements, the Marshal turns at once to politics, and associates the army with himself in the guardianship of order and of the public peace. "This "part of the mission which has been imposed on me belongs equally to you. We will fulfil it together to the "end, maintaining everywhere the authority of the law and the respect due to it." Under ordinary circumstances this language would be open to serious objection. In France the army has usually played too large, rather than too small, a part in political affairs. So long as it keeps to the part which the Marshal assigns to it, and rests content with maintaining everywhere the authority of the law, no fault can be found with it. The danger is that it may go further, and undertake to define what are the laws and who are the lawgivers whose authority has to be maintained. What France needs is that the army should regard itself as merely the agent of the civil power; and these direct appeals to it are not precisely calculated to encourage this idea. But the circumstances in which France new finds herself are not ordinary. She is probably about to try a very critical experiment, under conditions which, though they are more favourable to success than could once have been hoped, are still very far from being favourable in themselves. In an article in the new number of the Fortnightly Review Mr. J. C. Monson enumerates the difficulties which lie in the way of the establishment of the Republic, and he gives the first place in order of importance to the feud between the proletarist and the propertied classes. It would be vain to deny that France can show an alarming as ray of volcanic elements, or to hope that public order could be maintained for an instant if the grasp of authority were relaxed. But Mr. Monson's discouraging predictions, though they have far too solid a foundation, hardly accent to make sufficient allowance for the fact that this feat between the profestariat and the propertied classes last came to a head under a Republican Government, and that the profestariat insurrection was put down with extraordic the proletariat insurrection was put down with extraordi

nary severity and extraordinary success. If it had not been for the Commune, the feeling of the rural constituencies towards the Republic would probably have been ve different from what it has lately seemed to be. If M. THERS was able, with the co-operation of Marshal MacManon, to recapture Paris, what reason is there to doubt that Marshal MacManon will be equally able to keep down Paris now that he unites the civil and the military powers in his single person? This is the inquiry which many of the peasantry may be expected to put to themselves at the general election, and they are likely to derive from it more solid comfort than they could obtain from any other consideration. If Marshal MacManon had boon a man of great personal ambition, or if he were to identify himself with either of the parties at present contending with the Republic for the government of France, the situation would be entirely changed. The French peasant is willing to accept the Republic provided that it comes to him without too long a dolay, and that it comes provided with adequate securities for the preservation of order. No guarantee can be so satisfactory for this purpose as the presence at the head of affairs of a popular and trusted soldier. It is improbable that, now that the peasantry have grown accustomed to Marshal MacManon as President, they would even like to return to the old state of things in which the soldier was only the right hand of the politician.

This accounts for the unanimity of applause with which the Marshal's Order of the Day has been received. With the single exception of the Legitimists, there is no party but is glad, or feigns that it is glad, to be assured from his own mouth that he does not mean to resign office under any circumstances. Upon this head M. Gambetta's organ is as decided as the Duke of Brootie's. The partisons of the Republic and of the Septembate are so far agreed. The former wish the Republic to be definitively proclaimed, but they look to Marshal MacManon to keep order during the process. The latter wish the proclamation to be postponed at least till 1880, but they wish Marshal MacMation to be the guardian of the Commonwealth during the interregrum. There can be no question that the Republican leaders are well advised in thus associating themselves with the Marshal. It is all but cortain that the majority of their own followers would abandon them if they took a different course; and, more than this, it is doubtful whether their followers would not be fully justified in so doing. The momentary establishment of a Republic which proved itself unable to enforce order would be more disastrous to the Republican cause than any amount of defont or postponement. It would alienate all the new symputhy of which the Republic has lately been the object, and confirm with all the strength of a reconquest the conviction that Republican institutions cannot secure to the Government the power which a French Government needs. That Marshal MacManon's estimate of his own position may be more exalted than is quite consistent with constitutional ideas is possible; but the danger of a Republican Executive proving too strong is incal-culably less formidable than the danger of its proving too weak.

MR. DIXON'S BILL.

THE tone of the debate on Mr. Dixon's Bill was decidedly It brings us, or rather it shows that we satisfactory. have travelled, several steps nearer to the universal enforcement of school attendance. It is true that to admit that all parents ought to be made to give their children a certain minimum of education is not the same thing as determining how they are to be made to give it; but the mechanical difficulty could hardly have been got over until the necessity for getting over it was conceded. After Wednesday's debate it is not too much to say that it is conceded. Successive extensions of the principle of indirect compulsion have opened people's eyes to the inconsistency of declaring by Act of Parliament that a man must send his child to school when it involves the sacrifice of the child's earnings, but that he need not send his child to school when it does not involve the sacrifice of the child's carnings. The cases in which the argument for exemption is strongest are caught, while those in which the argument for exemption mils altogether are allowed to escape. It is conceivable that a labouring man should think that he is doing the best he can

for his children when he sends them to work early. Their wages, he may say, go to swell the fund out of which they as well as the rest of the family have to be supported, and they themselves are accustomed to habits of industry. such excuse can be set up for children who are kept away from school merely because their parents will not be at the trouble of seeing that they go there. The difficulties about the payment of fees and the provision of clothes do not touch direct as distinguished from indirect compulsion. They are common to both kinds, and if they are not recognized when the child, if not at school, would be at work, they ought not to be recognized when the child, if not at school, is in the streets. Indirect compulsion is an extremely useful auxiliary and supplement to direct compulsion, but it is not and cannot be a substitute for it. It is much to be desired that in the interval before the Government have prepared a scheme for bringing all children within the sweep of the educational net, they should consolidate and extend the machinery for bringing into it that large section of children whose parents want to send them to work early. But it must not be forgotten that this is only an employment for the interval, and that no activity in this direction can absolve the Government from the duty of introducing a scheme for direct compulsion as soon as they have made up their minds what the nature of such a scheme ought to be. It was to have been expected that Lord Sandon was not prepared with a scheme on Wednesday; but the plea of newness to office will not exist in a second Session. The chiefs of the Education Department can command the assistance of a staff of eminent ability and great local experience, and there is probably scarcely a member of this staff, at any rate during the last three years how compulsion can be best extended over the whole country. If the question is again raised next year by Mr. Dixon or any other private member the Government will have to give a definite account of what they mean to do in the matter. The recess would be well employed if it enabled them to avoid this pressure by introducing a measure of their own, and so depriving Mr. Dixon of his occupation.

There are two reasons why a Conservative Government would be likely to deal successfully with the question of compalsion. The first is that the class which most objects to seeing children made to go to school is also the class which has least to hope for from a change of Government. It is conceivable that the opponents of compulsion might for once be strong enough to turn out a Ministry. But what would they gain by turning out the Conservatives when their success could only result in bringing back the Liberals? It may be assumed, therefore, that the most obscurantist section of the Conservative party will stop short of quarrelling with their leaders when they reflect that those who must succeed them are still more unsound upon the question of compulsion. They will do what they can to oppose the Bill but their opposiwill do what they can to oppose the Bill, but their opposition will stop just short of the point at which opposition becomes really dangerous. The second reason is that a Conservative Government will have at its back the great body of the Anglican clergy. The violence of the League has driven them into an attitude as regards compulsion which is in no respect natural to them. So far from being sufferers in any way by the universal enforcement of school attendance, they will be immense gainers by it. At present they keep up schools often at great cost to themselves, and have the constant dissatisfaction of seeing them only half filled. Even if their educational zeal were merely, as Secularists sometimes say, a cloak for Denominational zeal, they would still have every motive for liking a compulsory system. It is no good opening schools unless the children can be got to attend them. Whether the reason which leads the clergy to wish to get hold of them is to teach them reading or to teach them the Catechism, they must equally like to see them brought within their reach. So far as the clergy generally have opposed compulsion, they have done so from dread of the vexations machinery with which compulsion has usually been associated. They have supposed that it meant not merely that every child was to be made to attend school, but that every child was to be made to attend a School Board school. There can be no question that in any Bill which a Conservative Government may introduce, some means will be found to ! break up this supposed connexion; and when their minds have been set at rest upon this point, the clergy will not object to being relieved from a constant source of annot ance and disappointment. There are a great number

possess whose opinions upon such matters are entirely shaped by the clergy, and there can be no doubt that the clergy would be warm supporters of a Bill to make compulsion universal, provided that it came from the right side of the House, and did nothing to increase the number of competing schools.

Of course it does not follow that the Liberals should repudiate their share in the work of framing a machinery which thall bring all children to school. The knowledge that their opponents are thus engaged will quicken the seal of the Government, and any success in this direction would really be common property. The difficulty of inventing the required machinery is unfortunately incontestable. Mr. Dixox has naturally enough kept in the lines laid down by the Act of 1870, and vested the power of enforcing attendance in School Boards. But, as Mr. FORSTER said, although a willing and active local body may be the best instrument for carrying out compulsion, an unwilling body is about the worst. The success that has attended the enforcement of school attendance by existing School Boards proves nothing as to the success which would be achieved by similar bodies elected for this single purpose. The existing Boards have adopted their by-laws of their own free choice. They need not have forced a single child to go to school unless they had thought it advisable that he should be so forced. The School Boards which Mr. Dixon proposed to create would have no option in the matter. They would be elected for the sole purpose of getting children to school, and elected in many instances by persons altogether opposed to this purpose, In whatever way compulsory attendance is introduced throughout the country, the process must be one of extreme delicacy; and it is not usually hold a wise step to entrust the conduct of delicate process. the conduct of delicate processes to persons who would gladly see them break down. A contemporary has inferred from Mr. Forster's remark that, if no local body can be found to enforce the law, Parliament should still not be afraid to pass a law enforcing compulsion that he would be willing to station education officers appointed by the Central Government over the whole country for the purpose of putting the law into action. As we read his words, they do not bear anything like so extensive a meaning. All he says is that compulsion is so important that it must be introduced irrespective of any differences that may arise as to the choice of the authorities by whom it is to be enforced, and to say less than this would be to set the means by which the end is to be attained above the end itself. Even after School Boards and Boards of Guardians have been rejected we have not come to the end of local authorities. It is conceivable, for example, that the duty of ascertaining what children were not sent to school might be assigned to voluntary visitors appointed by the school managers in every district, while the duty of enforcing attendance might be assigned to local Committees chosen by or from the county justices. If these authorities should hereafter be superseded as regards the conduct of county business, their successors would naturally inherit this together with their other functions.

THE EXILED PARIS COMMUNISTS.

Tiwo of the transported Paris Communists have published in the Times an account of their sufferings in a French prison, on the voyage to the Antipodes, and in the desolate region where they were condemned to pass the rest of their lives. If their narrative is true, it proves that heartless cruelty is the chief characteristic of official Frenchmen. From Ministers down to military and civil officers, to warders, and to private soldiers and sailors, the Communists seem to have met with nothing but wanton harshness and brutality. It is fortunately not necessary to believe in the truth of all the details of the story. Former accusations of the same kind have been partially disproved; and the unfounded complaints preferred by some of the Fenian convicts against English governors of prisons illustrate the tendency to calumny and exaggeration which may be produced by the inevitable hardships of confinement. Political convicts not unsumarrally regard themselves as immocent or meritorious, because the penalties which they undergo are not inflicted for ordinary crimes. Those among them who may have a gloomy and malignant temperament learn to regard the administrators of their sentence as separate acts of injustice.

It is useless to reason with misery, or to censure the upreasonable demands of sufferers. Imprisenment and exile are meant to cause pain; and impatience or want of fortitude is scarcely an additional offence. If the Communists regard themselves as bonefactors of society, the great majority of their countrymon, including all the respectable classes, hold the opposite opinion.

It may be at once admitted that the treatment which the escaped prisoners describe would be utterly unjustifiable. It may be presumed that none of them had been convicted of the atrocious crimes which were perpetrated by their political associates. The murderers of the Archbishop of Paris, of the President of the Court of Cassation, and of other hostages, were deservedly subjected to capital punishment, whenever they could be identified. The transported convicts may be supposed to have belonged to the rank and file of the insurgents, but it may be remarked that their self-appointed representatives express no disapproval of some of the gravest crimes which have disgraced humanity. According to their own statements they took arms against an Assembly which in their judgment had been improperly elected, or which, in other words, contained a large Conservative majority. Rebellion and civil war are almost always unjustifiable, and the insurrection of Paris at the close of a disastrons war, in the prosonce of the army of the victorious enemy, was extraor-dinarily criminal. The outbreak commenced with more than one brutal and deliberate murder, and it closed with the wholesale slaughter of sixty unoffending prisoners, and with the wanton destruction of some of the principal buildings of Paris. The Government which ultimately reestablished order was fully justified in inflicting punishments which may perhaps for some time deter even the revolutionary rabble of Paris from the renewal of their enterprises against society. The minute and incessant cruelty of which the Communists complain could not be excused even if the prisoners had been ringleaders in the outrages perpetrated by the Commune.

Every traveller who has been subjected to the petty despotism of French railway servants will readily believe that subordinate functionaries may, in dealing with prisoners, be habitually harsh and overbearing; but it is strange that the Communist convicts should never have encountered a single humane or considerate official person. The sargeon who examined them to ascertain their fitness for the voyage is said to have remarked, in passing one of the number who was far advanced in consumption, that food must be provided for the sharks. The "stout-hearted officer" who commanded a fort in which they were temporarily confined is succeed at as never going to sleep without ten soldiers lying across his doorway. The Versailles Commission is compared, in the familiar style of 1793, to Tidenus and Califolia. M. Rochefort, or a friend on his behalf, might have obtained a respito from transportation by paying a small bribe to a woman who professed to have influence with the chief authority. The marines who guarded the prisoners on board ship treated them with violence and insult; and "these hard conditions were aggravated by the " caprice and ferocity of a fanatic commander." Even the residents in their distant place of prison, though they bere no official character, were prone to the vices which seem to prevail universally among all unconvicted frenchmen. The missionaries who devote themselves to an unattractive life on a remote island are, according to the Communist account, greedy speculators who make fortunes at the expense of their native converts. The Governor of New Caledonia exercises "a tyranuy enough to render the absolute auto-"crat furiously jealous"; and it is hardly necessary to add that he abuses his powers for the purpose of oppressing the involuntary immigrants. An association of pretended capitalists cheated the labourers whom it employed out of their wages; and during a long and painful experience the exiles never encountered an honest man. dispositions and sentiments were in all cases exemplary. They were willing to work, but they could find no remunerative labour; they cultivated the family affections, which in fact are commonly found among Frenchmen.

The story, which is composed with some literary ability, contains one or two pretty episodes which might have been extracted from Victor Heso's romances. One of the prisoners having heard that his wife and children were on their voyage to join him, met the ship on her arrival, and was informed, with the customary good feeling of all Frenchmen, with the exception of the Communists, that nine or ten children had died at sea, and that his were

probably among them. Another exile wandered in the woods in delirious search of an absent sister, until, in the month of November, he was found frozen to death. All these anecdotes may possibly be true; but they singularly resemble fiction.

If it is the fact that every Frenchman is a demon in power and an angel in adversity, the inference would searcely be that a Republic founded on universal suffrage was a desirable form of government for France. Communists, when they were locally supreme, emulated to the best of their power the historical and legendary exploits of their predecessors during the Reign of Terror. There is reason to suppose that some of them were afterwards treated with unnecessary and excessive severity; but a general libel on the nation is not readily to be accepted as true. It is wholly incredible that M. THIERS or his successor should have knowingly connived at the enormous abuses of power which are attributed to the inferior members of the public service. The surgeon who, in direct violation of his daty, sent an invalid to sea for the purpose of causing his death would, if the charge had been well founded, have incurred severe and merited punishment. The fanatic and savage commander of the emigrant ship would scarcely have been allowed to disregard the regulations with impunity. Even if the Government of Versailles had been cruelly disposed, administrative French traditions require strict observance of the rules of the service. Greater moderation would have rendered the service. Greater moderation would have rendered the accusations preferred by the Communists more probable. Indiscriminate attacks on all those with whom they have to deal are proofs of blind passion, if not of wilful false-hood. Even in a penal colony there must occasionally be elimpsus of instina and manual. be glimpses of justice and mercy. The published story affords a fresh illustration of the profoundness of the gulf which separates classes and political parties in France. The extreme democrats are in their own belief regarded by the rest of the community with feelings of eninity which find expression, as occasion offers, in acts of remorseless cruelty. In their turn they are ready to rise in insurrection whenever they have a hope of success; and the mob of Paris rotains the cruel instincts which were handed down from the days of the League to the era of ROBESPIERRE. The existence of the temper displayed in the remonstrance of the escaped Communists gravely endangers the prospects of the Republic to which moderate politicians at present incline. The anthors of the narrative boast of their armed hostility against an Assembly recently chosen by universal suffrage. A Conservative Republic would offer a similar temptation to conspirators and rebels; and renewed civil war would probably result in the re-establishment either of the Bonapartist Empire or of some similar form of arbitrary government. The bloodthirsty rabble which during the Commune slowly tortured a policeman to death in open day will not be endured as a ruling power, even if the narrative of the Communists is true

LEICESTER SQUARE.

THERE is an old proverb which warns us not to be so rude as to look a gift horse in the mouth, and it may be supposed to be still more unmannerly to subject the giver to a similar scrutiny. It was perhaps, therefore, unnecessary for the Times to announce, "in order to prevent "any danger of motives being misunderstood," that the presentation of the garden in Leicester Square to the public was not connected with speculative investments "in any promerty in the neighbourhood of the Square." At any rate, if such an assurance was required, it might as well have been made to cover a somewhat less limited area. Many persons, we imagine, will be disposed to regret that the iandlords of the surrounding property, or the ratepayers, and not prefer to carry out a much-needed public improvement at their own cost. Still it is something that the scandal and nuisance of Leicester Square as it used to be is at last put an end to; and for this everybody may be thankful. It is possible that the existence of some of the unhappy exiles who frequent this region may be cheered by the grass and the flower-beds, reminding them in a mild way of a Parisian place, but it is searcely likely that the citizens of Loudon will resort in large numbers to this new promenade, and, if they do, there will certainly not be room for them. A great many people, however, are constantly passing through Leicester Square, and, if they do not find

much in the attractions of the garden to tempt them to pause, they will at least enjoy relief from the night of the abomination of desolation which was formerly thrust upon their notice. The whole theory of public nuisances is of modern date, and marks in one direction the progress of civilization. It must indicate a considerable advance in social intelligence when it is recognized that an eyester is a nuisance which ought not to be tolerated. A nuisance of bad smells or suffocating vapours may be objected to on the score of health; but the way in which an open space, like that in the centre of Leicester Square should be kept up is in a great degree a matter of taste. Nothing could be more offensive and disgusting than the filthy wilderness to which we were so long accustomed; yet it could scarcely have been attacked on sanitary grounds, or indeed on any ground except that it was a grievance to the eye. Although the general principle that the public is entitled to protection against annoyances of this kind may be supposed to be now accepted in theory, there has been great difficulty in getting it practically applied; and, as this case is not an isolated one, it may be worth while to observe the circumstances under which it arose.

The history of Leicester Square is written in the law reports. At one period it was famous for its duels, and it has since been celebrated for the lawsuits to which it has given rise. At the end of the last century it appears to have belonged to a couple of families, TULK and PERKY, between whom it was divided, under a decree of Chancery, the houses on the north side of the Square being assigned to Perry and the rest to Tulk. The Commissioner who made this allotment certified that the lessees of the houses on the north side should continue to pay to Tulk the sums reserved in their leases towards keeping up the garden, and that TULK should for ever keep and maintain the garden in its then state as a pleasure-ground. In point of fact, the garden seems to have been maintained in this condition for a series of years. In 1807, when the TULKE, father and son, divided the property between them, the son bound himself to keep the garden in good order, and this obligation was transferred to a subsequent purchaser. It was also covenanted that the Tulks, and their tenants resident in the Square, should be entitled, on reasonable payment, to have keys and admission at all times to the garden. Gradually, however, the character of the Square changed. A Prince of Wales had once lived there, and the buildings round the Square were dwelling-houses occupied by persons of a good class. These were people who would be likely to attach importance to the ornamental character of the garden, and see that it was kept up properly. It was, in fact, a sort of private enclosure for their use. In the course of years the social reputation of the neighbourhood declined. A public thoroughfare was made through the Square, and its semi-private character was lost. The sort of people who now lived there took little interest in the garden, and it was allowed to fall into disorder, and ceased, in appearance at any rate, to be a pleasure-ground. In 1848 the property had been purchased by one MOXHAY, who thought the best thing he could do with it would be to cut down the trees, remove the statue, and build over the open space. He was proceeding to carry out this plan when Tulk filed a Bill in Chancery to restrain him from committing such acts of wasto, and especially from taking down the statue. Moxhay pleaded that "the garden had become a disgrace "and reproach to the neighbourhood," that it could do no good to anybody to keep it as it was, and that there was no legal obligation resting on him to maintain it was no legal obligation resting on him to maintain it as an ornamental pleasure-ground. The injunction against Moxhay was granted,; but immediately afterwards came Mr. Wyld's Great Globe, which was allowed to remain there for ten years without remonstrance from any quarter. Perhaps the only perfectly clear and incontrovertible point in the covenants in regard to the Square was that the tenants were to have any admission to the graden; and it was attenance of keys and admission to the garden; and it was strange, as the MASTER of the ROLLS remarked, that this right should have been suspended for so many years without a word of com-plaint from anybody. When the Globe was gone, what remained was a ruinous-looking open space on which the Tulk family, to whom it had reverted, declined to spend any money. They tried, however, to make something of it by erecting a hoarding round it for the display of it by erecting a hoarding round it for the display to advertisements. It might have been supposed that the placards were less unpleasant to look at than the dirty desert, with its mutilated states but some of the residents objected, and the Court of Chancery gave orders

that the hearding must be removed and the ground kept in decent order. It would probably have been difficult to decide what state of neglect was compatible with decency, and the proprietor would obviously have had an interest in making the enclosure as hideous as possible in order to force his opponents to come to terms. It should be mentioned also that in 1865 the Metropolitan Board attempted to "take charge" of the Square and erected a notice-board on it. This led to an act of ejectment against them, which was successful. A private Act of Parliament which was recently obtained by the Board gave them powers of dealing with the nuisance; and it is surprising that so obvious and appropriate a remedy should have been so long delayed.

It will be observed that, as far as the legal rights of the different parties were concerned, there was no question of anything being due to the public. The residents in the Square were entitled to keys and admission to the enclosure, and they contended that the enclosure ought to bekept up as a pleasure-ground for their use. The chief proprietor, on the other hand, was unable to apply the ground to his own benefit, and declined to spend money in keeping it in order. It appears that the Great Globe was erected without legal authority; yet it was allowed to remain for ten years, simply because none of the persons with rights in the Square thought of objecting to it. If the tenants had been equally content with the state of the Square after the Globe was removed, or if they could have agreed with the proprietors as to some commercial use of it, nobody would have had any right to interfere. There is probably no other city in the world in which such an unsightly and disgraceful object as the Square was in its last days would have so long been tolerated. It will scarcely be disputed that the question was one which required the intervention of some body charged with the protection of the public interests. There are with the protection of the public interests. There are many other open spaces in London similar to Leicester Square, and we know by experience what might happen in any of them. The public may have no right to claim access to such enclosures, but it has undoubtedly a right to insist that they shall not be allowed to fall into a state of neglect and decay which constitutes a public eyesore and nuisance, and it should be somebody's business to see that public rights are enforced in this respect.

THE COMTISTS.

R. RICHARD CONGREVE, who is known as the clerical leader or director of the English Comtists, has published a selection from his writings and lectures (Longmans and Co.) during the last twenty years. The papers in this volume are modestly called Essays, but they contain, in fact, an official and authoritative exposition of the practical application of Comte's principles to the actual conditions of human society. The centre of the Church is at Paris, where, we are told, the direction is vested in one man, in conformity with society. The centre of the Unurch is at Larie, where, we all told, the direction is vested in one man, in conformity with the Positivist doctrine of concentration of power. This supremi head is M. Lafitte, who acts on his own responsibility, advising as head is M. Lantte, who acts on his own responsibility, advising as he sees fit with the small body of those named by Auguste Comte as qualified in due time, on the fulfilment of certain conditions, to become Priests of Humanity. Subordinate to this contral direction there are at present two other centres—one in England, and one in America—and of the centre in England Mr. Congreve is the recognized chief. Mr. Congreve, it appears, does not presume to speak as a Priest of Humanity, and he also does not presume to speak as a Priest of Humanity, and he also states that his insufficient scientific training prevents him even from being, in the full sense, one of the second order of ministers, a vicar. Practically, however, as we gather, he acts as a vicar and discharges the ministerial functions of the English branch of the Church of Humanity. His principal business seems to be preaching; but he is also authorized by the central director to administer the sacraments of Presentation and Marriage. It would appear, therefore, that if Mr. Congreve is not a full Priest of Humanity, ha is at least the nearest approach to the real thing which can be he is at least the nearest approach to the real thing which can be found in this country, and his utterances have an official and representative character. Hitherto the adherents of this faith have sentative character. Hitherto the adherents of this faith have been in the habit of meeting any criticism of the teaching of their founder by the remark that no one is competent to form a judgment on the subject who has not thoroughly mastered the whole system and everything that Comte wrote. Mr. Congreve admits what Comte's fifteen volumes "seem a good deal," but "many of us have been so trained and have such leisure that the mere amount cannot be a serious objection." On the other hand, however, many of us are not in the happy possession of this indispensable training and leisure, and must therefore be content with some simpler test of the value of the system. This would seem to be supplied by Mr. Congreve's moderate-sized volume. Most of it has appeared before in one shape c. arother, but it is an advantage to have the heatissed fragments proughtwoogstaer for compassion. We are aceliared fragme

bound to suppose that Mr. Congreve, at any rate, has mastered Comte, and knows all his fifteen volumes by heart; and he has been good enough to give us the practical gist of all this illumination as "applied to our actual state." Our actual state is something which ordinary persons may perhaps venture to think they know a little about, and they may hope to be able to judge of the value of the new religion by the remedies which it offers for pre-

sent evils.

Mr. Congreve's first essay, which it seems was written under the immediate inspiration of Comte himself, deals with the foreign policy of England. The disease from which the nations of Europe are suffering is, he points out, mutual distrust. This does not strike one as a particularly profound or subtle diagnosis, but it is no doubt true, and it is just as true now as it was eighteen years ago when the article was written. We are nort told that it is necessary to got rid of this distrust, and that the only way to got rid of it is to get a right public opinion established throughout Europe. But then "the most indispensable requisite as a pre-liminary for the existence of a right public opinion is peace." So that there can be no peace until there is a right public opinion, and no right public opinion until there is peace. The use of the quack's infallible specific for killing vermin required that the insect should first be caught and pinched in order to make it open its mouth for the insertion of the powder. In a similar way the Countists undertake to put an end to mutual distrust as soon as universal peace is firmly established. The practical part of this essay lies in the principle that every nation ought to surrender what does not properly belong to it, and of course, if every country what does not properly belong to it, and of course, if every country what does not properly belong to it, and of course, if every country would only agree to this, we should all be very happy and comfortable. There might, however, he some difficulty in settling what does or does not properly belong to each country. Mr. Congreve proposes that England should set a good example by resigning Gibraltar to Spain, at the same time disbanding her army, except a small portion for domestic police, as a mark of confidence in France. Even if France should decline, after this mark of confidence and submission, to disarm too, there is no ground, according to Mr. Congreve, for England's remaining armed. "Let it be our aim to bury all the memory of the long rivalry of centuries. Let it be our hope that France will be willing to meet us in this; for it is with her that forgiveness must rest, as in the sum total of human wrongs, the balance is, I think, strongly in the sum total of human wrongs, the balance is, I think, strongly against us. We have been more often the injuring party; France the injured." If France is, as Mr. Congreve says, the nobler nation (and there is at least courage in repeating at this moment the statement he made in 1865, that France is in a more advanced political state than England), why does not France, by virtue of her position, set the example? It should be observed that it is one of the main points in Mr. Congreve's creed that England is the most brutal and degraded country in the world, and is perpetually doing something wicked from the meanest and most sordid motives. "For much of that which is worst in the condition of the world,"he says, "England is more than any other country responsible." Whatever England does is, in short, always wrong, and generally base. If she goes to war, it is bloodthirsty rapacity; if she inclines to peace, it is more cowardice. The Alabama Arbitration, which might be supposed to fall in with Comtist visions of universal peace, was only "cringing to our largest customer." Yet this is the country which is expected, by its noble and disinterested sacrifices, to give a new the statement he made in 1865, that Prance is in a more advanced "cringing to our largest customer." Yet this is the country which is expected, by its noble and disinterested sacrifices, to give a new start to the regeneration of humanity. It would surely be more natural that, if France is to exercise "the primacy," France should take the lead in good works. It is of course inconceivable to Mr. Congreve that England should hold Gibraltur, or India, which he also wishes to be surrendered, from a sense of public duty.

We have no space to go through all Mr. Congreve's political suggestions in detail, nor would it be a profitable task to do so. In the reconstruction of the Western system Russia is to be kept outside in order that France, instead of Germany, may be the geographical centre; and the United States, who cannot be very well fitted into the arbitrary framework, are also excluded as

well fitted into the arbitrary framework, are also excluded as "the offspring of an inferior nation, and of a period of negation and dissolution." All this fanciful and arbitrary speculation, which is as easy as conducting a campaign with pins on a map, certainly does not appear to be the sort of illumination for which it is worth while to discard an old religion and start a new one. Mr. Congreve's views on the lawfulness of war bear a remarkable resemblance to those of the unregenerate world. Positivism is, he resemblance to those of the unregenerate world. Positivien is, he says, a gospel of peace; but this only means that "Positivists would prefer to act as much as possible by peaceful means," and so, we should imagine, would everybody else. "Westernst sometimes be accepted as a necessary evil—a sacrification the general welfars of Europe." There can be no objection, we are told, to "a war in the interest of peace, a war to prevent war, a repressive measure of European police, such as the disturbed state of Europe may from time to time render necessary, before the final settlement is effected", in other words, war is lawful in order to carry out such objects as Positivists approve, but criminal in all other cases. Mr. Congreve's consistency on this question may be gathered from his exhortation to England in 1265 to tion may be gathered from his exhortation to England in 1265 to disband her army lest it should give offence to France, and his still more fervent exhortations to England in 1870 to send her army, which had fortunately not been disbanded, to the support of France against Germany. Again, we find the Positivists exciting the Japanese to keep up a strong army to be used sgainst England. The document in which this suggestion occurs is so particularly characteristic of the state of mind of English Positivists that it

ought not to be overlooked. It is headed an Address to the Japanese Ambasador (p. 536), and appears to have been presented in the early part of last year. The persons signing the address admit that they have no means of knowing the special objects of the Embassy, but "if your object be, as it is commonly reported, to obtain a revision of the treaties at present existing as unjust and injurious to Japan, we cordially wish for your success, and shall do all in our power to further it"; in other words, though they avowedly know nothing about the matter, they are ready to assume everything against their own country. They go on to express their satisfaction with the prudence of the Japanese Government in "confronting the encroaching recklessness of European commerce with the formidable military power which alone can extort from that commerce, in its present unsocial conditions, due moderation and respect." "To be well armed and well disciplined "—we are quoting literally—is the lesson pressed upon the Japanese by these disciples of Humanity and Peace, who also add another suggestion, that Christian missionaries are scouts of the enemy, and the Embassy, but "if your object be, as it is commonly reported, to gestion, that Christian missionaries are secouts of the enemy, and we cannot too urgently recommend every measure of precaution

It will be observed that many of the views which Mr. Congreve advocates are not at all necessarily connected with Positivism as a religion, and are quite capable of being argued on general grounds, without upsetting the calendar, or invoking the names of Auguste Comte and Mine. de Vaux. Some of them are a more regume comes and mine, de vaux. Some of them are a mere repetition in a peculiar jargon of Radical commonplaces, while others are echoes of the Peace Society and of various schools of ideal philanthropy. "To subordinate politics to morals—in other words, to test political actions and speculations by moral considerations—such," we are grandly told, "is the aim of Positivism." It would "lay down the principle that, for States as for individuals." would "lay down the principle that, for States as for individuals, would "lay down the principle that, for States as for individuals, it is the question of duties, and not of rights, that must hence forth take precedence," and so on. There is nothing now about such propositions except the curious impudence with which they are put forward as if they were really novel and original ideas. Even poor benighted Deists and Christians have got as far as this. It has long been perfectly well understood that the principles of morality are equally binding on a nation in its way in the table of the state of the principles. public and in its private life, and that the State and the individual are alike responsible for the use which they may make of their respective powers and faculties. The notion of the Comtists that they enjoy a monopoly of this sort of wisdom and virtue, and that they enjoy a monopoly of this sort of wisdom and virtue, and that they are entitled to look down upon the rest of the world as from a pinnacle of superior morality, is as absurd as it is impertinent. Yet it furnishes the key to their position. Not long since M. Lafitte, the chief director of Positivism, preaching in Paris, urged his hearers to be tolerant. "There are many," he said, "who find hope and comfort in a belief in a spiritual world and future life; let us not be unduly severe upon these." If this had been said the naw other person it might have musted as a sergam on the by any other person, it might have passed as a sarcasm on the movement whose weak point it reveals. It is this assumption of immeasurable superiority, and of the right not only to look down on the rest of the world with contempt and disdain, but to scourge its wicked stepidity, which is the principal characteristic of the Comtist communion. The right to be severe on unbelievers, which is assumed as a matter of course, is implied in the formal caution against excess, grevo candidly admits that this new spiritual power is analogous to Popery, and one of the points of resemblance is certainly the absolute spiritual authority which is claimed. Comtism is presented, not as a more body of opinions which are capable of being sented, not as a mere body of opinions which are capable of being shown by argument in the ordinary way to be reasonable and just, but as a religion which it is blasphemy to question. Consequently anybody who happens to differ from the opinions thus proclaimed must expect to be dammed—in this world at least, and as far as hard words can do it. It is possible that the comminations of the Comtists might have been milder if they had not unfortunately fell themselves obliged to surrender a future state. As they can get at their opponents only in this present life, they have to make their anathemas as concentrated as possible.

The sort of temper in which Positivism works is strikingly

illustrated in the writings of Mr. Congreve. The religion of Humanity is, we are told, one of humility "in the true sense of the word"; its attitude to all opponents is respectful and patient. A few extracts from this volume will indicate the true sense of these words as understood by a priest, or at least a vicar, of Humanity. It is apparently impossible for Mr. Congreve to conceive that any same person who has not some meral twist in his character should hesitate to accept his views. He remarks, for character should hesitate to accept his views. He remarks, for example, that "the votaries of art, the disciples of science, the large and mixed class which constitutes the literary world, the representatives of intellect and culture, have all, from various less respectable motives, united against us." That any opponent can have a respectable motive is incredible, but Mr. Congreve admits degrees of turpitude. Professor Huxley happened on one consistence of say that Comte's writings were rather drawy and verbose, and that he found little or nothing in them of my scientific value, and a great deal that was as thoroughly antagonistic to the very essence of science as anything in Ultramontane Catholicism. Mr. Congreve has thought fit to reprint in cold blood the latter in which he attacked Mr. Huxley for these opinions. "Ne candid man" could say such things: they are an "impatient uttersuces." mr. Congreve has thought he to reprint in cold blood the latter in which he attacked Mr. Huxley for these opinions. "Ne candid man" could say such things; they are an "impatient utterance; based on a wholly imperfect and insufficient acquaintance with the subject." As Mr. Huxley said nothing of Counte's social projects, these not being in his line, oven his silence is turned against him, and denounced as "disoreditable injustice." Moreover, Mr. Congreve

detects signs of an uneasy conscience. "The man of science view with detects signs of an uneasy conscience. "The men of science view with alarm and hatred the spread of a dectrine which they instinctively feel is destined to put an end to their indiscipline." In another case, Professor Beesly having rashly speken of the Shaffeld outrages in a way which it was feared might be misiaterpreased by an ignorant and passionate audience, Mr. Congreve fiescely took up the cadgels for him. Journalists were and are (for the letter is reproduced) denounced as "literary braves," and journalism as "moral assassination." There is, it is asserted, a plain analogy between the outrages of the press and those of the Shaffield murderers. "The editor of a paper works in secret; secretly and in safety issues his instructions to his instruments, who for money carry them out." A sweeping charge of the most abeminable character—which, if first made in heat, is now deliberately revived after eight years of meditation—is here brought against the whole press on no other ground than because a public speaker had been warned of the possible consequences of some heaty and equivocal uttorances. Mr. Congreve complains that he has no access to the press, and that he is obliged, in order to disseminate his views, to have recourse to pamphlets and placards exhibited on the backs of men in the street. But his method of controversy perhaps explains the difficulty. There are no journals which dear in such made and malignant slander.

Mr. Congreve is always cassaring us that he has no access to the congress of the congress of the congress of the controversy perhaps explains the difficulty. There are no journals which dear in such made and malignant slander. alarm and hatred the spread of a doctrine which they ins

and malignant slandor.

Mr. Congreve is always assuring us that he is a men of peace, and that he is all for peaceful measures. Yet it is impossed, and that he is all for peaceful measures. peace, and that he is all for peaceful measures. Yet it is impossible not to be struck by his eagerness to invent excuses for the most atrocious forms of violence and outrage when they happen to be directed against classes or institutions which are obnoxious to himself. It may be only an accident, but it is at least a very curious one, that, as appears from the present volume, his sympathies should be keenly and exclusively collisted on the side of the Indian mutineers, the Fenian rebels, the Sheffield assessins, and the Parisian Communists. No doubt he is careful to express disapproval of the outrages which these different sets of criminals perpetrated, but his great object is to discover excuses for them, and to suggest that, in comparison with the conduct of the reand to suggest that, in comparison with the conduct of the respectable classes of England, their behaviour was by no means so very black after all. From beginning to end the book is a vilificavery black after all. From beginning to end the book is a vilitica-tion and calumny of the great body of the writer's country-men. Their acts are constantly represented in the worst possible light, and every kind of brutality and infamy is attributed to them; and this picture of the conduct of the upper and middle classes is expressly addressed to working-men, who are told that they are hated by the classes above them with "the inhuman hatred of the slaveholder for the revolted slave." There is no reason to doubt the sincerity of the Positivists in declaring themselves to be on the side of peace and order; but in declaring themselves to be on the sale of peace and order, their it is obvious that in the meantime, until peace and order after their own fashion have been established, they cannot help sympathizing with the various forces of destruction which, as they fancy, are clearing the ground for them. It is, Mr. Congreve remarks, matter for hope rather than expectation that the changes which time will be a constructed with the changes which time will or hope rather than expectation that the changes where the form of the prospect that one day there will be "an organization which will grind down all recalcitrant elements." The moral grinding the Comtists are evidently quite capable of performing for themselves, and it will not be their fault if it does not occur to some of their favourite instru-

ments that physical grinding is also requisite.

It is possible that some of the exasperation of the Comtists may be due to the disappointment under which they are at present suffering. "We move but slowly," laments Mr. Congreve; "more slowly than is easily intelligible." "It is a time of slow, almost slowly than is easily intelligible." It is a time of slow, amount microscopic advance, which draws heavily on our patience and confidence—if we would avoid a sonse of oppression and gloom; and it is not always easy to avoid this feeling." He is not always easy to avoid this feeling." impressed with a certain character of unsteadiness of conviction, impressed with a certain character of unsteadiness of conviction, or at any rate of action, which is becoming more apparent in the adherents of the system. "We do not grow much—the most clear-sighted of our opponents are right in that—and I do not know that we deserve to grow much." These things may probably account for the increasing vindictiveness of the failing remnant of a decaying sect, but its temper has always been pretty much the same. The more closely Positivism, or rather Comtian—for it is necessary to distinguish between the philosophy of Positivism in its early form and the mystic religion into which it was afterwards developed—is examined, the more deeply will it be found to bear the stamp of the personal character of its it be found to bear the stamp of the personal character of its founder. Combs was a crazy man of genus, who united an intense and overweening vanity to a bitter, suspicious, and despotie temper. He quarrelled with everybody from childhood upwards with his father and mother, with his teachers, with his friends, with his wife, and no doubt he would have quarrelled also with Olovilde do with, and no doubt he would have quarrelled also with Olotilide de Vaux if their acquaintance had not been quickly terminated by her death. The arrogance and sourcess of the propiet appear to have descended in no stinted measure on his limplink followers. Mr. Congreve's book supplies a curious and paintal attay in the movind anatomy of the human mind. It is impossible not to recognize in it the symptoms, not so much of intellectual activity at of an sort of mental malady akin to that which admetimes affects the body, when black spots dense believe the eyes; and there is a sthement impulse to quarrel and sould, and if possible, to rush out and shake somebody. In the cent of the sect, it might be called an organization of intellectual biles. A PILGRIMAGE

A PILEMAGE.

ITHE world has been amused or edified lately by the revival of religious pilesimages. By the help of Mr. Cook enthusiastic parsons can wish devestional shrines with much greater case than of old. We are now, it seems, to wimess a pilerimage insteaded to give utterance to a very different current of opinion. Seventy agricultural labourers have started to march through the Midland consties in order to bring their wrongs before the world. Pilgrims on such an around might have been expected rather to go barefoot than to take advantage of railway trains. But, however it may be conducted, the enterprise is a curious one. It might be thought that newspaper reports would be sufficient to spread a knowledge of the Newmarket look-out to avery corner of the country. The source is fisch and blood will do more than any amount of abstract disquisition upon his rights and wrongs. A selection of the actual human beings who have been brought up upon a limited of the actual human beings who have been brought up upon a limited number of shillings a week (the estimates are so various that it is more prudent not to give figures) will be exhibited in the large towns. This, they will say in substance, is the kind of article produced under the existing system. Judge for yourselves what must be its merits. If the labourers look half-starved and ragged, they will argue that improvement in their condition is importantly required. If our an improvement in their condition is imperatively required. If the whole, they have a tolerably comfortable appearance, it will be equally easy to say that such respectable persons ought not to be condemned to hopeless lives in miserable hovels. Anyhow the sight of a hand of exiles driven from their native homes to implore the sesistance of the outside world against tyrnunical farmers and landlords will be sufficiently impressive, and the contagion of sympathy may be expected to spread and induce a flow of hard cush towards the coffers of the Union. A large van, it is said, is provided to bring home the expected offerings, which would apparently imply that the agricultural labourer has not yet risen to the conception of cheques and Post-office orders. However, the effect will no doubt be picturesque, and the visible and bodily presence of a treasure-box may stimulate charitable offerings.

Meanwhile this curious move on the part of the labourers may suggest some reflections as to the nature of the struggle which is now proceeding. Nobody denies the right of the labourers to combine, and to endeavour by all lawful means to force a higher rate of wages from their employers. As a rule, however, warfare of this kind is generally confined to the persons immediately inte-rested. When a body of artisans strikes, it these not often venture rested. When a body of artisons strikes, it does not often renduce to appeal to the general public for support, though it may find alliances amongst the trades more or less directly connected with the same business. The agricultural labourers take a different ground. They consider that the nation at large ought to take their side. It is not a more question of a bargain between two indended transitions but of armaniary assemble us after of things appoints. pendent parties, but of removing a scandalous state of things amongst an important class of the population. The adoption of the present expedient amounts to saying that the people of Birmingham, Nottingham, and other large towns ought to insist upon the farmers Newmarket paying a higher rate of wages to the men whom ey employ. Undoubtedly the appeal is likely to meet with they employ. some response. Nothing can be more natural than for an insome response. Nothing can be more natural than for an in-habitant of Birmingham to wish to take the mote out of his neighbour's eye. We ourselves are perfectly ready to admit that we should be very glad if the farmers of Newmarket would pay twenty-five, or even fifty, shillings a week to their men. We should be heartly glad if every landowner, not only at Newmarket, but throughout the whole agricultural districts would receive a received districts, would provide an excellent set of cottages on his estate. with good water laid on to every house, with proper drainage and bedroom accommodation, and with a good school in the immediate neighbourhood, where every child might receive a good education up to the age of fifteen. We should be glad to see the old aspiration realized that every pessant might have a fowl in his pot; said, in short, if we were to give loose to our imagination and draw a purely fancy picture, we do not know where we should stop until we had raised the labourer to a condition as comfortable as is conwe had min sistent with his supporting himself by the toil of his hands. Whilst we are about it, we should indeed go somewhat further, and wish the same good fortune for the miserable population of our cities. If we may trust the Times' reporter, there are indeed many circumstances in the life of an agricultural labourer which urgently need improvement, but there are also a good many labourers who have decent accommodation, whose children are rosy and thriving, and who, in short, would make a very had archange if they left Suffolk for St. Gilos's. And therefore we begin to doubt whather our sympathy does not need a little enlightenment. When we are matencing the farmer in imagination to pay a higher rate of wages, we may be saking sistent with his supporting himself by the toil of his hands. Whilst need a little enlightenment. When we are sentencing the farmer in imagination to pay a higher rate of wages, we may be saking for comething which is not possible consistently with existing industrial conditions. It is very tempting to join in a fight with the view of haping the mealer side; but it is not always the case that the weaker side is in the right. The labourers were perfectly right to stir up the feelings of their own class as widely as because. The law rate of agricultural wages were undoubtedly owing in great part to the want of a spirit of enterprise and independence. The labourers wages were not forced up by the compaction of employers charment, heaven be made to ignorant to knew what was going on activities the manner limits of his lighters and his colleagues are endeavouring to summer this against the making a particular sore made made and his colleagues are endeavouring to summer this against the making a particular sore made made and making a particular sore made made, and

they may probably bring such a pressure to bear when the labourer know how to combine for the enforcement of their

labourers know how to combine for the enforcement of their rights that their wages may rise naturally, and labour cease to stagmate in little peols unaffected by the general current outside. But when it is proposed that the outside world shall unite with the labourers against the farmers, the question because rather different. The question is, after all, what the farmer can afferd to pay, and the ultimate effect of forcing him for a time to pay more would only be that cultivation must be discouraged, fill after a time wages would fall lack to their natural level. A rate lovised upon public charity would not be of more personnent advantage to the labourer than the old system of supplementing wages from the Poor-rate. And therefore there is some personnetion argument the Poor-rate. And therefore there is some presumption against the interference in the matter of people who really knew next to nothing as to the conditions of the question. How, after all, can the people of Birmingham tell that they are not doing an injustice to the farmers? The mere fact that several behingers come to the same that they must be better that several behinders. to them and say that they would like better pay obviously proves to them and say that they would like better pay obviously proves nothing, nor do the arguments, so far as we have seen them, appear to be very convincing. If the farmers complain, says one of the orators, it can only be from one of four causes; either they are paying exorbitant rents, or farming badly, or living extravagantly, or saving money. We will not give a lecture upon the theory of rent or the general laws of political economy. It is enough to say that we have no reason to suppose that farmers differ materially from the rest of the industrial classes. They will naturally complain like other months when they have any extend in a contain plain, like other people, when they have embarked in a certain business and find that one casential part of their calculations is to be upset. The most moderate and reasonable of fermers will naturally be put out if he finds that he will have in future to spend a pound where he used only to spend fifteen shillings. The nature of farmers is corrupt, for farmers are men; but we have no reason to assume that they have inherited a larger share of original sin then other people, or that they are abnormally penurious or extravaguot. Unless they can get an average rate of profit they extravagent. Unless they can get an average rate of profit they will give up their business; and mere general reflections upon will give up their business; and mere general reflections upon human avarice and extravagance do not help us to decide that question one way or another. And therefore, whilst we admit the propriety of spreading information and accounging combination amongst all the class directly concerned, we doubt very strongly the advantage of bringing in outsiders to take a part in the quarrel. It is only too probable that the effect of such an appeal will be to sneourage false hopes, to protract the struggle beyond its natural limits, and ultimately to make its results more injurious to everybody concerned. A number of labourers may be induced to held out until the farmers have suplabourers may be induced to hold out until the farmers have supplied their places, and then they will be left to depend on charity, or emigrate, or return to lower the rate of wages to a still inferior or emigrate, or return to lower the rate of wages to a sum inscreed level. It is conferring a very doubtful benefit upon a men to enable him to straggle beyond a certain point, which point we have no means of determining accurately. The formation of unions for self-help may at least tend to make him independent; but the connected tendency of relying upon public charity is just the opposite, and may very likely be seriously demoralizing as well as ultimately

futile for the purposes avowed by the agitators.

We are quite aware that reflections of this kind, however obvious, have at times a rather brutal appearance. Mr. Arch will covous, have at times a rather brutal appearance. Mr. Asch will tell us with perfect truth that the nation at large has an interest in the well-being of the agricultural classes; and that we cannot afford, whatever political economists may tell us, simply to look on and see fair play. When a degraded and ignorant population is rising in the midst of us, an evil is being gonerated which will not be set right by the simple operation of the law of supply and demand. Vice and misory have a condense, to wearant themselves and if the continuous a tendency to propagate themselves, and if the conditions of life of an agricultural labourer are such as to make him an anworthy member of society, statesmen ought to andoavour to change them; and even the most remote classes may be vitally interested in a successful solution of the problem. Nothing can be more true or more deserving of attention. We do not argue on behalf of in-difference, but against a spasmodic attempt to set things right by the interposition of the outside world in a dispute of which it does not understand the conditions. It is very simple and easy to say, let the farmers pay twice their previous rate of wages; but even farmers deserve justice, and we could not force that change without setting up another series of consequences which would demand careful investigation. From a limited point of view, the question may appear to be simply one of immediate justice to the labourer, and that is the way in which it is naturally treated by the heavy agitator. The orators who are trying to get money out of the pochets of a crowd by speeches delivered from waggons do not trouble thomsolves with logical refinements, and simply appeal to the universal feeling of every poor man that he would like to get more out of the righ. But any one who takes a wider view must see at once that the problem opens up far wider social and national questions to which no off-hand answer is possible. aim, for example, at improving the condition of the labourer by improving his education, and that, not merely in the sonso of teaching him a little more reading and writing, but by raising him to a higher stage of culture. We may be led to propose an alteration of the Poor-laws or of the tenure of land, although those subment or the a non-move or of the tenure of fined, atthough those subjects are obscured by a superabundance of quark prescriptions; or we may each to mend matters by sunitary legislation, or by facilitating savings and improving the working of briendly Societies, or by matricting the labour of women and children; or, in short, by a great number of methods such of which involves whole libraries of

discussion and inquiry. So far as the present agitation amongst agricultural labourers either increases the intelligence and independence of the class itself, or leads to genuine reforms of a rational character founded upon a statesmanlike consideration of all the complex conditions of the case, it may confer a permanent benefit. But when it consists in sending round the hat and making sensational speeches to get a subsidy for a particular campaign, it is at least as likely to do harm as good. We should be glad if the pilgrimage brought it vividly before the public mind that there are serious social problems very much in need of solution; but we fear that it is more likely to encourage the application of quack remedies which will introduce new causes of irritation and render a pacific termination of the quarrel more impracticable than ever. If pacific termination of the quarrel more impracticable than ever. If the farmers can manage to do without the men now locked out, the support of the victims by public contributions will end by doing them no good; and even if the farmers should be forced to yield, it is very probable that the victory won, so to speak, by artificial means will be only temporary, and therefore only the beginning of a series of mischievous contests.

THE CHURCH SITUATION.

A T last the Archbishops' Bill has worked its weary way through the House of Lords, and is fairly before the Commons for a second reading, although beset with competing motions for its rejection from both sides, some of them alleging reasons, and others only opposing the fatal three months. It took its departure under about a of validators expected from prairies any input statement. only opposing the latal three months. It took its departure under a shower of valedictory speeches from various eminent statesmen. Lord Cairns, with a guardian's affectionate interest, praised it as a good little measure which would never think of meddling with doctrine, while it would cheapen and mitigate procedure; Lord Carnarvon looked at it with calm benignity; Lord Selborne, in blessing it, sweetly cursed the High Church; Lord Granville was content to heave a brick at Ritualism and sneer at Ministers; and Lord Selishury, while committing himself to the opinion that was content to heave a brick at Ritualism and sneer at Ministers; and Lord Salisbury, while committing himself to the opinion that it would do very little, picked out the creation of a Judge on 3,000/. a year as its main feature, intimated that it was a "flag," and feared that its passing now would do more harm than good. The Archbishop in his reply travelled over many points, but he did not repudiate the "flag." We shall not waste time in showing that a flag run up just now by the Episcopate for a campaign against the most active party in the Church can only mean a civil war out of which that Church could hardly escape with safety. We dare say some optimists will argue that the Bill has been reduced into so harmless a condition that both sides may agree to We dare say some optimists will argue that the Bill has been reduced into so harmless a condition that both sides may agree to adopt it as a superfluous but ornamental ensign. The difficulty, however, under which we labour is that of being unable to see that the harm has been taken out of it. It is not the same measure which was brought in last April, but it is hardly a better one. The vice of the first draft was that it converted every Bishop into a petty tyrant. In attempting to get rid of this defect, its editors have succeeded in abolishing the judicial office of the Episcopate, and giving to every prelate who has not the rare courage of impartially refusing to take action under the Bill, the poor choice of suing to be taken as umpire, or having to play the subordinate part of registrar to a distant Judge.

Those who treat the Bill as harmless forget the enormous power

of registrar to a distant Judge.

Those who treat the Bill as harmless forget the enormous power Those who treat the Bill as harmless forget the enormous power which the Judge will possess of stamping his own opinions upon the whole Church of England. Mr. Justice Keating may be absolutely right in his view of the unlawfulness of sculpture in charches, but, even if he be so, his opinion is at present only law within the court of the visitor of Exeter Cathedral. Had he thimself pronounced his judgment as Provincial Judge under this Bill, it would, for the time being, have been the voice of both Provinces. The concentration of the judiciary obviously possesses many abstract and primal facis advantages, but these may be too dearly bought at the sacrifice of primary principles. The constitution of the Christian Church, well understood and regulated in days when the Augustus was still the sovereign authority in Britain, is that the Bishop is the primary, and the Metropolitan the appeldays when the Augustus was still the sovereign authority in Britain, is that the Bishop is the primary, and the Metropolitan the appellate, Judge. This general principle admits of any form of regulation, supposing its essential feature is not lost sight of; in particular, the common sense of Churchmen has in every land secured that the legal inexperience of the titular Judge should be supplemented by trained assessorship. But the present Bill, as manipulated by Lord Shaftesbury, loses sight of this clear principle, and enacts that each case which proceeds to a hearing must either be heard by the primary Judge without appeal, or else by the jurisdiction which is in its nature appellate, acting in the first instance. heard by the primary Judge without appeal, or else by the jurisdiction which is in its nature appollate, acting in the first instance, with no power of coordinating the two tribunals. At all events Lord Shaftesbury had better moderate his hard language against Popery. The estensible reason of that system, which we, like him, have no hesitation in calling false, was the inconvenience caused by the small and often conflicting jurisdictions of many diocesses. So the Roman Curia concentrated the judiciary power of the whole Papal Church within its own walls. This is just what our Archhishops are now doing under the promptings of the "great Protestant Earl." The fragmentary and unappealable jurisdiction of the personal Bishops which this Bill sets up alongside of the centralized Court is simply an alien substance which never can be assimilated with the body into which it is projected, and is therefore only powerful for confusion.

To come, however, to more immediately practical considerations. The choice of the new Judge at this particular crisis could

hardly fail to give much trouble to those who would, unfortunately for themselves, have the appointment. We are sure that the Archbishops would take all pains to make the fairest choice; but, in proportion as they do so, the difficulties in which they have involved themselves by such proceedings as their answer to the Church Association, and their speeches upon the present Bill before Lord Shaftesbury had riveted the direct responsibility upon them, will start into prominence. These are abstract considerations, but they lead to the great question How will it work? Lord Cairns and Lord Selborne were each in different ways equally intolerant of the idea that the Bill would have any extansive effect, because as lawyers they declined to look beyond the formal effect of its several provisions. Had they condescended to be men of the world, they would have seen that the mischief to be apprehended resides far less in the one suit which may be prosecuted than in the fifty charges which may be rejected. The Archbishops themselves would be the last to deny that they did publicly run up their flag, and that their example was followed by more than one of their suffragens. They may now regret what they have said, but the effect of inflanmatory words is not removed by the penitance of the speakers. The hitherto inert mass of fussy self-importance which exists in the Church of England, as in all great institutions, has been ostentatiously invited by the rulers of that Church to assume the congenial duties of public informer, and a Bill has been pushed on to clothe them with the powers needed for the ignoble duty. They are not people to care for or to understand the changes through which it may have passed, or the degree of justification which exists for the different ceremonial practices which they may happen to dislike. All they know is, that it was and is the Archbishop's Bill, and that under it they are invited by the Archbishop to "stamp out" whatever they may please to nickname Ritualism; and they will accordingly act up hardly fail to give much trouble to those who would, unfort volved in, and no securities required for, filing an information, and they have nothing to do but to come up again smiling with re-peated charges so long as they have a vicar to roast or a bishop to perplex. The persecution Societies, too, will watch their oppor-tunities and extend their operations, particularly under the provision to admit non-resident landowners and parishioners for the purposes

tunities and extend their operations, particularly under the provision to admit non-resident landowners and parishioners for the purposes of informing. A house in a suspected town might be a good investment in more than one way for the Church Association. Who, too, can say how long the Hishops' courage or patience may be proof against a perpetual obsession? In very weariness, if not cowardice, they will be tempted to let slip the dogs of litigation, and then the war of reprisals will begin against the men who have so long been safely raving against Ritualistic excess from behind the broad bulwark of disregarded rubrics.

All these dangers are to be risked for the sake of the empty boast of passing a Hill which has between April and July just succeeded in proserving the same title. In the meanwhile there is no Churchman who is not ready to agree that rubrics must be revised, and the criminous jurisdiction of the spiritual courts reformed. A Bill to enforce revised rubrics, and to provide for the uniform and inexpensive hearing of all suits against clergymen, whether for ceremonial or moral offences, would at all events not be a flag, and could therefore be calmly discussed upon its merits; and yet the prelacy will not wait for a few months to secure so obvious an advantage, but prefer to force their crude measure upon the House of Commons, which is always, and very reasonably, unwilling to saddle itself with superfluous work in the last days of the Session, when time runs full too short for even necessary business. Yet the Archbishop of Canterbury had setually built the bridge over which he could retreat with honour, when he applied to the Crown to renew the Letters of Business given to the preceding Convocation for the revision of the rubrics. The Bishop of London capped this proceeding by introducing a Bill for simplifying the method of Parliamentary assent necessary to give validity to Convocational recommendations. As, however, he does not propose to press his measure, it will hardly be worth while to stop t

worth while to stop to examine its provisions.

The Archbishops step has of course given little pleasure to the outand-out supporters of the Bill. They have combined with a certain section of its opponents in deprecating any reference of the disputed questions to Convocation, because that body is still unreformed, section of its opponents in deprecating any reference of the disputed questions to Convocation, because that body is still unreformed, while they are never tired of advancing propositions which only agree in seeming to be framed so as to render any such reform impossible. The truth is, that the connexion between a reform of Convocation and a consideration of the actual difficulty by the only existing mouthplece of the English clergy, is by no means so close as the more indiscreet supporters or the more outspoken enemies of that ancient institution would make us believe. One has become a pressing question, while the other could, if necessary, bids its time. It might, for instance, be just as well for the people who are most clamorous for that reform to take pains to assertain beforehand what is the nature of the body which they affer to manipulate. Their mostrum, offered with various accomings, is always at bottom the same prescription of a Church Parliament taking in a representation of the laity. Such an assembly might be a very excellent thing in itself, though we shall have to any semething further on as to the way in which we anticipate that this excellence will display itself. It is not, however, and never was, the idea of that old constitutional body, the Convention plant of either Province. We pass over its long abolished but most most important function, the taxation of the clergy. When that prerogative passed away,

sition remained for practical purposes a Committee clergy for emitting opinions and exercising inwith me convoive power for driving either home; our emergicant occasions, and only with the leave of that a subodiment of the laity called the Crown, for roughand, whom emerginant occasions, and only with the leave of that supreme embodiment of the laity called the Crown, for rough-hewing the various eccleniastical regulations severally known as canons or rubrice, which have no binding force until sanctioned by Parliament. We cannot conceive a religious body professing any spiritual character claiming a more modest share of self-government—although even this allowance was for nearly a century and a half denied to the Church of England, and was only at last recovered when that Church had, in spite of many obstacles, reasserted its own spiritual life. Indeed the impotence of Convocation compared with the power wielded by the assembly of the Scotch Kirk, with its pleatiful proportion of lay elders, is the commonplace alike of those who grudge the English clergy any corporate voice at all and of those who desire to transform it into a duplicate of the Northern body. The history of the past and present generations has, we own, given these reasoners a plentiful crop of precedents for the government of Churches belonging to the Anglican communion by assemblies in which laymen meet and vote by the side of the clergy, in the United States, in the Colonies, and lastly in Ireland. But one characteristic runs through all these instances; all these Churches are unestablished, and the General Assembly of the Scottish Church—although it may itself maintain a condition of establishment impossible out of Scotland—has certainly been the fruitful parent of unestablished counterparts, while, in concert with its free doubles, it plays the past of a quasitainly been the fruitful parent of unestablished counterparts, while, in concert with its free doubles, it plays the past of a quasi-Parliament within an ostensible capital, and helps in no small degree to satiate Scotch longings for home rule. Have the advocates for representative laymon as an integral portion of the English Convocation ever faced the embarrassments of creating with an integral part of the property of the part of the such an imperium in imperio, and yet of maintaining those relations with Parliament which are essential for the preservation of the Establishment? If they are ready to swallow discatablishment as the greater good or lesser evil, we willingly recognize their consistency, while we plainly say that we decline to share their counsels. But the impossibility of creating a lay Convocation without innovating in many other ways is no argument against using the existing form of clerical representation for the modest and congruous duties which belong to it. Still less is it possible to say that, because the Church laity have no voice in Convocato say that, because the Church latty have no voice in Convocation, therefore they are mute except so far as they may command the ear of Parliament. Englishmen, when they see a want shead, seldom fail in overtaking it by some rough-and-roady process; and so they have done in this case. No law and no fear of ulterior change stand in the way of diocesan conferences. The idea is a very practical one, and well adapted to the conditions of the age. Every year adds to the number of the diocesas in which they are at work, and in no long time we are convinced that they will have taken their place as the recognized though half-informal organ have taken their place as the recognized though half-informal organ of a body of religious opinion wider than, though in harmonious correspondence with, that of the older constitutional organization.

The reform of Convocation, admitting these premisses, is really a aimple matter, which only affects the Lower House of one Province. In York the proctors elected by the parochial clergy stand in a sufficient proportion to the official Deans and Archdeacous and to the sufficient proportion to the official Deans and Archdeacons and to the representatives of the Chapters, for each Archdeaconry uniformly elects two. In Canterbury a similar arrangement would lead to the return of upwards of a hundred parish clergymen, instead of the little more than forty (somewhat capriciously appointed by rules which differ in the various dioceses) who now find seats; and some persons have even contended that an Archbishop could issue the necessary writs for the supplementary elections while the Convocation, which runs with Parliament, was still sitting. But in the meanwhile the very fact that Convocation stays unreformed ought to administer consolation to the worthy generated that the Letters of Business would create a turbulent phalanx of spiritual revolutionists. A body professing a turbulent phalanx of spiritual revolutionists. A body professing to be representative, and yet so largely composed of nominated members, is a theoretical anomaly, but it is one of a similar complexion with an heroditary House of Lords and other institutions plexion with an heroditary House of Lords and other institutions which Englishmen in their calmer moods are wont to regard as anything rather than a calamity. Those accordingly who think that in this case the disproportion might easily and with advantage be rectified, may still, for the present purpose, accept the Convecation of Canterbury as it is, as a sufficiently representative and satisfactory committee of the various Church parties. At all events, a Lower House in the composition of which episcopal and ministerial nomination has so large a share is not the body most likely to go to the barricades.

ministerial nomination has so large a share is not the body most likely to go to the barricades.

The second reading of the Public Worship Regulation Bill will be taken during the week when Convocation will actually be considering the rubrics with which it claims to deal. Of the duration of the debate the only thing which can be safely predicted is that it will be long, and if the measure should, after a very liberal weeding of the Order Book, drift into Committee, the discussion which that stage will encourage must be such as no House of Commons would very willingly submit to in the later part of July on a Bill not promoted by the Government. In the meanwhile the possibilities of a really comprehensive compromise would be ripening. We can only sak in amazement, Why go en?

accepts him.

go on?

TOTTENHAM'S.

TOTTENHAM'S.

NOVELISTS now occupy in England the place which in other times and countries has been and is assumed by dramatists. The "humours" of the day, the latest forms of folly and extravagance, are represented, not on the stage, but in the pages of a perpetual succession of what are called, and in some cases truly, new novels. It is of course impossible for any writer, whether of plays or novels, to supply the demand which comes upon all established public favourites for writing which shall be at once fresh and good. Usually the same character is again and again produced with accessories which are slightly varied, and the result is accepted as new and original work.

One of the most industrious manufacturers of three-volume novels, Mrs. Oliphant, has lately introduced a new style into the ornamentation of her work. We have had from her and her fellow-labourers enough of duchosses and countesses and of the

fellow-labourers enough of duchoses and countesses and of the splendour of Belgravian mansions and the beauty of suburban villas. But, so far as we know, this author is the first who has ventured to marry an earl's daughter to a shopkeeper, and to surround the family thus strangely formed with magnificence plainly paid for out of the till. There are in London two or three establishments which may have suggested to the two or three establishments which may have suggested to the author the idea of Tottenham's, and it is possible that the present or future masters of these gigantic shops may intermarry with the precage. We heard lately that a duke's son marry with the pecrage. We heard lately that a duke's son had thought of going into the tea trade, and this would at any rate prepare the way for an earl's daughter to become the wife of a draper. One of these great houses of business may be compared, while thats, to an estate or a colliery. Mr. Tottenham in the story fairly says that he has the same responsibility towards those whom he employs as the owner of land or mines. The only difference is that this now kind of property is less durable than the old. Success in trade is generally due to qualities which are with difficulty nurtured in the lap of luxury. If we allow one generation for the rise of a house of business, another for its sustained prosperity, and third for its ducking school are with missing prosperity, and rise of a house of business, another for its sustained prosperity, some a third for its decline, we shall represent with sufficient accuracy the usual operation of causes and effects. This sort of property requires, much more than either land or mines, the constant influence of the master's eye and hand. Very much can be done by deputy, but always on the supposition that there is a principal. The luss business of the supposition of the suppositio of the master's eye and hand. Very much can be done by deputy, but always on the supposition that there is a principal. The husband of Lady Mary Tottenham may intend to stick to the shop, but the difficulty would be to get the shop to stick to him. It must be remembered that the assistants on whom the head of a great house depends have always the inclination, and are likely to find sooner or later the opportunity, to set up for themselves. A man is not necessarily worse at business for having been at Eton and Oxford, if he would attend to business like a man who has been at a "commercial" school; but this he probably would not do. If he leaves his capital in the concern without closely superintending it his income soon diminishes, and he incurs the risk of loss by the rashness or negligence, or even dishonesty, of partners. If he withdraws his capital the concern probably cannot stand without it; and if the attempt be made under such circumstances to conresult is the attempt be made under such circumstances to convert a private firm into a company with limited liability, we can only say that longer trial is needed before it can be declared whether this expedient is or is not likely to be generally successful. The great and perhaps insuperable difficulty is that no director or manager will permanently serve a body of shareholders as he will serve himself. Some of these companies fail from dishonesty, but more from neglect. It is easy, therefore, to understand that such an establishment as Tettenburgh is destined understand that such an establishment as Tottenham's is destined to decay. We hear much from Mr. and Lady Mary Tottenham about the education of their own and other people's children, but neither of them seems to entertain the notion that education ought to have any, even the most distant, reference to the shop. A novelist, and especially a lady, is cutified to rear an imaginary structure without looking closely at the foundation. But it is obvious that such an establishment as Tottenham's cannot be trusted, like a planet, to go on rotating when once it has been set going. Mr. Tottenham, the sole proprietor, is represented to have been first incapable as a minor of interfering in the concern, and when he did interfere, he sent down the profits, as is quite likely, by a third. But how does the author suppose that such a concern could be carried on during 'he minority of its chief? The Court of Chancery can wind up any sort of business that was ever invented, but that Court would hardly trust itself to make an order "on further directions" for carrying on the shawl and mantle department of Tottenham's. The author seems to have forgotten that there must be a motive power to every machine. "My father died," says Mr. Tottenham, "when I was only a small boy." His mother brought him up in entire ignorance of the shop, and bought all her own things at Howell and James's rather than get them at rost price at Tottesham's. He was so ashamed of his name that he was calling himself Smith trusted, like a planet, to go on rotating when once it has been ignorance of the shop, and bought all her own things at Howell and James's rather than get them at cost price at Tottesham's He was so ashamed of his name that he was calling himself Smith or Brown when he proposed to and was accepted by Lady Mary. It is perhaps sufficiently improbable that she would have accepted Mr. Tottenham knowing his position, but it is quite incredible that she would accept Mr. Smith or Mr. Brown of whom nobody near her could know anything without knowing that he was an intposter. According to the story, however, she accepts him as Smith or Brown, and then he tells her that he is Tottenham and keeps a shop; and she drives him from hor, not because he is a shopkesper, but because he has used decoit. Then he takes to the accepts him.

The point of contact of Tottenham's with the main story is that the master of it engages the hero as tutor to his son. The point of contact of Tottenham's with the main story is that the master of it engages the hero as tutor to his son. The "house," having mysteriously governed itself during Mr. Tottenham's minority, survives the crisis caused by his ignorant interference in its management; and when the story opens he has been for a dozen years or more living in a grand suburban mansion and park, and driving to business daily in a handsome phaeton and pair. The prosperity of Tottenham's under a ruler who began in total ignorance of his trade is not perhaps much more surprising than the fact that the Tottenham's under a ruler who began in toom management trade is not perhaps much more surprising than the fact that the British navy survives the administration of a succession of First Lords utterly unacquainted with ships or shipbuilding. There is of course this difference, that the mistakes of a First Lord of the Admiralty are paid for out of the unfathomable pocket of the nation, while the mistakes of the head of a commercial firm are charged against his own capital. However, we must allow something to the exigencies of story-telling. Tottenham's, having survived the early errors of its master, may be supposed to be "a good property" on which that master may live in all the luxury which modern noveliets take special pleasure in describing. We which modern novelists take special pleasure in describing. We all know those passages where Miss Braddon catalogues furniture and fittings with the relish of an epicure gloating over a bill of fare. Mrs. Oliphant has the same harmless weakness. Mr. and Lady Mary Tottenham are sented in the conservatory under the dome which had been built to give room for the branches of a palm-tree. In this favourite spot all the pretty luxury of these conservatories culminated. There were bright-coloured Persian rugs, chairs half rustic and wholly laxurious, and all the flowers rugs, chairs half rustic and wholly luxurious, and all the flowers that art can extract or force from nature in the depth of winter. This kind of thing pleases the author, and does not greatly injure us. The adjectives, which we omit, help to make up the necessary three volumes. When the author has done with the beauties of the mansion, she takes up those of the shep, and here she is justified in laying on the colour pretty thickly. The destined adornments of many families and households are collected in a palace built expressly for the display of them. It consists of "an immense square pile of building, facing to four different streets, with frontage of plate-glass windows, and masses of costly shewls and silks appearing through." Mr. Tottenham reads letters, hears reports, and supervises the programme of an "entertainment" to be reports, and supervises the programme of an "entertainment" to be given by the ladies and contlemen of the house in the presence of Lady Mary and some of her aristocratic friends. An objection is raised in the house to the appearance in the programme of the name of one Miss Lockwood, against whom a scandalous report prevails. Mr. Tottenham is obliged, as the benevolent despot of the place, to inrottenham is obliged, as the benevolant despot of the place, to investigate this scandal, which connects Miss Lockwood with two of the characters in the story. A report on this unpleasant subject is made to him by Mr. Robinson, "a grave elderly gentleman" who looks like a respectable member of Parliament, but is only the head of the shawl and clock department in Tottenham's. "It is marvellous," says the author, "how much humanity resembles itself." There is both freshness and truth in this sketch of the interior of Tottenham's. Miss lockwood auters the counting. interior of Tottenham's. Miss Lockwood enters the counting-house and faces her accuser. This "young person" is clad in clogant black silk robes, very well made, with dark hair claborately dressed, tall, slight, graceful. She is one of those beings who are to be met with in the inner recesses of great shops, bearing all the outward aspect of ladies, trying on one beautiful garment after another, and surveying thomselves in great mirrors as they pass and repass:-

The best of feminine society ebbs and flows around these soft-voiced and elegant creatures. Ducheses, princesses, lock like was betwomen beside them, and young girls often not more pretty or graceful. They are the Helots of the formals fashionable world, and, at the same time, to some degree, it despots 4 for does not many a dumpy woman appear richeulous m the elegant garb which has proved before her eyes so beautiful and becoming upon the allm straight form of the "young person" who exhibited and sold side.

Our own want of taste perhaps accounts for our considering this by far the best passage in the three volumes which lie before us. For Love and Life (Hurst and Blackett) might as well be called by that name as any other. It is "for life" in the sense that the author, as we suppose, lives by writing it, and it is "for love" because it treats, as nevels mostly do, of courtship and marriage, which, in theory at least, depend on love. The regular business of the novelist can be transacted just as well at Tottenham's as anywhere else. Ledy transacted just as well at Tottenham's as anywhere else. Mary has several nieces, one of whom thinks of going into a sisterhood, visits the poor of London in a black dress, comes to Tottenham's to visit and influence its "young ladies," and has even persuaded her aunt's husband to set up a little chapel on the premises. We are not aware whether London actually affords an example of "Ritualistic" proclivities so startling as this. But the sauthor is at liberty to suppose it. A chapel in a house of business is not more wonderful than an "outertainment," with an affable dashess corruling actually the shopment and shopwaymen on their part. duchess complimenting the shopmen and shopwomen on their performance of the "Trial Scene in Pickwick," would have been thought thirty years ago. The young gentleman whom Mr. Tottenham has engaged as tutor to his son has seen much better days, in which he was almost engaged to Lady Mary's niece, who has been in love with him ever since, and for his sake has refused eligible offers. and takes to that objectionable black dress. Of course Edgar and Gussy meet in a convenient alley of the labyrinth of Tottenham's, and in spite of the reclamation of Gussy's aristocratic mother the usual consequences ensue. The story is as good as could be expected considering the rapidity with which it must have been

written. But our interest in it begins and ends at Test. The connexion of the shop with the passage might be advantageous, and we may remember that among the names in mercantile history are men of good family who London, kept shops, and made fortunes, out of who founded hospitals, and supplied by loans the necessitions.

THREE EASTERN MINETERS.

ON the eastern side of our island, in the old East-Anglia or the lands immediately bordering on it, lie three of the greatest churches of England, all now of cathedral rank, and whose architecture and history make them fit objects for comparison. These are the three minsters of Ely, Peterborough, and Norwich. Of these three we suspect that Norwich is the least known of the great churches of England. This comes of its geographical position. A man who goes to Norwich must have set out with the deliberate purpose of going to Norwich, unless indeed he has set out with the deliberate purpose of going to Cromer or Great Yarmouth. No man can find himself at Norwich in the course of a journey to some other place. Fly, on the other hand, comes within the seknowledged bounds of a visit to Cambridge, and Peterborough lies on the direct line between London and York. It follows therefore that Ely and Peterborough are far better known than Norwich. tecture and history make them fit objects for comparison. on the direct line tervesin bodion and Tork. It intows that that Ely and l'eterborough are far better known than Norwich. Norwich is of course well known to those who have made such matters a special study; but when, as sometimes happens, ordinary people in ordinary talk begin to discuss "cathedrais," it seldom happens that Norwich comes within the range of such discourse. Yet the church of Norwich is one which stands quite on a level with the other two, it is a perfectly fair subject for comparison: with the other two; it is a perfectly fair subject for comparison; and though perhaps most people would, on the whole, put Norwich third in the group, yet there are points in which it certainly excels both its rivals. All three are on much the same scale; churches decidedly of the first rank, as contrusted with amalier buildings like Hereford, Chichester, or Rochester. All are nearly of the same date and style; in all an unusual propostion of the original building still remains; and in the one case, that of Ely, where large later additions have been made, they have been remarkably influenced by the design of the original building. All were churches of regulars, and all still keep large remains of their conventual buildings. But with all these points of likeness, no three churches can well differ more among themselves in two very important points. There is no likeness either in their west fronts or in their central towers. At Peterborough the treatment of the west and is unique; at Ely the treatment of the west and of the centre also is unique. Peterborough has its western transept and unfinished western towers, and the matchless portice in front of all. Ely has its one limb still standing of a far greater western transept, with the one mighty tower and the graceful porch—not portico—before it. Norwich has nothing to be called a west front at all; there are the mere ends of the nave and aisles, without even western towers, a strange lack in a Norman burnel was a strange lack in a Norman burnel was a strange lack in a Norman content of the color band has in the without even western towers, a strange lack in a Norman church on so great a scale. Ely, on the other hand, has in the centre its unique lantern; Norwich has one of the noblest of Romanesque towers crowned by a spire which, if perhaps not quite in harmony with the building, forms a grand and distinctive feature in the general view of a city where it is the only spire. Peterborough meanwhile has a low and poor central tower, of which all that we can say is that its lowness and poorness are so far a merit that something better in itself might have lessened the importance of the wonderful group of towers, spires, and gables at the west end. Norwich and Peterborough still keep the only two Romanesque apres which we have in England on a great scale; and at Ely, though the appears gone, yet it has left its traces in the building which has supplanted it. In all three some part of the building was an addition, a later Lady-chapel; at Ely it was an essential part of the tion, a later Lady-chapel; at Ely it was an essential part of the fabric as it now stands, namely the north wing of the western transept. This loss is painfully felt from that side of the charch, but at Peterborough the destroyed chapel is hardly missed, and a Norwich one simply feels the loss of the chapel as being, like its addition, one of the many tamperings which the spee has undergone. In their general outline all three have the same effect of bulk, bulk in many ways—vast length combined with very considerable height but kly gains over the other two by having kept the original pitch of its high roof over both nave and choir. All have suffered— Norwich the most of all-by raising the outer wall of the triforier range, instead of keeping the sloping roof of the aids. We are not sure that the effect of mere bulk is not increased by this change; Of course this but it tends to confuse the parts of the building. Of conflict of bulk comes out more strongly at Ely and Peters where the minster practically stands in the country with nothing but trees and its own secluded buildings round it, while Norwith

is a church built in a great city, and consequently cannot constitutely over everything in the neighbourhood as the other two.

In this last difference we get the outward expression of the binto of the three churches. Ely and Peterborough wars althous found in the wilderness, at whose gates a small town grow up, and which in the wilderness, at whose gates a small town grow up, and which were reised to episcopal rank under the first wild like last Manry respectively. Peterborough Cathodral is alongly Peterborough Abbey under a new name; no church which was not already eathedral went on with so little change; the last Abbet became the first Bishop, and kept on in his old quarters. At Ely a small part only

is able than the elevation of the church to enthe-The city, three or four times agreet as it was a time or the day has never been thought worthy of the Palithement. Peterborough, once a pocket hilly became a great railway centre; it grew, it cleak hadependence, and chose Mr. Whallow to show dark attients are from any of the expersitions of its.

The city, three or four times as great as it was at it may a city in were than neven mistring while ested its mulitiesk inde or free its modern altin mensatic times. The city, three or four times as great as it was thirty years back, is now a city in more than name, rejoicing while we write in the rule of the first Mayor of the newly-chartered commonwealth. But all this growth has hardly interfered at all with the old monastic pricinet. The minster still stands at Peter-herough, as at Ely, apart from the town which has gathered at its gates. The case of Norwich is quite different. There, as at Except, the city came first, and the church was founded in a city which was a break income. Moreover, the city came is the church was founded by the city came in the church was founded by the city of the which was already famous. Norwich cannot indeed boast of the antiquity or of the stirring early history of Exeter. Not actually occupying the site of the Roman Venta Icenorum, but so nearly representing it that writers who affected the control of presenting it that writers who affected classical elegance called English city by the Roman name, Norwich grew up, a strictly the English city by the Roman name, Norwich grew up, a strictly English settlement, around the vast mound which is now covered by the Norman keep, but which doubtless marks the site of an earlier fertress. It played its part both in the Danish wars and in the revolts of the reign of the Conqueror, and it appears in Dumasday as a great and flourishing city, though not yet the site of an episcopal church. It was not till the beginning of the twelfth century that the famous Herbert Losings, the penitent simonist, moved thither from Thetford the chair which the first Norman Esshon Herford had moved from Elmham to Thetford. Then arous Bishop Herfast had moved from Elmham to Thetford. Then arose the present church of Nerwich, a church founded on a new site, within the city which had become the greatest in his diocese. It may perhaps be doubted whether it was so strictly founded within the city as the church was in the analogous cases of Exeter and Chichester, as there is no mention of walls at Norwich till a later time. The walls of Norwich at their best were a very inferior place of fortification to the walls of Exeter. The western capital stands on a height, and its walls allowed access to the river only at a single point. Norwich covers a most irregular surface, full of ups and downs, which supply the "hills" and "plains" of the local street nomenclature. But the city may on the whole be described as lying on a hill sloping down to the Wensum, and spreading itself on the other side of the river. The walls fence in a large space on both sides of the stream, but where the city does not spread beyond it, the walls are simply brought down to the water-side, and the river is left as the only protection for its own banks. Herbert built his church on the lower part of the slope, and the occlesiastical precinct stretches down to the river. It is possible therefore that, when the town was unwalled, the momentery may have been strictly close to the town rather than actually within it, like the churches of Exeter and Chichester. But a monastery built close to what was already, according to the standard of the time, a great city, holds a very different position from a monastery at whose gats a small town has sprung up. Norwich is still remarkable for the number of void spaces—gardens and the like—within its walls, and it was still more remarkable for them when the chief houses of the city, the palace of the Dukes of Norfolk foremost among them, had gardens attaching down to the river like the Strand them, had gardens stretching down to the river, like the Strand in London in old times. The monastery precinct may thus have been hemmed in rather by other precincts than by mere houses and streets. But it was hemmed in; it did not stretch out at pleasure into the open country. Norwich is, and all along has been, strictly an urban church; Ely and Peterborough are essentially rural; they are not in the city, but the city has spring up hard by them.

The three churches, in their original Romanesque form, followed

very nearly the same type. The castefu limb of each consisted of four bays and an apse, the choir being, as usual, under the tower or westward of it, as it still remains at Norwich. But at Ely the apse gave way to the first eastern addition, and the fall of the ntral tower in the fourteenth century caused the rebuilding of the three bays to the east of the apse, of three only, because the lantern in its new shape swallowed up a bay of each of the limbs of the cross. But the responds of the original apsidal arch still remain as a kind of relic. Even at Poterborough arch still remain as a kind of relic. Even at Peterborough and Norwich, the responds only remain, the arch itself having perished in the later recasting which has somewhat affected the original look of the apse at Peterborough and far more seriously at Norwich. The form of the apse at Peterborough and at Norwich was different. Peterborough had the simple apse without aisles or chapels; Norwich had divergent chapels taking the form of amail round churches with apses of their own. This armagement suggested the addition of the later Lady-chapel, and so led to its destruction and to the great mutilation of the church at this end. At Peterborough the eastern apse was surrounded in a most ingenious way by the retrochoir, an exquisite work itself, at this end. At Peterborough the eastern apse was surrounded in a most ingenious way by the retrochoir, an exquisite work itself, and which is so contrived as to interfere wonderfully little with the older building. Of the Norman variety of Romanesque the three churches between them give opportunities for studying every variety, from the work of Abbot Sinsson in the transpots of Ely to the way in which Romanesque gradually changes into the earliest Gothic in the two west fromts. Of the very early Norman the lower range of the Ely transpots is all that remains. Norwich, the style of which is pretty uniform from the east to the west, shows the style in a form a little later. Then comes Peterborough and the rest of Ely, naves which were built gradually from one design, beging the same proportions, but the same proportions, but the same to cheestory into

ineignificance, and certainly taking ewey from the internal of height. At l'eterborough and Ely it is a little smaller, I still very large, and its proportions have determined dusign of the two churches throughout. We may design of the two churches throughout. we say sure that those who finished the two saves would built very differently, with a smaller triforium, and built very differently, with a smaller triferium, and most likely with pointed archee, if they had been perfectly free and had not been carrying out an earlier design. Still more sure we may be that, except through the same necessity of adaptation, the architacts of the thirteenth and fourteenth centraries at Edy would never have given their work a proportion so thereughly Norman, so unlike the usual fashions of their own age. What they did when they were free we see in the western transpt and tower

Setting saids the small remains of Simeon at Ely, all three charches belong to the same general type of Norman work, though Norwich has throughout a distinctly earlier character than its fellows. They are quite unlike the Norman of Durham, yet more unlike the Norman of Gloucester and Tewkenbury. The piers are throughout square masses with attached shafts, save only a pair of enormously massive columns at Norwich, which seem to mark the extent of the choir westward. They are fluted in a way quite unlike anything else in the three churches, and more reminding us of the group so nearly and strangely connected at Waltham, Dur-han, Dunformline, and Lindisfarn.

The conventual buildings have in all three cases to be disentangled as usual from the prebendal houses into which they have been built up. All three have lost their chapter-houses; all three have kept some traces of their infirmaries. Here Norwich has least to show, and Ely most, in the form of that admirable infirmary which was once so strangely taken for a church older than the minster. Norwich has the great advantage over the other two of minater. Notwich has the great advantage over the other two to a perfect cloister, and a large part of the Norman reflectors has lately been brought to light. Otherwise in more fragments Petarborough is the richest. All keep their gates, Norwich having two very striking ones, rich with that peculiar panelling in flint and stone which is so characteristic of Fast-Anglia, and which is expectable the control of actly the same in principle as the brick and marble work of Italy. All three remain episcopal dwelling-places; not one of the three cities has seen its Bishop forsake his home for a local Buckden, Farnham, or Dishopthorpe. At Norwich, as an apiscopal charch from the beginning, the episcopal dwelling is of far greater importance than in the other two. At Peterborough John Chambers lived on as Bishop where he had before lived as Abbot, and his successors have followed him. The same seems to have been the libe above analysis and by hydred ways amiliar case when the like change was unde four hundred years earlier at Ely, and the mighty Palatine of the Isle was ledged in quarters far less striking to the eye of the traveller than his brother of Norwich, who claimed no such secular rank. In all points the three minsters and their belongings may be fairly and profitably compared, and if Norwich is on the whole somewhat less striking than its fellows, it is mainly owing to its less advantageous position for showing itself, and to the lack of anything worthy to be called a west front.

THE GOVERNMENT AND THE ENDOWED SCHOOLS ACT.

THE operation of the Endowed Schools Act was inquired into Last Session by a Committee of the House of Commons presided over by Mr. W. F. Forster. The Chairman prepared a Report recommending that the powers of the Commissioners under the Act should be extended for three years, but he was unable to prevent the introduction into his draft of a clause consuring the proceedings of the Commissioners. Other clauses, condemning either the policy of the Act or the proceedings under it, were rejected only by the Chairman's vote, and the opposition to Lord Lyttelton and his colleagues which had thus expressed itself in the Committee was renewed even more strongly in the House when a Bill to extend their powers was brought in. Ultimately these powers were extended only for one year, and thus it becomes ary to determine in the present Session what is to be done with this unpopular Commission.

The Commissioners had and threw away a splendid oppor-nity. They excited opposition by what they did, and still more by what they said. A paragraph introduced into the Report by Mr. Gathorne Hardy stated that "The published opinions of some of the Commissioners on the subject of endowments had caused alarm, and had, in some cases, seriously impeded the harmonious action which might otherwise have been recured between them and the governing bedies of the charities with which they had to deal." It was to be regretted that some of the which they had to deal." It was to be repretted that some of the changes proposed by the Commissioners, especially in the cases of certain good schools, should have been such as to hinder the hearty co-operation of those who had theretofore worked to render those schools efficient. The evidence taken by the Committee abundantly justified this remark. It is not necessary to assume that the Commissioners were wrong and the school managers right in every instance. It is possible that the Commissioners may deserve to be added to the list of great and good men who have been nisunderstood by their greneration. But it is certain that they recorded as harment handly and a selection of the commissioners. provoked vehement hostility where there was at first a disposition to welcome and support them. It was, however, acknowledged by the Report that " much sound and good work had been done" by the Commissioners, and the hope was expressed that, "acting

under more clearly defined powers," they would provide the means of restoring Grammar Schools to their ancient usefulness. As the amendment expressing this hope was moved by Mr. J. G. Talbot, and supported by Mr. Gathorne Hardy, it may be assumed that the party now in office see their way to realize it. But of course much depends on what is meant by "clearly defined powers," and it would be easy so to define the powers of these Commissioners as to take away from them the power of doing several things to which many supporters of Government strongly object. In some respects the powers of the Commissioners were defined or limited by the Act of last Session, and it was understood that this process would have been carried further if it had not been determined to renow these powers only for a single year, so as to ensure full consideration of the working of the Act during the present Session. It must not be forgotten that the Endowed Schools Act of 1869

was brought forward as a remedy for evils which both sides of the House alike admitted and deplored. It does not follow, because the Act has been indiscreetly worked, that it was a legislative mistake; although we think that in some respects it received less consideration than it deserved. We may suspect, indeed, that some points arising on it were not so much unperceived as intentionally slurred. Mr. Gathorne Hardy moved an amendment to the Report on which the Committee voted 9 to 9, and Mr. Forster as Chairman voted for its rejection. This amendment recited that the preamble voted for its rejection. This amendment recited that the preamme to the Act of 1869 had been relied upon by some as ignoring the connexion of religious with secular instruction, and treating "the main designs of the founder" as embracing the latter principally or only; and this view had, to some extent, been acted on by the Commissioners. "But as they admit that education should include Commissioners. "But as they admit that education should include religious teaching, and in this your Committee agree, it would be well to provide that the designs of founders in regard to that subject should be carried fully into effect in combination with the improvement in other respects of endowed schools." Such was the clause which Mr. Hardy proposed, and which was rejected by the vote of Mr. Forster. To the minds of many of Mr. Hardy's supporters it might became to mean much while it is concluded to the proposed to mean seem to mean much, while it is capable of being explained to mean very little. Two questions arise upon it to which various answers may be given—namely, What is religious teaching, and what were the designs of founders in regard thereto? We can understand that if the Conservatives had been in office when the Endowed Schools Act passed, and had appointed Commissioners to work schools Act spassed, and had appointed Commissioners to work it, the practical answers given to these questions would have been different from what they would be under Commissioners appointed by the other side. It would not be only the tendencies of the Commissioners' own minds that would be different, but they would be under the influence of a different spirit presiding at the Privy Council Office. We may illustrate this subject of education by a reference, which may perhaps surprise some readers, to the subject of burn It is easy to say that Mr. Cross education by a reference, which may perhaps surprise some readers, to the subject of beer. It is easy to say that Mr. Cross has left matters pretty much where Mr. Bruce placed them, but the publicans know quite well who are their friends. There may not be much change in the text of a law, and yet there may be a wide difference in the administration of it. In one matter indeed—that of ex officio governors—an interpretation was given to the Endowed Schools Act which could only have been suggested by hostility in some members of the late Government to the Church of England. This piece of astuteness was felt to be so little creditable to its authors that Mr. Hardy carried in the Committee creditable to its authors that Mr. Hardy carried in the Committee a recommendation opposed to it, and a clause founded upon this recommendation was introduced into last year's Act. There was recommendation was introduced into last year's Act. There was another clause of the Act of 1869, giving a sort of test of "Denominationalism" to which also an application was given which greatly surprised and angered Churchmen. In this instance there was not the same sharp practice as was shown in that mentioned was not the same sharp practice as was shown in that mentioned above, but we may be quite sure that, if the Conservatives had been in office, the clause would have been understood differently. Here also the grievance of Churchmen was admitted, although not to the full extent alleged by them, and a clause to remedy it was inserted in last year's Act. If the Conservatives could be sure of retaining office for three or four years, and if they could change the Commissioners, they might renew the Act nearly as it stands, and proceed actively with the work of reforming such of the endowed schools as really need it. They would thus permanently strengthen institutions which would be a support to their own party, and they would deprive the other side of any pretext for meddling further with those institutions when their turn of power comes. But that is difficult to put into words which easily makes itself felt in practice.

If we take the ordinary case of an existing grammar school, we find that religious instruction is given in it according to the doctrines of the Chirch of England, but that instruction is not forced upon the children of parents who conscientiously object to it. As regards day-boys no practical difficulty exists; but as regards boarders it may not be easy to decide what is to be done during church-time with a boy whose parents object to his being taken to church. It may not perhaps be impertinent to suggest that parents who are so very scrupulous are at liberty to send their boys to some boarding-school where the religious instruction will be after a pattern which they approve. Practically, however, the existing system of grammar schools, which had grown up under the supervision of the Court of Chancery, was satisfactory in this respect, and the great majority of persons interested in them would probably have desired that that system should be let alone. The Commissioners, however, were incapable of letting anything alone. They meddled actively as far as their opportunities allowed, and they enunciated rules.

on which future meddling would be conducted. With curious infelicity, while they alarmed Ohurchmen by unsettling principles, they infuriated Dissenters by disturbing property. The general scope of the amendments proposed in Committee by Mr. Hardy was to restore nearly the system or practice which existed before the Endowed Schools Act passed. Some of these amendments, as we have said, were carried, and others were only rejected by the Chairman's vote. It is evident from the discussions in the Committee that Mr. Hardy fully understood this subject of education in grammar schools, and accurately represented the views of the majority of Churchmen on the subject. We may entertain doubts whether the Government are prepared, by the Bill which they have just introduced, to amend the Act to the full extent to which a year ago Mr. Hardy thought it ought to be amended; but we must wait to see the Bill in print before we can discuss it. The experience of the Licensing Acts was hardly needed to teach us that there may be a difference between the speeches of leading members of Opposition and their doings when they form a Cabinet. Besides, as we have already pointed out, at least as much depends upon the spirit in which a law is administered as upon the law itself. Sir Michael Hicks Beach, with more candour than politeness, prepared a draft Report which stated that "the declared opinion and policy of the majority of the members of the Commission were likely to interfere with the proper administration of the Act," and that "a change in the personal composition of the Commission" was essential to the successful completion of its work. It may possibly occur to Ministers that a material change in the Commissioners would please Liberals and Conservatives alike.

MURDER.

It is difficult to understand why Englishmen should be so slow to apply to the regulation of their domestic affairs those scientific and business-like methods of procedure which have long been employed with such remarkable success in Indian administration. It may be said that in India the Government has a comparatively clear field before it, and that it is therefore easy for it to take a fresh start on almost any subject, and to make for its destination by the straightest and shortest road, whereas at home there is a dense and tangled growth of established habits and conventions for which allowance must be made. To a certain extent this is no doubt true; yet it does not fully account for the sort of stupid and obstinate perversity with which clumsy and inefficient ways of doing things continue to be followed in England, while much simpler and more efficient and expeditious ways of doing the same things have been discovered and are actually in use in India. It is impossible, for instance, to imagine a more absurd way of introducing Bills than that which is adopted in the English Parliament. There are few Bills which explain themselves, and consequently the House has usually to wait for the second reading before the member in charge of a Bill gives any account of what it is intended to accomplish. The member may, perhaps, not be very anxious that the object in view should be too clearly known, or for other reasons his statement may be brief and imperfect. The consequence is that it frequently happens that a Bill has got into Committee, or is perhaps on the point of being read a third time, before its character is fully understood. This difficulty would in a great measure be obviated if the practice of the Indian Legislative Council were followed, an account of the reasons and objects of each measure being placed at the head of it. The preamble, in fact, ought to be made a reality, instead of a mere form as at present. If this were done Parliament would have a much clearer idea of the various proposals put before

There is another point on which India has long been far ahead of England, and that is the scientific precision and distinctness of its laws. It is impossible to exaggerate the importance of this boon to India, and there is no reason why we should not try to do as much for ourselves. There are many parts of the Indian Code which might without much difficulty be adapted for English use, and in any case the principles upon which Indian law has been drawn up ought to be applied to the simplification and elucidation of English law. The great superiority of the Indian Code consists in the system of intelligible definitions on which it is based, and in the strict logical relation between the central principle of each law and the provisions by which effect is to be given to it. We are glad to see that at least a beginning in the work of reconstructing English law in this fashion is about to be attempted. We refer to the Bill which has been introduced by Mr. Russell Gurney to amend and consolidate the law relating to homicide, and which bears evident traces of having been prepared by some one who is thoroughly versed in the principles of the Indian-system. It corresponds, in fact, very closely with the lines which have been suggested by Mr. Fitzjames Stephens for the treatment of this question. The difficulties which surround this branch of the law are mainly due to the fact that, in the course of generations, ideas on the subject of murder have become more subtle and refined; that a great many different minds have been employed in putting these ideas into shape from all sorts of different minds have been employed in putting these ideas into shape from all sorts of different minds have been employed in putting these ideas into shape from all sorts of different minds are completed.

general results. It was natural that in early times when human life was held comparatively cheap there should be less hesitation in punishing by death the killing of a man, under any circumstances; than at a later period. Public opinion was then incapable of appreciating nice distinctions, and the old feeling about retribution, that a life was due for a life, would also have its effect. If a man killed another he would be extremely likely, if the law did not deal with him, to suffer for it at the hands of the friends of his victim. Gradually, however, it began to be perceived that there were many different circumstances ander which a man might be killed, and which affected the character of the act and the way in which it ought to be punished. Thus "malice aforethought" came to be deemed an essential condition of murder as distinguished from manslaughter, and a vast amount of legal ingenuity was expended in twisting the phrase amount of legal ingenuity was expended in twisting the phrase from its simple and natural meaning. Its natural meaning would seem to be a deliberate intention to kill, but this was mixed up seem to be a desiderate intention to kill, but this was mixed up with questions as to the motives of the act which caused death, and it was held that malice was to be gathered, as Sir Michael Foster put it, from "such circumstances as carry in them the plain indications of a heart regardless of social duty, and fatally bent upon mischief." So that if a man was bent upon any criminal act, and by mere accident, without any intention of killing, chanced to kill any one, that was murder. The absurdity of this doctrine is shown in the case stated by Kester. "A shorteth at the neglect of R and in the case stated by Foster. "A. shooteth at the poultry of B. and killeth a man; if his intention was to steal the poultry, which must be educed from circumstances, it will be murder by reason of the felonious intent." The influence of this principle is still to be the felonious intent." The influence of this principle is still to be found in our law, although its extravagance has been corrected. There is a case on record not very far back of a burglar having being hanged at Lincoln for murder, in having frightened an old lady to death. He broke into the house, came across the old lady, and flung a pillow over her as a hint to keep quiet. She received such a shock that she died. It can hardly, however, be supposed that a murderer would choose a feather-pillow in order to carry out his purpose. It is obvious that the question is one, not of motive, but of intention—did A. intend to kill B.? If A. did, the act is murder, even though its motive was to do a kindness to the act is murder, even though its motive was to do a kindness to B. by sending him to a better world. If A. did not intend to kill B., and had no idea that what he was doing was likely to have that result, then the mere accident of B.'s death ought not to be considered murder.

It is the great merit of the Homicide Law Amendment Bill that the great merit of the Homicide Law Amendment Bill that it begins at the beginning of the subject, and goes through its work in a thoroughly business-like and straightforward manner. In the first place, What is homicide? It is not lazily assumed that this is something which everybody knows, and which judges can be trusted to define correctly for the instruction of juries. A distinct definition is given :-

3. Homicide means causing a person to die sooner than he would have died if the act by which his death was caused had not been done. It is immaterial whether the act by which death is caused did or did not inflict actual injury on the body of the person killed, and whether the death did or did not happen within n year and a day of the act which caused it.

4. It is homicide to cause death by a course of conduct, although no part of such course of conduct would by itself have caused death.

Then follows a series of other clauses stating what is or is not, under various circumstances, to be considered lomicide. One of these clauses deals with a question which was recently raised in connexion with one of the Fenian outrages:—

To. An act which causes death is homicide, although it would not have caused death, or would not have caused it till a later time than that at which it happened, but for surgical, medical, or other acts done in good faith for the purpose of preventing death, unless such surgical, medical, or other acts were such as to amount in themselves to criminal homicide under the

provisions hereinafter named.

Homicide having thus been defined, the next step is to distinguish when homicide is and when it is not criminal. Nine exceptions are made from the general rule that killing is a crime—when it is purely accidental; when it is a case of necessity, in order to save the life of the person killing; when it is a choice of evils, the act being done in good faith, to avoid equal or greater danger to the life of the person killing, or of any other person, and being reasonably necessary for the purpose; when an act is done in good faith to a person who has a legal right to consent; when it is in execution of the sentence of a court, or even of an irregular order which, owing to a mistake of fact, is believed in good faith and upon reasonable grounds to be binding; homicide by a soldier or sailor in the execution of his duty; homicide by lawful force, when the force is not greater than is reasonably neceslawful force, when the force is not greater than is reasonably neces sary; and homicide from the effect of madness. This last clause is so important in its bearing on questions which are constantly per-plexing both judges and juries, that we quote it in full:—

24. Homicide is not criminal, if the person by whom it is committed is, at the time when he commits it, prevented by any disease affecting his

mind—

(a) From knowing the nature of the act done by him;

(b) From knowing that it is forbidden by law;

(c) From knowing that it is morally wrong; or,

(d) From controlling his own conduct.

But isomicide is criminal, although the mind of the person committing it is affected by disease, if such disease does not in fact produce some one of the effects aforesaid in reference to the sot by which death is caused, or if the inability to control his conduct is not produced exclusively by such disease. If a person is proved to have been labouring under any insane defusion at the time when he committed homiside it chall be presented, unless the contrary appears or is proved, that he did not present the degree of knewledge or self-matter lives being specified.

The third part of the Bill deals with Criminal Homicide, the third part of the full deam with Calanna Louisian, within a sither murder, manalaughter, or hilling by negligence. In the case of murder the question is strictly confined to the intention to kill, or to commit an act which in all probability will kill or do grievous bodily harm to any one; and the common-sense rule is laid down that—

Every person shall be presumed to intend and to know the natural and ordinary consequences of his acts, nor shall this presumption be rebutted only because it appears or is proved that at the time when the act was done the person who did it did not attend to or think of its nature or probable consequences, or that he hoped that those conséquences would not follow, or that he was then incapacitated from knowing or attending to the nature or consequences of his act by drunkuness or anger, or any other state of body or mind, except in the cases otherwise expressly provided for in this Act.

Manslaughter is distinguished by the absence of the intention to kill, or of the knowledge that the act will probably cause death. Clause 28, relating to killing by negligence, has a peculiar interest for railway directors and managers. In manslaughter there is an intention to do bodily harm, but not to the extent of causing death; but in killing by negligence there is no necessity to prove any direct malevolent intention whatever. It is enough to show that death has been caused by a want of the degree of knowledge, skill. care. attention. caution, or diligence, which ought to have skill, care, attention, caution, or diligence, which ought to have been employed in the position in which the accused was placed; or by a negligent act or omission without which the death would not have happened. Murder is reducible to manslaughter would not have happened. Murder is reducible to manalaughter when the offender is deprived of the power of self-control by provocation, fear, or effects of child-bearing. The section dealing with cases where a mistake is made as to the person who offers provocation or causes fear is perhaps somewhat too wide as it stands. An excuse of this kind would require to be very jealously guarded. A definition of provocation in detail, and rules as to punishment, complete the measure.

Our limits reader it of course impossible for us to see theorem.

punishment, complete the measure.

Our limits render it of course impossible for us to go through all the details of a Bill of this kind or to discuss them adequately. There are various points upon which the measure will require careful consideration—we have especially in view the section referring to mental disease—and in which room may perhaps be found for some improvements. On the whole, however, it is impossible to speak too highly of the courageous thorsughness, candour, and precision with which it has been drawn up, or of the vigorous common sense which distinguishes both its language and provisions. A few other Bills of this class would do a great deal provisions. A few other Bills of this class would do a great deal to relieve English jurisprudence from the discredit which at present rests upon it in consequence of its unscientific confusion

and slovenliness.

MONTGOMERYSHIRE.

MONTGOMERYSHIRE, though it does not present so abrupt a contrast to the scenes of civilized life as the Snowdon region or other parts of North Wales, deserves the attention of the tourist in early summer. The country is hilly but can hardly be called mountainous excepting in its barriers—the Berwyns to the north, the Llandinam and Phinlimmon ranges to the south, the Long Mountain and the frowning Breiddens on the east, and Aran Mowddy and its neighbours to the north-west; and scarcely anywhere does it lack the charm of a wild but well-watered garden, diversified continually with smiling orchards and thriving pastures. From Plinlimmon in the south-west springs the ever-waxing Severn, to fertilize half-sdozen valleys in its course northward through the county, and to receive en route the tribute of very many lesser streams, which, with others independent of them, form one of the distinctive characteristics of Montgomeryshire's physical geography. We have seen it asserted that "nearly two hundred rivers, brooks, and streamlets have a whole or a portion of their course within and streamlets have a whole or a portion of their course within the boundaries of the county," and there is little doubt that the statement would be amply confirmed by the many enthusiastic anglers who gather yearly at such fishing stations as Talerdig, Mallwyd, Cann Office, Meifod, and Machynnieth. One of these Mallwyd, Cann Ollice, Meifod, and Machynnieth. One of these rivers, the Camlad, differs from the rest in flowing from Eagland into Wales; for, rising near Bishopscastle, it joins the Severn at Forden, between Welshpool and Montgomery. The Tanat, but of the most popular trout streams, rises north-west of the county, and taking a course eastward, forms part of the boundary between Montgomery and Denbigh before it joins the Severn at the north-east; and the Twrch, which rises in the west, then cantward to the foot of M. Golfa, where it makes an angle to the north, and, after receiving the Verney, joins the Tanat not far from Landighlo. receiving the Vyrnwy, joins the Tanat not far from Llandisilio. This Vyrnwy, by the way, a famous stream and justly named "amnis piscosus," by reason of its trout, grayling, and frequent salmon, is a little puzzling to the tourist in that, between Llanfair

salmon, is a little puzzling to the tourist in that, between Llanfair and Meifod, it is called the Bechan, that stream and the Einion here uniting to form it. Some miles higher up and neare to its source, the Bechan again bears the name of the Vyrnay.

From this glance at a few of the Montgomeryshire rivers it will be inferred that the county is rich in pasture land, and no one who has looked over the valley of I'ool, or Guilsfield, or Meifod, or Montgomery, can have any doubt on this point. As soon as the tourist by rail has got well into the county from the border town of Cawestry, which is to it what the Herefordshire town of Kington is to Radnorshire, a quasi-metropolis over the frontier, and passed the lime rocks of Llanymynach and the Norman, church of Llandrinio, he becomes aware of ruch alluvial

meadows on either side of him, in which, on the banks of the serpentine and here sluggish Severn, dreves of imported Fierefords thrive and fatten to the sure profit of their owners. And so it is with the other valleys, even those amid the hills being comparatively fertile. Whether the county still retains its old fame for horse-"Babel," or confusion of tongues, at a recent horse-fair at Llanfair, in the centre of it; but it seems certain that breeding and feeding are the wisdom of its agriculturists, as compared with corn-

growing.

For the industrious tourist who wants to see everything and for the flying visitor the Cambrian Railway is equally convenient. By its help and that of its branches, every town and be approached with ease. For instance, venient. By its help and that of its branches, every town and place of importance can be approached with ease. For instance, quitting the main line at Llanymyasch Junction, half-way betwixt Oswestry and Welshpool, a branch will take you along the pretty valley of the Cain to the little town of Llanfyllin ("Llanvuthling" one must call it if anxious to lay claim to Welsh blood or antecedents), which is chiefly celebrated for its peal of bells, its "cwrw," and its widows. The preponderance of the latter is said to arise from the potency of the former. Perhaps, however, fow would have the curiosity to go so far off the main line to see this petty, though pretty, townlet, were it not on the road to Llanrhaiadr-yn-Mochnant, a village on an affluent of the Tanat, four miles from which is the Pistyl Rhaiadr, said to be the loftiest cataract in NorthWales. Most persons will probably go on loftiest cataract in NorthWales. Most persons will probably go on straight to Welshpool, a very convenient centre for excursions, with a very capital hotel, "The Oak," from which, either on foot, in car, a very capital hotel, "The Oak," from which, either on foot, in car, or by rail, no small part of Montgomoryshire may be explored. It is true that one might have stopped short at Buttington—famous for a great slaughter of the Danes under their leader, Hesten, by one of King Alfred's generals in A.D. 894, a relic of which may have been the vast quantity of skulls dug up in heaps when the foundations of the school-house were being excavated some years ago—or perhaps at Middletown, nearer to Shrewsbury, for the handy ascent of the Breiddens; but even then it were best to make Wolshnool one's headquarters, and to take an early train. Certainly Welshpool one's headquarters, and to take an early train. Certainly no traveller ought to miss the Breiddens, supposing that were possible, which it is not, for Moel-y-golfa rises sheer and solitary on the view as you look back towards England from Welshpool, and other more northern peaks overlook the Severn and the railway. These mountains possess a threefold interest—picturesque, geological, and historic. To many the first will be the chief attraction, with its choice of views to the north-west, with the Berwyns in the far distance, the Long Mountain and Keray Hills to the south, and the spires of Shrewsbury to the east. But paramount in the eyes of historical students is the interest of the Breiddens, on which are vestiges of two distinct encampments, as the most probable scene of the supreme struggle between Uaractucus and Ostorius—almost the only one indeed which can show at once the "juga imminentia" and the "amnis vado incerto" required by Tacitus's description. To Hartshorne, who had investigated the subject minutely, their claim seemed conclusive; and a very passing examination of Oefn Carnedd, near to Most Lane and Caerswe, the type of the subject minutely and Machamalth will convince the subjects the subjects of the contract tween Llauidloes and Machymleth, will convince the antiquary that the Breiddens have strong pretensions to be pronounced masters of the Whilst we are on the subject, it should be noted that here, there, and everywhere about the county of Montgomery there are British camps of larger and smaller size, oval, circular, oblong, or, as often, in shape a compromise suggested by the nature of or, as often, in shape a compromise suggested by the nature of the ground. The height above Montgomery town, called Fridd-Faldwyn, belongs to this last class, and is quite worth scaling for its well-defined double entrenchment, as well as for the enjoyment of a perfect panorama. But to return to our head-quarters, Welshpool is rather attractive as a sally-point than for intrinsic objects of interest. Clean, wide streeted, and flourishing, the town has its new and its old church, in the latter of which is a recumbent effigy of the late Lord Powia, "Conservator episcopatus Asaphensia," and its "tomen" or "tumulus," probably a stockaded fort to guard the entrance of the Severn, near the railway station. But the great thing at Welshpool is Powis Oastle, with its charmingly undulating park, to which there is an entrance direct from the principal street, and of which the townspeople appear to be as proud and as free as the which the townspeople appear to be as proud and as free as the noble owner. Grand and venerable oaks flank the approaches to the picturesque Castell Coch, of red sandstone, which, though modernized and altered in the days of James I. and Elizabeth, represents a Ised and altered in the days of James I. and Elizabeth, represents a structure of the thirteenth century. It stands out in a perfect elevation upon a solid rock scarped into walls, the tops of which serve as terraces, from one of which, as also from the windows at the end of the interesting sixteenth-century gallery upon which the principal rooms of the interior open, there is a perfect view of Welshpool with the peak of Moel-y-golfs in the distance. A drive through the park with its green alopes and sylvan scenery, diversified here and there by a herd of deer, is not a bad way of getting a general view of the immediate neighbourheed. The interior of the castle with its curiosities may be seen, as may also the a general view of the immediate neighbourheed. The interior of the castle with its curiosities may be seen, as may also the gardens and the grounds, which present not a few well-grown and noteworthy coniters. This done, it will be well to drive cert of the park by the entrente from the road to Newtown, and crossing the Severn to return to Welshpool through the grounds and demesses of Leighton Park, an old estate of the Corbetts, which have been wonderfully improved and modernized by the wealth, taste, and enterprise of Mr. Naylor, the present proprietor. The fine Early English church of Leighton, built by this gentleman, with its tall and graceful spire, is as interesting in its modernesses

as the curious and very ancient mother-church of Trulysian, of Wolston Mynd, on the south-west slope of the Long Mountain in its antiquity. The latter is a timber-framed edifice, which he

Wolston Mynd, on the south-west alope of the Long Mountain is in its antiquity. The latter is a timber-framed editics, which has been restored after the old type.

Another expedition from Welshpool would be to the poetty valley, and village of Guilsfield, but to this we shall revert later. It has been said that the Cambrian Railway serves for access to all the towns of Montgomeryshire; and we proceed from Welshpool straight to Montgomery, a quiet little place which has seemingly forgotten its pruminence in the days when Baldwyn was the Conqueror's Lieutenant of the Marches. It has been early days its eastle was constantly being taken and retaken; and it changed bands more than once in the Civil War. taken; and it changed hands more than once in the Civil War. Between those two epochs it had become a chief residence of the ancestors of Lord Herbert of Cherbury, to whose parents there is a handsome monument in the south transept of the church; and we find that the indefatigable Mr. Grosart, who has been able to disprove Isaac Walton's statement that pious "George Herbert" was married at Dauntsey in Wilts, does not doubt that he was born in Montgomery Castle. Local tradition places that event at the Black Hall, the site of which is shown in the north-east of the town; but funcy (though not tradition) might desire that it should town; but funcy (though not tradition) might desire that it should have happened at Lymore Hall, a perfect old timber mansion of the sixteenth century, now belonging to Lord Powis, and perhaps the finest of the houses of this character, which form quite a the finest of the houses of this character, which form quite a feature of the county. At any rate George Herbert's birth at Montgomery is uncontested, and if Henry Vaughan was a Silurist, the author of the Temple might have claimed to belong to the Ordovices. Other timber houses of like character are Trelydan Hall, in the parish of Guilsfield; Marrington Hall, near Cherbury; and Llandinam Hall, near Moat Lane, and under Cefn Carnedd. Offa's Dyko skirts Lymore Park on the east, and is here the boundary betwirt Montgomery and Salop. But if Montgomery is a town of the past, quickened up, it may be, on rare occasions for an assize or an election, but ordinarily rather sleepy, the railway will carry the traveller on to two other towns which rest their claims to importance on the living present, and owe a great their claims to importance on the living present, and owe a great deal more to trade them to tradition. Newtown and Llamidloes are busy centres of wool and flannel manufacture. All that is likely to detain a tourist in either is the very fine carved and gilded rood-screen which has been transferred from the old to the new church of the former, and the exquisitely carved only roof of the church of the latter. It is a testimony to the onk roof of the church of the latter. It is a testimony to the ancient glories of the old Abbey of Cwmhir, in the adjoining county of Radner, that both these ecclesiastical treasures are reputed to have been removed to their present resting-places from that religious house. Hard by Newtown there is an old and curious scat of the Pryses, one of whom, Sir John, is as much a tradition of Newtown on account of his three wives as Catheto Pennant, he "kept the two first who died, in his room, one on each side of his bed; the third, however, declined the honour of his hand till her defunct rivals were committed to their proper his hand till her defunct rivals were committed to their proper place." If this bo true, her demurring did not abate his appre-ciation of her; for on the death of his third wife he wrote to a reputed worker of miracles, Bridget Bostock of Cheshiro, to come and cap all her wonderful cures by raising from the dead the best of wives, friends, and stepmothers. It will be a matter for the tourist's consideration whether on his way from Newtown he should strike off by the Mid-Wales Railway for Llanddoes, or to the west receiver town of the county Machanides, or should strike off by the Mid-Wales Railway for Llanidlees, or go on to the most westerly town of the county, Machymleth. If he does the former, he will pass, a mile from the junction at Moat Lane, the site of a very important Roman town—Caerews—and may tarry to trace the streets and roads, and inspect the remains of Roman industry; and we are not sure that he will not be as well repaid as if he pushed on to Machymleth, a traditional Roman town and station (unless "Maglona" was Pennal, four miles further towards Aberdovey), singularly barren of not only Roman, but later historical memorials. Upon Llanvair, the only other town of Montgomeryshire, the tourist will come in the course of a back route through the county, which should be made from Mallwyd, near Dinas Mowddy, a charming bit of Merioneth, beloved of artists and anglers for the sake of its mountain scenery, its winsome stream of Dyfi, and the comforts of its hostely, the some stream of Dyfi, and the comforts of its hostelry, the "Peniath Arms." It is easily reached by the branch railway from Cemmaes Road to Dinas. Before leaving Mallwyd the waterfall should be visited, and the old yews in the churchyard. One of these has a girth near the ground of twenty-three feet; as large as a famous yew at Buttington, and larger than that at Guilsfield for whose age an approximate estimate has been attempted from the epitaph of a nonagenarian who sleeps under it, and who died in

> Under this yew tree Buried would hee bee, For his father and hee Planted this yew

From Mallwyd we track a wild and dreary mountain road past Llidiart-y-Baron (where the red-haired robbers of Dinas Mowddy took summary reprisals on a severe Judge or Baron Owen) to Bwish-y-Fedwen; and thesee, passing Garthbibio church on the left seroes the Twyrch to Cann Office, a good inn and fishing centre. Hence run roads to Llanfyllin and to Llanfair, and these is no lack on either route of autrenchments and ancient cannot Moel-y-Dolwan, near Cann Office, Garddon, near Llanvair, are two which occur to us, and in the valleys of Matford Sailyfield,

to the north and north-east of Lieuvair, there are several greater or leaser British and Roman camps and stations. Both of these process also the attraction of charming scenery, as well as a zero sectionization interest. Their very remarkable churches are to be described in Mr. D. R. Therea's forthcoming History of the Diocess of St. Asaph. Merited should arrest the antiquary by its pretensions to be the site of the Roman Mediclanum, which he can weigh with those of Mathraval, four miles off, an ancient palace of the Princes of Powis. With these was connected St. Tynilio, the founder of the church and of a wide-spreading, affiliated ecclesiastical establishment. His wells and crosses attest the width and length of his mission, and truly his lines were cast in sunny, pleasant places. Of these daughter churches none is more notable than Guilefield, externally perhaps the finest fabric in the county, internally disfigured by the evils and excesses of the pow-evaters. It ought to be photographed as a warning, and then the sconer it is "gutted" the better. The little spire atop of an embattled tower renders Guilsfield, or, as the bilingual natives call it, Kegidva, a charming feature to look down upon from the many undulating heights of this picturesque and smiling parish, which is, as we have said, within an easy drive of Welshood. Montromeryshire might of course be entered from Bala and the north, but Welshpool, from its easy access to Shrewsbury, seems the natural point of departure. To us, at any rate, it is the "finis chartsque viseque."

LACE AT THE INTERNATIONAL EXHIBITION.

THE boundary which separates mere love of personal organient from the art of dress is not always easy to determine. It is no sign of higher taste in the Yahoo that he hourds certain shining stones of various colours. Had Swift seized on a love of fine clothes for his illustration, it would have lest most of its force. It is true that the selection of articles of clothing, their adaptation and constructive fitness, hardly reach the dignity of art. But there is an element of culture in decorating dress. Jewelry set in beautiful patterns partakes of the same quality. The shining stones only share in it collecterally. There is art in the way an Italian flings his cloak round him. There is art in the Indian's disposition of his war paint. The Maori elaborates charming patterns on the skin of his forehand, and lends a double beauty to his arching pattern of his countries in the land his countries in the land his countries his ann or his forenead, and lends a double beauty to his arching nostril and his curving lip. We may not be able to appreciate efforts at their full value, but they are not without their proper significance in the history of more civilized institutions. There is pure art in colouring, embroidering, and ornamenting our clothes. It may not be of a very elevated kind. Except in certain develop-It may not be of a very elevated kind. Except in certain develop-menta it is generally of a low order. But one of the higher branches may be found in lacemaking. Needlework on linen pro-bably came first. Netting, with more or less of pattern interwoven, followed. But pure lace which consists of the ornament only is the last and best. Specimens of all kinds may be seen in the present International Exhibition. Had they been arranged on a more intelligible system, or even properly labelled, the task of noticing them would have been comparatively light. As it is, the authorities to whom the selection and management were confided have avoided the possibly invidious course of adopting any particular plan. Fine as the collection is, its use to the learner is very slight, but it may be enjoyed by any one well acquainted with the subject. Those who love to look at what is costly may also be gratified as well as the people who like to associate fine names with tine things. So, too, the visitor who indiscriminately admires everything that is pretty because it is the proper thing to do may be simply rewarded for the trouble of going to Kensington and standing half an hour in a thorough draught. But the amateur or the workwoman who comes to learn will go very nearly empty away. To the student the Exhibition is tantalizing and disappointing. A good catalogue might have remedied much of the confusion; but nothing of the sort is vouchsafed. An alphabetical list of lenders and their addresses has occupied all the energies of the compilers, though even of these several are omitted. And when the number and place of a specimen have been identified, the visitor must generally content his inquiring mind with the concise information place of a specimen have been identified, the visitor must generally content his inquiring mind with the concise information that the object before him is "Lage." And it is well when the description is so pithy and so true. Where the Catalogue is more discursive, it is less worthy of reliance. The visitor who cumot form an opinion for himself is often puzzled between the account on the label, when a label is attached, and the views expressed in the printed list. Ladies who buy lace are in the habit of naming their nurchase after the place in which they may with it. In ad-

on the label, when a label is attached, and the views expressed in the printed list. Ladies who buy lace are in the habit of naming their purchase after the place in which they met with it. In adjoining cases pieces almost identical in pattern, and certainly identical in manufacture, have different designations. There are many anthorities qualified to classify such a collection as this; and indeed any classification, even one which might be judged exposens, would have saved time and trouble to the visitor.

Lace-making has in some respects the intenset which belongs to a lost art. If money could command modern work equal to the ancient, our developing humanity would probably forbid the use of an ornament which requires the sacrifies of his and eyesight, which calls upon women to work in damp callers so as to obtain thread of the needful fineness, and to induce blindness the claboration of microscopic stitches. We man grantfully the the claboration of microscopic stitches. We man grantfully the there allows with what can be produced by machinery, inferior though it he to the old pillow lace of Flanders or the Aldiego poin. of

the seventeenth century. No more than a few inches of the Vesetian rose patterns or the silk galaxie can have been made by precised hands in a year; and young ladies who imagine they can complute a whole suit of point in a few months are grievously mistaken. Occasionally, it is true, a specimen like that from Irahud in the South Emanagton Misseum, or the Devoushire example in this Exhibition, may be produced worthy of the days gone by, but practically the finer needle or pillow work is only ift for idle hands to do, and can never really enter into the market. For the sake of those who made these exceptional pieces it is to be hoped they worked of their own free will, and the most estisfactory thing about them is the proof they afford that a high standard of excellence is still held up. The nuns who worked in the middle ages at such laborious tasks emilated in their lace the illuminations of the monks, and depended for their patterns upon some of the lest artists of their time. When we see such triumphs of the art as some of the priestly vestments here shown, we must feel convinced that they were achieved only by long years of patient assiduity in places where time was no object in our modern sense of the word. Although in many respects a parallel may be established between the gradual development of architecture and lace, since both run together in cycles almost simultaneous throughout Europe, the amount of first-class lace produced was comparatively small, always costly, and often so rare and curious that popular fincy overlaid it with legends, while its importance to great people connected it in many cases with great events.

The historical associations which cluster about specimens of old lace are thus often of a remarkable character. Where, as in England, relic worship seems strongly implanted in most men's minds, there cannot full to be great interest attached to several of the pieces now exhibited. What the Spiritualists call a "Seeing Medium" would be required for due admiration of some of the articles. A person so gifted might here includes in wonderful visions. Charles I., with Marie Antomothe and Mary Staart, might perhaps be recognized, each with a head, carried after the manner of St. Denis, upon the arm, hovering fondly above the relics of presperous days in life. Napoleon Bonaparto might still be found near the point d'Alençon tunic made for his coronation, or Louis XIV. lingering over the Venetian rose counterpane which is said to have been his, and which deserves more attention perhaps as the most magnificent piece in the gallery. Here is a flounce which derives its value from having long been chorished in the family of the poot Regers, and there a less remote association is connected with the baby-clothes of Beethoven. A robe in one corner was made in anticipation of an heir to the Princess Charlotte. Some Mechlin near it was worn by her gaunt grandmother. Madame de Maintenon gave this fine flounce to Fension. The Old Pretender decorated his wrists with those ruffles. A lappet from Burleigh and the veil of the Empress Marie Thérèse lead naturally to the gold and silver lace left by Queen Elizabeth, we are not told where, but presumably at Ashridge, when she was removed to Hatfield by order of her sister. There is some embroidery by Queen Anne of Denmark, and contemporary history is illustrated by a piece of point saved from the Pastechnicon. The authenticity of many of these things is more than doubtful, but fortunately they are worth looking at for their own sale. A startling and ghastly effect is produced by one example. The little one at

or the waxen cast.

Modern royalty is but poorly represented. If the Prince Consort designed any lace, its owner has not followed Mr. Browning's example in the adjoining gallery. None is exhibited by him or any other royal designer of modern date. Some examples of Russian manufacture, lent by the Duchess of Edinburgh, are creditable to the taste of the makers; but though our native-born princesses are usually understood to be very wealthy in this particular, they have held aloof on the present occasion. That so rich an Exhibition should have been made without royal assistance is in itself matter for surprise. But much of what fills the gallery is from the collections of persons far below royal rank, and if any sus princy laws on the subject ever existed in England, they have long been set at nought, and not even the example of Archdescon i'helipotts in another department of art is likely to revive them. Louis XV. is said to have prohibited the use of certain kinds of braided lace except in his own dressing-room; but many such stories are in existence, and may generally be relegated to the region in which the white cat and her marvellous piece of cambric have still an abiding charm.

It must be concaded that the difficulties in the way of making a

Cunterbury seventy years ago, seems to have been rich enough in lace, but so poor in friends that no one ever claumed the gasmests

It must be conceded that the difficulties in the way of making a good catalogue of a collection like this would be very great. At the outset, it would be almost impossible to determine with any degree of certainty the country to which some of the most a markable pieces belong. We speak of Flemish lace where a Frenchman speaks of point d'Angletterre. The smuggling of the Court of Charles II. will not account for all the specimens of such work now to be found. While Valenciennes belonged to Haizentt, no doubt much was made in Flanders; but was not a great deal made also in England, and did not the wars and the granding tyranny of Louis send some of the best workers hather? We have already compared the simultaneous progress in dealer to that which characterizes the successive periods of flotble architecture, and the

difficulties of a classification would be increased as old natterns were traced and new ones recognized, as stitches were varied and invented. princess might bring in her train the skilled workers of another A princess might bring in her train the skilled workers of another Court, and pillow and point be combined according to the taste and fancy of the maker or the wearer. It is perhaps best to give up the hope of identifying the birthplace of every variation, otherwise the confusion which already exists will become doubly entangled. Many examples of this, the only one of several similar questions on which we will touch, may be found in the Exhibition. Thus what in one of the cases is labelled "Saxon" in another is described as "Norman," but we may safely ascribe them neither to the rance nor Germany, as they are both probably Italian imitations of "Elonish." Again, the owner's account is always implicitly "Flemish." Again, the owner's account is always implicitly taken, and much confusion ensues when the Hon. Mrs. Jones differs with the Lady Robinson. Two fine pieces are called "Old Spanish cushion point," although in the Museum across the road a similar example is, perhaps with more correctness, described as "Flemish." In fact "Flemish" is found but described as "Flemish." In fact "Flemish" is found but too convenient as a designation of old point. It is impossible to make it cover the whole of the early work of Spain, Italy, England, and France. Venetian work, and the later tabrics of Chantilly and Bayeux, are easily distinguished. But there are specimens of early Honiton hardly differing from the Italian of the fifteenth century, and a Russian dressing-gown of some antiquity closely resembles the modern Devonshire manufacture. Belgium still produces five or six distinct kinds, which go by the old names but are not likely to deceive any except a very unpractised eye. Modern Spanish points seldom approaches the old; the bestreproductions of ancient patterns being, as we have seen, some of the amateur work of our own countryseidom approaches the old; the bestreproductions of ancient patterns being, as we have seen, some of the amateur work of our own countrywomen. To reach such perfection entails many a failure, and, what perhaps is worse, it is trying to the feelings of the unconcerned spectator. A lover of good lace is too often called upon to admire vile patterns in crochet and braid, when not even the good-natured "Pretty, very pretty," of Sir Joshua will afford a loophole for escape. As to the sufferings of victims asked to buy, or to sell to other victims, the subject is too harrowing to be dwelt upon even for a moment. upon even for a moment.

REVIEWS.

HERBERT SPENCER'S ESSAYS.

MR. HERBERT SPENCER has now gathered into a third volume of essays a number of occasional pieces, ranging over the last ten years in date, and dealing with a considerable variety of topics. We do not think this volume will be found equal to its predecessors in general importance and interest. The proportion its predecessors in general importance and interest. The proportion of critical and controversial matter is greater than we should have liked to see; for this is not the kind of writing in which Mr. Spencer excels, and the time and energy spent by him in replying to criticisms appear to us, even when the replies are successful, to be so much lost from the stock available for his principal work. There is no final answer to hostile criticism of a great work but the permanence of the work itself. However, Mr. Spencer has given us good specimens of his constructive genius in the essays on Animal Worship and on Laws in Getteral, which are to our mind the most valuable parts of the book, and to which we shall recur. We do not put the essay on the Classification of the Sciences on a level with those last named; for, though tion of the Sciences on a level with those last named; for, though we are by no means prepared to deny that Mr. Spencer has exercised much ingenuity on this process, or in particular that exercised much ingenuity on this process, or in particular that his classification is very superior to M. Comte's, we fail to see that it is anything more than an exercise of ingenuity. Mr. Spencer speaks of a true classification as if it were something absolute and to be sought for its own sake; a view which, be it said with all respect to his eminent services to modern science, savours too much of mediaval realism. We who do not believe in the independent existence of types or universals can only regard classification as the arrangement of things in bundles for our own convenience. In one sense every classificabundles for our own convenience. In one sense every classifica-tion is true that is founded on really existing resemblances; but it will be of little use unless it is also convenient, and it will be convenient only if the resemblances are relevant to the purpose convenient only if the resemblances are relevant to the purpose in hand. Take, for instance, a collection of books. If I ask the owner what books he has on a given subject, and he answers, Five in quarto, twelve in octavo, and so on, he has given me a classification which may be quite true, and for the purpose of arranging the books on the shelves might be very useful, but which for the purpose of my question is frivolous and useless. Now we are quite uncertain as to the object proposed by Mr. Spencer in his elaborate discussion of the points in which the several sciences resemble and differ from one another. We do not know what place if any, it is to occupy in his general system, and we what place if any, it is to occupy in his general system, and we are therefore unable to pronounce any opinion as to its value. There may be reasons of which we know nothing for various distinctions of which the soundness and convenience a. present seem doubtful to us. But we find in this essay an extraordinary laxity of expression in a fundamental proposition of physics, which, though not material in this place, is otherwise not uninstructive. Mr. Spencer states, as an instance of an "abstract-

concrete truth," "that the momentum of a body causes it to mo concrete truth," "that the momentum of a body causes it to move in a straight line at a uniform velocity." Abstract-concrete this may be, but so far is it from being a truth that one can hardly understand how such a blunder can have escaped revision in three successive editions. The first law of motion has nothing to do with mass, nor therefore with momentum, which involves mass; and momentum has nothing to do with causing a body to move. We cannot believe that this confusion of words, indicates a corresponding confusion of thought; but it does indicate the confusion of the confusion of thought; but it does indicate the confusion of indicates a corresponding confusion of thought; but it does indicate a degree of indifference or carelessness in these matters which is at least highly dangerous.

This is unfortunately by no means the only case in which Mr. Spencer's language has converted elementary truth into strange fiction; and the mischief does not always stop short at mere looseness of expression. That want of familiar mastery of the fundamental conceptions of mechanics which alone can of the fundamental conceptions of mechanics which alone can make such mistakes possible is calculated to lead to more serious entanglements. Mr. Spencer's latest controversy makes this painfully evident. His reply to his critic in the British Quarterly Review is intended to be crushing, and is written in a tone which could only be justified by extreme presumption on the part of his antagonist, and complete superiority at all points on his own. On the point he has singled out for discussion—namely, the character of the evidence for the so-called axioms of physics—he wholly fails to appreciate the reviewer's position. He spends some time in showing that fundamental propositions such as the Laws of Motion are not capable of absolute proof from experience; which would be relevant only if it were admitted, which it is not, that they are known to be absolutely true. Nor does he make his own position clear. He lutely true. Nor does he make his own position clear. He defines the term a priori in a sense of his own, as he well may; but then he forgets to divest it of that notion of a special and preeminent certainty which belongs to it only in the sense of intuitive or metempirical philosophers from whom he dissents. Ho intuitive or metempirical philosophers from whom he dissents. He seems to think that the accumulated experience of ancestors added to that of the individual can give rise to knowledge differing not merely in degree but in kind from that which is acquired by the experience of the individual alone; or else to overlook the difference between giving an explanation of the fact that an irresistible belief exists, and giving a proof that the belief is true. He seeks to drive his enemy into a dilemma by observing that, if a physical axiom consists in showing that by assuming its truth we can explain the observed phenomena, then all distinction between hypothesis and axiom disappears, and mathematical axioms must stand on the same footing. This is absurd to Mr. Herbert must stand on the same footing. This is absurd to Mr. Herbert Spencer's mind, but not absurd to those eminent mathematicians who in fact accept this very conclusion, and hold that mathematical axioms do stand on this same footing. He makes the strangest remark of all in defence of his phrase Persistence of Force. He says it is not equivalent to Conservation of Energy, for he uses Force as "the generic word including both that species known as energy, and that species by which matter occupies space and maintains its integrity." If the word Force is to signify that which mathematicians understand by it, then the first clause of this explanation is contradictory, for Energy is not a species of Force, and the second is an absolutely unmeaning combination of words. If Force is to be defined as an occult quality by which matter occupies space, and of which Energy is somehow a species, the definition is of that unscientific sort for which no man can ever be the wiser. Altogether this last polemic of Mr. Spencer's is not calculated to add to his philosophic dignity or reputation, and

makes a somewhat inauspicious conclusion to the volume.

The other matter contained under the same head of "Replies to Criticisms" is partly concerned with the doctrine of the Unknowable, which we think so indefensible on principle that we can take no interest in any collateral discussions arising out of it, partly with the metaphysical opinion lately put forward by Mr. Spencer under the name of Transfigured Realism, on which we have nothing to add

to what we said at the time.

The essay on "Specialized Administration" is a friendly pas

of arms with Professor Huxley, whose decided opposition to Mr. Spencer's opinion of the proper limits of State action has moved Mr. Spencer to enter on a further development and defence of that opinion. His exposition is undoubtedly brilliant, but we cannot think it convincing. He is seduced into error, as many other great men have been before him, by a tempting analogy. There are certain real and striking analogies between the individual and the social organism which Mr. Herbert Spencer has elsewhere pointed out with much felicity, and which must be recognized as soon as pointed out. But he proceeds from these observed analogies to infer other analogies that cannot be observed or verified, which is an unwarranted step; and then he treats these as a sure foundation for political argument, which is a still less warranted step. We cannot conclude from the existence—or, as Mr. Spencer does, from the absence—of certain relations in the body natural, that the corresponding state of things is desirable in the body politic. The natural body itself is by no means all that might be desired. Mr. Spencer admits that the independent behaviour of the internal Spencer admits that the independent behaviour of the internal organs, which he would take as a pattern for his policy of the least possible State interference, is often very inconvenient. But, in short, Mr. Spencer has here quitted the firm ground of science, and unconsciously expatiates in the regions of Platonic fancy. Some anarchic theorist might with no less plausibility deny that there is anything in the individual organism really analogous to legal restraint and might proceed to argue that in the social organism legal restraints are altogether unnecessary. Mr. Spencer does

^{*} Essays: Scientific, Pultical, and Speculative. By Herbert Spens Vol. III. London: Williams & Norgats. 1874.

indeed add some reasons of a more tangible kind. These however have all the appearance of being afterthoughts, and are in sundry ways inadequate. For instance, he complains of people expecting "the State" to do things for them as if it were a mysterious entity; but he himself treats it as an entity or inflexible homogeneous agency, whereas "the State" is but a collective name of many heterogeneous and highly specialized agencies, and even the functions of legislation for special purposes are in practice, if not in theory, specialized to a considerable extent. Again the crucial distinction between "positively regulative" and "negatively regulative" interference seems to us untanable. According to Mr. Spencer it is "negatively regulative" and justifiable to restrain my next-door neighbour by the force of law from creating an actual nuisance, but "positively regulative" and unjustifiable to restrain him from building his house so badly that a nuisance, or worse, will be the certain result.

to restrain him from building his house so badly that a nuisance, or worse, will be the certain result.

Another essay is a reply to Mr. Martineau's criticism on the Evolution hypothesis. It appears to have been called forth by special reasons, and in the absence of such reasons it would be superfluous. Mr. Martineau, not content to do battle on his own ground of metaphysic, has tried to carry the war into the enemy's country by raising scientific objections to the hypothesis in its purely scientific aspect. It is no disparagement to his reputation as a pure metaphysician to say that these objections are of a futile and commonplace kind. Besides being severally untenable, they all involve a misconception of the nature and use of scientific hypothesis, a point not taken up in Mr. Spencer's reply. However, hypothesis, a point not taken up in Mr. Spencer's reply. However, the true view of scientific hypothesis has been so well set forth by Mr. Lewes in his last work that perhaps even Mr. Spencer could as

yet find little to add.

We pass on to the two pieces in which Mr. Spencer is at his best. The chapter "On Laws in General" is restored from the original edition of First Principles. It discusses the conditions determining the order in which different partial uniformities of nature become known to man, and the conclusions are thus summed and in the cuttles of the conditions. up in the author's own words:-

The various classes of relations are generalized in a certain succession, not solely because of one particular kind of difference in their natures; but also because they are variously placed in time and in space, variously open to observation, and variously related to our own constitutions: our perception of them being influenced by all these conditions in endless combinations. The comparative degrees of importance, of obtrusiveness, of absolute frequency, of relative frequency, of simplicity, of concreteness, are every one of them factors; and from their unions in proportions that are never twice alike, there results a highly complex process of mental evolution.

He goes on to point out the bearing of these remarks on the probability that all phenomena (or, as it would be more accurate to say, so many phenomena as mankind may have time to investigate while the earth continues habitable) will some day be found to be

Familiarity with concrete uniformities has generated the abstract conception of uniformity—the idea of Law; and this idea has been in successive generations slowly gaining fixity and clearness. Especially has it been thus among those whose knowledge of natural phenomena is the most extensive—men of science. The mathematician, the physicist, the astronomer, the chemist, severally acquainted with the vast accumulations of uniformities established by their predecessors, and themselves daily adding new ones as well as verifying the old, acquire a far stronger faith in law than is ordinarily possessed. With them this faith, ceasing to be merely passive, becomes an active stimulus to inquiry. Wherever there exist phenomena of which the dependence is not yet ascertained, these most cultivated intellects, impelled by the conviction that here too there is some invariable connexion, proceed to observe, compare, and experiment; and when they lects, impence by the conviction that here too there is some invariable con-nexion, proceed to observe, compare, and experiment; and when they discover the law to which the phenomena conform, as they eventually do, their general belief in the universality of law is further strengthened. So overwhelming is the evidence, and such the effect of this discipline, that to the advanced student of nature, the proposition that there are lawless phenomens has become not only incredible but almost inconceivable.

That law is universal will become an irresistible conclusion when it is perceived that the progress in the discovery of laws itself conforms to law; and when this perception makes it clear why certain groups of phenomena have been reduced to law, while other groups are still unreduced.

When it is asked why the universality of law is not already fully established, there will be the answer that the directions in which it is not yet established are those in which its establishment must necessarily be latest. That state of things which is inferable beforehand is just the state which we find to exist. If such coexistences and sequences as those of Biology and Sociology are not yet reduced to law, the presumption is not that they are irreducible to law, but that their laws clude our present means of analysis.

to law, but that their laws clude our present means of analysis.

The whole exposition is very characteristic, and Mr. Spencer's power of grasping and organizing an extensive series of facts is applied here with excellent results.

In the "Origin of Animal Worship" Mr. Spencer carries pre-historic speculation a step further back than had previously been done. It was already established that primitive animal worship is not indiscriminate, but that particular tribes worship particular animals from whom they generally believe themselves to be descended. Mr. Spencer considers this to be a corruption of an original worship of real human ancestors, who were nicknamed after the particular animal. As savage dialects are hardly capable of distinguishing metaphor from reality, the metaphorical meaning of the name would soon be forgotten, and the animal itself become the object of worship and the reputed ancestor of the tribe. The original worship of ancestors is itself ascribed to the belief in a double or other self, which is capable of quitting the man during life (as in alsep or trances), and which lives and must be propitiated after the man's death. This belief is produced by the co-operation of various causes, of which drams are set down as the chief. We may remark that the importance attached to the

widence of dreams even in comparatively modern times is curiously shown by Lucretius, who treats it so as to show that he thought it one of the most formidable difficulties he had to meet. The reasons here given by Mr. Spencer apply to other objects as well as to men, and equally explain the primitive stribution of a ghost to all objects, whether living or not, which is known as Fetichism, or better Animism. But he overlooks the generality of his own reasons, and wants to derive animism in a roundabout way from animal-worship, which seems to us quits unnecessary. The worship of totems may possibly strengthen or keep alive existing animism, but we cannot believe that the animism of saveges is a secondary product, as Mr. Spencer would make it. If it were so, the natural tendency to it would hardly survive as it does in civilized races. How many civilized men can honestly say that they have not a moment of personal resentment when they tiumble over an inanimate object? We say nothing of children, in whom it is undisquised. Mr. Spencer pushes his theory too far in another direction when he offers it as an instrument for explaining myths in general to the displacement of comparative mythology as at present understood. He is not quite fair to the current theory when he says it requires us to assume "that primitive tribes habitually express by the doings of men the course of natural phenomena." The only necessary assumption is of the same kind that is required by Mr. Spencer himselfnamely, that their vocabulary cannot distinguish the actions of men from those of natural agents. We are far from saying that Mr. Spencer's suggestions on this head are without value, but we do not believe they can be made the foundation of a general theory of the formation of myths. How far they will really go can only be shown by much more examination and verification, and we must wait for the further development which Mr. Spencer promises to give in the Principles of Sociology. Apart from these doubtful extensions, his theory of animal-w times is ethnologists.

MY LIFE, AND WHAT I LEARNT IN IT.

SIGNOR CAMPANELLA informs us that he writes his auto-biography in order to impress upon the world have a little derived from his own experience. We should perhaps have a little derived from his own experience. We should perhaps have a little difficulty in drawing out those lessons in a complete form; but their general nature is such as might be expected from an ardent Italian patriot of 1848. They have been proclaimed with abun-Italian patriot of 1848. They have been proclaimed with abundant cloquence in a good many countries, and we do not know that Signor Campanella's personal experiences throw any new light upon the subject. If he differs from other members of the extreme Liberal party in Italy, it is perhaps in the circumstance that, having been a monk, his hetred of the priesthood is rather more prominent than usual. Certainly, if his anecdotes are not too highly coloured, he has no reason to regard them with affection. His book begins he has no reason to regard them with affection. His book begins he has no reason to regard them with allection. His book begins with a description of the Arcadian region of Southern Italy where he passed his youth, where life is still simple and beautiful, and the one black shadow is, or was, cast by the presence of a lazy and corrupt priesthood. The people would be everything that a poet's or a painter's fancy could demand were it not that religion with them has become a degrading superstition. It is to be hoped that when the superstition is crushed some purer form of faith will take its place. We will not dilate upon the ignorance, hypocrisy, and greed which Signor Campanella considers to be the hypocrisy, and greed which Signor Campanella considers to be the necessary results of the Roman Catholic system in its perfection, as denunciations of a similar kind are tolerably familiar to most as denunciations of a similar kind are tolerably familiar to most readers. It is enough to say that his views would be satisfactory to the admirers of his friend Gavazzi, or to Mr. Whalley himself. We may confine ourselves to recording one anecdote of Signor Campanella's early youth, which appears to have made a strong impression upon his memory. As he was a member of a large family, his mother destined him to an ecclesiastical career; for in Southern Italy, as in Ireland, it was till lately the great ambition of a family to have given many sons to the Church. Accordingly, the young Campanella became a novice in a convent near his native town, Spinazzola. In those days burials always took place in the churches, and a sickening custom prevailed which is enough to note one desire the immediate introduction of incremation. As short intervals, it seems, the dead hodies were taken out of the graves and exposed upon the floor of the church in various stages of decomposition. They were then re-buried in a common grave, the object being, we presume, then re-buried in a common grave, the bject being, we presume, to make room for fresh comers; and as the sextons were allowed to become proprietors of any spoils found upon the bedies, the office was one of considerable profit and ambition. This disgusting coremony took place during the first year of Campanella's noviciate. With some of his companions he had indulged in a stoken repeat, made more discreditable by the circumstance that they had used

" My Life, and What I Learnt in It, By Giuseppe Maria Campanella.

This escapade being the holy-water vessel to boil their macaroni. discovered, young Campanella was ordered by way of penance to lick the floor of the church, from which the bodies had only just been removed, from the door to the high altar. He revolted against this sickening punishment, and, after being threatened with expulsion, was restored, contrary to his wishes, by the entreaties of his family. We need not follow his subsequent career beyond saying that, owing to his possession of a singularly fine voice, he became a singer in the Sistine chapel. There he was surrounded by all manner of priests, in whom all the characteristic vices of elevical courtiers were festered to an expherant growth. vices of clerical courtiers were fostered to an exuberant growth, but he also made acquaintance with a good many patriots, who were as pure and noble as their natural enemies were loose and corrupt. as pure and noble as their natural enemies were loose and corrupt. Ultimately, after escaping some snares, he fell under suspicion, and, without any reason being assigned, was ordered into retirement at Naples. He does not appear, however, to have been treated with the diabolical cruelty which might have been expected; for he obtained permission to retire from his order, and afterwards travelled through Italy, still a priest, but in the interests of the patriotic party. When the outbreak came in 1848, he took a strong part on the popular side; became chaplain to a regiment of Neapolitan volunteers, and in that capacity reached Venice, and went through the celebrated siege. With the capitulation and his consequent exile the story concludes.

We have said that Signor Campanella, however interesting his

We have said that Signor Campanella, however interesting his experiences, has no new principles to expound. He is an ardent believer in the rights of man, the progress of humanity, the advent of universal peace, and other articles of the true revolutionary creed. But in one respect the type of which he is a representative differs curiously from the modification with which he are now femiliar in Evolund. We cauld that articles are indeed. representative differs curiously from the modification with which we are more familiar in England. We could find agitators, indeed, and especially Irish agitators, who are equally given to declamation which would shock Mr. Carlyle and cause Mr. Froude to invoke the shade of Cromwell. But in countries where political discussion has been more worked into the habits of the people, there is not that childlike belief in the efficiency of gushes of rhetoric which comes out quite refreshingly in Signor Campanella's pages. How far this may be owing to differences of national temperament, or how far to the fact that we have learnt by experience how little can be done by more talking, may be disputed. But even the most incoherent stump orator discoursing upon Home Rule would scarcely have that faith in the powers of his eloquence which is unconsciously and amusingly displayed by his Italian rival. Whatever happens, the expedient which immediately suggests itself to Signor Campanella is that he should make a speech appealing to the eternal laws of justice and humanity; and, if we may trust his the eternal laws of justice and humanity; and, if we may trust his report, the speeches often produced an effect in which we presume that his fine voice must have had some share. When Naples was formenting with revolutionary passion, a Swiss regiment charged a mob. Signor Campanella and a friend pushed to the front, and, mob. Signor Campanella and a triend pushed to the iront, and, exposing their breasts to the bayonets, pointed out to the commander that it was infamous for the sons of a Republic, hired for money by a tyrant, to become the butchers of their brethren. "The words found an echo in his heart," and the danger of bloodshed was averted. The suppression of the Jesuits was being the suppression of the Jesuits wa shed was averted. The suppression of the Jesuits was being generally discussed. It suddenly struck Signor Campanella that it was "necessary to make an appeal to the ever sincere and just judgment of the people." His mode of carrying out this plan was to turn to the crowd in which he found him. plan was to turn to the crowd in which he found himself when the thought struck him, and exclaim, "Who is Italian, let him follow me!" Many followed him accordingly, and the same appeal being addressed to the people round each caffe, a vast crowd speedily assembled round the convent of the Jesuits. At this point it occurred to Signor Campanella that there were some "men of the most brutal aspect" amongst the devoted patriots called together by this curious appear to the ever just judgment of the people. In fact, the priests were in some danger of being robbed and murdered. The old remedy, however, was equally efficacious. "Strong and fervid exhortations" pacified or overswed the men of brutal aspect, and the priests were simply turned out of their convent without receiving any personal injury. When the regiment of which Signor Campanella was chaplain reached Bologua, the reaction had taken place at Nanles, and orders were sent to the regiment to return. They at Naples, and orders were sent to the regiment to return. They hesitated, but Signor Campanella, gutting upon a table, pointed out to them, with all the energy he possessed, that this was the supreme moment in which they must decide between despotism and indopendence, and it need not be said that his cloquence again prevailed. appendence, and to need not be said that his coquence again prevailed. The only difficulty was to find a commander; but this want, too, was supplied by the appearance of General Pepe, to whom Signor Campanella made such a moving spooch, received by such universal acclamation, that he consented to lead them, whilst "every heart was tion, that he consented to lead them, whilst "every heart was full of the most noble, the most generous enthusiasm, excluding all doubt, all fear." Some of the Royalist officers looked askance upon the crater when he came amongst them just after this performance; but, taking in his hand a bust of Pio None, who was still supposed to be on the national side, he addressed them in such fervent terms that many of the officers remembered "that they were men and not sheep, and that amongst men they were

Italians. Once in Venice, and surrounded by the Austrians, it might be thought that the time for elequence was gone by, so far, at any rate, as the exercise of any influence upon the minds of the enemy was concerned. But Signor Campanella was equal to the occasion. He appears, indeed, to have devoted himself heroically

supporting the spirits of his friends under which they were explicit; but his en fined within those limits. Towards the confined within those limits. To yards the cities siege he was frequently stationed upon one of the small forts thrown up by the Italians; and here, he says, looking out upon the impressive scene of the lagoon in the quiet summer night, his feelings often became so strong that he was compelled to give vent to them. Sitting on a gun, whenever a pause occurred in the bombardment, he addressed the Austrian soldiers. Though he had no speaking-trumpet, he had a very powerful voice, and pronounced his words carefully. Perhaps his heavers were only Croats or Germans, but it is nrobable that their powerful voice, and pronounced his words earefully. Perhaps his hearers were only Croats or Germans, but it is probable that their incapacity to understand his language would not have made his eloquence less effective. He cried to these soldiers of the foreign oppressor that in vain they sought to conquer Italy; that the despotism which they served was repugnant to God and man; and that the Italian cause, as the cause of justice and liberty, must triumph in the end. To the vulgar English mind there is something grotesque in this picture of the Italian crater in the summer night rearing out revolutionary sentiments at the top of his voice to a distant enemy by way of relieving his feelings. On one night he had some reason to think that Radetzky himself was within hearing. He addressed him in a brilliant piece of invective, calling him "worse than the most ferecious hyena," and ending with the apostrophe, "Radetzky! cease to be the tyrannical instrument of tyrants; become a citizen, a man; pass to the side on which is the apostrophe, "Radetaky! Coase to be the tyranical instrument tyrants; become a citizen, a man; pass to the side on which is the right, and on which God smiles. I'rom champion of the power which destroys human rights, become their apostle and defender. Thus in the present and in future times you will truly deserve to be called great." "Thus," he adds, "I strongly expressed my feelings before the stern Austrian Marshal Badetzky." The stern Austrian stronger to say does not appear to have the present subjects. Austrian, strange to say, does not appear to have been particularly impressed in any way, and probably felt that he could use his lungs to better purpose than by attempting to carry on a controversy across the lagoon. It was rather more annoying that the Venetian Minister of War sent for Signor Campanella and seems to have rather disapproved than otherwise of his patriotic exertions; but the Minister was suspected of having some secret intelligence with Austria. The last gleam of Signor Campanella's eloquence was on the occasion of his receiving his passport from the Austrian authorities to leave Venice, when he hurled a scathing sarcasm at the oppressor's head, upon which he was congratulated by all his friends.

The simplicity with which these and other feats of a similar

The simplicity with which these and other feats of a similar kind are recorded is quite disarming. We cannot doubt that Signor Campanella is perfectly sincere in the complacency with which he recalls his oratory, and it is not for us, who have inherited a different temperament, to judge him severely. The English disposition is perhaps best represented in the old song, where the captain informs his crew that he "hasn't the gift of the gab," but encourages them to take a French ship by informing them that, it show don't do their duty, he will flow each mathem seen. Whether they don't do their duty, he will flog cuch mother's son. Whether he would have done better to appeal to them in a sharp, stirring oration about country and the rights of humanity is a question which opens a wide field for discussion. Certainly he would not have been so characteristic an example of the English type of heroism; and as we are only too generally inclined to share his general sentiments, we may perhaps be disposed to do something less than justice to men of the opposite disposition.

THEOLOGY IN THE ENGLISH POETS.*

THIS volume consists of a course of lectures delivered by Mr. Stopford Brooke during the season of 1872 on Sunday afternoons in his chapel of St. James's; their object being to derive from the language of our poets a scheme of theology independent of and distinct from the language of our formularies, whether formally accepted or denied by them. All thoughtful, intelligent poetical gritching is absented. intelligent poetical criticism is pleasant reading, but we own that we profer each poet to be discussed on his own merits, without the critic being hampered by a view and a cause to promote and advocate. Nor does it add to our pleasure to remember, as we read these lectures, that they were delivered in church on a Sunday; though the author makes a great point of these conditions, remarking that the objections of some persons accustomed to hear nothing but sermons from the pulpit have been more than outweighed in his mind by the attendance of many who had previously been unin-terested in religious subjects. The supposed sermon-lovers may ossibly reply that it is not what they are accustomed to hear from Mr. Brooke's pulpit, but what they hear from the reading-desk and the altar, that disinclines them to this new scheme for theological the altar, that disinclines them to this new scheme for theological teaching. Mr. Brooke has a way of making Ohristianity essaingerman to so many ugly-sounding professions of faith and its reverse, that he must not wonder if some people carry his meaning further than he intends it to go. He must, we should think, be somewhat indifferent to the adhesion of the steady goers of his congregation when he writes of Pope's "Universal Prayer" that congregation when he writes of Pope's "Universal Prayer" that religion all over the world." Why, we set, second and defend the term in such a place before such an assembly?

This is the theology which Mr. Brooke labours to prove to be the growth of modern poetic thought... "Nature alive," as he chewhere

Thursday in the English Poets. By the Box. Stopford A. Brooke. Henry S. King & Co. 1874. The State of the S

expense it. We should my that "Nature alive," in one sense, is cartainly no median idea. The imagination cannot dwell long upon nature without adopting a language personifying nature, which is making acture with animate life. The "trees of the wood rejoicing before the Lond," the "hills clapping their hands," minds and dryads, sives and fairles, Puck and Sabrina, all alike show this; but it is especially not use theological idea. As soon as nature is described spart from man, terms are used without which the poot cannot awaken sympathy, or stamp his thought on the mind of others. But there is a mutual understanding. The same understanding which allows the prophet to foretell of the earth disclosing her blood and casting out her dead, the pealmist to describe the Creator as flying on the wings of the wind, Moses in a poetic flight to use language not only different from, but in opposition to, his dogmatic atterances, makes the bard fearless; he has ideas which cannot be conveyed otherwise than by strong figures of speech. But by degrees, Mr. Brooke argues, this language has become the poet's theology, at first without his knowing it:—

So near, in fact, have we got to the conception of Nature as alive, that Cowper is betrayed unconsciously into phrases which mingle God up with the universe to make it living. The lines which speak of the diffusion of God through all are repeated in idea in this other phrase:—

There lives and works A soul in all things, and that soul is God.

This is a contradiction of his position of a God wholly distinct from the universe, but it marks the transition to the last step in the postic idea of Nature. It is the conception of Nature as a living Iking to whom affection was due, who could of herself awake feeling and thought in Man, whom we could have as we love our fellow-men, who lived her own life and had conscious pleasure in it—it is thus conception which unconsciously in Cowper began to tremble into being.

The idea of Cowper "unconsciously" falling into such a creed as this is little in accordance with our notion of his character, nor do the words, to our thinking, bear any relation to it. That he would probably have indignantly repudiated such a gloss on them Mr. Brooke himself does not doubt. The growth of them into Wordsworth's sentiment towards nature seems, however, to Mr. Brooke natural and obvious. This great poet he represents as conceiving of "Human Nature as one person, acting as if directly from himself (i.s. Wordsworth)—the male being of the universe to whom Nature, that is, the spirit who informs the outward world, is as the female." It is this separate life of nature and man, writes our critic, which enables a dramatic action to take place between them; Wordsworth in this differing from Coloridge, who held that

We receive but what we give, And in our life alone does nature live;

and differing, too, from the poet of In Memoriam, on whom Mr. Brooko is severe for tracing in nature likenesses to his own varying moods; while Wordsworth, he asserts, forgets himself in the beauty, joy, and life of things. Nobody can admire Wordsworth's poetry beyond our own sense of its merits; but we do not admire it exactly on the ground that he forgets self more than his brother poets succeed in doing. Surely it implies rather a worrying scrupulosity towards nature, it is investing her with temper as well as life, to quarrel with the poets for not all treating her from one and the same point of view. To us they all seem to vary their view with their mood; each has his prevailing tone, but, like Olivia and Sophia in the Vicar of Wakefield, we may see them change characters for a whole day or a poem together.

Wordsworth, no doubt, trusts himself to speculation with considerable daring both of expression and thought; but poetry turned into prose, and set out as a formula, loses much more than its dress; the meaning undergoes a sort of chemical change—that is, it affects differently the mind which receives it. The medium of verse tells upon the reader, whose apprehension adapts itself to meet it. He feels himself in an ideal world where nothing is absolutely and merely what it seems, but is the exponent of some subtler truth; because for a simple explanation of fact plain prose is undoubtedly the most convenient medium. The poet, he remembers, is Heir of more than royal birth, is in some especial and favoured sense the son of Adam, "which was the son of God." But imagination can play no part in Mr. Brooke's formal interpretations, and the reader finds himself on a par with the theologian; he can talk in the same strain, and it is to be expected that many will talk in it, and we shall have our transcendental school before long conversing with nature on the easiest terms, and making all manner of personal applications if the wind but stirs the tree-tops. This kind of intimate relation with nature—nay, all close observation of nature's beauties—is with most men a mere fashion; had they lived in another age, they would have known and felt none of it; but when Mr. Brooke—endowed, we doubt not, with a passion for natural beauty—says, "Most of us have felt at times the desire for union with Nature to be unutterable, so secret and deep is its passion," a good many of his sympathizers will not like to be behindhand, and will learn to talk of this union, and will turn interpreters, and affect to know what nature's mocking spirit is, and to hear her address them after the manner of Emerson as "Little fellow!"

Two-thirds of the book are devoted to developing this particular theology out of the works of Wordsworth, mainly from the Prolude and Exoursion. It is well that these leading and characteristic poems should have their turn of attention, and be studied as well as taken for granted; and the numerous passages quoted are at once beautiful and characteristic; though, as we have said, we

should have preferred the meaning not being pointed, or reduced to prose matter of fact. We like them best when left to our own interpretation or guess. For Wordsworth's deep introspection, his struggle to penetrate the abyes of memory, and his awful salf-reverence are conditions which must always be allowed for. Mr. Brooke himself allows this, in meaking of the great oder—"Wordsworth was nothing of a Platenist; he only liked these ideas of pre-existence and reminiscence, and made his own thought out of them." And perhaps a man had better not be his own text, however profound its meaning, for long periods of time. Not even a pure and noble character and lofty genius can make such meditations safe, as a constant, or, to use a favourite word of the writer's, healthy, exercise.

The Revolution, as Mr. Brocke designates the great French social upheaval, ignoring all other, is made to play a part only second to nature in the education of the poet. So strongly are the lecturar's own sympathics allied to it, that we doubt whether he is able to throw himself with any keen interest into any period remote from its influence. He does not inquire how far Shakspeare and Milton inculcate the theology which he implies that it is the mission of poets to teach; and those of the fraternity, as Cowper and Burns, who sound some preliminary notes, were, he considers, touched and impressed by its forebodings. Wordsworth supplies his most copious illustrations. Coleridge, who fell back into Conservatism, incurs his contempt—a sentiment which he also expresses for the aristocratic element which lingers still among us, but which is passing away in a broader humanity. He is strong against genius submitting to the patronage of the great, "trying in their blind barbarian way to help him on." The advice is probably good, but the epithet is uncivil. This is dpropos of Burns, who suffered under the injuries of Mr. Brooke's two hugbears, Patronage and Calvinism; the latter the only creed for which he has not something courteous to say, and on which he is disposed to lay the blame of Burns's errors and Cowper's madness—unfairly, we think, in both instances. Despondency is a mental disease to which—we appeal to general experience—Calvinists are not more subject than other men, and it afflicted Cowper before he knew Newton, as Mr. Brooke grants. To Burns in his own country and time Christianity is represented as inaccessible. "The Christ presented to him had, according to the teaching of that time and country, nothing in the world to do with him." "The Christian ministers of Ayrshire blotted out Christ for Burns." The ministers of Ayrshire blotted out Christ for Burns." The ministers of Ayrshire would perhaps have had something to say in

It is one of the necessary effects of large generalization that small truths and more minor facts must go to the wall. Every thing and person has a task and office assigned to him beyond and apart from his individual action. It depends entirely on the reader's amount of sympathy with the generalizer how far these departures from severe fact affect him. If one is once cought in the current of a great idea, they go for nothing. To the enthusiast the sticklor for minuts accuracy is a captious objector, but where sympathy is cold, truth of fact stands at its full value, and one feels an increasing suspicion of a theory which requires such sacrifices, or catches at such fallacious supports. Mr. Brooke finds it convenient for his view to call the post Gray the "courtly Gray." Gray, who was choice in his own epithets, would not have known himself under the description. He eschewed the society of fine and great people; and the only time he was ever at Court—on his appointment to a professorship—he wrote, "The day was so hot and the ceremony so embarrassing to me that I hardly knew what he (the King) said to me." Cowper, on the other hand, is called a lawyer's clerk, which as little represents his social position, though it gives force to a paragraph. Again, the argument requires that a new religious element should awake at a particular period. "The work of the Latitudinarian School had been distinctly a work of charity and was needful for the time," but "the revived religious life of the personal soul took its rise with the preaching of Wesley." A true devotional element, Mr. Brooke grants, entered into our poetry in the hymns of Watts, but he finds in them no passionate or personal feeling in devotion. "Watts," he informs his readers, "lived an easy, retired life in a great country house from 1712 to 1748, and there is in his hymns that pleasant devotion to God which arises from piety and comfort, from a distant contemplation of the sufferings of the poor beyond the gates of the park." Now the plain fact is that Watts

When I survey the wondrous cross,

quoted with approbation by Dr. Pusey, in which the congregations of every English communion find an expression of dectrinal, personal, and passionate devotion which no later hyun-writer has surpassed. Mr. Brooke seems to know Watta only in his hymns for children.

The plan of the book renders it a communitary rather than a critique. It leads the reader to speculate on the religious bearing of certain poets' distinguishing works rather than on their beauties. Our notice of the book itself has been written in the same spirit.

THE ASHANTEE WAR.

CAPTAIN BRACKENBURY'S book on the recent campaign naturally demands a different sort of notice from that taken of the numerous other narratives which are being poured forth upon the public—greatly, we should fear, to the risk of some of their enterprising publishers. "This is not an official history" are indeed the first words of his preface; and it appears that neither General Wolseley nor any of his staff saw the work either in manuscript or print. But, on the other hand, the author tells us that he has had placed at his disposal every official document concerning the campaign, without reservation, and he distinctly claims for it "all the accuracy of an official account." In short, it is this in fact, if not in its pretensions. For the writer has been behind the scenes throughout, "whether we consider his advantage as to materials, or his confidential post at Sir Garnet's side during the war. And the very fact of his having occupied this post must make it difficult, indeed hardly possible, for him to treat all the events he chronicles with an impartial eye. Many great commanders have written of their own exploits, but their memoirs are hardly understood to be constructed in a judicial spirit, with perhaps the single exception of that of the Archduke Charles, who put forth his famous work anonymously many years after the events had occurred. The trusted secretary of any such commander can hardly afford to throw a shadow, be it ever so faint, over any part of his chief's proceedings. And hence we may look in such a work as Captain Brackenbury's for fresh evidence of facts, but cannot expect to find them judicially weighed. We say thus much beforehand, that there may be no disappointment as to the nature of the contents of what must long be, even allowing for this drawback, the chief authority for the details of a very remarkable campaign. It must serve us here chiefly as the groundwork of some reflections on a story the outlines of which should be familiar to all. Those who would have mere narrative without com

Boyle's marrative a few criticisus, the groundwork of which it is part of our task to examine, and the other so-called histories of the war are sufficiently described, as indeed the previous newspaper reports of the same writers would lead us to expect.

Captain Brackenbury's volumes will especially fill a place of authority as regards the feelings of the commander, and his relations with his subordinates and the Government that selected him. And we may say here that the conduct of the latter at the very outset appears to justify sufficiently what Captain Brackenbury observes later, that they did not fully trust their commander when they chose him. The real fact is that their conduct savoured rather of imbecility than prejudice. The Cabinet notoriously disliked all war in the abstract excessively. They had good reason to doubt whother the nation did not regard this particular war as entered on needlessly. And so they commenced the undertaking without any belief that its successful conduct could bring any honour to themselves or to the agents they selected. Of the general feeblenees of treatment they showed in their African policy there can be no better instance than that of the circumlocution and hesitation used in superseding Colonel Harley when the time came for passing from a mere colonial difficulty into a real war. It is true that no fault had been found with that officer. But he had no relaim by rank or services to command such a force as it would be necessary to send, "should more extended operations be engaged in "—to use Colonial Office phraseology—"than had been as yet undertaken"; or, in plain words, should vigorous action be decided on to repel the invader. And it was so manifest, were it only by the painful instance of the New Zealand war ten years before, that the civil and military operations should be directed by one head, that it seems ridiculous to be reading the cumbrous apologies which the Colonial Minister made to Colonel Harley for doing so obviously a necessary act of duty. War can no mor

The leading notion of the Cabinet at this time, as now revealed

Blackwood & Sons. 1874.

Through Funtesland to Communic. By Frederick Boyle. London: Chapman & Hall. 1874.

plainly in Sir Garnet Wolseley's original memorandum, was to conduct the active part of hostilities mainly with the native factor to be raised on the Volta under Blover, who, "making use of a body of about a thousand trained Housess as a nucleus for that purpose, is to carry war into the Ashantee territory lying on the right bank. If possible, he is then to advance westward in the direction of Coomassie." It was hoped, Sir Garnet went on to say, that this might have the effect of causing the Ashantee army to retire on the Prah, or at least act as a powerful diversion in favour of "the force that is to advance from Cape Coast"—that is, if his own proposal were accepted. More was hoped in truth than here meets the eye; for it may be read between the lines of this memorandum, written with full knowledge of the existing circumstances, that Lord Kimberley was so sanguine as to believe that no such advance would be required at all. And there is a slight touch of satire in the next paragraph of the next advisability, in a military point of view, or to consider whether the best direction is thus given to the best native troops (the Housess) we have on the coast. In framing a plan of operations for the attainment of the two objects before mentioned" (i.e. the clearing of the Protectorate and the scizure of Coomassie) "it is necessary therefore that it should fit into this operation already determined on." With which suggestive preface, and some additional remarks on the probable dates of Captain Glover's expected movements, Sir G. Wolseley proceeded to put forward his own scheme in detail, being that which led up to final success, and which now forms, in its printed shape, the best monument to his judgment and sagacity. As to his own poculiar relations with Captain Glover, it is sufficiently apparent from a perusal of this work that such difficulties as arose were not the fault of either, but were chargeable solely to the divided Government they served.

Sir Garnet's plan comprised, as Captain Brackenbury justly points out, two distinct propositions; the first, that two battalions of line troops, with detachments of other arms, should be despatched in time to commence operations on the 1st December; the second, that the troops sent should be composed of specially selected officers and men. Like the gods of the Homeric tale with certain of its heroes, the authorities he addressed listened to the first part favourably, but turned deaf ears to the other. "It was considered that the traditions of the British service were opposed to it, and that it would interfere with the regimental system of the army; and it was decided that, if European troops were to be used" (on which point there were long afterwards lingering doubts in the minds of the Ministry), "the two battalions first on the roster should be employed." The objection taken was a fair one, as it seems to us; but, on the other hand, the service was of so limited and exceptional a nature that tradition might for once have well been put aside. Had it been so, the unpleasant question of regimental precedence that we have presently to speak of would have been avoided; and those who know the inner history of the expedition are better aware than the mere reader of Captain Brackenbury's work can be that this unpleasantness formed one of the chief blots in a very successful campaign. For a third battalion was afterwards added to the original demand when the natives of the Protectorate proved far less serviceable than the least sanguine had hoped, and, transport not being equal to the increased demand, it became suddenly necessary to leave part of the white force out of the honours of the advance, to the intense chagrin of those excluded.

As before said, it is not our purpose to review the story of the campaign, which Captain Brackenbury tells with a mastery of its details, as well as of general military knowledge, which all intelligent readers will appreciate. We look to his work rather to see how he meets those criticisms which even the most successful operation must raise. Among these one relates to the period of despondency that set in when Sir Garnet, after his successful raid on Essaman, found further operations practically paralysed by the untrust-worthiness of those he had come to deliver. There is little trace of this having affected the real confidence of the staff that had been sent to make war without soldiers. And the report that the advanced posts were all but withdrawn at one time on a needless alarm would appear to have no more foundation than the fact chronicled at p. 225, Vol. I., that Colonel Festing directed the engineer party to withdraw from Mansu to Dunquah. Major Home, it would seem, did not comply with this order to fall back (on Mansu, Captain Brackenbury writes, meaning obviously from that place), and the Major-General reversed it, causing a reinforcement to be sent to him instead. This overruling of Festing's view was fully justified, since the next report from Home declared his new work to be so strong that he could hold it with his fifty natives; a proof, by the way, that those employed by the engineers at least were not accounted utterly untrustworthy by those who led them. As to Sir Garnet's famous despatch declaring his own position to be "somewhat humiliating," there is no question that it really was so, looking at any result beyond that of merely guarding his ase on the coast; and he was fully justified in using strong language to the Government which had at the first shows such plain symptoms of doubt as to the proper means of carrying on the undertaking it confided to him.

symptoms or doubt as to the proper means or darrying ou — taking it confided to him.

We pass up to a more painful question, the exclusion of the third white fattalion from its extracted share of the adventure, which has left a soreness that time, as we are told, has as yet done

The Ashanti War. A Narrative prepared from the Official Documents. By Henry Brackenbury, Captain Royal Artillery. 2 vols. London: Blackwood & Sons. 1874.

little to heal. Three regiments of more honourable fame have rarely been brigeded together than those that met under Sir Archibell Alison's command among the surf off Cape Coastle; and it is but netural that that which was left behind in the advance should have falt the position most beenly, and that it should have sacribed the selection of the Rifles and Highlanders for precedence, the latter having been the last betallion added to the brigade, to something more than chance. That the Brigadier himself hore a name honoured among Scotchmen may have contributed to this sentiment; and at this point of his neglective Captain Brackenbury was no doubt conscious that he had delicate matter to treat. As he gives the history from the official papers, the course of events may be briefly summarised thus:—The Rifles had the first claim to land on military grounds, as they only as yet hore the short rifles—arms of a similar nature intended for the other two battalions being delayed by the slow salling of the too famous Dromedary. Whilst waiting orders to land, a severe outbreak of cryaipelas among the 42nd caused the senior medical officer to recommend that it should be the first to disembark; but as this alarm passed off Sir Archibald Alison contented himself with letting it go on shore after the Rifles. The 23rd was to follow, and one-half of the battalion was landed, when Colonel Colley, who had just taken over the transport arrangements, found that descrition of carriers was increasing so fast as to endanger the whole progress and prospects of the force. On this the Brigadier-General suspended further disembarkation, leaving the artillery on hoard with half of the 23rd; and when Colley's reports reached headquarters at Prahsu, and were confirmed by the Supply Department, Sir Garnet not only confirmed the order to stay the disembarkation, but "took the decided step of at once ordering the 23rd and Royal Artillery to re-embark." Of course, as Captain Brackenbury observes, he would have been only too glad to take the whole

We are now in Captain Brackenbury's second volume, and find him entering carefully into the subject of the transport, the near failure of which caused the misfortune just noticed. He shows that there would have been far more difficulty than the facile imagination of Correspondents depicts in the attempt to organize a proper system before Colonel Colley came. In doing this, however, he unconsciously seems to reply to himself when he closes by saying, "It was only when the transport was put altogether into the hands of an officer of ability and rank, with a considerable staff under him, that a systematic method of dealing with the desortions could be established." It would have been better perhaps to have stated the broad fact that General Wolseley's prospect of success was all but sacrificed to an attempt to move a force by a means which no military man of experience can believe to be suited to such a task. A Control Department constituted as ours is may serve to feed an army in time of peace. An attempt to use its machinery in war anywhere would be as fatal as it would have been if continued in Ashantee, where, as we are told in another place, the Control literally had to borrow labourers from the engineer works to carry on its duties. Lord Napier at one time found his plan of operations in Abyssinia likely to be foiled by the inability of the Bombay Government to realize the need of proper transport for it. It is not surprising that Sir Garnet Wolseley, with all the deadweight of the Colonial and War Offices to overcome, did not add to his preliminary difficulties by insisting on proper conditions on this head as firmly as did Napier. But a perusal of Captain Brackenbury's own remarks on the subject will show that this point proved of more vital importance than had been originally foreseen before the desertions began. That these desertions were due to ill-treatment he strenuculy denies; yet the letter he quotes from the chief magistrate goes rather to prove that irregularity of payment and rations may have had

special service officers were not ubiquitous, and to say that all was not done is simply to say that they were too few for their task. Into the last episode that has called forth serious criticism, the hurried retreat from Coomassie, we cannot follow Sir Garnet's exsecretary and present advocate in detail. His view is of course identified with that which presented itself at the time to the General, who, with less than a thousand European fighting men at his disposal, a heavy charge of sick and wounded, and a short store of provisions, had to would he possible advantages of a longer stay against the risk of some evil that might "add failure to what had hitherto been unbroken success." On such a point we believe Sir Garnet Wolseley to have been an infinitely better judge than any of his self-constituted critics could be. He had better opportunity of knowing every feature of the case than they, was asturally using gifted, and had a far wider experience of war and the self-constituted critics could be case than they, was asturally using gifted, and had a far wider experience of war and the self-constituted critics. On

the whole we have no doubt that he did what was wisest, and that those who have cried out on him as over-custions would have been the first to condemn his reshness had he risked the lives in his hand needlessly. With this remark we take leave of the narrative of his secretary, who has performed a difficult task with olearness, shility, and moderation. The error of the work, if any there he, lies in the conception that it could take any other form, than that which it has actually assumed—of a justly earned sulogy and an able defence at all points of the commender with whose fortunes the author was bound up. It would have had greater weight, in short, had it come from some pen less directly interested in the events it chronicles. Indeed its publication has awakened a doubt in the public mind whether that mingling of the functions of staff officer with those of private authorship is judicious which has been for the first time tried in this African war.

CLYTIE.

BY dint of being the subject of a lawsuit and of a letter written to the daily press by one of Her Majesty's Counsel learned in the law concerning the proper pronunciation of its title, the novel called Clytic has attracted an amount of attention which its merits assuredly do not warrant. This is a circumstance spart from and outside the author's work, and he cannot be blamed for it. For much which is part of and within the book, for many means which he has employed to draw notice to its contents, he may be blamed. The ephemeral novelists of the present time are not as a rule distinguished by a want of confidence in their own powers, by a belief that the intrinsic merit of their work will fail to make itself known without extraneous aid. With this want of confidence and this belief Mr. Hatton must be credited; he has found it necessary to add interest to his scenes and characters by unusual methods, without the support of which he may have felt doubtful as to his success in writing a novel. Perhaps he would have done better not to write a novel at all.

One of the methods of exciting interest which the author of Clutic has thought could be applied in a cannot be reached by a perhaps.

Clyric has thought good to employ is a carefully elaborated description of the manners and customs of theatrical managers and agents. It is not wise to single out a comparatively small class of people engaged in a special employment as objects of blame, unless some crying and widespread evil exists among that class. The scenes of the theatrical world which occur in Chytic convey the impression to the reader that this is the case in that world. How far these scenes resemble real life, how frequently the kind of conduct which is represented in them is to be met with, those who are acquainted with theatrical matters will readily judge. It may be hoped that those who are not will hesitate to form their ideas of a class of people who have at all times come in for more than their fair share of abuse from the portraits presented of them in Clytic. The author, it is true, introduces his readers to one manager of a theatre who possesses principle and honesty; but he is careful to add that this person is "an exceptional manager—one in a thousand." Another method resorted to by the author for surprising the attention of his readers is the translation of men and women from the actual world to the pages of his fiction, sometimes in their own persons, sometimes covered by a transparent disguise. As an instance of the first of these plans, it may be noticed that on one occasion, when the heroine lately arrived in London from the country is watching the assemblage of notable persons, unknown to her, in Hyde Park, a passing allusion is made to the domestic loss of one of the most distinguished men of this time. There is little to be said about the factor which distance such a research as this. The way is which the taste which dictates such a passage as this. The way in which the author saves himself the trouble of creating a character, or the author saves himself the trouble of creating a character, or spares his readers the weariness of becoming acquainted with the products of his imagination, is well exemplified by a certain Tem Mayfield, who plays an important part in the book, and appears at first as an undergraduate of Dunelm University, desperately in love with Clytie, whose real name is Mary Waller. She is called Clytie on account of her resemblance to the well-known bust, a cover of which Tem Marfield became in the resemblance for the second. Clytie on account of her resemblance to the well-known bust, a copy of which Tom Mayfield keeps in his room for the purpose apparently of addressing to it long tirades of romantic love, intermixed with speculations upon the philosophy of Averroes and Pope. Whether any young man in this world ever, to quote the author's words, "smoked and talked to a Parian bust" in this fashion may well be doubted. Tom Mayfield is disappointed in his love and flies from the scene of his disappointment to America. He goes away as an ordinary young Englishman, of some force of character, which however does not prevent him from ranking among "the little lovers that curse and cry" when he is rejected by Clytie. He reappears later on as a Californian poet who has lived a wild life among miners and Indians, under the name of Kalmat. The name Kalmat is the name of a young Indian who figures in Mr. Joaquin Miller's Life among the Modocs, with only two letters transposed. The description of Kalmat is a tolerably accusate description of the author of Life among the Modocs, and in order that no doubt may be left as to the writer's intention, events of a unique character. be left as to the writer's intention, events of a unique character described as having happened to himself by Mr Joaquin Miller are assigned to Kalmat by Mr. Hatton. If Cytic should fall under Mr. Joaquin Miller's eyes, he will be no doubt delighted to find not only himself, but also select passages from his history, figuring-

^{*} Clytic: a Novel of Modern Life. By Joseph Hatton, 3 vols, London; Bapparan & Hall 1874.

in Mr. Hatton's paper. A more glaving instance of this reckless introduction of definite events and paraces is found in the leading incident of the nevel. The province of the remands writer should be to observe real life, and reproduce the result of his observations assisted by his imagination. Mr. Hatton has either disdained this assistance, or, having tried it, has found it wanting, and reproduced what would be better forgotten.

and reproduced what would be better forgotten.

The reason of Tom Mayfield's disappointment and departure is the love which he supposes Clytic to entertain for Philip Ransford, a young man whose wealth is his only recommendation. Circumstances combine to make it appear that Clytic is in the habit of giving claudestine assignations to Ransford, and is on the point of eleping with him. This is not unnaturally distasteful to her grandfather, who is also her sole guardian. He therefore keeps a strict watch over Clytic, which is so galling to her that she flies secretly to London at the same time that Tom Mayfield departs to America. It may here be pointed out that in Mayfield departs to America. It may here be pointed out that in the first volume of the book there exists a remarkable resemblance between the characters of Olytic and Hetty in Adam Bede; indeed the likeness extends to a reproduction of the well-known scene in which Hetty wears the jewels given to her by her lover when there is no one present to see them. So far the author pursues the same kind of course which he has adopted with regard to Kalmat. It is not difficult to represent something of a real person's career in the pages of a novel. It is more difficult under the present condition of things to transfer the career of a well-known character from a well-known book to another book which is likely to be less well known. Therefore it is not surprising that Clytic should become an entirely different person after her departure from Dunelm. The heroine's chief object in coming to London is to find an engagement at a theatre, which she is led to desire because her mother, who was secretly married to a son of Lord St. Harsard, had been a celebrated actress. The nature of the descriptions of theatrical life which are here introduced has been already indicated. In her ignorance of London and its ways Clytic goes to look for legioners in a London and its ways Clytie goes to look for lodgings in a notorious quarter of the town. Here occurs a scene which the author had better have left out of his book. Clytie escapes the stils which threaten her, and falls into the care of a park-keeper's wife, with whom she finds lodgings. During this part of her career, and while her engagement at a theatre is pending, she is persecuted by Philip Hansford. Although his designs are frustrated, he carries his plans for working them out so far that certain incidents are capable of being raked up against Clytic in after life with an ovil construction. Finally she is provided for by old Lord St. Barnard, who discovers her to be his grandchild; her appearance at the theatre never takes place, and we find her ten yours later married to a Lord St. Bernard, nephew of the old Lord, and consequently her cousin. Meanwhile Philip Ransford has been ruined, and reduced to gaining a precarious living as best or as worst he can. A friend of his, a villanous attorney named Cuffing, discovers that he is acquainted with Lady St. Barnard's early history, and sees in this a possibility of extorting large sums of money from her or from her husband. Here occurs, not a scene, but the greater part of a volume, which the author had better have left out of his book.

Those who are already acquainted with the nature and the main facts of a peculiarly disagreeable slander case which created much scandal not very long ago will hardly wish to refresh their memory by reference to Mr. Liatton's novel. Those who are not acquainted with these facts will scarcely care to learn them in the form into which the author of Clytic has put them. Nearly twelve chapters are taken up with an account of the proceedings in Bow Street which upon Ransford's being brought up on a charge of maliciously publishing a libel upon Lord St. Barnard with intent to extort money. The merit of these twelve chapters has appeared so surpassing either to the author or to the publisher of the book or to leth that one of them is printed nearly word for word twice over. There can be no kind of doubt as to what the origin of this, the main feature of the story called Clytic, is. The author himself main feature of the attive called Clytin, is. The author himself seems to have thought that his selection of a theme required some explanation and this he puts into the form of an imaginary ex-tract from one of the daily papers at the time:—

tract from one of the daily papers at the time:

An editorial note upon the charge drew attention to the fact that the wildest imagination of the novelist had been outstripped recently in several cases that had some before the courts. Without for a moment offering an opinion upon the Barmard-Ransford libel case opered this day at Bow Street, the editor still pointed out that in this business we had either one of the foolest and most dastardly and cruel libels that could afflict social life, or we had a story of the most incredible deceit and immorality. It was with such materials as these, it seemed to the editor, that the successful novelist must dest; love, revenge, human passion in their highest and most daring flightes. Why the novelist should sit down and draw drafts upon his own imagination when the doors of Bow Street were open to him daily, this editorial authority could not imagine. Moreover, the most successful novels, the stories most read, and whose lessons took the deepest hold of the human heart, were drawn from history proper, or from history as it presented itself at the police courts and the courts of law generally. Charles Dikane's Officer Turist, with the Fagin and Bill Sylas episode; Fleiding's Tom Jones, and the sponging-houses; Hawthorne's Nearlet Letter, and the crime of the clargyman; Adam Beds, with the adaction of Heather [sie], and her trial for murder: these and many more works were cited as examples, not only of oriminal history furnishing the best materials for the novelist, but as an answer to certain namby-pamby critics, who denounced steries that dealt with those very social sina which formed the strength of our classic novels, past and present. The harm was when some week writer drew upon his or her imagination, and mistook lubricity for the tender passion; when immorality was gilded over and made prosperous; when seems of social deprayity are dwelt upon with a sort of loving care; when vice is made

attractive and virtue regulates; when the Magdalate is made to better and purer and helier than the true and divine likely legalit; was society polaried by the movelist. But the writer whiches the per mould the realities of life to his purpose, and deal manfally and the with intory as it was securided in the newspapers; could not fall be see following, and might map his flagges at the samp of week collins who not distriminate between love and last, between purchange and he

We cannot but express, even at the risk of being ranked the author of Clytic among the numby-pamby, smarling, went critics whom he so bitterly actrizes, our sincers hope that

will fail to secure a following.

There is little more to be said about such a book. Barnard is finally righted, and she and her husband live happity ever afterwards. Kalmat, whose long residence in California has not cured him of his early habit of "amoking and talking to a Parism bust," announces several times to a new image of Clytte that he is Justice. He also, we are informed by the author, watches the case in Bow Street for Destiny. He carries out the idea, which he seems to have borrowed from Monte Cristo, that he is Justice and represents Destiny, by shooting Ramaferd in the course of a somewhat ludicrous duel which takes place in an old course of a somewhat ludicrous duel which takes place in an old inn on the Thames. A coroner's inquest is held upon the body of Ransford, and the surgical evidence goes to prove that he committed suicide. The author seems to have a great belief in the power of shooting generally. The chief hold which the villanous attorney Ouffing has over Ransford lies in the fact of his occasionally display ing a revolver, and throwing out ferocious hints about the cheapness of life in America. The author's style is not without a certain vigour; but it is employed in wrong directions. He spears to think that force is secured by a multitude of words. When he wishes to be impressive he piles together a vast heap of adjectives. He on one occasion describes a woman with "a wealth of hair." Of the grammar to be found in Clytic two passages may serve as examples. Lord St. Barnard, talking to Kahmat, says, "For you and I loulogue has only that personal interest which belongs to a persecuted woman." And the poet, catching the trick perhaps from his companion, presently says to Lord St. Barnard, "Let you and I, my friend, be a little mad."

PRIESTLY LIFE IN FRANCE.

THE accomplished author of the Life of a Dominican Artist, reviewed some years ago in our columns, has laboured assiduously ever since in the same comparatively unoccupied field of French religious literature, partly by translations, and partly by original sketches of distinguished foreign ecclesiastics, such as that now before us. There is less distinction than might be supposed between the two classes of works, for copious extracts are worked into the hiographical sketches, and the writer has the rare merit of making a translation read like an original composition. The prosent volume, like those which preceded it in the same series, is evidently written with a devotional and hortatory purpose; but it serves incidentally to throw a good deal of light on the condition of the French Church in the sixteenth and seventeenth centuries, and the way in which it was influenced by the Counter Reformation which did so much to change the inward and outward life of Catholicism throughout Europe. The French Oratory, founded by Cardinal de Bérulle, never attained even to the limited influence of its Italian prototype as an institution, partly through its falling from an early period under the suspicion of Jansenism. It has, however, been the nursery and home of some of the noblest spirits and brightest intellects among the French priesthood of the last two centuries, and is associated in our own day with the eminent centuries, and is associated in our own day with the eminent name of Gratry, whose single-minded protest against dominant corruntions is tagnished, but not use he himself put it in a moment of culpable weakness. "Graced" by his subsequent recantation. The present volume contains a brief sketch of the career of four leading French ecclesiastics, three of whom, Cardinal de Isrufie; St. Vincent of Paul, and Olier, are well known by name, though little beyond their names may be familiar to ordinary readers. Of Condron, one of Berulle's earliest neophytes, we hear for the first time; but he well deserves the notice his biographer has bestowed upon him. It is worth observing that Olier, the founder first time; but he well deserves the notice his magrapher has bestewed upon him. It is worth observing that Olier, the founder of St. Sulpice, the very model and stronghold of the seminary system of clerical training, had himself, like so many of the greatest men among the Roman Catholic priesthood, both regular and secular, received a lay education. He is described as "a vigorous, hearty schoolboy, yet with a deep-seated religious feeling," then as a student at the University of Paris; and at eighteen his persists a blandary of the him the headship of an ablest and two privates, in obtained for him the headship of an abboy and two priori three different dioceses, without of course his having yet taken orders, and indeed without his by any means furnishing the attractions of fashionable life. Condren and St. Philip Ners, the founder of the Roman Oratory, similarly passed from a soulest cases to the service of the altar, and the same remark applies to the two great preachers of the French Church in our own day, Bavignan and Lasordaire.

The mention of Olier's worldly life, though it done not seems even to have been vicious, while he was destined for the Church, and already held lucrative preferment—for French abbeys were

The Revival of Priestly Life in the Secundanth Century is France. A Sketch. By the Author of "A Deministra Artist," Sec. London: Evingtons. 1873.

like English description, as a the privat of the clarical monils in our minds the earlier life of De Retz, ed much like K profession?—recalls in our mainds the earlier life of De Hetz, especially when we used of the "handsome schoolboy of eighteen "appearing as a dishicanble preaches in Parisian pulpits on the strength of his ableau of Notre These de Péhrer. De Retz elso preached at Paris with great fold, long before he was in hely orders, but the moral tone of the two men was widely different. It is characteristic of that times that Olier's parents, who seem to have been pions people in their way, should have seen nothing incongruous in these strange anomalies. But there was in fact much were behind. The condition of the French elegy at the time, we are took was many as to fill the heart of any devout man with told, was such as to fill the heart of any devout man with constantation. Vincent of Paul used to say that he had found numerous priests whose ignorance was so profound that they could not say mass correctly, and did not know the found numerous priests whose ignorance was so profound that they could not say mass correctly, and did not know the ordinary form of absolution. And a Bishop writing at that period observes, "I shudder to say that there are some seven thousand priests in my diocese, either drankards or of impure life, utterly without vocation." Another contemporary Bishop says, "There is not a priest in my diocese capable of any ecclesiastical office except the Canon Theologian of the cathedral." Abelly adds that "a mere priest" was a common form of reproach, and Amelote that "the name was held to be synonymous with ignorance and debauchery." It may be remembered that St. Charles Borromeo gives much the same testimony as to the state of the diocese of Milan when he became archbishop. The radical reform effected since then is mainly due to the efforts and example of reform effected since then is mainly due to the efforts and example of such men as those whose lives are recorded here, though it cannot of course be forgotten that the Church of Franco has passed once and again through a baptism of fire which was likely at least to separate the wheat from the tares. And it is to be feared that the reform has been, after all, a one-sided one. In our own day the French clergy, as a body, contrast favourably in moral conduct with those of Italy or Spain, but their mental culture is of the feeblest. A living member of the French Oratory, Father Perrand, who is frequently quoted in these prices, dwells forcibly on the importance of this consideration. In these days, he says truly enough, "the humblest parish priest must expect to encounter self-elected esprits forts, and many on all sides reject the authority of his ministry." The educated classes of France are notoriously drifting away from all Catholic, not to say all Christian, belief, and the present generation of the clergy are powerless to stem the tide. There is something more needed for the contract of the clergy are powerless to stem the tide. spiritual training, however excellent, and the narrow and exclusive curriculum of the petit séminaire and grand séminaire too evidently fails to supply it. It may be well for those concerned to have this lesson impressed on them by influential members of their own order and communion. It was, we may be allowed to remind them, no Protestant or rationalist, but a canonized Saint of the most ascetic and orthodox reputation—none other than the famous St. Teresa—who established the axiom that when the choice lies between a devout and stupid confessor and a contatingly be preferred. And the good sense which is so conspicuous in many of the counsels of Condren and others cited in this volume, as also in the spiritual writings of St. Francis of Sales some of which have been translated by the same author-rests on a wider experience of life than any seminary can supply.

We may have appeared perhaps to wander from the volume

before us, though our remarks are suggested by its perusol. But it is time to say a word of the personages commemorated here. Of all the modern Saints in the Calendar there is none perhaps so attractive as St. Philip Neri, the founder of the Roman Oratory, whose winning character has gained him the sympathetic admira-tion of many beyond his own communion. Born at Florence just twenty years after the martyrdom of Savonarola, and brought as a boy in the Convent of St. Mark's, he retained through life a profound reverence and affection for the memory of the great Dominican reformer. The Congregation of the Oratory which he founded at Rume, composed of secular priests bound by no religious rounded at tame, composed of section priests dound by to reingoing vows, has lasted to the present day, and was imported, as is well known, into England by Dr. Newman. Twenty years before Philip's death in 1595, Berulle was born; so great was his success in converting Huguenots that Cardinal du Perron used to say, "It you want to convince a heretic, bring him to me; if you want to onvert him, take him to the Bishop of Geneva (Francis of Sales); but if you want both to convince and convert him at once, take him to M. de Berulie." He was educated by the Jesuits, but did not join the Order, and seems all along to have considered it his mission to labour for a revival of discipline and spiritual fervour among the secular clergy. It occurred to him that the best means of effecting this object would be to establish a community modelled on the Oratory of St. Philip Neri; but there were important differences both in the rule and spirit of the French and Italian Oratory, beyond what the author seems to be aware of. One point she does mention. Each house of the Italian Oratory was independent of all the rest, and governed by officers elected every three pendent of an the rest, and government by omnors elected every three years; but Bérulle—influenced probably by the French instinct or contralization, as well as by his Jesuit training—placed all the houses of his "Oratory of Jesus" under a common government. A Superior-General was to be elected by an assembly of deputies from the treneral was to be elected by an assembly of deputies from the various houses, of whom one was chosen triennially to represent every twelve members; and the first assembly held after the founder's death decided that the Superior should hold office for life. It is a further difference, not mentioned here, that, whereas the life send and scientific controversy and the education of youth hold a pro-

minent place in Berulle's scheme, and are specified in the Buill of confirmation, these objects are expressly evalued by St. Philip's rule, which gives daily preaching and ministration of the Sacraments as the possible work of his Fathers. The Gentery of Jesus spread rapidly in France, so that within twenty years of the foundation it numbered 71 houses and 550 members. It is certainly remarkable, as Father Ferraud has charved, that "us the beginning of that long period of 175 years during which the national representation of the States General was to be altogether suspended, the founders of the [Franch] Gentery should have developed a constitution in which factoristication ing the modifications of the Italian original) the rights of the work so carefully guarded, which obliged superiors to consider the opinion of their inferiors, which called upon sutherity to render a periodical account of its acts, and to be set saids in due course before a higher power, namely, that of the Congrugation itself, as represented by its deputies." Its early success was in great measure due, not only to the personal influence of Stambinaelf, but to his disciple and successor in the Generalabip, Condren, who recalls much of that striking combination of an ardent piety with a warm and affectionate nature, which had characterized St. Philip Neri. This is abundantly illustrated in his letters, of which copious extracts are given here. If the Cratory fell afterwards under the charge of Jansonism—which to the fashionable orthodoxy of the day, as we know from an amusing anecdate of the Court of Louis XIV., appeared worse than atherem—it did but share the fate of all that was most earnest and most independent among the clergy and devout thinkers of the Gallican Church.

Vincent of Paul, the founder of the Lazarists, had spent two years in the Oratory and twelve as tutor in the Gondi family before starting his own Congregation, of Mission Priests, who, like the Oratorians, were to take no vows, but only to express, on entrance their intention of remaining in it for life. It was designed for the training of the elergy by "spiritual retreats" as well as for the evangelization of the rural poor. Bossust made his ordination retreat at St. Lazare in 1652, and on several subsequent occasions conducted retreats there himself. There were also to be periodical "Conferences" of the clergy held there, and these lasted to the time of the first Revolution. Still more important, however, in its permanent effects was the work of Jean Jacques Olier, founder of St. Sulpice, of whose scendar training and antecedents we have already spoken, and who, though he has not been codents we have already spoken, and who, though he has not been canonized, appears afterwards to have attained both the reality and reputation of a very high degree of sanctity. All previous attempts at introducing the seminary system into France had proved abortive; but he, on undertaking the charge of the huge parish of St. Sulpice, including the entire Faubourg St. German, which is described as "the very sink of Paris for irreligion and immorality," resolved to work it by means of a seminary, or immorality," resolved to work it by means of a seminary, or rather community, comprising, besides ecclerisatical students, some fifty priests. The parish was a peculiar of the see of Metz, then held together with ten abbeys by Henry of Bourlon, a natural son of Henry IV., who was a laymon, and eventually a married man. From the seminary of St. Sulpice others were founded in various French dioceses, of which it was the pattern and source, and thus the system was gradually spread throughout the country. The objects of Vincent had been less exclusively clerical. Retreats for laymon were frequently held at St. Lazare, and Vincent has left minute directions as to the hospitable enter-tainment of guests who resorted thither for the purpose. Before leaving him on the night of his arrival the director of the retreat is to take care that nothing requisite for the "exercitant's" bodily comfort is omitted; he must be duly provided with paper, pens, ink, books, coverings for his bed, and a night-cap. But the three institutions of St. Lazare, the Oratory, and St. Sulpice were the joint instruments of that revival of discipline and devotion among the French clergy which was so sorely needed at the time. it was after all partial is true enough, but what reform is not? Olice died in his forty-ninth year, worn out with his excessive toils, April 2, 1657. Bossuct styles him "virum presentatissimmum et sanctitatis odore florentem," and Fénelon speaks of him as "vir traditus gratine Dei et plane apostolicus." Still strouger is the eulogy contained in a letter from the Assembly of the Clergy to Pope Clement XII., where he is called "eximius sacerdos, insi cleri nostri decus et ornamentum." Bérulle had died more than twenty years before, after witnessing the foundation of the spleudid church in the Rue St. Honoré, where his monument was orected, and which still retains its name of Oratoire, though, after under-going horrible desceration during the revolutionary period, it was handed over to the Calvinists, who still use it for their services.

This graceful "Sketch" of the career of some of the chief reformers of the French clergy in the sixteenth century may be profitably read in connexion with Mr. Jervis's excellent History of the Cleurch of France, which it serves to illustrate and supplement. We hope the author may still gontinue to labour in the same field, but trust she will forgive us for one parting caution. The corrections of the press in this, as in forme of her other werks, seem to have nearly superficially conducted. We have come across a great many misprints, especially in Latin quotations; and it is a pity that such easily avoidable blemishes should be allowed to detract from the charm of so interesting a volume.

LESSING'S LACCOON.

THERE are certain works which can never be what is called popular, and which at most can but have a limited number of renders amongst the most cultivated, so that their very existence seems precarious, at least in the sense of continued reproduction; and yet these books are by a kind of fortunate necessity reprinted once for each generation. The translation of Laccon made by Mr. and yet these books are by a kinu or location of Laocoon made by Mr. Bessley, of Learnington College, supplied England and America for twenty years; but now Messrs. Roberts, of Boston, have published a new translation, and Messrs. Macmillan promise another. So the little book is now entering upon a new lease of life in the English language. There is not a single work in the whole range of art-criticism which has so peculiar an interest for the student of intellectual history. It is the first example of intellect, armed with sufficient knowledge, applying itself vigorously to the solution of artistic problems, and it is wonderful how many such problems are really and satisfactorily solved and disposed of in the little book. All readers of Mr. Lewes's Life of Goethe will remember the passage about Goethe's art-training, where the biographer says :-

Instruction in the theory of Art he gained from Oeser, from Winckelmann, and from Laocoon, the incomparable little book which Lessing at this period carelessly flung upon the world. Its effect upon Goethe can only be appreciated by those who early in life have met with this work, and risen from it with minds widened, strongthened, and inspired. It opened a pathway amid confusion, throwing light upon many of the obscurest problems which torment the artist. It awakened in Goethe an intense yearning to see the works of ancient masters.

works of ancient muster

Goethe, being melancholy and hypochondriscal in class your fallowed Lessing to pass through Leipsic without making any attempt to see the man he so much admired; a caprice he after-the opportunity never recurred." Lord wards repented, for the opportunity never recurred." Lord Macaulay told Mr. Lewes that "the reading of this little book formed an epoch in his mental history, and that he learned more from it than he had ever learned elsewhere." A work which has een a source of light for minds so luminous as these may well

have light for other generations yet.

Great unity was given to this treatise by the choice of a single work of art as a central subject of discussion, and the work was most happily chosen for the purpose, because it was universally known, and admitted of the closest comparison with certain passages in poetry also universally known to cultivated people. To understand the creat nature of the book one has only to fancy the author stand the exact nature of the book one has only to fancy the author in his own room, surrounded by friends, with a reduction of the Laocoon upon the table, and a bookshelf behind him well supplied with Greek and Roman literature. He then begins to talk about art and poetry, taking his illustrations chiefly from this one example, quoting his ancient authors, referring to the marble group, and scattering throughout his discourse a quantity of the most acute remarks which at that time were entirely new, and which are still most important truths that artists and critics can never afford to lose sight of. It is not too much to say that if Lessing's subtle and just criticisms were remembered always as they deserve, many of the futile attempts that are continually made in literature and art would be simply and happily avoided. The intention of his little work is clearly set forth in the following extract from his own preface:-

The dazzling antithesis of the Greek Voltaire, that painting is dumb poetry, and poetry speaking painting, stood in no text-book. It was one of those conceits, occurring frequently in Simonidos, the inexactness and falsity of which we feel constrained to overlook for the sake of the evident truth

The ancients, however, did not overlook them. They confined the saying of Simonides to the effect produced by the two arts, not failing to lay stress upon the fact that, notwithstanding the perfect similarity of their effects, the arts thomselves differ both in the objects and in the methods of their

upon the fact that, notwithstanding the perfect similarity of their effects, the arts thomselves differ both in the objects and in the methods of their imitation, δλη καί τρόποις μιμήσους.

But, as if no such difference existed, many modern critics have drawn the crudest conclusions possible from this agreement between painting and poetry. At one time they confine poetry within the narrower limits of painting, and at another allow painting to fill the whole wide sphere of poetry. Whatever is right in one must be permitted to the other; whatever pleases or displeases in one is necessarily pleasing or displeasing in the other. Full of this idea they, with great assurance, give utterance to the shallowest judgments, whenever they find that poet and painter have treated the same subject in a different way. Such variations they take to be faults, and charge them on painter or poet, according as their tasts more inclines to one art or the other.

This fault-finding criticism has partially misled the virtuoses themselves. In poetry, a fundness for description, and in painting, a fancy for allegory, has arisen from the desire to make the one a speaking picture without really knowing what it can and ought to paint, and the other a dumb poem, without abandoning its proper sphere and degenerating into an arbitrary method of writing.

To combat that false taste and those ill-grounded criticisms is the chief object of the following chapters. Their origin was accidental, and in their growth they have rather followed the course of my reading than been systematically developed from general principles. They are therefore not so much a book as irregular collectures for one.

Lessing's opening chapter deals with the now well-knowin com-

Lessing's opening chapter deals with the now well-known com-tarison between the Laccoon of poetry and the Laccoon of sculpture La reference to the loud cries of the first and the comparative selftraint of the second. Lessing quotes Winckelmann to begin with:-

He raises no terrible cry, as Virgil sings of his Laccoon. This would not a possible, from the opening of the mouth, which denotes rather an anxious ad oppressed sigh, as described by Ladelet.

But after Lessing has quoted Winckelmann, he argues with great force that to a Greek there would appear nothing degrading in a cry of pain. To attach the idea of shame to the expression of suffering by ories is a modern notion, or a Northern notion; for it is suffering by cries is a modern notion, or a Northern notion; for it is old amongst the Teutonic races, but it was not an ancient Greek notion at all. "Not so the Greek. He felt and feared. He expressed his pain and his grief. He was ashamed of no human weakness, yet allowed none to hold him back from the pursuit of honour or the performance of a duty." So Homer makes the sen of Nestor say, "I am in no wise ashamed to weep." Nestor by it ye survey of the examing. Sophocles represents the dying Herculia as wailing, meaning, weeping, and screaming. After noticing these instances, and that of Philocetes, Lessing has his own inference to make: to make:

I now come to my conclusion. If it be true that a cry, as an expression of bodily pain, is not inconsistent with nobility of soul, especially according to the views of the ancient Greeks, then the desire to represent such a soul cannot be the reason why the artist has refused to imitate this cry in his marble. He must have had some other reason for deviating in this respect from his rival, the poet, who expresses it with deliberate intention.

Having thus determined that there must be "some other reason, Lessing at once diligently sets out in search of it. He proves in various ways that "among the ancients beauty was the supreme various ways that "among the ancients beauty was the supreme law of the imitative arts," and then concludes that "whatever else these arts may aim at must give way completely if incompatible with beauty." A painter would carry expression as far as was consistent with beauty and dignity, and what he might not paint he left to be imagined, a concealment which was a sacrifice to beauty. beauty:-

Apply this to the Laccoon and we have the cause we were seeking. The master was striving to attain the greatest beauty under the given conditions of bodily pain. Pain, in its disfiguring extreme, was not compatible with beauty, and must therefore be softened. Screams must be reduced to sighs, not because screams would betray weakness, but because they would deform the countenance to a repulsive degree. Imagine Laccoon's mouth open, and judge. Let him scream, and see. It was, before, a figure to inspire compassion in its beauty and suffering. Now it is ugly, abhorrent, and we gladly avert our eyes from a painful spectacle, destitute of the beauty which alone could turn our pain into the sweet feeling of pity for the suffering object.

Then Lessing is careful to notice the enlargement of the realm of art which has taken place in modern times, by which the artists have extended the field of their labours over all visible nature whether beautiful or not, but he says that there are other independent considerations which should set bounds to expression. Next he comes to that very important but often negected truth about art, that it must confine itself to a single moment of time, and he argues very ingeniously and very soundly against the choice of the culminating moment in an action:—

Since the artist can use but a single moment of ever-changing nature, and the painter must further contine his study of this one moment to a single point of view, while his works are made not simply to be looked at, but to be contemplated long and often, evidently the most fruitful moment and the most fruitful aspect of that moment must be chosen. Now that only is fruitful which allows free play to the imagination. The more we see the more we must be able to imagine; and the more we imagine the more we must think we see. But no moment in the whole course of an action is so disadvantageous in this respect as that of its culmination. There is nothing beyond, and to present the uttermost to the eye is to bind the wings of fancy and compel her, since she cannot soar beyond the impression made on the senses, to employ herself with feebler images, shunning as her limit the visible fulness already expressed.

Then follows a quite admirable argument against the choice of what is too transitory in nature. Lessing rightly considers that as the work of art is permanent, and is looked at for long together, the subject of it ought to have a certain natural possibility of duration also:

All phenomena [he says] whose nature it is suddenly to break out, and as suddenly to disappear, which can remain as they are but a moment; all such phenomena, whether agreeable or otherwise, acquire through the perpetuity conferred upon them by art such an unnatural appearance that the impression they produce becomes weaker with every fresh observation, till the whole subject at last wearies or disgusts us. La Mettrie, who had himself painted and engraved as a second Democritus, laughs only the first time we look at him. Looked at again, the philosopher becomes a buffson, and his laugh a grimace. So it is with a cry.

It is a matter of common experience that, although picture action often have a great momentary effect upon us in exhibitions, those which obtain the longest hold upon our affections are almost invariably pictures of repose. If the reader who is at all seriously interested in art will just pass over in his memory the pictures which he oftenest pauses before, and dwells upon, in the public galleries of Europe, we may predict without much risk of error that they will represent scenes or personages in a condition that may be best described as that of beautiful tranquillity. These are the only tures that remain true whilst we look at them, and as long as These are the only piclook at them, the only ones that retain a lasting charm. There is a clear distinction between the reasonableness of sketching extremely transient action for book illustration, and painting it in a picture. We may turn over the leaves of the book rapidly, but the picture hangs on the wall hour after hour, and day after day. What is true of painting in this respect is true in a still greater dayree of, sculpture; for a marble group in a room is a much more obtained than a flat picture hang against the wall. Indeed, if we sculpture; for a marble group in a room is a much more ournave thing than a flat picture hung against the wall. Indeed, if we might venture to express a private and half-heretical opinion, we should almost say that in the Laccoon group itself there is too much action for a work in marble, and that the position of the three victims, although the action has not yet fully culminated, is nevertheless transitory enough in its matters to be open to some objection on this account.

^{*} Lacconn: an Essay upon the Limits of Painting and Poetry, with Remarks illustrative of various points in the History of Ancient Art. By Gotthold Ephraim Lessing. Translated by Ellen Frothingham. Boston:

we are inclined to think that, as is natural in a man of literary training, Lessing's observations on poetry are still more masterly than his very scate reasonings about painting and soulpture. But what is best and most precious in his treatise is neither this nor that; it is the clearness with which he establishes the differences between the necessities of different arts. Poetry has often reference to the sys, but always through the imagination only, and it often addresses other senses or feelings than those which belong to with. The following analysis is perfectly unassailable:— We are inclined to think that, as is natural in a man of literary

Without inquiring here how far the poet can succeed in describing physical beauty, so much at least is clear, that since the whole infinite realm of perfection lies open for his imitation, this visible covering under which perfection becomes beauty will be one of his least significant means of interesting us in his characters. Indeed, he often neglects it altogether, feeling sure that if his here has gained our favour, his nobler qualities will either so engrous us that we shall not think of his body, or have so were us that, if we think of it, we shall naturally attribute to him a beautiful, or at least no unsightly one. Least of all will he have reference to the eye in every detail not especially addressed to the sense of sight. When Virgil's Laccoun screams, who stops to think that a scream necessitates an open mouth, and that an open mouth is ugly? Enough that "clamores horrendos ad sidera tollit" is fine to the ear, no matter what its effect on the eye. Whoever requires a beautiful picture has missed the whole intention of the poot.

Then Lessing goes on to argue that, since nothing obliges the poet to concentrate his picture into a single moment, he may, in passing, describe a transient weakness without reducing our general conception of a character that he has already taught us "Virgil's Laccoon cries, but this screaming Laccoon is the same we know and love as the most far-seeing of patriots and the tenderest of fathers. We do not attribute the cry to his character, onception of a character that he has already taught us to esteem. tenderest of fathers. We do not attribute the cry to his character, but solely to his intolerable sufferings." Passing from Virgil to Sophocles, Lessing analyses the situation of Philoctetes, and this analysis contains some of the critic's acutest observations. He remarks, for example, that "physical suffering in general possesses in a less degree than other evils the power of arousing sympathy. The imagination cannot take hold of it sufficiently for the mere sight to arouse in us any corresponding emotion." But in the sight to arouse in us any corresponding emotion." But in the drams in question Sophocles has contrived wonderfully to intensify and ennoble the idea of physical pain. "He chooses a wound—for we may consider the details of the story dependent upon his choice, in so far as he chose the subject for their sake—he chose, I say, a wound and not an inward distemper, because the most painful sickness fails to impress us as vividly as an outward hurt." Then come pages of delicate observation touching point after point in

the surest manner.

Several chapters which follow consist entirely of an investigation of the several chapters which follow consist entirely of an investigation of the several chapters which follows consist entirely of an investigation of the several chapters which follows consist entirely of the several chapters which is several chapters which it is se several chapters which to how consist entrary of an investiga-tion into the relative powers of poetry and painting, and the whole force of the author's intellect and learning is brought to bear upon this subject with a single great purpose in view—namely, to esta-blish as firmly as possible the independence of each of the two arts, so that neither of them may be stupidly censured for not doing what the other habitually does. He goes to the heart of the matter when he says, in speaking of poets, that the real object of their work is to let their personages act, and by their actions reveal their character. He laughs at an Englishman, Spence, for wondering

why the poets did not describe the Muses more:-

why the poets did not describe the Muses more:

What is this but expressing surprise that the poets, when they speak of the Muses, do not use the dumb language of the painter? In pactry Uranna is the Muse of astronomy. Her name and her employment reveal her office. In art she can be recognized only by the wand with which she points to a globe of the heavens. The wand, the globe, and the attitude are the letters with which the artist spells out for us the name Urania. But when the poet wants to say that Urania had long read her death in the stars—

I pas diu positis lethum pradixerat astris

Urania—

why should he add, out of regard to the artist—Urania, wand in hand, with the heavenly globe before her? Would not that be as if a man with the power and privilege of speech were to employ the signs-which the mutes in a Turkish seraglio had invented to supply the want of a voice?

In the sixtenth charter I essing attempts to concentrate in the

In the sixteenth chapter Lessing attempts to concentrate, in the space of two short sentences, the characteristics of pictorial and poetical subjects. There is a flaw in one of his statements, but only in the form of it, and the resulting idea is a safe guide for the practical worker in the two arts:—

Objects which exist side by side, or whose parts so exist, are called bodies. onsequently bodies with their visible properties are the peculiar subjects of

Objects which succeed each other, or whose parts succeed each other in me, are actions. Consequently actions are the peculiar subjects of poetry. It is certainly not true that objects which succeed each other are actions; it is the movement, the succession, which constitutes the action; but to this of course the objects are indispensable. Take, for instance, a dog and a hare; when they are stationary it is quite correct to call them hodies; but when the dog runs after the hare, are they not bodies still, and is it accurate to affirm that they have cessed to be bodies and have become actions? The running dog and hare are surely not two actions, but two bodies in action. However, having noticed this flaw in Lessing's statement, we may accept his dictum with certain restrictions. What he means is that when life pauses in certain restrictions. What he means is that when life pauses in certain temporarily fixed situations, the moment of pause is the right time for the painter, whereas, when life moves on in a rapid succession of situations, the poet is the artist best able to deal with it as a subject. This is quite true in a general way, and yet on reflection we shall remember many poems which deal with a single situation rather than a succession, whilst it is clearly open to the painter to represent at Hogarth did.

The succession of situations on different to represent at Hogarth did.

bidden to use several pages. The reason against the practice is chiefly the difficulty of selling ten or twenty pictures together, so as not to break a series, but this is merely an economical reason, which has nothing whatever to do with the capabilities of the art. Several other important questions are dealt with by Lessing in the Laccoon, but we have not room to indicate them. Every page of the book is full of minuted intellectual and artistic interest. of the book is full of mingled intellectual and artistic inte We have to acknowledge, in conclusion, the thoroughly good quality of Miss Frothingham's translation, which is as readable as a wellwritten original English book.

A FEW PAGES FROM REAL LIFE.

"A JOURNAL," says Mrs. Osborne in her introduction to this book, "is the photograph of a mind, and a mind is at all times a jumble of ideas of all sorts as to value, grave and gay, trifling and profound." While we are willing to allow Mrs. Osborne, if it gives her the least satisfaction, to call a journal a photograph, we regret that we cannot go with her any further. The ideas that JOURNAL," says Mrs. Osborne in her introduction to this form the jumble that form the particular mind of which this journal is a photograph, are never grave, never gay, never profound. Nor is there any difference to be found in their value, if they are to be is there any difference to be found in their value, if they are to be measured at least by any recognised standard. They are not worth a straw, they are not worth a pinch of snuff, they are not worth a rotten nut. We do not go so far as to say that therefore no possible standard could be struck out by which their worth could be estimated. For all we know, if it were thought advisable to make the attempt, it would be possible to estimate their value by comparing them with so many verses of Proverbial Philosophy, or so many pages of A. K. H. B. Why Mrs. Osborne calls her book A Few Pages from Real Life we cannot so much as cases. A paraon in Pages from Real Life we cannot so much as guess. A parson in like manner will often call his longest and dullest sermon a few practical remarks. We never heard, however, of any one else giving it the same name. Fewness, after all, is a comparative term, and, compared with what Mrs. Osborne has written, the 480 pages that she has published may be few indeed. Let her be satisfied, however. She has shown up the errors of the Papists, and "the inconveniences as to personal comfort" that affected her daily She has exposed the absurdity of the doctrine of Transub stantiation, and the badness of the dinner she had at Brussels. She has struck a fatal blow at the Jesuits, and a scarcely less fatal one at the smallness of the sheets on the Continental had. grievance," she says, "is such a national one that it really demands reformation, for bodily comfort is one of the first requisites for travellers who are not discoverers or officials, and as such must rough it if required." If in the next century or two the power of the Roman Catholic Church gots narrowed, and the sheets abroad get widened, it will be mainly owing, no doubt, to Mrs. Osborne's book. We are not ashumed to own that, few though the pages are which she has written, far fewer of her pages have we been able to read. She has travelled—so much the table of contents tells us—from London to Constantinople, and from Constantinople back to London. She has told us, so far as we accompanied her—and that was only to Viennawhere each night she slept and where each day she dired, what she said and what she thought. She has noted a thousand circumstances and made a thousand reflections. Each circumstance unfortunately was utterly insignificant, and each reflection was foolish. Litera scripta manet must be the motto on which she acts, and, like certain silly people who treasure up every letter they have received, she attaches a value to what is written merely because it is written. We should suppose that exactly as she wrote her journal, so has she published it. When once anything had got fairly entered into her note-book, it was no more to be altored than if it had been a law of the Medes and Persians. When we conif it had been a law of the Medes and Persians. When we considered the important nature of the various entries, we were reminded of nothing so much as of a diary which a little girl began to keep. She, too, had thought fit to record the strange occurrences that had come within the range of her short life. The centries, unless our memory or our imagination plays us false, were somewhat as follows:—"I saw to-day a charity girl hopping."
"I saw two porters riding in a railway-carriage."
"The postman had a ride to-day in the butcher's cart."
She however, so far as we have yet learnt, has not gone into print, though now that Mrs. Osborne has published her "Notes of Impressions received from well-known Places" we do not know why she should in the least hesitate to publish hers.

hard to imagine what manner of person she can be who It is very thinks that the world will care to know that when she arrived late at Munich the first place she drove to was the chemist's, and that she found the hotel so full that she could not have a sitting-room. When a Special Correspondent is sent out to some great war, and finds that, owing to some hitch met with in beginning the work of butchery, there is as yet nothing to tell, he may be excused if he fills his letter with what nobody cares to read. As an honest man receiving good pay he is bound to write something, and if he cannot write about others, he can at least write about himself. But Mrs. Osborne, of course, has no such excuse as this. She had nothing to write, and she need therefore have written nothing. Had she what is called "great command over her pen," she might

had been solemnly put on record that the coups in which she and G. were, "being very near the engine, shook terribly. G. moistened her lips with a lemon, but could touch nothing else, so I could not enjoy the levely scenery we passed through." "Munich," she goes on to tell us in one of those strangely composed sentences which near end then by their absundity almost yours the december. which now and then by their absurdity almost rouse the drowsy

Musich is considered very unhealthy, and yet there are no great provisions for acquiring remadies; for at the English Apotheko we found that English was not spoken; and the Hof Apotheko we arrived at, through the doubting toleration of a Bavarian sentry, we found to be a laboratory situated in the palace itself; but, on the other hand, care is taken not to bry people alive, for every one who dies there is carried to the dead-house, where precautions are taken that, should consciousness return, there might be a way of escape from such an awful fate.

We should be curious to know, by the way, how it happens that the laboratory in the palace is so unhealthy that special provision has to be made for those who should chance to die there. Are the Court chemists of Munich so devoted to experimental science on substances of the most dangerous and subtle nature that they are ever falling down in a trance, and being borne away, as if dead, to their burial? If a mistake is to be made with any of them, and if they are to be hurried out of the world before their time, they may, if it is any consolation to them, know, on the authority of Mrs. Osborne, that "the entotional part of one is that which is to last while the regregations are to change in a future state of axists. of Mrs. Osborne, that "the emotional part of one is that which is to last, while the perceptions are to change in a future state of existence." It is curious to notice the extreme rapidity with which Mrs. Osborne passes from subject to subject, from thought to thought. She tells us that "every chemist's shop on the Continent ought to have an ample supply of Condy, and nowhere is it to be had."; and then five lines further down, without even beginning a fresh paragraph, she goes on to add, "Life becomes like an objective romance to read the endings thereof when remance has been expunged from subjective life." Between Condy on the one side, and the objective romance and the subjective life on the other, she expunged from subjective life." Between Condy on the one side, and the objective remance and the subjective life on the other, she has managed to squeeze G.'s bed, the First Napoleon, the Emperor of Germany, and the Queen Louisa of Prussia. In another page she opens with what we may call a Protestant burst, urging "every Protestant who can afford to leave as little as five pounds in England, Ireland, and Scotland, to do so for a fund to maintain pure Protestantism." She then, without a pause to take breath or to came down from the height of her great argument, remarks that "the wooden bridges of Salzburg seem to be made of loose planks, and must, I should think, soon be worn out, but most easily replaced," and then, with another jump, she says, "A carriage is very agreeable after reilroads, and railroads increase the natural tendency of a traveller to regard humanity under a purely national aspect, and the inhabitants of other countries with diverse hobits and manners as 'sports of nature.'" We cannot, however, bring home to our readers the wonderful manner in which this book is written unless we quote the author at some length. We shall written unless we quote the author at some length. therefore venture to give a few lines over a whole page, so that they may see what sort of a thing is this "Guide-book from Notes of Impressions received from well-known Places ":-

When one looks at the stars and thinks that "our Father" made the glorious solar system, that He created that human nature which in the midst of its perversions yet affords gleams of its divine origin and illustrations, such as Plato, the" noble army of martyrs and saints," Sir Isaac Newton, and to sam up in one name, mental and moral grandeur, a name familiar to us all, for "a city that is set on a hill esamet be hid," and noble as his career in public life was, dedicating as he did all his energies to the welfare of this empire and mankind at large, we know that Prince Albert was perfect in domestic life also, and our noble-hearted Queen, as a wife, was more gratified in giving the love of millions, through herself, to a character worthy of all reverence, than in being the sovereign of her great empire. No other woman ever had such a fate, and may every blessing rest upon their descendants!

We met a good many acquaintances at Salzburg, and all agreed as to its surpassing beauty.

As there are so many glow-worms, I wonder there are not fire-flies also, for I should not have thought it was too far north.

We have read the utterances of some of the silliest of the silly. In flotion we are familiar with Mrs. Nickleby's speeches; in real life we are not unacquainted with the political discourses of the author of Ginx's Baby. But neither Mrs. Nickleby nor Mrs. Edward Jenkins can hope to rival Mrs. Osborno. She but nor surpasses both of them in the power of making a foolish start, many foolish discussions, and a foolish are an experience and a foolish are the same of th digressions, and a foolish end. It is a pity that women have not yet seats in Parliament, for in that case we should expect before long to hear that she had been returned to Parliament for some

Northern borough.

On one occasion Mrs. Osborne tells us that "the Times to-day has an article which I don't understand." She would seem to imply from this that most of the articles she generally did understand. We should have thought that she would have been a good deal puzzled by the grammar that is sometimes to be found in them. deal puzzled by the grammar that is sometimes to be found in them. But perhaps she understands English, enough at least to read it, as well as the language in which she writes. It must have been an unusual thing, however, for her to pick up a copy of the Times; for a few lines further down, in recording the events of this same important day, she writes:—"In the Times to-day a quotation from the Emperor Nicholas anused me very much." The quotation not only amused her, but gave her an occasion to point out that "in no country in the world does royalty reckon for so much, as to personal affection, as it does in England, because it is a subjective and not an objective interest. It is not like a fine bust laid upon a pedestal composed of subjects, but is like the apex of a pyramid." It must be rather a serious matter for Mrs. Osberne's friends when she is seen to pick up a number of the Times. If every time she

gets amused by one of its articles she is to swind los in such fine talk as this, they must one and all begin to sume the art of writing. gets amused by one of the articles and as to detain a man and time ralk as this, they must one and all begin to curse the art of mining Years ago they must have seen that she would, if she lived get into print. For she showed, as she is careful to let us see, a mint unusual precocity, and she is reminded on one occasion, to quote her own words, "of the inpute horror she had, as a child, of a precident. own words," of the innate horror she had, as a child, of a precident. People used to laugh at me, and call me old-fashioned, but they did not in the least shake the resolution with which I ever replied, 'I hato it as a precedent.'" We too may be allowed, when a silly book is published, to say "We hate it as a precedent," I to exercise a severity of criticism sufficient, we may hope, to have the precedent from getting established.

FRENCH LITERATURE.

CHARLES LOUANDRE has published another volume of extracts from the old French continue. His previous LVL of extracts from the old French contours. His previous collection dealt with the contemporaries of Rabelais and Honaventure Desperiers; we are now introduced to the seventeenth century, and if many of the names quoted by the learned editor are wall and it many of the names quoted by the learned editor are wall known to most readers, we notice, on the other hand, several which sound strange, and which require a little biographical elucidation. M. Lonandre devotes a preliminary essay to a view of the whole ground over which he purposes taking his readers; he shows the decay of romantic literature manifesting itself on the eve of the Remassance by vain efforts to revive the chansons de geste, and to interest the public in the high deeds of the Amadis. Honors the property and his detack the most remarkable d'Urfé then came forward, and his Astrée, the most remarkable specimen perhaps of early pastoral novels, obtained an amount of popularity which seems to us quite incomprehensible. Sorel, Scarron, and the other representatives of the Bolème littérairs next engage our attention, simultaneously with the more ambitious works of La Calprenede and the Scudérys. From the quieter compositions of Fenelon and Perrault, we come at last to Fontenella's artificial and manièré style; and thus the whole of the grand siècle is brought before us, M. Charles Louandre illustrating his excellent though brief biographical sketches by characteristic extracts.

The publication of the works of André Chénier and François de Pange has met with the success it deserves, and M. Charpentier is thus encouraged to draw upon the literature of the Revolutionary period for fresh materials. We have always thought that a score of most interesting volumes might easily be produced from the polemical writings of Mullet du Pan, Rivarol, Mirabeau, and the other leading members of the National and Alreadent, and the other leading members of the National and Legislative Assemblies. Amongst these, the brilliant offusions of Camille Desmoulins † would naturally occupy a conspicuous place. M. Jules Claretie was peculiarly well qualified to make us acquainted with the controversial talents of the ricus Cordelier, for he has long been engaged upon a history of that witty journalist, and of the political group to which he belonged. In addition to the various pieces which have already been printed, M. Claretie has been able to put together a number of brochures which are now extremely scarce, and which are interesting for the which are now extremely scarce, and which are interesting for the history of the early days of the Revolution. It was impossible of course to give the Récolutions de France et de Brabant in their entirety, but a selection of striking passages is made, and will, we doubt not, be read with pleasure by those who not only take an interest in political history, but admire likewise the effusions of true wit, even when they overstep every now and then the limits of good taste. M. Sainte-Beuve calls Camille Desmoulins "la plume la plus gaie, la plus leste du parti démocratique"; thanks to M. Jules Claretie, we shall now be able to ese hew far this estimate is deserved. Notes, tables, and a copious alphabetical index add much to the value of these two volumes.

The history of contemporary Italian literature is a subject which has not yet been treated with the care and detail that it descrees. In writing about the renovation of Italy, authors have chiefly confined themselves to political or social topics; they have show the influence of freedom in developing the material prosperity of the country; their discourse is of drainage, roads, agriculture, commerce, and they scarcely notice the intellectual progress which has already accomplished so much. This last is the subject specially selected for consideration by M. Roux, and the little values he has just published to a country of the little values he has just published to a country of the little values he has just published to a country of the little values he has just published to a country of the little values he has just published to be country to the little values he has just published to be a little value of the little values he has just published to be a little value of the little values and the little values has been accomplished to be a little value of the little values and the little values has been accomplished to be a little value of the little values and the little values are little values are little values. volume he has just published f is a sketch of Italian literature in its various branches during the last twenty years. It is obvious, however, that some reference to the previous epoch was necessary going on, and M. Roux hes accordingly devoted an introductory chapter to a review of Italian literature from the First Empire to 1860, describing chiefly the writings of Monti, Ugo Foscolo, Mansoni, and Gioberti. He is evidently at home in this interesting subject, and his agreeably written volume is a valuable contribution to the suries of text-books issued by M. Charpentier.

M. Marimée's Portraits historiques et littéraires 5 agraints of fifteen

sketches which have already appeared either in periodicals or as preferent to editions of Brantône, Stendhal, &c.; their third morit is that they are the last collected remains of an author whose reputation will live as long as people are found to appreciate excellent

writing and me immediateless which cover allows itself to run riot. One of the places here reprinted is M. Mainston Discuss do reception at the handlessy, where he had been chosen to succeed Charles Nedler. It not unfrequently happens that contrast rather than harmony characterizes the elections to vacancies occurring at the Public Mararin; and in the instance of M. Merinde this was certainly the case. The author of Le dernier banquet des Girondius too frequently allowed fancy to acrosch upon the domains of historic truth, whilst his successor is the Institute gave, on the centrary, to fiction the appearance of sober reality. Both Charles Nodier and Mérimée are open to the accusation of having too much frittered away their talent; and it is a pity that their literary fame should rest upon a number of small productions instead of being derived from some important and first-rate work.

We have once more to speak of M. Jules Claretie. His Médaillons et persents form a complete gallery of modern French painters and sculptors. Not only does he devote separate chapters to the principal amongst them; he also studies them together as they appear in the Paris Exhibitions of 1865, 1867, and 1872; and, by way of preface to this second edition of his volume, he gives a brief sketch of the history of French art during the year 1873-74. M. Olaretie's work will be found full of particulars interesting to biographers, and in this respect it can be classed in the same category with M. Figuier's Année scientifique; but he does more, as he is not afraid of theorising, and of pointing out the direction which art, as he thinks, ought to move. Originality is what he recommends above all, and he denounces equally the copyists of Overbeck's mysticism and the imitators of the Italian style.

During the month of April last M. Jules Favre was invited to give a series of lectures before a Belgian andience; he has now collected them in a small volume †, to which is added a preface on liberal institutions generally, and, in particular, on the political state of Belgium itself. Without following M. Favre through the details of this introductory chapter, we may perhaps draw attention to the contrast he so forcibly brings out between the present attitude of two nations which almost simultaneously made a revolution for the purpose of founding a constitutional momerchy. It is no use attempting to deny that France was much hampered in her efforts by administrative habits which were the work of centuries, and which it was impossible to throw off completely at a few months' notice; but, at the same time, the character of Louis Philippe accounts to a considerable degree for the catastrophe of 1848 and its deplorable consequences, whilst the practical common sense, the frankness, and hencety of Leopold I. enabled the Belgians to bring their political undertaking to a prosperous issue. M. Jules Favre has clearly illustrated this in his preface. The lectures themselves are partly biographical, partly philosophical; the former group comprises an éloge of Washington and one of Joan of Arc; the latter, an essay on international duties, and a disquisition on the position of women in democratic societies.

and a disquisition on the position of women in democratic societies.

Like so many other politicians, M. Paul Thureau-Dangin is irresistibly led to study the present by the light of the past, and to search the early annals of the French Revolution for circumstances and situations analogous to those amidst which we are now moving. This is a temptation which one can easily understand; but it is sometimes dangerous to yield to it, and, with every desire to be impartial, the historian is often found drawing artificial comparisons, and giving a construction to facts which they hardly justify. M. Thureau-Dangin describes in his first essay the situation of France between the catastrophe of Robespierre and the coup dietat of Brumaire, and he finds there the exact counterpart of the crisis through which his country is now passing. The Republic of 1874, like its predecessor, is, he contends, merely an official label applied to the dictatorship of a party—an arbitrary regime which events might have justified, but which has now neither excuse nor review dietre; it must disappear, and the problem is, what system shall take its place? But if, as he considers, the excesses of the Radicals have disgusted the country with the Republic, the obstinacy of the Extreme Right has not been less powerful in striking a fatal blow at the Royalist party. M. Thureau-Dangin proves this by giving a brief account of the administrations of MM. de Serre, de Villèle, and Martiguae, from 1818 to 1829, and he shows that whereas the Monarchical ultrus were as designous as their colleagues at the other extremity of the House, the genuine members of the Right represented not only the principles of legitimacy and hereditary right, but the traditions best espable of counteracting the vices of democracy. The third essay in this volume is intended to illustrate the danger of placing the seat of government in Paris, and of leaving the executive and legislative autherities under the ever-jealous eye of the mob.

The second volume of M. Louis Blane's work is devoted to political questions, and consists of articles published in the newspapers between 1839 and 1874. The first seems to us the most remarkable, because it contains the programme of Socialism written at a time when the theories which during the last forty years have brought France several times to the brink of destruc-

* Peintres et sempteure contemporation. Par Jules: Claretie. Parle: Charpentier.

tion were only dreams, seeking indeed to be retlined, but hope constantly in check by the power of the description. M. Louis Blane has lived long enough to see his principles of political scenomy carried out to an extent which he blamed scenosly anticipated.

M. Gaston Boissler's learned treaties on the Heligian of the Romans" is a production which deserves a fuller notice than we can attempt to give it here. If we pass from the study of Cicaro's correspondence to that of Marena Ameditus, we cannot two centuries a thorough change seems to have taken place in the view which society took of religious subjects, and Romes has shaken off unbelief to become religious by the stunness of all metamorphoses. The question naturally arises, What influences were the several schools of philosophy leavened by the spirit of religious faith? M. Beissier's aim is to supply the answer to this question. His design has been to sketch the "revival," if we may use the expression, which took place in Roman society between the Augustan age and that of the Antonines, independently of the action of Christianity. He begins by a review of the origin of Roman polytheses, and describes its gradual decay through its alliance with Hellenium, combined with the indifference or hostility of the multitude and the attacks of the poets. When Augustas took the reins of government scepticism was prevalent in Italy, and he felt the necessity, of strengthening his authority by the assistance of religion. In detailing the efforts made to bring about this result, M. Hotssier devotes two long chapters to Virgil, and to a criticism of the Aineid viewed as a religious poem; he explains how the Manenam bard came to be regarded almost in the light of a hessid of Obristianity, and he sees in his opic the faithful expression of all that purified heathenism could supply as an anticipation of the Gospet. Heaven and the various metaphysical schools occupy an important place in the second book, which treats of religion during the epoch immediately following the reign of Augustans; whilst the third and concluding one is taken up with a description of the state of society viewed under its different aspects. M. Boissier's conclusion is that Christianity found the heathen world thoroughly prepared for its reception, not mere

M. Gréard's volume on Plutarch † refers to the same period as M. Boissier's work, and relates the efforts of one of the wisest amongst heathen philosophers to selve the problems of man's destiny in this world. That these efforts are too often inadequate and superficial is the fault not so much of l'interch himself as of the system in the midst of which he was brought up. Paganism could not tear off the veil from the eyes of men, and even the doctrines of Plato, which the moralist of Cheromes loved so much, failed to clear away the principal difficulties in the enigma of life. M. Gréard himself acknowledges that Plutarch "was in spirit and in heart a heathen, and that no moralist of the same epoch was by the character of his teaching so far off from the ethics of Christianity." His merit consists principally in the practical wiedom of his precepts, and in the charm of his style. No one ever made a more agreable use of an extensive course of reading; no moralist ever turned to better account the treasures of wisdom and of thought contained in the classical works of Greek philosophers and poets. M. Gréard's easy has reached a second edition, and it has been so completely recast that it may be considered almost as a new work.

Marc-Antonio Barbaro is unquestionably one of the best Italian representatives of the Renaissance period. As a diplomatist he took an important part in the political history of the sixteenth century. After the battle of Lepanto he was employed to negotiate the conditions of peace, and he discharged the arduens duties of Ambassador for the Republic of Venice at the Court of France and at that of Pope Sixtus V. As a man of literary tastes he likewise attracted the notice of the Venetian Government, for he was three times instructed to reform the University of Padus. Finally, his artistic sympathies were no less decided; the architect Palladio and the painter Paolo Cagliari found in him an enthusiastic patron, and he even learnt sculpture under Alessandro Vittoria. Thus mixed up with all the events of a busy and exciting open, Barbaro stands forth as the most complete embodiment of the Italian magnifico, and fortunately the Venice archives abound in materials for a history of his life. M. Charles Yriarts has made admirable use of these documents, and the handsoms volume; before us will be found to illustrate the history not only of Italy, but of France three containes ago; for it contains a special chapter on the causes which induced Henry III. to give up the crown of Poland, on his way from which country he visited the Venetian Republic and was spiendidly entertained by the Senate and the Doge. A portrait and a facsimile complete this monograph, which forms a valuable companion to M. Armand Hasselst's works, La diplomatic vanitiense and Lea archives de Venice.

for children, also wrote a narrative of her journey to Madrid, and this work had long ago fallen into disrepute on account of the writer's literary character. It was assumed that a person habitually living in an atmosphere of fiction could not be trusted habitually living in an atmosphere of fiction could not be trusted when she set down to give the public the journal of her travels, especially describing as she did a country like Spain, extremely difficult of access towards the end of the seventeenth century, and descriptions of which had to be taken on trust. It must be owned that Mme. d'Aulnoy seemed to have done her best to justify the suspicions of her critics; with the view, no doubt, of enlivening the details of her travels, she mixed up with them opisodes of the most romantic character, evidently the products of a fertile imagination, and thus thought that she had combined the amusement afforded by Gil Blas or Don Quirots with the solid advantages of a genuine impression de voyage. In short, her volume was too much leavened with fiction to please the sober-minded, and too realistic to interest the lovers of romance. Besides, her contemporaries had not the sources of information which we now and too realistic to interest the lovers of romance. Besides, her contemporaries had not the sources of information which we now possess in the way of mémoires, &c., by which to check the lady's narrative. Mme. Carey, who has undertaken to publish the present edition of the work, has carefully availed herself of all the aids she could discover, and the result is very favourable to the fair voyageuse. Leave aside the romantic episodes which are easily distinguishable from the rest, and you have before you, not indeed a statement of Spanish politics at the time of the War of Suscession, but an amusing, chatty, picturesque sketch of the Court and city of Madrid.

The political and physical description of the Slavonic racest contained in the little volume before us is intended to be not merely, a contribution to geographical science, but also the pièce justificative of a theory. In a long preface the anonymous author declaims against the stupidity of his countrymen who waste precious time in endless discussions on Communism and Federalism, instead of preparing themselves to ward off further attacks by

instead of preparing themselves to ward off further attacks by Prussia. In order to counterbalance the influence of Germany, France, says our author, should unite itself closely with the Slavonic races; another revolution, he thinks, is at hand, another convulsion, which will break out this time between those races and the various nations belonging to the Teutonic family; the whole of Europe must necessarily be drawn into the conflict, and France can have

must necessarily be drawn into the conflict, and France can have no desire but an alliance with the natural enemies of Germany. Whether the reader accepts this view or not, he will find in the volume a number of interesting particulars, spoiled, however, by a pretentious and bombastic style.

It was Boileau who said "un sonnet sans defaut vaut seul un long poème," and Godeau, "the dwarf of La Princesse Julie," expressed his firm conviction that there was not a single good sonnet in the French language. This is no doubt going a little too far; but, if we may judge from the sumptuously got-up collection just published by M. Lemerre, we may safely say that contemporary sonnet-writers ought either to hold their peace or to attempt some style of composition in which medicerity is less generally the prevailing rule. The further we go back chronologically in this volume the better the pieces are, and the famous poems which set the Jobelius and the Uranists by the ears ten centuries ago now appear in company with a number of really neat and elegant little sketches. The book is introduced by a history of sonnet-writing, giving us the craft and mystery of a a history of sonnet-writing, giving us the craft and mystery of a style of composition in which we may without exaggeration say, Multi vocati, pauci electi.

M. Ernest Naville has contributed to the June number of the Bibliothèque universelle a very able review of Auguste Comte. It is a calm, dispassionate critique of Positivism, illustrated with biographical details and notices of the leading philosophers of that section. The same number of the Genevese periodical gives us the sequel of M. Lehr's remarkable essay on woman's rights, and

the sequel of M. Lehr's remarkable essay on woman's rights, and the imaginative part is well represented by two tales. §

As for French fiction, properly so called, it is neither better nor worse this month than usual. M. Jules Claretie writes a kind of historical novel on the epoch of the Directory, and his animated pictures of society at that period are, strange to say, comparatively unobjectionable. || The Muscadins or incroyables, with their scrotulous-cravate (such was their actual name), their topboots and their powdered hair, occupy the foreground, whilst from the midst of a motley assemblage of personages stand forth Augereau, Barsas, Mms. Tallien, Bonaparte, and that famous Mms. Angot whose peculiarities are just now the theme of all the organgrinders.

M. Louis Enault had not accustomed us to sketches of the demi-monds, and his novel La vie à deux ¶ is, we trust, an exception which he will not repeat. It is true that the dramatic incidents crowded together in the two novelettes before us are estensibly designed as a lesson, and the author would repudiate the idea of appearing in any other character than that of a stern muralist; still the flect is disagreeable, and most readers, we fear, will be attracted to the book for the description it gives of unlawful passion rather than for the moral professedly appended to it.

LORD DERBY AND THE BRUSSELS CONFERENCE. ORD DERBY'S conditional and qualified assent to the proposed Conference at Brussels deserves entire approval. No English Commissioner will be appointed until the other Governments which are to take part in the Conference have disclaimed any intention of either proposing any change in the laws and usages of war, or of intering in any way with belligerent rights at sea. If these concessions are made, an English Commissioner will attend the Congress, but he will not be invested with the character of a plenipotentiary. Every proposal which may be made will be referred home for instructions; and the other members of the Conference will receive full notice that no decision will be binding on England until it has been formally accepted by the Government. Having taken these precautions, the Foreign Minister exhibited a proper regard for international courtesy in not absolutely refusing to take part in the Conference. The Emperor of Russia is entitled to a certain amount of deference; and it is probably not merely a conventional assumption that a part or the whole of the object of the Conference which he proposes may be to mitigate the evils and sufferings of war. To any suggestions which may be made for purposes exclusively humane the English Government will pay willing attention. It is possible that recent experience may have shown the expediency of improving the condition of prisoners of war, of facilitating exchanges, or of providing for the security of those who attend the wounded. It will be for the promoters of the Conference to explain the advantages of any other method which they may devise for mitigating a great and unavoidable evil; but it must be remembered that one of the objects of legitimate war, as of criminal legislation, is to inflict suffering either by way of reprisals for injustice, or for the purpose of enforcing the acknowledgment of rights and the discharge of national duties. One of the principal causes of the incessant hostilities of the middle ages was the discomfort of ordinary life, and the consequent preference of the military classes for the excitement of war over the dulness of peace. Modern civilization has provided many additional reasons for objecting to the violent disturbance of occupations and engagements. Only professional soldiers and sailors regard a violent death as a natural and probable occurrence; and the whole community has the strongest in disconneging the retired property and the professional soldiers. interest in discouraging the national quarrels which may cause widespread misery, and which will undoubtedly impose a heavy burden of taxation. If means could be discovered for obviating all the risk and suffering of war, the reasons for valuing peace would disappear.

Any proposal of the great military Powers to modify the law and practice of war, although it may be made in perfect good faith, must nevertheless be regarded to a certain extent with suspicion. It is highly improbable that any preject of the high will be calculated to diminish the advantages which are derived from superiority in numbers and organisation. Russia and Germany, not to mention France and Austria, must have strong motives for increasing the immunities of large regular armies, to the detriment of kind became incorporated with the indefinite code of international law, Commanders in-Chief would enjoy every facility for exercising any additional powers which might be conferred upon them by general consent. On the other hand, if it became their interest to disregard restriction and the proposed on their discreption, there would be no tribunal and no external form which

could compel them to observe new rules of warfare. If, for instance, it were enacted that an invading army should not interfere with private property, it would be idle to expect that a general-in-chief should allow his troops to starve in the midst of abundance. It must be remembered indiscussing similar questions that belligerent rules can at best only be regarded as more or less authoritative recommendations. It might have been thought that in modern times prisoners of war were in no danger of capital punishment; yet the Carlists and Republicans in Spain incessantly accuse one another, with or without foundation, of refusing quarter. No French or German general would, except under extraordinary provocation, be liable to such imputations; but there are rules of comparatively imperfect obligation which would, before and after the Brussels Conference, be interpreted according to the immediate interest of belligerents. There would be no difficulty in finding plausible excuses for departing from the theoretical law. The population of an invaded country is generally disaffected to the conqueror, and it might always be asserted that the adverse belligerent had given a special provocation, or perpetrated a previous irregularity.

The statements of the purpose of the Conference which Lord Density quoted from a Vienna paper were not official, and may probably have been inaccurate; but such schemes would furnish a more intelligible explanation of the object of the Conference than the vague statement that it is deemed expedient to mitigate the hardships of war. The Vienna writer announced, with or without authority, that wars were henceforth to be exclusively conducted by the armed forces of the belligerents. No interference with the persons or property of civilians will be allowed, and on the other hand private combatants will incur the penalties of crime. When a foreign territory is subject to military occupation, the general in command will exercise supreme civil and military power, so that, as Lord Dennier observed, if an invading army supercontablished in Kent often defeating the defeating the defeating the defeating forms. were established in Kent after defeating the defending force, any inhabitant of the county would become liable to the consequences of treason if he maintained his allegiance to the QUEEN. It is not improbable that the proposed exemption of non-combatants might be intentionally expressed in ambiguous language with the result and for the purpose of incidentally abolishing the right of seizure of an enemy's vessels and goods at sea. A hundred years ago all the Continental States were bent on restricting maritime rights for the simple reason that England was the first of naval Powers. As the superiority has fortunately not thus far been impaired by the lapse of years, it is at least conceivable that the same motives might lead to the promotion of a similar policy. It is barely possible that a community of interest may exist between great military Powers and a country which maintains a small army and a navy of proponderating strength; but proposals to adopt new rules of international law for the common benefit of States differently situated suggest the necessity of vigilance.

Lord Derby has for once been unjustly charged with an excessive display of characteristic cantion. Courage and decision were proved rather by hesitation in adopting a plausible scheme than by hurried anxiety to avoid possible offence. It is not certain that Mr. Geal-grone and Lord Geanville would have been equally prudent and firm. Any plan, however insidious, for diminishing the evils of war might have pleased Mr. Geal-grone's credulous fancy; and he could have expatiated with interminable eloquence on the error of missing an opportunity, and on the wickedness of doubting the sincerity of friendly and benevolent

Governments. Impetuous timidity is one of the most dangerous qualities of a statesman; and fortunately Lord DEEBY, though he cannot be charged with excessive audacity, is never hasty or impulsive. In one of the most humorous fictions of the last generation, a moralist of easy principles asks why laws are made, and answers his own question by adding, "evidently for the benefit of those "who make them." Lord Derey perhaps conjectured that the international legislators at Brussels would enter on their task with the same exclusive regard to their own interests. The Russian and German Governments, having perhaps arrived at a prohiminary understanding between themselves, might probably commence their labours by some apparently humane proposal of secondary importance, such a a protest against the use of a particular kind of bullet. To simple-minded civilians it has never been clear why it is permissible to kill enemies with large shells, and wicked to kill them with little shells; but if the pain caused by certain rifle-halls is disproportionately great as compared with their efficiency, there may perhaps be reasons for consenting to the prohibition. The next step might be to provide against the advantage in war which might result from the possession of greater mechanical skill, or of a cheaper supply of materials. It may be taken for granted that none of the parties to the Conference will desire either to strongthen their possible adversaries or to weaken themselves. For exclusively benevolent purposes a Commissioner without any power to pledge his Government will be as useful as a plenipotentiary. More ambitious designs will find an impediment in Lord Derry's want of enthusiasm, and it is not impossible that the hesitation of England may cause the abandonment or postponement of the Conference. In such an event foreign journalists would welcome a new illustration of insular cruelty and solfishness.

THE COUNT OF CHAMBORD'S MANIFESTO.

FOR some time a rumour has been current in Paris That the Count of CHAMBORD was going to do something of a strong and sensational kind. Ho or his friends had arrived at the conclusion that, not to be forgotten, he must make himself remembered, and that, as no one was apparently taking any notice of him, he must seize the occasion for issuing one of his typical manifestoes. time the manifesto must be of a perfectly unmistakable character, and must produce a great effect if it was to produce any. A Pretender cannot go on issuing unsuccessful manifestoes for over without making his impotence too marked; and as the manifesto was to be for the time a final one, and was to be a last appeal to France to welcome without delay or hesitation its own beloved King, the Count is stated to have taken the wise precaution of repairing to Switzerland, so as to be available at a few hours' notice in case he was wanted. But it was by no means easy for him or his advisors to frame a new manifesto. He could not hope to attract any profound attention if he merely went over old ground, and told his critical subjects what he had often told them before. His business was to give an explanation of his views and of what might be fairly expected if he were seated on the Throne. If he only explained what was perfectly well known, his new explanation would, it was apprehended, fall dismally flat. People, however, who wish a thing ardently, generally manage to discover some means of gratifying their desires, and the pains taken by the Count to hit on some new subject for an explanation were rewarded with the success they deserved. On two main points, indeed, there was nothing more to be said; the COUNT has already cleared up all possible doubts as far as they go. There is the flag, and the flag which the Count has clearly explained he means to have is the White Flag. The head of the the means to have is the White Flag. The head of the French army has, indeed, informed him and all the world that the introduction of the White Flag would produce a civil war and a mutiny in the army, and that the Chassopots would go off of themselves. The Count has therefore done well to preclude any possible doubt as to his intentions on this important subject. The Chassepots may go off or not as they please, his flag is the White Flag, and he means to have it. Then there is the great question of the immediate use he would make of his power. It might

royal justice, lay about him freely, and show that he was something like a King. It would have been very nation if he had let such a doubt remain, and so, last swings, he explained what he proposed to do with that candous and clearness which never forsake him. If he was once King he could show that he did not bear the sword in vain, and would not let a little whelesome bloodshedding stand in the way of his being able to confer on France the inestimable benefits of a Divine Monarchy. Still there was one subject untouched. It might occur to some misguided persons that if he was King he would tolerate Parliamentary institutions. Here was exactly what was wanted. It was a point worthy of suggesting a frank explanation; and the Count as usual took care that, if his new manifesto dealt with a new subject, it should deal with it so satisfactorily that no one could pretend any longer to doubt as to the Count's meaning. He accordingly repudiated the fearful and humiliating suspicion that he is not averse to constitutional government, as if he had been repudiating the imputation that he was afflicted with leprosy or meant to commit bigamy. He can hardly find words strong enough to express his horror and contempt for a monarch who consents to accept such a position as that occupied by the grandfather of the Count of Paris. There is scarcely anything in the world that the Count of CHAMBORD would not rather be than an Orleanist. With this last explanation, given in this handsome and straightforward manner, the Count naturally felt that he had really done all that he could do. He had told his subjects everything. There he was, a plain, honest man, born to be a King, utterly indifferent to the wishes of the army, burning to make rebels smart for their sins, and loathing constitutional government. It was for his subjects to take him or leave him. If they would not have him he would wish them. him. If they would not have him, he would wish them good-bye, and hand them over to the visitation of Heaven. If they would have him, they had only to whistle, and he would dance over the Swiss border.

One of the first criticisms passed on the manifesto at Paris was that the political system described by the COUNT as his own was uncommonly like that of the Empire, and that he was only offering what another competitor had offered before him. But this seems a hasty way of viewing things. It is true that what the COUNT proposes is a despotism. It will naturally be a tempered despotism. Every despotism is tempered somehow. Even our old friend, the Shah found after leaving us and getting home that he must give up for a time the faithful Vizier who had accompanied him in his wanderings, and he ultimately had to get rid of his own uncle before he could get his Vizier back again. A Legitimist despotism in France would the Count says, he tempered. There would be a Senate, packed as the King might think proper, and an Assembly which might represent the people as much as it liked, provided it gave no trouble to royalty. Nor was it to be supposed that the King would do nothing for his subjects. He would imitate his ancestors, and dispose of all mischievous persons who attempted to domineer over the King and the people. Of course some allowance must be made for the changes of times. The COUNT could not have meant that he would do exactly what Louis XIII. and Louis XIV. did, and break the power of the nobles; for if he were to suppress a score or two of noble families, he would get rid of his whole political party, which would be inconvenient even to a despot. All he meant was, that he would make short work of any one, whoever he might be, who could be supwork of any one, whoever he might be, who could be supposed capable of opposing the King in any way. The traditions, the customs, the political habits and designs of the ancient monarchy would be revived, and the King would see that they were revived effectually. The programme of Imperial despotism is entirely different. The Empire proposes to gratify the wishes and consult the opinions of modern France; it accepts the Revolution, it befriends democracy. It is merely, in the opinion of its adherents, the best instrument which democracy in France can have to effect its purposes. It condescends to use appropriate means of humouring the It condescends to use appropriate means of humouring the people. It bribes, threatens, and teases when it wants an therefore done well to preclude any possible doubt as to his intentions on this important subject. The Chassepots may go off or not as they please, his flag is the White Flag, and he means to have it. Then there is the great question of the immediate use he would make of his power. It might have been doubted whether he would prefer to be merciful and kind, to overlook past dissensions, and to try a healing policy, or whether he would go in for a reign of stony centre of civilination then ever. It is a tempered despotism, but it is tempered not merely by the presence of a mock Senate and a fictitious representative Assembly, but by its own sizes, and by the condition it accepts, that its emly title to endure is that it looks into the hearts of Frenchmen and fulfils their secret desire. The two despotisms so far as their pretensions go are entirely unlike. The despotism of Legitimacy is a despotism professing to give the people what the despot thinks good for them. The despotism of Imperialism is a despotism professing to give the people what the people itself wishes.

It is not impossible that it may have crossed the Count of CHAMBORD'S mind that, enchanting as his programme, when all doubts as to it are cleared up, must seem to every honest man, yet the French in their perversity might not altogether like it. But he is not the sort of person to trouble himself overmuch about this. He has been an exileration he was a boy, and he can afford to be an exile some time longer. He is like a dealer who has got an ancient masterpiece for sale, and who, if he finds the public insisting on spending all its money on the works of modern artists, is content to take his antique treasure back to his shop and wait till fashion alters. There must, the Court thinks, be a rage some day for bric-à-brac of the date of Louis Quinze. If, however, his manifesto was to be a failure for immediate purposes, he took care that it should provide him with one source of piquant consolution. If he was doing himself harm, he could at least make sure of doing his young friend the Count of Paris a good deal of harm also. If people said of him that, in his blindness, he was pulling away his last supports and burying himself in ruins, they should also say that he had managed to crush the Orleanist Philistines. He assiduously rooted up all that Louis Philippe had done, all that the Count of Paris represents, all that the Orleanists insist on, declared his detestation of every item of the addition, and then reminded the world that the two branches of the Boursons are sincerely reconciled. If the Count of Paris passed this challenge over in silence, he would forfeit his position as the champion of Constitutionalism. If he protested, he would undo all that he has been for three years trying to do in order to make himself acceptable to the Legitimists, and would have shown himself to have gone through the humiliation of the Fusion for nothing. It was the Orleanists who prevented the Count from being King last autumn, and now he has to take his revenge. Perhaps he may have done France more service by this than he intended. If the cause of both branches of the Boursons is made hopeless, the number of pretenders is at least reduced. France has then no choice, if it wants a definitive Government, but between the Republic and the Empire. If it cannot choose between them, it has the Septemate ready for it, If it cannot and the Septennate, as Marshal MacManon justly observes, needs nothing but to be organized. Unfortunately, while to say this is easy for the Murshal, to do it is, it must be owned, not so easy for a poor, distracted, confused, almost imbecile Assembly. The good advice of the Marshal is not, we fear, very unlike saying to a party of gouty old gentlemen that the candles are lighted, and the music is begun, and that there is nothing wanting but that they should organize a quadrille.

THE ARCHBISHOPS' BILL IN THE COMMONS.

THE anticipations of those sanguine dreamers who may have imagined that the House of Commons would find one night sufficient for the Archushops' Bill have been frustrated, and the debate stands adjourned till some day which is still to be fixed. The distinguishing feature of Thursday's discussion was Mr. Gladstone's speech, of which it is not too much to say that it was the first, and is still the last, general review which has been presented to either House of the whole Bill, manner and matter. So much has taken place since March, that it was a seasonable thought to remind the House of the monstrous indecency perpetrated by "some clever fellow" in flashing on the Church of England the news of the meditated comp d'église through a leading article in the Times, nor it was not less seasonable to remind the members that in fact the stage which the measure was then reaching was in fact the first time the actual Bill has ever been effered for second reading. But the staple of the speech was the declaration—singularly impressive from the

known orthodoxy and love for acclesiastical order of its author—in favour of risual classicity as the condition essential to the maintenance of the Church of England in the present age. The proofs which Mr. Glassrous addreed that the Bill in all respects involved the violation of this requisits were absolutely demonstrative; while he pointed his opinions by giving notice of resolutions on the Committee stage which will call the House to the consideration of first principles, which had been very lightly slurred over in Mr. Russell Gurner's too facile and plausible explanation of the scope of the Bill. Of this explanation we must observe that it was in direct contradiction both to the speeches of the Anchessnops and of Mr. Holt, spoken later in Thursday's debate; for none of those advocates of the Bill scrapled to describe it as an engine of persecution directly meant for the Ritualists. As to the ritual difficulty, Mr. Glasstons spoke out manfully. When a practice could be proved "to give evidence of a design to alter, without the "consent of the nation, the spirit or substance of the esta-"blished religion," then he would show it no mercy. Churchmen also "should have ample protection against "precipitate and arbitrary changes of established custom "by the sole will of the clergyman." As to the history of the Bill, Mr. Glasstone is content to observe, with a moderation which is more telling than the strongest sarcasm, that the House attaches a high value to the encourrence of the Government with the ecclesiastical authorities in the initiation of legislation affecting the Established Church, while he was careful in his speech to explain that he attached no blame to the Ministry us to the way in which they had dealt with the question.

Mr. GLADSTONE'S speech stands unanswered, although Sir WILLIAM HARCOURT was pleased somewhat later in the debate to deliver a grandiloquent oration, seasoned with easy lore from popular Church histories, against Mr. GLADSIONE'S "optional uniformity." Sir WILLIAM, no doubt, showed great dexterity in his new character of a Protestant champion; but as the only practical course which he had to recommend was a ruthless and compulsory conformity—without reason or exceptionto all and every rubric, canon, or statute, because it was the voice of that people to whom the clergy owe their pay, we may well leave the learned gentleman to the enjoyment of a policy which, as no one knows better than himself when off his stilts, would only lead to a worse disruption of the Church of England than that which broke up the Scotch Establishment. The ex-Solicitor-General brought up Mr. HARDY, who found it an easy task to demolish with manly good sense the turgid sophisms of the self-appointed preacher of intolerance, after which he proceeded to handle the Bill with a thoroughness equal to that of his predecessor in the representation of the University, and wound up with the statesmanlike conclusion that "the best course would be to defer the Bill till men's " minds had cooled, and when a measure might be brought "forward embracing the whole ecclesinstical law and pro-"cedure, by which alone justice would be done to the best "interests of the Church."

The pledge which Mr. GLADSTONE gave to invite discussion upon his resolutions previously to the House resolving itself into Committee on the Bill disposes of the last chance of the measure passing during the present Session. Any resolution in opposition to a Bill at this stage prevents its managers from bringing it forward after half-past twelve at night; and if a third day can be found for the presumable committal of the measure, the discussion which must ensue will assume the importance of a second reading debate; while, even if Mr. RAIKES should ever find houself in the Chair, the number and complication of the amendments which he will have to disentangle is still an unsolved problem. In the meantime Convocation has again seriously set itself to that work of reviewing the rubries as to which the Archbishop of CANTERBURY at some carlier stage of his Bill chose to be sceptical, while suits decisive of disputed ritual will be the earliest concern of the new Imperial Court. Nothing, in short, is left to the RECORD and his friends to accomplish by passing the Bill except the breeding of bad blood among Churchmen, whom a wiser policy would have sought to combine against the renewed aggression of the Liberation phalanx. The Bill which Mr. HARDI has said ought to be introduced next Sassion, which Convocation has recommended, of which Churchman approve, and which a Government with a majority in both Houses can easily pass, is one to simplify and expedite the procedure in all the old Church Courts, to

sweep away the cumbrons and unpopular Church Dis cipline Act, and impartially to bring every kind of clerical offence within the scope of the same reformed tribunals. Mr. DISRAELI has only to announce on Monday that the Government will introduce such a measure ne year, and neither the ARCHEISHOPS nor their friends in the Commons can greatly complain if time fails for any further discussion of their unlucky bantling.

SPAIN.

THE full accounts which have now been received of the circumstances which caused and followed the death of Marshal Concha prove that the national army has suffered a serious disaster. It is not necessary to believe the blustering proclamations of the Carlists who, while they may fairly boast of their gallant repulse of the attack on their lines, were unable or unwilling seriously to molest the retreat of the enemy. It is certain that a heavy loss was incurred; and Concha's successors in the command have not since ventured to resume offensive operations. On the other hand Don Alfonso has suffered a repulse from an inferior force occupying a petty town. The Carlists are again showing themselves in the neighbourhood of Santander and Bilbao; but recent experience will have warned them against the risk of attempting a regular siege. As long as they are content to remain on the defensive, their forces can neither be exterminated nor finally dispersed; but they will never be able to meet a regular army of considerable magnitude in the open field. It may be conjectured that the temporary inaction of Zabala and Moriones is caused rather by consciousness of the imperfect discipline and organization of their troops than by losses which have already been repaired by reinforcements from Madrid. If Concha could have disposed of 20,000 veteran troops, he would have found little difficulty in forcing the enemy's positions. Unfortunately his regiments were chiefly composed of raw recruits, if not of boys; and consequently they advanced to the attack with the formation of a street mob, and when they were assailed in turn, they were seized with panic. Without the confidence of each man in the steadiness of his comrades, which can only be secured by regular discipline, personal courage avails little in war; and it is probable that the volunteers of Navarre and Biscay are bolder and more skilful in the use of arms than the raw soldiers who have been hastily collected from the other provinces of Spain. Enthusiastic levies are no match for good troops; but in the absence of perfect discipline on either side, the warlike aptitudes of different races and tribes are found to vary widely. In the Peninsular war the Spanish guerillas, though incapable of meeting French troops on equal terms, rendered better service than the regular armies.

One of the lessons which may be learnt from the Spanish Civil War is the importance of military organization. The civil War is the importance of mintary organization. The continuance of the struggle has only been rendered possible by the successful efforts of the Republicans to demoralize the army after it had been brought to a respectable point of efficiency by O'DONNELL, by NARVAEZ, and by PRIM. It was to the want of a sufficient force of trained soldiers on either side that the enormous expenditure of life and money in the American Civil expenditure of life and money in the American Civil War was chiefly due. The Federal Government was War was chiefly due. The Federal Government was anable to profit sufficiently by its vast superiority in numbers and material resources; and, on the other hand, the Confederate generals repeatedly lost the fruits of their numerous victories during the earlier part of the war. The triumph of the stronger party was ultimately caused by the inability of the Confederates to repair their inevitable losses. The invincible determination of the Federalists to overwhelm their adversaries at the cost of any sacrifice, however great, is not likely to be reproduced in Spain; but there is reason to hope that the supplies which have been mysteriously provided for the Carlists will not prove to be inexhaustible. A change in the policy of the French Government might at any time deprive them of advantages which are probably indispensable. It would seem that two neighbouring Governments of precisely similar constitution ought to find little difficulty in arriving at a friendly understanding. Marshal Serrano is not more disposed than Marshal MacMahon to favour a policy of revolution; and, for the time at least, the French Government is opposed to the pretensions of Legitimacy. The bravery and the provincial patriotism of the North would seem that the Generals are not yet ready to move. One of the divisions of the army is to operate in the rear of the Carlists, and if

not enable Don Carlos to continue the contest if he were unable to procure money or to receive munitions of war from abroad. As the contest proceeds, the National army will gradually become inured to war; and the recruits of to-day will in a year or two become comparatively veterans. Discipline is acquired rapidly, if expensively, in the middle

of a campaign.

The Carlist war has for the time caused a suspension of political intrigue and agitation. The Republicans who, only a year ago, were noisily engaged in the dismemberment of Spain, are passive and silent. The army, though it may be imperfectly efficient in the field, is numerous and strong enough to suppress or to prevent popular insurrection. The PRESIDENT some time since once more offered Señor Castelar a place in the Ministry; but the proposal was rejected. It matters little for the moment whether the members of the Cabinet profess Moderate, Progressist, or Republican opinions. Their only business is to preserve order, which has not lately been disturbed, to achieve the more difficult task of raising money, and to provide the army with the necessary supplies and reinforcements. Señor Camacho, Minister of Finance, lately proposed a Budget so indefensible that it was generally censured even by the Spaniards themselves. The public wants were to be relieved by a suspension of payment of interest on the debt; and it was felt that the arrangement, however convenient in itself, would render the construction of future loans impositself, would render the construction of future loans impossible. Some less outrageous scheme may perhaps be substituted for Señor Camacho's Budget; but the production of an equilibrium is beyond the powers of any Minister of Finance. The revenue might be permanently increased by an entire change of commercial and fiscal policy. Misgoverned countries are happy in the possession of a reserve which may at any time be made available by an abandoment of erroneous doctrines. The operation of economical reforms would be necessarily slow in producing its natural results, and every Spanish Finance Minister is forced to live from hand to mouth. The army in the North is well supplied with small arms, with artillery, and with ammunition, and any want of provisions which may from time to time be experienced is caused rather by defects of commissariat arrangements than by the inability of the Government to provide the necessary stores. The death of Concha was indirectly caused by the failure of a convoy which had been expected in the front for two or three days. A treacherous guide had almost succeeded in leading the convoy into the midst of the Carlist troops, and although the danger was averted, the loss of time proved to be irremediable. One cause of the unsteadiness of the troops, and consequently of the death of the COMMANDER-IN-CHIEF, was the want of provisions, although it is not improbable that half-disciplined recruits would at any time have shrunk from attacking the formidable position occupied by the enemy. The army will find but little to live upon in the country itself, as it has been long occupied or traversed by the Carlist troops. Marshal Concus strictly prohibited plunder, but he compelled the disaffected inhabitants to satisfy military requisitions.

Moriones, who has been appointed to a separate command, has hitherto not been fortunate against the Carlists. His failure to take the lines of Somorrostro was soon afterwards followed by his resignation, but it was probably the case that the force at his disposal had been wholly insufficient in numbers. It would seem that ECHAGUS, who CONCHA'S Chief of the Staff, and MARTINEZ CAMPOS, who is nephew of SERRANO, have been recalled to Madrid. Their dismissal is explained by the incapacity which ECHAGUE displayed after the death of his chief, and by the suspicion that MARTINEZ CAMPOS may be too zealous a partisan of Don Alfonso. Spanish generals are changed as frequently as Ministers, and it is probable that, unless ZABALA and MORIONES attain some early success, they will be dismissed in turn. It is not known whether Conces was really a great soldier, but there is no doubt that his reputation after the relief of Bilbao overshadowed all his rivals. In a war such as that which now rages in Spain the confidence reposed by the

Zarala is strong enough to surround the enemy, he may perhaps obtain a decisive victory. Concha's plan of out-flanking the hostile force might perhaps have succeeded if he had lived.

THE LAND TRANSFER BILL

THE ATTORNEY-GENERAL, in recommending the Land I Transfer Bill to the Commons, had an easy task to fulfil, and he performed it in a very easy way. He merely gave a brief sketch of the provisions of the Bill, explained that it was approved of by Lord Cairns and Lord Sel-BORNE, and invited any one who pleased to criticize it. As he owned at the conclusion of the debate, if he had asked for criticism, he had got plenty of it. One lawyer after another rose to pick holes in the measure, and almost every critic proceeded on different principles, and wished for a different thing if there was to be a system of registration at all. As the critics could not see what they wanted, and not very clearly what they objected to, all they could do was to ask the Government to lot the Bill stand over to next Session. Even the official supporters of the Bill were not very zealous in its defence. Dr. Ball thought that the system proposed would not secure the objects it was designed to effect unless it were made more like the Irish system. Sir John Karslake owned that the compulsory classe, mild and weak as it is, might be properly questioned in Committee. Colonel Corrett, responding to an invitation from the legal members that some one other than a lawyer would be good enough to speak, and that landowners, who are supposed to be the class principally interested in the success of the measure, would let their views be known appared that he measure. would let their views be known, announced that he was perfectly indifferent to the Bill, which he thought was quite unnecessary, as plenty of land was to be got with titles good enough to satisfy competent solicitors, and the only difficulty was to find the money to buy it. It is perfectly true that there is a large amount of land in the market; that an intending purchaser can generally find something to suit him, and that the titles to land are practically safe enough. Mr. OSBORNE MORGAN suid that during twenty years he had only known three bad titles work mischief, and in all those cases there was fraud. The English system of titles is not to be pronounced defective because on some rare occasions sharpers are at work to take advantage of it. Frands will be contrived with regard to every kind of property; but land in England is certainly not a kind of property which offers fraudulent persons any very tempting field for the exercise of their ingenuity. If there is land in plenty for sale, and titles are practically good, what is the use of a Land Transfer Bill? There what is the use of a Land Transfer Bill? There can be but one answer. It is to make the sale of land cheaper and quicker. It is unnecessary to ask who would benefit by such a change, or whether land under it would more freely pass from the rich to the poor, or from the poor to the rich. Whoever may be the persons to profit by the transfer of land being quicker and cheaper, they have a right to ask that the law shall allow them to reap the benefit if a harmless alteration in the law can secure it for them. The main question is, therefore, whether under the Government Bill the transfer of land will be made cheaper and quicker. As to this there is a distinction to be drawn. In the first instance the Government Bill will make the transfer of land dearer and slower. Afterwards it will, so far as its provisions are satisfactory, make its transfer cheaper and quicker; and the Bill may be said to be likely to fail or succeed in its object according as we choose to look at its primary or its subsequent operation. Let us suppose that a purchaser buys land immediately after the compulsory clause, such as it is, comes into operation. He will go through exactly the same process that he goes through now, his expenses will be so far the same, and the time he will have to wait to get his business through will be so far the same. In addition he will have to pay for getting on the register and to wait till he gets on. It is only when he or his representatives revell that the quickness and cheapness of transfer which the Bill proposes to secure can show themselves.

When this preliminary and obvious fact is once kept in mind, there are two principal questions on which opinions greatly varied among the legal members of Parliament, and on the answers to which the view taken of the merits of the Bill naturally depends. Does the Bill go far enough? Is registration rightly made compulsory? The bill is con-

fessedly limited in its scope, and this limitation of scope gives rise to many obvious objections. There is first of all the general objection that no Bill can be satisfactory which does not make the transfer of land as easy as that of Consols or of an interest in a ship. But apart from this there are many more objections, of which the chief are that the register will give an intending purchaser no information as to leases not exceeding twenty-one years, that the Bill will leave the question of boundaries undecided, that it is not founded on a cadastral survey, and that it does not affect lands in settlement. Lord CAIRNS defended the omission of notice of short leases on the ground that, while such a notice would encumber the register to an enormous extent, and would cause great practical inconvenience, as every change of tenancy would have to be inscribed, the existence of short leases was exactly one of those things which every purchaser found out easily for himself. If a man means to bid for an estate, he requires to be told who hold the several portions and for what terms. Lord Cairns was thinking only of agricultural estates, and Sir Francis Goldship pointed but that, when a purchaser proposes to buy house proporty in a town, one main difficulty he has to contend with is that of ascertaining what leases and under-leases have been granted, and that it would be extremely convenient to him if the register gave him the information. This is true; but against this convenience there are to be set two inconveniences—that of compelling the registration of leases of portions of an agricultural estate, which would be only waste of labour, and the inconvenience to the purchaser of town property himself, who would have to be always attending to the register as his houses passed from one tenant or sub-tenant to another. Lord Cairs purposely abandoned the attempt to make his Act do what Lord Westbury's Act did, and to settle boundaries; and he did this on the ground that to require the settlement of boundaries before an estate was registered was practically to postpone the transfer of an estate until all possibilities of litigation about trumpery rights had been exhausted. If boundaries are not to be settled, the Bill cannot be founded on a cadastral survey, for nuless such a survey shows where one man's laud ends and another man's land begins, it shows nothing more than is shown by the plans which are usually prepared when an estate is to be sold. Lastly, it is true that, whereas about two-thirds of the land in England are supposed to be held in settlement, the Bill does not touch this land at all until it is taken out of settlement and sold. Gradually a large part of the land now held in settlement will come on the register through sales, and though fresh land will be brought under settlement, yet land once on the register will remain there whether it is settled or not. In the first instance, however, a great part of the land of England will remain outside the register. This cortainly makes the system of registration incomplete. But what is the object of the Bill? It is to facilitate the transfer of land that is bought and sold, and this object is equally secured whether land in settlement is placed on the register or not.

The Bill is compulsory in the sense that, if after three years from its passing a purchaser does not place the land on the register, he will only get an equitable title. The legal estate will be still outstanding in the vendor, who will be a trustee for him. The inconvenience to both purchaser and vendor will probably be sufficient to make placing the land on the register a matter of course; although the purchaser, as he otherwise gets all that the land has to give him, cannot be said to be punished very heavily for not having recourse to the register. If there was no compulsion at all, it might happen that the Bill would be inoperative, as Lord Westbury's has been, although it is said that in some of our colonies a voluntary system of registration has been successful. If it is to be considered a public benefit as well as a private that land should be registered—and it is difficult to understand how it can be contested that it would be a public benefit in many ways—the public which sets up the machinery for registration is entitled to ask that this machinery shall not be wasted. But when the Bill was before the House of Lords for its third reading the Government adopted an amendment by which its compulsory operation was not to extend to estates purchased under 300t. The ground of this amendment was that it was hard on poor people to make them pay the cost of registration for their tiny purchases. This, however, seems an argument neither sound in itself nor consistent with the general principles

of the Bill. If registration is to be regarded as a private benefit, its advantages are greater in the case of small proprietors than in that of large ones. The use of registration is to save expense, and the expense of transfer are proportion. ately much heavier when small plots are transferred. Even if this were not taken into account, registration ought always to be a pecuniary gain in the long run, although it may involve a little additional outlay to the first purchaser. He ought to get a better bargain—that is, to have a property more valuable in case of resale—if he adds the cost of registration to the first outlay, than if he does not, or else there must be something wrong in the calculations on which the scheme of registration is based. The case of a man who can find 300l. and the costs of transfer, and who cannot find a few pounds more to place himself in a demonstrably better pecuniary position, is so imaginary and exceptional a one as not to deserve consideration. If, on the other hand, registration is to be considered as a public as well as a private benefit, if it is a good thing for the country that land should be registered and so made transferable cheaply and quickly, this is true even more of small properties than of large ones. It is small people who complain of the expenses of transfer, of land being locked up, of no one knowing where to go to see whether a title is good; and such small people often think that the transfer of land is kept dear and slow for the special advantage of rich people and lawyers. If the Bill has any political aim, this aim must be to show small people that all that can be done for them has been done. To exempt small purchasers from the necessity of registration seems, therefore, to be sacrificing a main object to secure which the Bill was prepared; and as this exemption are to of the secure of th tion was no part of the original scheme of the CHANCELLOR, he will probably not be sorry to see the Bill restored in this respect to the shape in which he first framed it.

MR. GLADSTONE ON CHURCH ESTABLISHMENTS.

MR. GLADSTONE seemed in his speech on Scotch patronage either not to have profited by the lesson of the general election, or to have determined to pursue in the future the restless policy which may perhaps after an interval once more cease to be universally unpo-When he had scarcely begun to decline from his height of power he alienated many supportors, and caused additional irritation to all his opponents, by announcing that he would think three times before he destroyed the House of Lords. The adherents of the Constitution were not disposed to allow the maintenance of one of its chief elements to become an open question. At an earlier period, while Lord Palmersion was still Prime Minister, Mr. Comparions first indicated his leaning to universal suffrage by the famous phrase in which he affirmed that non-electors were of our flesh and blood. His statement, in the course of his speech on the Scotch Patronage Bill, that he is not an idolater of Establishment, is not less significant. There is no reason why a statesman should be an idolater of anything, or, in other words, why he should entertain an exaggerated admiration for any practice or institution. One of Mr. Gladstone's chief political defects is an idolatrous tendency which directs itself in turn to many different and dissimilar idols. Ho has often been misled by his habit of passionate concentration on some comparatively insignificant or transient object. When he declares that in a particular case he is not an idolater, he raises a suspicion that he has conceived for the principle of Establishment an indifference which will be apt to pass into actual dislike and hostility, though his speech on the Public Worship Bill proved that his attachment to the Church is in no degree diminished. It happens that two apparently inconsistent poculiarities of character concur to inspire him with a distaste for an Establish-ment. In both parts of Great Britain the influence and disposition of the members of the Establishment are on the whole Conservative; and in England the Church is so far an aristocratic institution that its clergy for the most part belong to the upper section of the middle class. As a democratic politician Mr. Glabstons shares the general unfriendliness of his party to and arriving the party by the contraction of the party to endowment and privilege; but long before he became a Radical leader Mr. GLADSTONE adopted extreme ecclesiastical theories which are held by a section of the clergy who are most impatient of the control and influence of the State. One or two extreme sealots of the school

have joined the Liberation Society, notwithstanding their profound antipathy to the other members of the body. There can be no doubt that case and security of temporal position tend both to discourage fanaticism and to mote habitual regard for temporal or secular considerations. It was for this reason that nearly every statesmen in England and Ireland supported the policy of con-current endowment which was rendered impracticable by the prejudices of the Nonconformists, and by the determination of the Roman Catholic clergy, to conci-late at any cost their main pensable and highest allies. Mr. GLADSTONE is, perhaps, the only emiment politician who would not deserve to be called an Erastian by indignant Scotchmen.

The worst enemies of the Established Church of England will not allege that its clergy have been engaged in a conspiracy against society. Their enemies would rather accuse them, however unjustly, of undue deference to the usages and traditions of the world. It is certain that they generally value their position as gentlemen even above their sacerdotal dignity. A precisely opposite result is observed in the countries where a poorly paid priesthood is necessarily recruited from the peasantry. Human ambition forcibly diverted from personal objects necessarily devotes itself to the aggrandizement of some order or corporation which may shed a reflex lustre on its otherwise obscure members. It may be conjectured that Mr. GLADSTONE would prefer a clergy exclusively concerned with ecclesiastical pursuits; and he would be fully justified in assuming that endowments and recognized legal rights discourage professional isolation. There was a time when officious Protestant writers were in the habit of assuring the Pore that the loss of his temporal dominions would greatly increase his spiritual influence. It is true that Pius IX. has shown no disposition to accept their advice; but they were so far in the right that adversity has made the Roman Church more and more arrogant and aggressive. analogous process would in England widen the separation between the clergy and the laity; and probably the more glaring contrast would approve itself to Mr. GLADSTONE'S judgment or fancy. If he wished to reconcile his position as a sincere and earnest Churchman with hostility to the Establishment, he would have a theory ready made for the purpose.

The various reasons which may induce Mr. GLADSTONE to disclaim idolatrons attachment to Establishments will not greatly concern either the adherents whom he may attract or retain, or those whom his significant declaration will alienate. His alleged objection to the measure under discussion was that it tended, in Mr. GLADSTONE's opinion, incidentally and unconsciously to disestablishment. To the accomplishment of the same purpose by a deliberate and well-balanced project he expressed no repugnance; and he took the opportunity of expressing a hope that he might be chiefly remembered in history in connexion with the over-throw of the Irish Establishment. It is well known that Mr. GLADSTOVE'S mind and opinions are never stationary, and that they approach the goal for which they have started with constantly accelerated rapidity. Extreme Liberals and Nonconformists of all denominations will receive Mr. GLADSTONE'S dechration with enthusiasm; but, as the whole body had already given him unlimited confidence, it is difficult to see how he can acquire any addition of political strength from the adoption of opinions previously held by his supporters. The moderate or wavering politicians who mainly determined the result of the last election will be more than ever confirmed in their distrist and uneasiness. The reaction which led to the defeat of the late Government was caused not so much by special dislike to any of their measures as by a general impression that they were ready to disturb every interest and every institution. There is no doubt that some members of the Cabinet disapproved of the unscasonable activity of their colleagues and of their chief; but it was believed that Mr. GLADSTONE controlled the policy of the Government. When Mr. Gosches wanterly threatened the compulsory sale of corporate estates, or when Mr. STANSFELD from time to time declared that the Liberal party must do something to justify its existence, the solid part of the community resolved to find rulers who were not bent on perpetual motion. Their satisfaction with the change of Government which followed will be confirmed by Mr. GLARSIONE'S intimation that he is not enthusiastically friendly to the principle of Establishment. The Church of England in its present condition is a symbol of order and

permanence to large unmbers of politicians who are comparatively indifferent to ecclerization questions. Even those who might regard its fall as a separate contingency with comparative indifference are well aware that the force which would be needed for its destruction would after its fall survive for the overthrow of many other institutions. If Mr. GLADSTONE had got rid of the Church Establishment, he would employ his energy in attacks on remaining and less formidable adversaries. By that time he would have thought his third thought about the House of Lords, and perhaps his first thought about landed property or its natural increment of value. Until the temper of the constituency shifts into the opposite direction, a Government of incessant and organic change can scarcely hope to resume power. Mr. GLADSTONE himscarcely hope to resume power. Mr. GLADSTONE him-self falls into the error with which he charges the present Government. For the sake of an argument on a distinct though kindred subject, or perhaps in the hope of recovering lost popularity, he prematurely threatens the existence of an institution which he has no immediate intention of assailing. On his own showing, disostablishment ought not to be undertaken except in accordance with a complete plan, which has certainly not yet been devised. Prudent statesmen and legislators, while they worship neither existing nor imaginary idols, take for granted every institution which they are not prepared to abolish. If an Establishment is mischievous, they may be bound to destray it but or love as it between only improving any tility. destroy it, but as long as it lasts they only impair any utility of which it may be capable by announcing their disapproval of the system. Two years ago Mr. Gladstone delivered an eloquent speech in favour of the Church in answer to Mr. MIALL; but a few weeks afterwards he allowed an authoritative statement to be made without contradiction that his meaning had been misunderstood. Sufficient time has since clapsed to allow of a partial conversion to the tenets of the Liberation Society; and the process will possibly be soon completed. The instinct which induced the great bulk of the clergy to oppose the late Government at the election appears to have been well founded. It is true that their inability to recognize Mr. GLADSTONE'S political merits may have something to do with his dislike of an Establishment.

MARSHAL MACMAHON'S MESSAGE.

THE Count of CHAMBORD has made this last week an eventful period for France. eventful period for France. It is the only service Providence permits him to render to the ungrateful nation which will have none of him. Whether the consent of the governed be or be not a condition of legitimate rule for a king in possession, it is nowadays an indispensable condition of the providence of the condition of the c tion of possible rule for a king who is in exile. Monarchs have grown selfish, and a brother in misfortune is now a brother only in the Christian sense. But though the Count of CHAMBORD cannot govern his subjects, he has still the power of influencing them, and it seems likely that incidentally his recent letter will have the effect of strengthening Marshal MacManon's position. It is true that even this result will not have been brought about by the Count of CHAMBORD acting alone. It needed not only a Pretender to write a letter to his erring subjects, but a faithful newspaper to publish the letter when written, and a foolish Minister to suspend the newspaper for publishing it. Why M. DE FOURTOU should have thought this last step necessary is hard to say. Perhaps he could not be expected to foresee that a day or two later M. Lucien Brun would read the Count's letter in the National Assembly, and so secure for it a place in the official journal of the French Republic. But he might have reflected that so long as a deputy who but now was an Ambassador is allowed to propose a resolution declaring that the Throne appertains to the chief of the House of France, it is sharp appertants to the their of the House of France, it is snarp practice to punish a newspaper for enabling the chief of the House of France to say the same thing. Even if the Assembly and the press are to be judged by different standards, there can be no reason why different newspapers should be judged by different standards. Yet M. DE Focktou need not look far to find journals which maintain to the chief of in every number that the Throne appertuins to the chief of the House of Bonaparte, and Legitimists may fairly claim the same license that is freely accorded to Imperialists. They are more respectable, and they are less dangerous. No one except a Royalist fanatic vould sare it betupon the Count of CHAMBORD's chances of the Throne, but it is allowable to suspect that a good number of shrewd politicians have

money depending on the restoration of Napoleon IV.
The unfathomable M. Dr Fourrou overlooked all these considerations and suspended the Union. Thereupon all arties bethought themselves that there had not been a Ministerial crisis for more than six weeks, and that here was an opportunity for securing one. No party in the Assembly is quite above this temptation, and almost every section was a candidate for the honour of defeating the Government. They were, in the end, defeated by a combination of the Left Centre with the Left and the Extreme Right; but the Left Centre were not satisfied with the glory thus gained, and, in order to show how useful they could make themselves, they assisted half an hour later in setting up the Ministry they had just helped to pull down. But, though the horses and the men were ready, Humpty Dumpty refused to be put up again. Like the drowning Irishman, he would be defeated, and nobody should save him. The Ministers felt that they had behind them a greater power than that of the Assembly. They resigned in order to make it clear to all men by whose authority they held office, and they withdrow their resignations because Marshal MacManon asked them to remain.

After this manifestation of the Marshal's position some communication had to be made to the Assembly, and as General DE CISSEY is more accustomed to read out orders of the day than to make speeches, he was made the bearer of the day than to make specimes, he was made the search of a Message. The Marshal begins by giving his own version of the vote of the 19th of November. He rejects the theory that it was a vote like other votes. The trust committed to him has been placed above all dispute. The duties imposed on him are duties from which he cannot in any case withdraw. The powers with which he is invested have a fixed duration, and for the term for which they are given they are irrevocable. It is not surprising that the Extreme Right and the Extreme Left should alike have protested against this exposition. The former are bound to hold that an executive officer whose appointment has not been assented to by the King is at best a tenant at will. The latter cannot allow that an Assembly whose constituent power they have persistently denied can legally create a seven years' dictatorship. Even the Left Centre must have been troubled at this limitation of Parliamentary emnipotence, and inclined to speculate whether the Marshal might not think even the proclamation of the Republic a derogation from the fulness of the Assembly's grant. In the latter part of the Message, however, the Left Centre found some comfort. The Marshal goes on to say that the law of the 20th of November ought to be completed. The power founded by that law is as yet inorganic, and until it becomes organic it cannot perform useful acts. The questions which have been hitherto reserved can be reserved no longer. "Further delays, by prolonging uncertainty, would depress trade and injure its development and pros-perity." France needs security and quiet, and these can only be assured to her by defined institutions. The points on which the Marshal thinks it necessary to insist will be communicated without delay to the Committee on Constitutional Laws. It is impossible to say positively what this Message points to. M. Casimir Penier wisely assumed that the settlement which Marshal MacManon has in view is the same with that which the Left Centre have in view. As the Marshal had just said that he meant to defend his power by the means with which the laws have armed him, there was nothing to be gained by accentuating any difference which may exist between him and the Left Centre as to the nature of the powers which are to be thus vindicated. Accordingly M. Casimir Panier treated the Message as merely an additional pressure brought to bear upon the Committee of Thirty to present their report upon him motion. Whether this interpretation rosts on any solid foundation is another question. If Marshal MacMallon really thinks that it is time to organize the Republic, it would have been very easy for him to say so. By this means he would have conciliated the active support instead. of the forced acquiescence of the Left Centre, have disarmed the opposition of the Left, have won over a considerable number of allies from the Left Centre, and in all probability have armed his Cabinet with a working majority. Having the ability to do all this, he designedly refrains from using it, and veils his intentions in a series of carefully chosen phrases, every one of which will bear two meanings. When Marshal MacManon says that the country meanings. When Marshal MacMahon says that the country is anxious for the organization of public powers, he goes no further than the Duke of BROGLE went. It is a combination of words which may stand with equal fitness for the organization of the Republic or the organization of the Septennate. Defined institutions need not be permanent, and the questions which ought no longer to remain in suspense may be questions that refer exclusively to the government of France during the term of the Marshal's office. The Marshal is anxious to have all the powers which he thinks necessary to a President of the Republic, but there is nothing in the Message to show that he is equally anxious to bave it decided that these powers are entrusted to him as F. dent of the Republic for seven years and not as President of a seven years Republic.

As regards logical consistency, the victory of Thursday belonged neither to Marshal MacManon nor to M. Casimir PERIER, but to M. RAOUL DUVAL. Nothing is clearer than the fact that the Assembly has hitherto failed to establish a definitive government, and that its internal divisions make it almost inconceivable that, it should have any better success hereafter. France needs a government which shall be strong enough to make itself respected by defeated partisans of every shade, and in order to create such a government the nation must be called upon to declare its wishes. M. RAOUL DUVAL is suspected of being a Bonapartist, and there is certainly a very considerable chance that, supposing the elections to be held during the continuance of the supposing the continuance of the supposing th of the present interregnum, the Bonapartists would be the principal gainers by a dissolution. There would be a latent doubt in the minds of many of the electors whether the return of a Republican Assembly might not lead to complications with Marshal MacManon, and whether the new Chamber would be disposed to concede that the old Chamber, in voting as it did on the 19th of November, had bound its successor equally with itself. In proportion as these doubts gained strength the disposition to return Imperialist candidates would become more general. They at all events know their own minds. They are equally opposed to the feudalism which the Legitimists are supposed to yearn after, and to the anarchy which the majority of French electors have only lately begun to dissociate from the idea of the Republic. With these chances in prospect, the Left Centre are naturally not inclined to vote for a dissolution until they have convinced themselves beyond all question that they will not have the opportunity of asking the country to confirm the Republic which they have made.

PATRONAGE IN SCOTLAND.

MR. GLADSTONE'S reappearance gave the debate on Church patronage in Scotland an interest which it might otherwise have wanted. Even in so tame a Session as the present, the second reading of a Bill which is certain to pass and which concerns nobody but Scotchmen is not an exciting affair. But ditchwater itself could hardly be dull if Mr. Gladstone was paddling in it, and no more genuine utterance has ever fallen from Mr. DISRAELI than his expression of delight that the leadership of Opposition had for the present been taken out of commission. Nor is there any reason for surprise at Mr. Gladstone's choice of an occasion. The interest of a subject does not always coincide with its importance, and in the latter respect the assues involved in the ecclesiastical debates of this week may compare favourably with those raised by Mr. Butt and Mr. Lewis.

Mr. Gladstone's opposition to the Bill rests on three grounds- the exclusion of the heritors from all share in the election of ministers, the offission of any provision calculated to meet the case of the Highland parishes, and the injustice which the abolition of patronage will do to the Fred Church. On the first point, the only object which the framers of such a Bill ought to have in view is the conciliation of public opinion in the Church with which the Bill deals. l'arliament is not asked to devise the best possible constituency; it is asked to remove a cause of contention within the Church by giving the nominal as well as the real choice of a minister to those who already choose him in practice. If the General Assembly adheres to its prayer that heritors shall be included in the ecclesiastical constithe concess, that is a very good reason for including them. But if the General Assembly prefers on second thoughts that the heritors should have a vote only in their character of members of the congregation, it is hard to see why they should be tied down to their first request. The cases in which a landed proprietor who is not a member

of the congregation will have either the will or the power to influence an election of a minister may very few. If the connexion of the Charach with the If the connexion of the Church with the Sta depended on the preservation of the Church with the State depended on the preservation to the landed gentry of the right to use this power when they have it, it would be a question whether so slight a link was worth retaining. There are solid advantages to be derived from keeping a share of ecclesiastical patronage in the hands of the Crown because by this means the influence of the State can be extended for a really public object, and it is a blot on the Bill that no provision of the kind has been introduced into it. The consequence of this omission will be that the State will The consequence of this omission will be that the State will continue to give the wealth and dignity which belongs to an Established Church to a body as to which it will have no guarantee that the type of minister which it would most wish to see honoured may not beentirely neglected, and every ecclesiastical benefice bestowed upon the fanatics or the charlatans who can best catch the popular ear. When a Church is disestablished, there is no help for this. Control is the accompaniment of privilege, and when privilege is withdrawn, control is properly withdrawn at the same time. But the Church Patronage Bill withdraws nothing from the Church of Scotland. It leaves it in possession of all its privileges, and merely relaxes a portion of the control which the State has hitherto claimed to exercise. The State might fairly therefore have made its own terms with the Church, and the end at which it should have aimed in making these terms should have been the retention of the right of presentation in the case of a few conspicuous benefices. If Scotland had anything answering to Deaneries or Canonries, the parishes might in all cases have been left to popular election; but in the absence of these dignities, the only means of securing the object in question would have been the reservation of certain royal parishes. The addition of a few landed proprietors to the leating hadis would offer no conjugator to describe the discount of the security of the electing bodies would offer no equivalent advantage. Those of them who are members of the congregation will have votes as it is; those of them who either belong to other churches or are absentees would probably take no part in the election. Even if Mr. GLADSTONE'S suggestion were adopted, it would merely be giving the class of ministers which it is important to provide for one more chance in

Mr. GLADSTONE had a better case when he described the thoroughly unsatisfactory condition in which many Highland parishes will be left by the Bill. But it is well to bear in mind that they will be left in this condition, not placed in it. Nothing can less bear examination than an Esta-blished Church which is only the religion of a mere fraction of the population to which it is by courtesy supposed to minister. But for this state of things there is only one remedy, and this remedy is not one which admits of being applied piecemeal. The Highland parishes stand in the same relation to the Established Church of Scotland as that in which certain Welsh parishes stand towards the Established Church of England. If they were a fair sample of the whole country, disestablishment would follow almost the amount of country. as a matter of course. But instead of being a fair sample of the whole country, they are only isolated exceptions. again they were separated from the rest of the country by any well-marked division; if, for instance, they constituted a distinct dependency, like the Isle of Man or the Channel Islands, it might be possible to legislate for them separately. But, if we do not mistake, Mr. GLADSTONE has himself declared that the Established Church of each kingdom must be treated as a unit, and that however close may be the parallel between the Church of England in some parishes of Wales and the Church of Ireland in some parishes of Munster, the same expedient is not equally appropriate to the two cases. Mr. GLADSTONE failed to show in what respect the Highland parishes would be the worse for the passing of the Patronago Bill. It may be a very unsatisfactory proceeding to hand over by law the disposition and enjoyment of livings which are paid for out of the general taxes of the people to the five or six, or perhaps twelve, communicants in the parish. But to leave the enjoyment of livings which are paid for out of the general taxes of the people to the five or six, or perhaps twelve, communicants, is no less unsatisfactory a proceeding because the disposition of them is severed from the enjoyment and left in the hands of some neighbouring landowner. So long as the endewed kirk stands all but empty while the voluntary kirk is full, there will be someone in the minds of the large congregation when they see the invalidate enjoyed by the small congregation, but this sorters will be till be increased by the fact that in both congregations the principles of Presbyterian Church government are equally adhered to.

The charge of injustice towards the Free Church, if stretched to its legitimate consequences, would prevent any Church from reforming itself after a section of its members has once renounced its communion on the score of any alleged abuses. It is often said, and probably said it with truth, that, if the Church of England had been what it is now in the days of WESLEY, the Methodist secession would never have taken place. On Mr. GLADSTONE's theory no change for the better ought to have been made unless it had been accompanied with proposals for receiving the Wesleyans back, not man by man, but in bodies. The Scotch seceders of 1843 are entitled to high praise for sincerity and conscientiousness. But they have no for sincerity and conscientiousness. But they have no right to demand that the precise condition of affairs which existed in the Established Church at the moment when they left it shall be stereotyped for ever. It is a sufficient tribute to the truth of their principles that, after an interval of thirty years, they have been adopted by the Church which once rejected them. Mr. GLADSTONE urged that, as soon as the stumblic j-block which was the cause of the separation is removed, it will be the duty of the General Assembly to make overtures to the Free Church congrugations, or, if this is too much to ask from the older communion, at all events it should listen generously to any overtures which may come from the Free Church. If unfortunately the General Assembly should manifest a different temper, it may become a question what should be done, but the State would clearly be going beyond its proper province if it undertook to begin negotiations on its own account. It is also highly probable that, while patronage remained, the Free Church would hold itself bound in conscience not to have any communication with a Church which submitted to the intrusion of the unclean thing into the Presbyterian temple. It may be admitted that, if the abolition of patronage does not reunite the Established and the Free Churches, one main object of the change will be unattained. But we question whether the end desired would have been brought any nearer by a Bill which exhibited the State in the character of an uninvited mediator between two rival religious bodies.

THE ADULTERATION COMMITTEE

THE Select Committee appointed to inquire into the Adulteration of Food Act of 1872 have sent in an exceedingly sensible report. The innocent traders who have been injured by the unintentional operation of the Act receive the consideration which is their due, while the traders who regard adulteration as a form of competition, and feel aggrieved because they are not allowed to sell as one thing what they have bought as another, will learn the useful lesson that harassing legislation in defence of the public is not likely to come to an end with the fall of the Liberal party. The recommendations of the Com-mittee seem to cover the whole area of the real or imaginary grievances alleged by the retail traders. They propose that the defendant and his wife should be examined in all cases; that when a retail dealer has bought an adulterated article under guarantee from a wholesale dealer, the latter should be summoned as well as the former; that when chemical experts are at issue, an appeal should be allowed to the laboratory at Somerset House; and that analysts ought to be appointed for larger districts than at present, in order to secure more competent persons for the As regards particular articles, the Committee recommend that an inspection of tea in bond should be undertaken by the Custom House officers, and that tea found to be seriously adulterated should not be admitted for home consumption. The Chairman of the Customs does not think that such an examination would involve any great difficulty, as the bulk of the tea would require but a brief examination, while suspected samples could be analysed at Somerset House. It is clear that this change in the law would relieve the retail trader from a real hardship, since under the present Act he is liable to be punished for adulteration in which he has had no hand. The Chinese are too intelligent which he has had no hand. The Unimese are too intelligent a people to go on adulterating tea after they have discovered that the consignments so carefully prepared for the English market may never go beyond the Gevenument laboratory.

Milk it seems has very greatly improved since 'be presing of the public is the assurance, not that certain articles are kept pure for the purpose of being officially analysed, but that every article in a shop may be, and in course of time will have been, subjected to a proper test.

Milk it seems has very greatly improved since 'be presing of It is by no means to be desired that only impure the Art. Before that time it was very generally adulterated articles should be analysed. Nothing would stimulate with water.

The Committee find it difficult, however, to

prescribe any uniform test for the purity of milk. tmosphere, and lodging will make an immense difference in the quality even of genuine milk. The milk of one breed of cattle yields a larger percentage of solid matter than the milk of another breed, the milk of one oow will be very different from the milk of another, even though it be of precisely the same breed and subjected to the same treatment, and the first and last pint of milk which a cow gives at the same milking will present all the difference between an extremely poor and an exceedingly rich milk. The Committee recommend that all fraudulent abstraction of milk should be forbidden. In this way skim milk would continue to be sold as a valuable article of food, but its sale under the name and in the place of new milk would be strictly forbidden. Buttur comes off with a better character than milk. It is often badly made, and so contains more than its fair proportion of salt and water; but there is little adulteration strictly socalled. In France a pleasing substance known as artificial butter is made from animal fat. The Committee see no reason to prohibit its sale in this country, provided it is made of wholesome materials and sold under some other name than butter. This is obviously a sensible conclusion. This artificial butter is in fact a species of "dripping," and as such may, if it can be sold at a cheaper rate than butter, be of considerable use to the poor. Bread and cornflour come well through the examination. The former is described as "fairly pure," but the satisfaction caused by this assurance is a little alloyed by the statement that the boat chemists experience great difficulty in discovering minute quantities of alum in bread. It is to be hoped that the stimulus given to analytical chemistry by laws against adulteration will result in bringing alum more completely within the range of detection. One of the most fertile sources of complaint with traders has been the action of the Act of 1872 upon mixed foods, especially cocos and mustard. It has been established to the satisfaction of the Committee that these articles are often sold mixed, not to increase the profits of the seller, but simply to please the taste of the buyer. They are of opinion that it would be a sufficient protection to the public to enact that every mixed article sold should be described as mixed. The buyer would then know that, if he consulted his palate by buying a mixed rather than a pure article, he placed himself at the mercy of the vendor; and there is no reason why this amount of liberty should be denied him. Saladdressing is not pure oil or pure vinegar or pure mustard, but it may conceivably be something better than all three; and as long as the purchaser door not get a compound when he wants the unmixed article, there is no harm

It is consoling to find that the Committee do not limit themselves to recommendations which aim at making things pleasant for the shopkeeper. The public come in for their share of additional protection. The extension of the prohibition of adulteration to the wholesale trader would benefit the retail buyer as well as the retail seller, since if adulteration is largely practised before the goods reach England, there is much more chance of its being detected while they are still at the Custom House than after they have been dispersed over the whole country. The same end is promoted by the recommendations which aim at making the business of the local authorities easier. At present the Inspector is bound himself to deliver every sample of goods to the analyst, a requirement which often entails considerable expense, and some magistrates are in the habit of refusing to accept the analysis of the chemist employed by the local authority unless he is himself present in Court. The Committee suggest that both those requirements may be safely relaxed. They recommend that if a sample is duly secured and properly sealed, the Inspector should be allowed to send it by post, and that the analysis should be received in evidence without its being necessary that the analyst should be present when it is handed in. Another recommendation of great value is that Inspectors, when traders refuse to sell them articles exposed for sale, should be empowered to take samples of any goods they suspect to be adulterated, upon tendering payment to the full value. What is needed for the security of the public is the assurance, not that certain

leaf more than the knowledge that the purity of a rival's goods was as likely to be advertised as the impurity of his own goods. As yet there is too often a feeling that the fact of having articles taken for analysis implies an offensive suspicion on the part of the local authority. Properly understood it implies nothing of the kind. It becomes much more difficult for the seller of adulterated food to resist or resent analysis if the seller of nurse goods. food to resist or resent analysis if the seller of pure goods is equally exposed to the test, and only differs from his less honest rival in his greater readiness to submit to it. A further benefit will be conferred on the public by the adoption of the recommendation that a distinction shall be drawn between fraudulent abstraction of properties from commodities and fraudulent addition of noxious ingredients to them. The abstraction of cream from milk, and the addition of alum to bread, ought both to be punishable, but it does not follow that they should be punishable with equal severity. Whenever a lesser offence is confounded with a greater, there is a disposition on the part of the magistrates to regard a man accused of the former as in some sort an injured person. If murder and manslaughter were both punished with death, no more convictions for manslaughter would be obtained, and the same principle holds good when the offences are the major and minor forms of adulteration. The last, and perhaps the most useful, recommendation is that the Act—or rather the new Act which it is suggested should be substituted for the Acts of 1860 and 1872—should be made compulsory. It ought not to be left to the discretion of local authorities whether they will or will not take proceedings against the sellers of adulterated goods. The very fact that they wish to shield persons of this class is probably evidence in itself that the need for the application of the law is especially pressing in that particular district.

THE DISCOMFORTS OF DISCIPLESHIP.

IT is a well-known instance of the benevolence of Nature, that when she introduces a new set of conditions in the physical world, she fosters at the same time the growth of organs which enable living beings to meet the change in their circumstances. Perhaps the most remarkable proof of this thoughtfulness on the part of Nature is to be found in the rapid development of the historical sense. People living, as we confessedly do, in days of transition, might be expected to suffer a good deal from seeing the transition, might be expected to suffer a good deal from seeing the swift decay of all sorts of respectable customs and institutions. The thinkers of other ages must often have been pained in this way. When cannibalism, for instance, was ousted by the custom of making prisoners slaves instead of eating them, it must have been a bitter moment for persons of old-fashioned ways and tastes. But in our case Nature has come forward with the comfortable gift of the historical sense. We feel that we are living in history, and that, if a custom is passing away, it is only because it has ceased to be historically necessary. We put the gnomic maxim of Mrs. Gamp, "Take things as they comes and as they goes," into philosophical language about evolution and progress in culture. philosophical language about evolution and progress in culture. If this is not the best of all possible worlds, it is the best as far as we have gone, and only confirmed gramblers like Mr. Oarlyle decline to recognize this truth. But as such discontented persons still manage to get a hearing, and as nothing stimulates resignation and the historical sense more than a clear view of the seamy side of some venerable and departing institution, it may not be unprofitable to consider the discomforts of Mr. Carlyle's favourite relation of personal discipleship. Discipleship, the worship of a living teacher, the influence of his voice and presence, is declining from a variety of pretty obvious causes. It is eminently worthy of our age not to regret this, but to reflect on the disadvantages of sitting at the feet of a master.

The expression about sitting at a teacher's feet at once calls up a

The expression about sitting at a teacher's feet at once calls up a picture of patriarchal wisdom at its case and of eagerly listening youth. But a moment's thought shows that a great deal more than this is involved in the ides. Physically, the attitude is an inconvenient one, and embarrassing both to masters and disciples. Perhaps the earliest historical reference to the mere posture is to be found in the account of Adoni Berek, and of the threescore and ten kings who were compelled to sit at the feet, and indeed beneath the table, of that monarch. It cannot be doubted that, while their situation was humiliating to the captives, and soothing to the vanity of their conqueror, it must often have caused considerable amoyance both to himself and his guests. Persons grouped all around one in submissive and crouching attitudes, mental or hodity, may flatter pride, but they do not conduce to the free and natural play either of the limbs or of the consciousness. We see this daily in the case of the faithful hound who puts himself in the

have taught them even as one would say precisely. Thus would I teach a dog." Intellectual elevery has preduced intellectual tyranny. It is impossible not to pity the disciple when we consider how much pain he suffers; but, then, he would be inflicted. No one who has had the had luck or the folly to attent disciple when we have a first or a moment or suffer any sider how much pain he suffers; but, then, how much he indicts! No one who has had the had luck or the folly to attend disciples can be sure of his peace of mind for a moment, or sujoy my looseness and largeness of discourse. The disciple is on him at once, like those terrible children who never forget saything, with "You said something different last week." And then disciples are always so inquisitive. They generally have an idea that the teacher is in some way behind the scenes of the aniverse, and they try to pump him about the origin of evil, and the fundom of the will. History shows them in all ages to have had a kneek of asking questions as idiotic as Boswell's curiosity about what Johnson would do if he were shut up in a tower with a new-born baby. The Confucian analectics in the Chinese classics contain a number of such questions, and the answer is generally a snub. "I do not know,' said the Master." "The Master replied, 'I would rather say nothing about it, Summer and Winter are silent, and why should I speak?" Mere inquisitiveness is not the worst trait in the character of the foolish disciple. Generally he is jealous as well, and is anxious to know the Master's private opinion of his companions. When he learns it, it is not long a screet. Probably Chung was very soon made aware that Confucius thought him only fit "to be dressed up in a sash, and talk impressively to visitors." In matters of practical life the disciple is quite a dangerous friend. As soon as he has caught at some careless opinion he rushes forth to put it into action. Thus Mr. Ruskin's young friends hastened to dig in front of a cottage home, and it is much to be feared that they may amuse themselves in the Long Vacation by carrying out another notion of Mr. Ruskin's, and making war on the Greek brigands. Whether or not their teacher would enjoy the sudden liveliness which their crusade would impart to the Eastern question, it is impossible to guess. But other masters have to waste a good deal of time in apologizing for the vagaries o question, it is impossible to guess. But other masters have to waste a good deal of time in apologizing for the vagaries of their disciples, or else have to submit to being dragged into their absurdities. Niebuhr was taking a lanient view of these characteristics of disciples when he called his pupils his wings. No doubt their encouragement lifted him into regions of historical hypercriticism which he otherwise would have left alone. But there are more impetueus disciples, who, to vary Niebuhr's metaphor, develop web-feet, and hurry into an unfamiliar element. The poor master must flounder after them into places out of his depth, and few sensations are more irritating than that of floundering before the eves of bewildered admirers. These are the moments which give birth to cruel and classical snubs, such as Johanon's "Sir, you don't understand what you are speaking of, you can't think what a don't understand what you are speaking of, you can't think what a poor figure you are making," or that of Confucius, "'This it is to be a pest.' Therewith he hit him on the shank with his staff."

be a pest.' Therewith he hit him on the shank with his staff."

There is an ingenious mode of avoiding the analysance of foolish questions, and of responsibility for disciples, which has been carried to perfection by some of the Gamaliels of the day. Finding that they have impressed people, and that mestership is being thrust on them, whether they will or not, they have become orealer and mysterious. The best-informed disciple has not an idea of what their views are on any subject. The master has the pupil doubly safe; he dares not get up and go away, for fear of losing the longed-for utterance; and he cannot compromise his teacher by carrying out principles which are hidden from him by that superior wisdom. By this system no one is a loser, unless indeed the master origi-By this system no one is a loser, unless indeed the master originally had something of importance to say, some "message to his age." But that is very unlikely. Aristotle was inclined to think that there were no political remarks of much value left to be made; and though some ideas of weight have come to light since the time of Aristotle, humanity can afferd to look forward to these

discoveries and to the pleasant surprise they will give posterity.

We have been considering the relations of masters who presur ably have something to teach and of disciples who have discovered ably have something to teach and of disciples who have discovered that fact. But the general hariness of opinion at present, and the need of a guide which many worthy persons feel, have given rise to a class of masters without any doctrine. Men who have something engaging or imposing in their personality, or who express with decision and seeming earnestness the chance view of the moment, often find themselves surrounded by disciples before they The expression about sitting at a teacher's feet at once calls up a picture of patriarchal wisdom at its case and of eagerly listening youth. But a moment's thought shows that a great deal more than this is involved in the idea. Physically, the attitude is an incompared in the idea. Physically, the attitude is an incompared in the idea. Physically, the attitude is an incompared in the idea. Physically, the attitude is an incompared in the idea of the maters and disciples. Perhaps the earliest historical reference to the mere posture is to be found in the account of Adoni Berek, and of the threescore and ten kings who were compelled to sit at the feet, and indeed hensath the table, of that monarch. It assume the doubted that, while their situation was humiliating to the captives, and soothing to the vanity of their conqueror, it must often have caused considerable amonyance both to himself and his guests. Persons grouped all around one in submissive and crouching attitudes, mental or bodily, may flatter pride, but they do not conduce to the free and natural play either of the limbs or of the consciousness. We see this daily in the case of the fathful hound who puts himself it the value of the part of his master. In like manner, learners who are too assiduous at a teacher's feet are always in the way. Their feelings are trampled on when the master becomes animated, and when he is out of temper he permits himself to ill-treat creatures in matters of tests. The master as partial creation have a question raised shout Mr. The matter of temper he permits himself to ill-treat creatures in matters of tests. The master as partial create, and more so sensitive, and so applicate to the feet are always in the way. Their feelings are trampled on when the master becomes animated, and when he is out of temper he permits himself to ill-treat creatures in matters of tests. The master is private and more so sensitive, and so applicate to admire a time of the case of the feet are always in the way. Their feelings are trampled on w is hime all accessed these thry eclipses of faith, but few perhaps we arrapathined with the unknety leader. There are moments had be negreto that he ever was called Master, and would prefer whichmens along to all the consistency, and they have it always out to them to all ut cherical feet, and rejoice there in permanence

It is among women of course, and very young men, that the stem of disciplinating mainly survives. A female following is core demoralizing then a male one; the master may be much stem of discipleship mainly survives. A female following is ore demoralising them a male one; the master may be much as rude, but he is far more despotic. Johnson was more arise than Richardson, but not so spoiled. There was generally one slave to turn and remind him that he was mortal. In a e of young men there will always be some who are ical or ealy half convinced. They get up from the teacher's sceptical or only half convinced. They get up from the teacher's fact, and, like lovers who serve women on their knees, "when they get up they go sway." At the Universities, where metaphysical masters are much looked up to, some one is always doubting whether the teacher really knows all about the Absolute. Bould spreads, the waxen wings of discipleship melt, and the luckless master comes down from his searings and speculations in the alouds. And this is perhaps the bitterest moment which occurs in the relation of disciple and master.

Reflection on any subject companily leads the instructed mind to

stion on any subject generally leads the instructed mind to less. When we consider the discomforts of discipleship, thankfulness. When we consider the discomforts of discipleship, the way in which the people at his feet hamper a man and irritate him, drag him on and keep him back out of season, feed his vanity and encourage his faults, we become aware of a new debt to the useful invention of printing. For it is the diffusion of books which has speiled conversation, as they say, and deprived the bore of his occupation, that saves us also from the infliction of personal discipleship. All our great mechanical discoveries act in this way; they lessen mere personal influence, keep men at a proper distance, as it were, and secure for each his own atmosphere undisturbed. All our relations are made less intimate, less strained, less hand to hand. Even guspowder has this effect; you cannot hate an invisible artilleryman in an adjacent county, as you could a person who took you by the beard and stabbed you under the fifth rib. In the same way, the necessity for the actual presence and power of In the same way, the search and stabled you under the fifth rib. In the same way, the necessity for the actual presence and power of the living voice of the teacher has ceased to exist, and Mr. Carlyle may regret it. But these influences would only reach a few, and could not be handed on in any mystic tradition. It was of little avail to see Mise Pinkerton, who had known Dr. Johnson. Things are better as they are. We cease to get the hasty word, the unconsidered opinion; the sage "does but give us of his best," the howests of his column reserved in his host, when thoughts of his calmer moments expressed in his best manner. When writers of importance allow themselves to publish extreme and crotchety views with dogmatic solemnity, they are generally men who have been spoiled by a court of disciples. Thus there are many consolations in the decline of discipleship. We are safe from snuts and rudeness; our teachers are remote voices, not living people who could "hit us on the shank with a staff," like Confucius. We can resign the everyday talk of great men to persons who are lion-hunters rather than disciples, and our contemporaries, when they are worthy, may almost become our classics.

HANGING.

RENEVOLENT peer has just been calling attention to a grievance which affects a small and not very select part of the population. He thinks that hanging is a less agreeable process than is necessary for securing the desired end; and pro-The fact that very few people are exposed to the inconveniences which formed a subject of one of Lamb's essays is certainly not a sufficient reason for objecting to their removal. We have no love for brutal murderers, who form the only class directly interested in the proposed reform; but we admit that there is suffering enough in the world to make us willing to diminish it wherever we can. We would put the greatest ruffian out of his misery as rapidly and easily as possible. We cannot affect to say that our nights are in the world to make us willing to diminish it wherever we can. We would past the greatest ruffian out of his misery as rapidly and easily as possible. We cannot affect to say that our nights are rendered alceplase by our indignation at the hardship to which our criminals are exposed; but, given two modes of putting them out of the world, we should prefer that which inflicted least pain. The question, therefore, is a legitimate one, though not calculated to absorb a large amount of public attention. Moreover it has recently been a good deal simplified. Under the old system we had to consider not meraly the personnance considered as a dramatic spectacle. From that point of view there was perhaps more to be said for hanging than is generally recognised. We do not mean to say that on the whole the archibition was not of a butalizing tendency, and fully deserving to be abeliahed. But, given the publicity, it was perhaps better than the more dignified authod of beheading. Oharles Lamb, in the casey to which we have referred, compating of the lusticeous view which the ordinary Englishmen always took of hanging. Swift and Gay, and even Shakapeace, he asys, invariably regard langing as some or less of a joke. Why this should be it is a hand, to say as it is to say why other amiliarings of the neutron that such such as semicleuse and this toothechs, are always a standard or hadicrous by the non-sufficient. Lamb cannot have not standard as hadicrous by the non-sufficient. Lamb cannot have not standard as hadicrous by the non-sufficient. Lamb cannot have not standard as hadicrous by the non-sufficient. Lamb cannot have not standard as hadicrous by the non-sufficient. Lamb cannot have not standard as hadicrous by the non-sufficient. I am had a standard as hadicrous by the non-sufficient in always to a standard as hadicrous by the non-sufficient.

been hanged as an interesting martys, even though we are convinced of his innocence. Poor Major André is perhaps an exception; and yet we cannot but feel that Washington showed a certain amount of worldly wisdom, if not of good feeling, in refusing to change the mode of his execution. Somehow or other our associations with the gallows ere of an essentially unromantic hind. There is no chance for dipping handleredkiefs in the sufferer's bleed; no painter could possibly make an interesting study of the closing scene; and, though here and there a simple-minded ballad may touch upon it successfully, we say scarcely imagine a postical treatment of the subject in any latter style. If therefore one object of number of the subject in any latter style. If, therefore, one object of punishment be to prevent the sufferer If, therefore, one object of punishment be to prevent the sufferer from becoming a romantic here, we have a decided impression that hanging is better calculated to promote it than any other form of death. It is so ampleasant to think of an innocent man being strung up ignominiously by the neck that the first impulse is to believe all persons who have suffered that fate to be guilty. The conditions, however, are considerably changed by the present system of privacy. As we have not to take into account the effect produced upon the multitude of spectators, we may put more attention to the fastings of the criminal. A good many more attention to the feelings of the criminal. A good many people, indeed, still assist in imagination by the help of reporters. Perhaps in an ideal state of civilization this vicarious mode of observation would also be abolished. It would be exceedingly impressive if the criminal's disappearance from court were also his final disappearance from the world: Matters might be so arranged that as the judge pronounced the last words of the sentence the convict should sink through a trapdeer and nothing more be ever seen or heard of him. At present, for obvious reasons, this is not possible; the popular mind must be satisfied by some guarantee that justice has been done; but we may, perhaps, give a little more that justice has been done; but we may, perhaps, give a little more play to our merciful instincts by allowing the execution to take place in the most painless way.

Here, however, occurs a considerable difficulty. What is really the most painless mode of death? That is a question for which it is impossible to find conclusive evidence. If, indeed, Spiritualism had anything to say for itself, it ought to be able to provide some kind of answer. The very material ghosts who revisit this world by the help of mediums are often drawn from that class which has They are disreputable a considerable experience of the subject. beings of criminal antecedents who frequently have made their exit to the spirit-world by the route of the gallows. A more tangible result would be obtained than has hitherto been communicated to result would be obtained than has hitherto been communicated to the world if some of their familiars would call up, say, the last murderers who have been hanged in England and guilletined in France, and get them to compare impressions. Unfortunately, indeed, the ghosts in question are such confirmed liars that very little reliance could in any case be placed upon their testimony. There is, however, some evidence which is good as far as it goes. Various persons have at different times been recovered after reaching the stage of inspisibility, and their recovers if trustworthy. ing the stage of insensibility, and their accounts, if trustworthy, ing the suge of insensionity, and their accounts, it trictworthy, tend to show that hanging is so pleasant a process that, but for its final results, it would be worth while to indulge in it occasionally by way of amusement. The recovered persons, it is said, agree that the unessiness is "quite momentary," that they then have visions of beautiful colours, and speedily become unconscious. Similar accounts are generally given by people who have recovered from drowning; and indeed physiologists tell us that, so far as can be discovered, death is generally a more painless process than we are apt to suppose. If this be the case, our sympathy with the hanged is so far thrown away, and we might relieve the anxiety of expecting sufferers by giving them the most authentic accounts of the operation which they are about to undergo.

It must be admitted, indeed, in any case that the worst part of hanging, or of any other form of execution, is probably that very unpleasant half-hour which must be passed previously to the performance. If our object be to diminish suffering, we must consider, normance. If our object be to diminish suffering, we must consider, not the actual pang inflicted at the instant, but the preliminary impression upon the imagination. For this purpose there is a considerable body of evidence which would demand attention. The popularity of different forms of suicide is not a proof that the form adopted is really the most painless, but it is a proof that it in the least terrifying to the inagination. The question as to the performing the operation is often discussed, but best mode of unluckily the results are rather ambiguous. Few persons who commit suicide, in fact, are cool enough to set about their end in a businesslike manner. A soldier naturally shoots himself because he has the materials always at hand. Women, it is said, incline in a general way to hanging because they have contracted an aversion to firearms, which remains with them—though it must be admitted that the logical process is not very sound—even whon the dangerous character of an implement should be its chief recommendation. Drowning, again, has recommendations to many people, not on account of its intrinsic merits, but because rivers people, not on account of its intrinsic merits, but because rivers are always handy, and because, in many cases, a voluntary performance may be easily mistaken for an accident. The choice would appear to depend generally upon the peculiarity of temperament which makes it pleasantest for one person to plunge at once into which makes it pleasantest for one person to plunge at once into which water and for another to alink in by degrees. A man with vigorous nerves likes to take the shock and have done with it. A more excitable person generally shrinks from the shock even more than from the change which it introduces, and dreads nothing which can be brought about by slow degrees. The French school of suicids has distinguished itself by its foundness for the charcoal process; which to Englishmen generally suggests associations, umpleasant even at the moment of death, of

stuffiness, headache, and discomfort. The most elaborate plan that we remember is described as having been adopted at Paris. According to some ingenious author of contemporary history, a professor of the art kept a hospitable table, which persons about to commit suicide were in the habit of visiting. They partock of a good dinner, with plenty of wine and excellent cookery, paying the bill, we presume, beforehand, with the understanding that a subtle poison would be mixed in one of the dishes not previously specified. We fear that the entertainer would be under a strong terretain to put it into the soul by war of series being the specified. We fear that the entertainer would be under a strong temptation to put it into the soup, by way of saving himself the rest of the performance. But if full reliance could be placed upon the host, we feel that such a mode of death, if not precisely in accordance with Christian morality, would have its recommendation for many temporaments. It is pleasanter to the imagination to allow the blow to strike you without being aware at the instant of its descent than to encounter it knowingly and visibly. And, indeed, if men of science should occupy themselves with the problem, there cannot be much doubt that some kind of poisoning would be the plan adopted in the interests of the sufferer. There is something unpleasant about every mode of the sufferer. There is something unpleasant about every mode of death which involves a suspicious-looking apparatus. A cold river in the winter is much more terrifying than a pleasant stream in the midst of summer. The end may be precisely the same, and the actual amount of suffering not less in one case than the other. But the instinct of self-preservation survives in a modified form even with instinct of self-preservation survives in a modified form even with people who have decided to put an end to themselves, and warns them against everything that is painful to the imagination. Ophelia would never have drowned herself if in her time streams had been applied to the purposes common in a civilized land. And on the same principle there can be little doubt that some poisons put an end to life in the quickest and least terrifying manner. An overdose of laudanum sends one out of the world with all possible respect for the decencies, and, if we consulted exclusively the tastes of our criminals, we should probably put an end to them by some composing draught, according to the great precedent of Socrates. We do not, however, pronounce any opinion as to the advisableness of any change in the operation. After all, the chief thing is to have some method which is, so to speak, sanctioned by long association, and method which is, so to speak, sanctioned by long association, and which inflicts a definite stigma upon the memory of the sufferer. Death by law ought not to be superfluously painful, but it ought to be distinctly ignominious, and therefore there is a good deal to be said for atherence to the old-fashioned methods which have acquired a certain significance simply by the fact that they have been practised immemorially.

DINNERS DOWN THE RIVER.

If the Continental cities in general are better provided than London with suburban dining places, it is very much owing to the way of living of their inhabitants. Business men on the Continent still stick for the most part by their business establishments; they take their business exceedingly easily, but they are always busied at it less or more; and when they do not actually reside over the shop or the counting-house, at least they have their abode somewhere in the quarter. A few wealthy bankers or merchants may betake themselves to mansions out of town, but their neighbours, for the most part, content themselves with a flying trip into the country at Whitsuntide, to be followed by an autumn holiday at the baths or by the sea. Yet perhaps they take all the more pleasure in the country that it is their habit to live in the town, and hence their fondness for getting into the open suburbs of a summer evening, when the air grows cooler, and the labours of the day are done. So round the enceinte of Paris you may see restaurants of one sort or another, wherever there is a bit of grass or a group of trees anywhere beyond the circle of the fortifications. If you go a little late to your favourite resort, when the weather is settled or sultry, there is no getting a table or a seat for money or favour. The proprietors of these places are apparently making their fortunes, from the famous establishments at St. Germain or Versailles to the humbler eating-houses at the east or on the north, where rabbits are the staple of the modest enemer. Out-of-door eating of this kind is even more the houses at the east or on the north, where rabbits are the staple of the modest menus. Out-of-door eating of this kind is even more the fashion in Germany, although in Germany, thanks to the primitive hours of all classes, suppers are served in place of dinners. Krolls's in the Thierarten at Berlin, Dommeyer's famous casino at Imperial Schönbrunn, are sure to be found filled always to over-fibration according to the property of places that seek to rivel them in corpularity Imperial Schollfrain, are sure to be found lined always to overflowing, as are scores of places that seek to rival them in popularity.

Near London, on the contrary, nothing of the sort is to be seen,
except, perhaps, under cover of the glass at the Norwood Palace.

Our treacherous climate is enough to deter the most daring of
speculators from enterprises the profits of which must depend on the
weather. But even if the climate were more trustworthy, there
are other reasons why dining places a little way out of town would
reasonable may with us. Few people who have saything like asset scarcely pay with us. Few people who have anything like easy means care to live in the city. With us, the first thought of a man who has made his start in the world is to live as far as possible from the place where he makes his money and to though his man who has made his start in the world is to live as far as possible from the place where he makes his money, and to throw all his business associations behind him when he returns to his family for his leisure hours. It would be wantonly inviting insinuations against his credit were a gentleman to inhabit spartments over his office. Then there are fashions in all circles of society, and fishion is imperative in its orders. It imposts that City man, clerks of respectable tradesides, shall establish their families in villas. The villas may be imposing piles in bastard Gothin like the crenelated

edifices that crown the creets of the hills near Sydenham. They may stand in their own park-like grounds, with flower gardens, croquet lawns, pineries, vineries, piggeries, and all the rest of it. Or they may be semi-detached and screened from the road by scot-blackaned trees that struggle for a precarious existence. But wherever they are, from Redhill to Watford, or Chislehurst to Richmond, their occupants have an agreeable sense of ownership, and even their who are actually inhabiting the town do their best to make believe they are living in the country. Hard-working men who have returned home by road or rail after a long day in the distant city have no idea of turning out again for holiday-making. It is thing they would dream of to slip out of easy shooting-coats and leave the shadow of their own trees and shrubs, to scramble for their food in public among a host of others all equally eager, or to sit through a tedious evening wedged up to a table in an uncomfortable chair. They do not much care for music; they have a decided distaste for promiscuous company, and establishments that offered them everyday fare at ordinary prices would have no chance of obtaining their patronage.

The people who arrange for dinner parties in the neighbourhood of town belong to a different set altogether. They seldom decide to dine offhand, and the dinner they expect to have provided for them must be something in the nature of a banquet. On these occasions, whatever their means, they act as if money were no object,

them must be something in the nature of a banquet occasions, whatever their means, they act as if money were no object, and the landlords or limited companies who cater for them fall easily enough into their ideas. They do not greatly long for fall easily enough into their ideas. They do not greatly long for the country as such. It may be refreshing to breathe a freeher atmosphere for the evening if they are up in town for the season, but those who come to town for the season have enough of the country in the course of the year. Rural scenes and tranquil seclusion scarcely fall into the programme of the season's gaieties; to interrupt the whirl of dissipation for a day would be like falling back on soda-water from Veuve Cliquot. It is true that an exception is made in favour of Richmond. It is true that an exception is made in favour of Richmond. Richmond has been a fashionable resort of Londoners from time immemorial, and with much reason. It commands the most enchanting views of genuine English landscape, with the wood and water thereto belonging. It boasts one of the prettiest parks in England, to say nothing of the immediate neighbourhood of the metropolis, and it is a pleasant drive to Richmond by read past the shady trees in Konsington Gardans and neighbourhood of the metropolis, and it is a pleasant drive to Richmond by road, past the shady trees in Kensington Gardens, and across furzy bits of common. And yet it is not surprising that dinners down the river should have charms superior to those of Richmond, even setting aside the specialities that make the attractions of their cartes. There is more freshness in the expedition, and to those who are sated with a round of monotonous pleasures the value of fresh sensations is inestimable. If you drive to Greenwich by the road, or rather by the streets, you see a good many sights that are anything but agreeable; the houses are dull or dirty, and often painfully dilapidated; around you everywhere are the signs of poverty or vice. The shops are mean, and suggest ideas of hard bargains driven for very inferior articles with customers who come to them straight from the pawnbrokers. There is an abundance of public-houses, and of those flaunting gin-palaces that swallow the earnings of the poor. You should feel twinges of melancholy, and it is to be hoped you may. Your interest must certainly have been awakened in any case, yet we fear that, however painful may have been some of the sources it originated in, it leaves no lasting depression behind, and sources it originated in, it leaves no lasting depression behind, and sharpens the appetite rather than otherwise. It may be trusted that a virtuous resolution to give practical and pecuniary vent to your recently stirred sympathies may have much to do with it; but your recently stirred sympathies may have much to do with it; but undoubtedly there is a marvellous rebound of spirits as you draw up on the esplanade before the "Ship" or the "Trafalgar." You have bright associations with the stucco of the façads that is glancing in any sunshine there may be; with the carriages of all kinds drawn up before the doors and in the courtyard; with the cheery bustle of guests and waiters in the passages, where, in the beautiful words of the American bard, you can "ketch the smells of roast and biled a-comin' up the entry." Some people go down by road; most are whirled along the roofs in railway carriages, among the chimney-pots and drying poles and the cages of the pigeon-fanciers; but there can be no question that the river itself is the appropriate highway to a river dinner. Whether you should take ship must of course depend entirely on the weather. Nothing can be more depressing than the banks and the bosom of the itself is the appropriate highway to a river dinner. Whether you should take ship must of course depend entirely on the weather. Nothing can be more depressing than the banks and the bosom of the Thames when there are raw fogs or driving rain, in spite of the gratifying panorama of our commercial prosperity that keeps unrolling itself on either hand to each revolution of the paddles. But if there be a gleam of sunshine here and there, and if the akies overhead be tolerably clear, there is no more enlivening spectacle in the world, and it is a spectacle that recommends itself delightfully to an Englishman's patriotic vanity. You shoot London Bridge under circumstances more agreeable than in the days of the wherries and watermen to find yourself in the very thickest of the standing show of our mercantile marine. You slip past the tiers of shipping in the Pool, the forests of masts and yards in the docks; past row upon row of sea-going steamers, each carrying in its name and figure-head and in the contents of the lighters leading or discharging at its sides its separate associations with foreign parts and secoples. The vest piles of the bonded warehouses, the smithing chimneys of the workshaps on after abore, may be secured in Genoa and the Queen of the lighters leading to their magnificent merchant founders. But perhaps there is as much, of the poetry of wealth about them, and certainly there is a great deal more of its reality. By the time you step ashore at Greenwich you have laid in abundant matter for meditation that you may set aside if you please for future use. If you have had time to learn little that is absolutely new, you have refreshed yourself as to a good deal that had been fast slipping from your memory.

For the dinner itself, it is by no means like other dinners. Ten to one, to begin with, it is served up with pleasant memories more piquant even than sauce Tartare. No one dines at Greenwich very many times in a season, so that a Greenwich dinner must be more or less of an event, while the staple materials that form the pretext

For the dinner itself, it is by no means like other dinners. Ten to one, to begin with, it is served up with pleasant memories more piquant even than sense Tartare. No one dines at Greenwich very many times in a season, so that a Greenwich dinner must be more or less of an event, while the staple materials that form the pretaxt for it assign it a distinct place in the recollection. Of the white-bait we say little, except that partiality itself must confess that its merits are mainly negative. If the butter in which it is encased confines the fugitive fragrances of the little fish, it smothers them as well. If the whitebait had all the fancied delicacy to which it may be presumed to ove the exalted dignity of its position, what cook with a conscience would dream of bedevilling it with cayenne? But it has come to reign at Greenwich by a sort of divine right, and it is something very like constructive treason to question the legitimacy of its traditional claims. What concerns the diner more is the more imposing fishes that form its cortége, and these include almost everything that swims in our English waters and something more. For precedence at the feast is conceded to an illustrious stranger from the tropics; but after taking leave of the turtle, who may have basked in "keys" or sandbanks in the Carribean seas, you find yourself floundering in the middle of a shoal of genuine English fishes. In the way of tampering with them promiscuously, it would appear that by a beneficent arrangement of nature an averagely sound constitution may permit itself any reasonable liberty so long as you are content to be guided by certain simple rules. Stick to the most simple dressings and eschew those pickles and powerful sauces that dominate the essential flavours of the dish they should properly set off. Do not begin a second dinner when the first is done, breaking out secklessly in entrées and entremets when the serious purpose of your expedition has been disposed of. So may you combine pleasure, profit, and comfort in your ic

THE PRUSSIAN GOVERNMENT AND THE BISHOPS.

THERE does not seem much likelihood now that any Pastoral will issue from the recent Episcopal Conference at Fulda. Indeed, according to one report, there was to be no Pastoral unless the Bishops had come to some understanding with the Government, and we may pretty safely assume, on the strength both of official and Ultramontane organs, that no such result has been achieved. In the present temper of the high contending parties, there was not the slightest reason for expecting it. The telegrams announcing that the Bishops proposed to deliberate on a plan of compromise, and that the Government was ready to meet them half way, to say the least, required confirmation; and the visit paid to the Emperor three weeks before the Conference by Hahne, Vicar General and administrator of the diocese of Fulda, did not go far towards confirming them. We are now assured by the Germania, the episcopal organ, that the two events had no connexion with each other, and that the selection by Hahne of the anniversary of the martyrdom of St. Boniface (June 5) for his visit to his sovereign, was alone a sufficient proof of the resolve of the hierarchy and the faithful to remain faithful even to death in their struggle for the divine and inalienable rights of the Church. No doubt, it is added, all the Bishops would be most thankful to bring to a peaceful termination a contest which involves such severe trials and difficulties, and which has already led to the imprisonment of three prelates and several of their clergy. But they were well aware that this could not be effected by any personal appeal to the Emperor, who, as a constitutional monarch, is bound by the decision of his Parliament, and in fact there was not the remotest notion of discussing proposals of peace at Fulda. "The Bishops have not departed a hair's breadth from the Church principles they have repeatedly preclaimed;" and they still therein an unshaken confidence in the eventual triumph of their cause. The semi-official Provincial Correspondence does not materially differ

to the recent programme of the Catholic Union at Mayenes and the latest utterances of the Pope and of the Ultramontane press, especially the Garmania, which has declared all mutual understanding to be impossible, until the new laws are superseded, and the bishops are thus enabled conscientiously to submit. The Correspondens, however, appeals to the consciences of the Bishops on the other side, and urges them to remember their duty to the Government and to their flocks and to abandon this fatal resistance to lawful authority. Every true patriot and intelligent friend of the Church would rejoice to witness a reconciliation, but this can only be seriously thought of on one condition. "The laws passed with the consent of the Imperial Reicherath and the Prussian Landtag form the basis on which alone the relations of Church and State can be further developed and the renewal of a friendly understanding effected. All overtures of peace which do not take this fact unconditionally as their point of departure are condemned beforehand as idle and fruitless." The Bishops can easily reduce the new penal code to a dead letter by obeying the laws it is intended to guard, and the Government would rejoice at such a result. "It has again and again insisted throughout the controversy that, in defining the boundaries of the civil and purely ecclesiastical domain, it desires above all to secure for the future the friendly neighbourhood and salutary action of the two societies instituted by God." It is so clear, however, that the Fulda Conference did not accept this standpoint, that the Correspondens considers it matter of purely psychological or historical interest what particular form its conciliatory proposals may have taken, and the more so, inasmuch as they were not simultaneously addressed to Rome and to the Emperor, but were simply submitted to the Pope for his previous approval. That there may have been some such proposals is possible—for there are two parties among the Bishops—but the official and Ultramontane organs agree i

This amounts, so far, to little beyond a repetition of the old Non possumus on both sides, and cannot be said to advance the controversy a single stage. On the general merits of the question we have already more than once expressed our opinion, which—not-withstanding the l'rotestant demonstration at St. James's Hall last winter—is probably shared by the great body of impastial and think winter—is probably shared by the great body of impartial and thinking Englishmen of all parties. It may be for that very reason that the latest apology for the ecclesiastical policy of Prince Bismarck is published by its author, M. Baumgarten, in the Allyomeine Zeitung under the title of a lecture on "The English State and the Roman under the title of a lecture on "The English State and the Roman Papacy." It is always of course an advantage to be able "to see ourselves as others see us," and in this case we certainly have no reason to quarrel with our critic, or rather our panegyrist, who holds up the traditional policy of England to the admiring imitation of his countrymen. But we may be permitted to doubt whether he has not somewhat misapprehended the lesson it serves to teach. We need not follow him into the depths of medieval history, the origin of Magna Charta, and the preaching of Wicliffe, further than to observe in passing that there are two sides to the question even there, and that the ambition of medieval Popes—as some of the greatest writers of his own country might have taught him—was neither wholly selfish nor exclusively inimical to the advance of European civilization. Neither will we enter here on the tangled history of the Stuart Civil War and the Commonwealth, or discuss how far Cromwell, "under whom religious liberty notoriously attained a completeness never equalled before wealth, or discuss how far Cromwell, "under whom religious liberty notoriously attained a completeness never equalled before or since in England or anywhere else," was consistent in excepting "Popery" from the benefit of his otherwise boundless toleration. It is chiefly from the history of Catholic Emancipation that M. Baumgarten illustrates "the elasticity of the English Constitution," and its capacity for the task of practically disconnecting Ultramontanism from absolution, which has to this day, be tells us helled the wisdom of German statesmen. We are then he tells us, baffled the wisdom of German statesmen. We are then presented with the various forms of oath imposed from 1773 downards on Irish Bishops disclaiming all civil and secular authority of the Roman Pontiff, and with the answers of Dr. Doyle and other Irish prelates when examined by Parliamentary Committees, repudiating prelates when examined by Parliamentary Committees, repudiating the civil jurisdiction and the infallibility of the Pope. And the writer reminds us that those answers were quoted by Archbishop Kenrick, Bishop Clifford, and other Opposition speakers at the Vatican Council. He considers it the peculiar merit of the sound and powerful political sense of England that the disclaimer of this medieval abuse has been erected into an official guarantee against the possible dangers of Catholicism to the State. A difficult considerable the possible dangers of Catholicism to the State. A difficult controversy of the schools has thus been made into a serviceable weapon for statesmen, of which, however, he regrets to observe that German Governments have not availed themselves. We must confees that this sketch of English policy towards the Church of Rome, whatever may be thought of its merits, does not appear to us to whatever may be thought of its merits, does not appear to us to have any very obvious bearing on the present conflict in Germany. In the first place, no cath against Papal Infallibility was ever imposed on Roman Catholic Bishops here, and no cath of any kind is imposed on them now. In the next place, no English statesman of our own day would attach much importance to the so-called guarantees about which there was so much fiery debate half a century ago in connexion with Catholic Emancipation. It is not really to this, but to a wide system of religious toleration—from which "Popory" is no longer excluded—coupled with a vigorous and even-handed administration of the laws to which all alike are

subject, that we owe our immunity from what to some Continental politicians appear such formidable dangers. If we give no privilege to Catholics, neither do we enforce any privilegia against them. When Mr. Arnold complains that we have not provided a Roman Catholic University for Ireland, his indictment may or may not be a fair one, but it is at least quite untrue to say that Prince not be a fair one, but it is at least quite untrue to say that Prince Bismarck has made any such provision for Prussian Ostholics; on the other hand we do not attempt, as he does, to drive Catholics youths—still less candidates for the priesthood—into mixed or Protestant Universities to which they profess a conscientious aversion. There cannot, in fact, be two policies more radically diverse than those pursued at present by England and Prussia respectively towards the Roman Catholic Church. A controversy about Ultramontanism which has been going on for some months past in the Contemporary Review may help to illustrate this difference, and a brief reference to it will not be out of place here.

Dr. Manning, in an essay on "Cassarism and Ultramontanism," which he has since been engaged in defending at length against the strictures of Mr. Fitzjames Stephen, had maintained the inde-pendence and supremacy of the Church within its own sphere and pendence and supremacy of the Church within its own sphere and its inherent right to fix the limits of its own jurisdiction in dealing with the civil power. And he added that this claim was in fact made by all Christian communions, instancing especially the Established Churches of England and Scotland and the Free Kirk. To this latter statement Mr. Taylor Innes takes exception in the current number of the Chrismporary, in an article written throughout with express reference to the pending contest in Germany. It is true no doubt that the Ultramontane and Puritan conceptions of the nature and office of the Church differ very widely, but as regards the nature and office of the Church differ very widely, but as regards the relations of Church and State, with which alone we are concerned here, the Free Kirk view, as interpreted by Mr. Innes, seems practically to coincide with the Archbishop's. The one indeed talks of tically to coincide with the Archbishop's. The one indeed talks of the supremacy, the other is content to assert the freedom and independence of the Church, but to all intents and purposes, as will appear directly, the difference is a verbal one. If Archbishop Manning insists that the Church, as a supreme power, "can alone fix the limits of its own jurisdiction and thereby fix the limits of all other jurisdictions in contract with it," the theory of the Scottish Kirk, as here expounded, is "that each has its own separate sphere; that within that sphere each is independent and supremac; and that each has thus its own jurisdiction not derived supreme; and that each has thus its own jurisdiction not derived from the other, or held of the other, but a co-ordinate inrisdiction." The Kirk however, we are assured, fully acknowledges the right of the State to decide for itself in those "mixed questions" which constantly do and inevitably must arise, only the Church elaims full liberty to decide for herself how far to accept these civil judgments. Accordingly, in a famous case of disputed patronage, where the civil courts had decided against the Church, the General Assembly resolved to offer no further resistance to the claims of the ration and incombent to the ampluments. ance to the claims of the patron and incumbent to the emoluments, "while at the same time it formally declined to take any eccleristical steps in their favour." In other words it surrendered—as it could not help surrendering—the emoluments, over which the State had absolute control; but whereas the Courts decided the admission of pastors to be a civil matter, and "demanded that the Church should on this question yield to the ruling of civil authority as supreme," the Church decided that it was an ecclesiastical matter, and refused to yield. Dr. Manning or the Prussian Bishops would under similar circumstances have acted in precisely the same way; they could have done no more and would have done no less. What abstract view the rival Churches may respectively take as to the duty of the civil power to submit to the ruling of the Church—and Mr. Innes dwells much on an alleged contrast here may be an interesting topic of theological speculation, but can be of little concern to the statesman. And this comes out very clearly when the writer proceeds to apply his own principles to the existing when the writer proceeds to apply his own principles to the existing conflict in Germany, in the words of an address delivered last month by the Moderator to the General Assembly of the Free Kirk at Edinburgh. We are told that in this address Dr. Stewart fearlessly applied the principles of the Kirk to the present problems of every country in Europe, and in Germany in particular outs absert through the recent legislation for the Churches with a sabre-like simplicity and directness." And this he does on the principles that the Beauty Catholic Churches week is sufficient to the same ciple that the Roman Catholic Church as such is entitled to the same freedom and independence as any other, "while, in so far as it is not 'a religious system' but 'a hostile secular policy,' a civil provided that legislation does not trench—as the Fulk laws our tainly do—on the internal working of the ecclesiastical body." In that distinction lies the whole gist of the that distinction lies the whole gist of the controversy. The State has an obvious right to vindicate its own security and integrity has an obvious right to vindicate its own security and integrity against all machinations whether of religious or secular opponents. But that is no justification for the Falk laws. If it be true, as Prince Biamarck has repeatedly asserted, but never attempted to prove, that the German Cathelics are dialoyal citizens, their disloyalty either is or is not part and parcel of their religious creed. On the former hypothesis, which however is not alleged, there might be some ground for refusing to tolerate Cathelicism at all, just as the Roman Empire refused to include Christianity among the highest religiouse, because it was held to be dangerous to the State. On the latter hypothesis the delinquents should be dealt with by the ordinary processes of law, supplemented, if necessary, by fresh penal legislation. But is meither case could the evil be legitimately or effectively dealt with by turning the constitution of the Church inside out, and meta-

morphosing the Imperial Chancellor, as it has been impully expressed, into "a Pope in jackboota." Meanwhile the infliction of pains and penalties under the new laws goes on marrily, and is no longer contined to eschemastics. Not to speak of fines, two Reman Catholic laymen were sentenced the other day, one to minutes months the other to twelve months imprisonment, the lamguage held to be disrespectful to the Government. The prelates now in confinement are, it is said, to be at once benished from the country when the term of their present sentences has explicit, and there will soon be a fresh batch to take their place in present; now can any successors or substitutes be appointed to their sees whom the clergy could in conscience accept. The next episcopal meeting at Fulda will almost cartainly be reduced in numbers; whether it will be more disposed to submit to civil dictation time alone can show. alone can show.

LORD CHELMSFORD ON NAVAL EXAMINATIONS.

THE House of Lords does not seem to be any more free than meaner assemblies from the well-known temptation of human nature to laugh, not because there is really anything famy, but because other people laugh, and because it seems to be the right thing to laugh. Some part of the amusement to which the House seems to have been stirred up by Lord Chelmsford's late speech on the examinations for naval cadets would seem to be due to this cause rather than to anything really funny in the matter itself which was before the House. Now we can well believe, as other noble lords besides Lord Chelmsford maintained, and as the details of the examination themselves seem to show, that the lade the examination themselves seem to show, that the lade of the examination themselves seem to show, that the lade really are over-examined, and therefore we may be sure, as a natural consequence, over-crammed. We do not care to defend a system which it seems to be admitted on all hands is carried too far. What we do wish to comment on is the singular spectacle of a House of Parliament laughing as if there was something in them exceedingly ridiculous, at some of the points of detail which Lord Chelmsford picked out as special subjects of merriment. The fact that some of them should have been thus picked out really throws a good deal of light on the advances which some branches of knowledge have made since the noble loyds who laughed were themselves examined ide since the noble lords who laughed were themselves examined for anything. They illustrate the way in which some things are vulgarly thought to be very hard which in truth are extremely easy, and which, if they are found to be so by teachers who have been brought up on a vicious system, and have therefore much to unlearn, are certainly found to be so by learners who come fresh to the subject and have simply to learn. What we have chiefly uniearn, are certainly found to be so by learners who come freak to the subject and have simply to learn. What we have chiefly in view is the questions in English history, though we really cannot see why Lord Chelmsford should think it necessary to go out of his way to sneer at subjects like physics and geology. In Lord Chelmsford's day it was probably thought that a naval officer could do his duty the better if he were ignorant of everything except his immediate calling. Public opinion has reversed such a doctrine as that, and though no doubt the tendency just now has been to go too for the other way yet it is hardlesuch a doctrine as that, and though he doubt the tendency just now has been to go too far the other way, yet it is hardly becoming to talk contemptuously of "useless questions in geology." Surely a naval officer, or any one else who has a turn for geology or any other science, must be the better for cultivating it. What strikes us is rather that the subjects are too many, and that it must be the provided of some bids. it would be better, while requiring real knowledge of some kind from each candidate, to allow somewhat more of choice between alternative subjects. And certainly the historical questions which seem to have excited so much merriment appear to us to have been for the most part very well chosen. Lord Chelmsford sake pathetically whether a young cadet should "find his hopes blighted and the future of his life overclouded because he cannot give a satisfactory account of the Septennial Act, the Corn Laws, and the Reform Bill." "What possible use," adds Lord Chelmsford, "was such knowledge to a naval cadet?" We answer that a naval cadet is an Englishman, and that, like every other Englishman, he should know something of the history and constitution of his country. All turns upon what is meant by a "satisfactory account." It would be indeed ridiculous if the examiners were to require from a naval cadet the kind of knowledge of these matters which would be necessary either for a Cabinet Minister or for a Professor of History. But the days are past when it would do for a naval officer or any one else to answer, as Lord Chelmsford would see to wish him to answer, that the Septennial Act, the Command Laws, and the Reform Bill are names which to him convey no meaning at all. The questions in English history are set at four different stages of the candidate's studies, and the four examinations cover as many periods, which we may call Karly, Mediswal, Tudor and Stuart, and Modern. The first examination is for boys between twelve and a half and fourteen years of age; the questions as quoted by Lord Chelmsford are as follows:—

the questions as quoted by Lord Chelmsford are as follows:

2. What nations have successively gained a footing in this country? State how long the rule of each continued. 2. Explain fully the relations in which Edmund Ironside and Canute stood to each other and to the reventry.

3. What chain had Edward the Confessor to the thrine? Demnite his character and the principal events of his reign. 3. Show by a description of swants which occurred during the reign of William I. Show by a description of swants which occurred during the reign of William I. Show by a description of swants which secure him submissively. 4. What was the leading fleatures in the sharacters of Harold, William I., William II., Employ I., and Staphen? Substantiate what you say by examples. 6. Describe—(a) this by orderly [5]. Dancello, (c) curiew boll, (d) thermalistic.

The attractionment is greeted by the Histons [7]. Insighter, and Lord Children of any property of such tender which is inagine, the state of mind a poor boy of such tender which is inagine, the state of mind a poor boy of such tender which which had to prepare for such an order of the feature which that their

lardships would not be able to imagine it. It is very likely that, to Lord Chainsford and many other pears, the questions may seem exceedingly hard. We can only say that they would not seem exceedingly hard. We can only say that they would not seem exceedingly hard to any loy of those years who has been taught as how of those years now may be taught. The first question, we have no doubt, seems specially frightful, and frightful it would be to a very large proportion of teachers. But any led who has been taught in a sizer and scientific, that is, in an easy, fashion, would be able to give, in favo or five lines, such an account as would show that he really understood the matter. The only question which we do not like is that shout the curfew, which might in some cases lead to the famous answer, that "the feudal system was the ringing of a half." The only proper answer would be that the common accounts of the curfew are all noments. This is not the kind of question which should be set. A negative question is always likely to act as a trap, and is therefore unfair. The examination for the second term runs lightly through the time of the Plantagenet Kings, as they are commonly called. One question the Plantagenet Kings, as they are commonly called. One question is, "Describe as fully as you can the relations of England with France in the reign of Henry the Fifth." To anybody who has been taught well and clearly, the answer to this question might be been tangent well and clearly, the answer to this question might be very full and yet very short. A very few words might set forth what is really all that is wented, but what we suspect that many of the peers might not take in. What is wanted, would be first, to explain that England and France were never strictly at peace between the breach of the Treaty of Bretigny and the conclusion of the Treaty of Troyes, and to state the chief terms of this last treaty. Things like these, which are the essence of the matter, are proposed by simple, perfectly clear, perfectly easy to requestly, if treaty. Things like these, which are the essence of the matter, are perfectly simple, perfectly clear, perfectly easy to remember, if only they are once rightly taught. Why, to look to later times, the House should have laughed at the question about the reign of Charles the Second it is indeed hard to guess. It runs thus:—

"Give an account of the principal events of the reign of Charles the Second, and state for what that reign was particularly noted."

Took Chalmsford has been both sailor and lawyer, and he at least Lord Chelmsford has been both sailor and lawyer, and he at least ought not to despise the knowledge of a reign so important both in our navel and legal history. But when the example of laughing has once been set, it would seem that peers as well as other people are ready to laugh at anything, whether funny or not. We have no doubt that, as the House in general seemed to think, the system of examination is nowadays carried a great deal too far both in the navy and in other places. But most certainly many of the particular things which were picked out for special contompt only show that the laughers have no notion of the progress which has been made of late years, and how easy many things seem to their grandchildren which seem hard to them.

THE LICENSING BILL IN THE HOUSE OF LORDS.

THE House of Lords is occasionally useful for the application of common sense to public questions. Lord Salisbury has made the best, because the simplest, speech on the Licensing Bill. If, he says, people do not wish to go into public-houses before 7 o'clock in the morning they can abstain from doing so. This obvious remark would seem never to have occurred to many speakers on the subject. If, says Lord Salisbury again, it is not good to begin work with a dram of whisky in the stomach, that is for the workman to consider, and not for Parliament. We would say, let the physician and the clergyman urge the duty of abstinence as much as they please, but let them not ask assistance would say, let the physician and the clargyman tage the duty or abstinence as much as they please, but let them not ask assistance of the lawgiver. We become weary and disgusted with these attempts to keep the working class in leading-strings. Such attempts are certain to fail, and no good could come of them if they succeeded. A country, in order to be of any weight in the world, must be peopled by men and not by grown-up babies. Whatever else may be comprised in education, it will be worthless unless it tasches man to be a law unto himself. Where, we may ask, as we listen to these tedions debates is wisdom, and where is the place of the man to be a law unto himself. Where, we may ask, as we listen to these tedious debates, is wisdom, and where is the place of understanding? It certainly is not on the bench of Bishops, nor does it sit beside Lord Aberdare. The true wisdom which can alone give real power to any class or individual is that which teaches self-control. This was the wisdom Pallas offered to him who should become her worshipper. This would support him in life's contest until.

the full-grown will, Circled through all experiences, pure law Commessure perfect freedom.

These lines are both postry and philosophy, and they would do the working-man more good, if he could heed them, than any Licensing Act that could be passed.

Lord Aberdare brought forward facts which deserve attention,

Lord Aberdare brought forward facts which deserve attention, although he applied them to support an unsound argument. "It was stated," said he, "that a great number of persons engaged in night occupations were in the habit of breakfasting at public-houses before they went home, and that others who came from their homes at a very early hour used public-houses in order to obtain refreshment before going to their work." This statement rests upon ample evidence. The case of fishermen at Brighten was brought before magistrates in support of an application for leave to open at five o'clock, which was refused. Washenld think there could headly be a case more deserving of fair or even indulgent consideration than that of the fishermen who some ashors after a night's toil and danger, nor could there he a mure harmiest lessiness than that of angelying them with food and drink. We describe the publican of opportunities for selling victuals, and then assessed him with

keeping a more liquor shop. There could be no has in allowing to open at 5 A.M. both in town and country, but it might understood that, except in places having special wants, he no not open before 7 A.M. unless he chose to do so. There is like danger of drunkenness from early opening. As the "fast" under the chose to the country opening the cou understood that, except in places having special to pen before 7 A.K. unless he chose to do so. There is list danger of drunkenness from early opening: As the "fact" under graduate said of morning-chippel, the heavy event if it he o'clock, would be too late for the man of regular halfise dissipation. Such an establishment as the "Finish," in Cover Garden, would be hardly likely to be revived, because the ag of men who frequented it would now find accommodation at their clubs. It may be observed that even clubs, which a subject to no law except that of nature, do not remain perpetual open. The original character of the "Finish" was that of a hour where the rardeners and early frequenters of Covent Carden Man where the gardeners and early frequenters of Covent Garden Mari might obtain necessary refreshment; but what is early to one m is late to another. "The child of laborious industry prepares might obtain necessary refreshment; but what is early to one ment is late to another. "The child of laborious industry proposes to begin his day's work at the very time when the frollesome sea of dissipation thinks of retiring to his night's rost. To both these parties 'Carpenter's Coffee-house' or the 'Finish' afforded an agreeable recess. While the market people were regaling on tes, coffee, purl, or such other refreshments as their necessities or habits demanded, another set of persons enjoyed in a separate coffee-room such regales as suited their fancy. This party was made up of everything strange and eccentric that the town could afford." The "humours" of this house are depicted in Hogarth's print called "Morning," and the description which has been quoted occurs in the Recollections of John Adaphus, who himself witnessed the entrance into the coffee-room of John Philip Kemble, "dressed with his usual goutlemanly propriety, very much the worse for a late dinner-party." Such a scene would be impossible now, partly because there is no John Philip Kemble and partly because there is no "Finish." It would be difficult to conceive anything more ludicrous than the discussion as to the proper prenunciation of Coriolanus to which Kemble was gravely invited by a frequenter of the house "who wished to be particular himself, and had some daughters that he wished to grow up as perfect as women could be." No such fun goes on now, nor could we desire the revival of a liberty liable to acrious abuse. Yet it does seem rather hard that Eishops should exast themselves to cut off the single hour of confort and enjoyment which still remains available after a visit to the theatre. A play that addresses itself to a first-class audience cannot get started before 8 o'clock, and if it is, as many imported plays are, a five-act piece, it does not finish until past 11. There is a saying about taking one's ease in one's inn, which is doubtless unworthy of aniconal consideration of the single lands. taking one's ease in one's inn, which is doubtless unworthy of episcopal consideration, although laymen are capable of regarding chops and stout as an appropriate end to an evening at the theatre. The Bishop of London says that it is clear from the evidence (we do not know what evidence) that it is bad characters and not respectable people who frequent the public-houses late at night. If he means that the extension from 12 to half-past 12 o'clock has been granted for the accommodation of "bad characters," he applies been granted for the accommodation of "bad characters," he applies that term rather largely. Soon after the Act of 1872 was passed, a meeting was held to protost against its operation in London, at which Mr. Buckstone, the lessee of the Haymarket Theatre, made a forcible speech. Is he and is the profession which on that occasion he represented among the "bad characters" mentioned by the Bishop? Here again the rational view of the question was that propounded by Lord Salisbury. Sobriety, he says, is a good thing, but it ought to be enforced not by Act of Parliament, but by preaching and admonition. The Bishop says that keeping the public-houses open to a late hour throws great temptation in the way of livery servants who are out at night with their masters' carriages. We should have thought that half-past 12, or even I o'clock, could hardly be called late by comparison with the hours at which carsiages are out, and we should have thought, further, that the opportunity of getting refreshment thought, further, that the opportunity of getting refreshment during protracted waiting in the hours of night could hardly be considered mischievous. However, we should suppose that a coach-box affords stowage for a private bottle, and we do not see why coachnen should not be as capable as their masters of remainments of the coachner during the hours where bestiments are because the coachners. coachness should not be as capable as their masters of remaining sober during the hours when business or pleasure keeps them abroad. This talk about "throwing temptation in the way" is the most disagreeable feature of these debates. It deserves to be called by the plain word "cant."

Lord Aberdare brought forward cases of necessity for early opening in order to support the "alasticity" clause of his own Act. Theoretically we might approve that clause; but experience that it is not desirable to danche our practical experience.

Act. Theoretically we might approve that clause; but experience shows that it is not desirable to devolve on magistrates the duty of fixing the hours of opening and closing. This, at any rate, was declared by Ministers to be the principle of their Bill, and now it is said that they have abandoned that principle by referring it to magistrates to decide what is a populous place. But we do not think that fanaticism is equally applicable to boul questions, or that it will be quite so largely prevalent in a County Licensing Committee as in an ordinary banch of magistrates. We hold that the hours named in the Act ought to be large enough to suit the wants both of town and country; but as Lord clairly is almost the only statesman hold enough to oppose the prevalent as the best that circumstances allow. The question whether a as the best that circumstances allow. The question whether a particular place is "populous" will not be often doubtful, and when it is, the Liesneing Committee will decide it as they best may. The most influential mambers of the Committee will be likely to be those who look at such questions in a legal way, and that way of looking at them excludes the views of bishops and clergy and

other elements of confusion. Several reported cases would assist the legal consideration of the question. "Where," said Lord Chancellot Historicy, in one of these cases, "there is such an amount of continuous occupancy of the ground by houses that persons may be said to be living, as it were, in the same town or slace continuously, then, for the purposes of the Bailway Acts, and, according to the popular and not the legal sense of the word, the place may be said to be a town." The same idea was more neatly expressed by Mr. Russell Gurney, sitting as a judge of Assize, when, having to try the question whether a turnpike-gate was "in a town," he told the jury that they were to say "whether the spot was surrounded by houses so reasonably near that the inhabitants might be fairly said to dwell together." This is the sort of test by which the Licensing Committee are to decide the question whether a place is "populous "within the Act. If there be one thousand persons who may fairly be said to dwell together, that is a "populous place," and the hour of closing public-houses therein will be eleven o'clock. We think that it may be possible to work this clause, and that at least this plan is as feasible as any other that can be suggested. If no plan for drawing distinctions can be invented, public-houses must remain open everywhere until eleven o'clock, and we are unable to convince ourselves that that would be a serious svil.

The latest accession to the party of restriction is the great Mr.

The latest accession to the party of restriction is the great Mr.
Thomas Cook, who writes to the Times to say that he likes iced tea, and finds it the "most slaking" of drinks; and that in Toronto the drink-shops are closed at 7 P.M. on Saturday, and the streets are not infested with "little smoking pupples," as at home. Mr. Cook thinks that if the American people had not to contend against the German and Irish elements, they would make short work with the drink traffic. This gentleman is a fair sample of the arrogant busybodies with whom, in an evil hour, Lord Aberdare allied himself. Our poor German friend, with his washy beer, and the Irishman, with his fiery whisky, are alike pro-scribed. However, as America cannot do without Germans and Irishmen, she must take them as they are, and make the best of them. It is a pity that bishops should go in for a competition of intolerance with persons like Mr. Cook. As they are less ignorant than he is, they can never be so confidently dictatorial; they will never reach the same sublime certainty of being right.

THE UNSEAWORTHY SHIPS COMMISSION.

THE UNSEAWORTHY SHIPS COMMISSION.

It is necessary to connect the final Report of the Royal Commission on Unseaworthy Ships, which has just been issued, with the preliminary Report which was published in October last. The Commissioners had then arrived at the conclusion that many unseaworthy ships were sent to sea, and that there was consequently a large annual loss of life, but they were unable "to offer with confidence any recommendations on the subject," being perplexed how to reconcile the precautions required for the safety of ships with "the freedom of British commerce," and non-interference with "the inventive genius of the British shipbuilder," and "the property of British shipowners." In other words, the Commissioners seemed to suggest that, if lives could be saved only by placing limitations on the right of shipbuilders to try how far they could go in the way of relieving vessels from all the conditions of stability and safety, and thus possibly restricting the profits of shipowners, the sacrifice of life must just go on as before. It is impossible to read the Reports without seeing how much the tender consideration of the Commissioners for trading interests has overweighed their concern for the preservation of the crews. The opening paragraph of the final Report prepares us for what is to follow. It is explained with great solemnity that "the safety of a ship at sea cannot be secured by any one precaution or set of precautions; but requires the unceasing application of skill, care, and vigilance from the design to the unloading caution or set of precautions; but requires the unceasing applica-tion of skill, care, and vigilance from the design to the unloading at the port of destination." "She must be well designed, well constructed, well equipped, well stowed, or she is not seaworthy. She must also be well manned and well navigated, otherwise all precautions as to her construction and as to her stowage will be unavailing." On the face of it this statement is obviously too unavailing." On the face of it this statement is obviously too sweeping. It is true, no doubt, that a perfectly constructed and prudently stowed vessel may be thrown away by bad seamanship; but it does not follow that all the precautions which may have been taken are altogether unavailing. It is quite possible, for example, that a captain or crew who fail in a struggle with the difficulties of a deck-carge might get on very well with a clear deck. The build of the ship, the state of the ropes, and the amount of labour which has to be done at the pumps must also enter into the question. Moreover, a bad ship is very apt to be connected with bad seamanship. over, a bad ship is very apt to be connected with bad seamanship. A seaman who has to take his life in his hands every voyage is scarcely likely to be of a very high stamp. It is clear, at least, that a badly-constructed and overloaded ship, with an indifferent crew, is much more likely to go to the bottom than a well-stowed ship with an indifferent crew. It is just a question how far you can go in running risks; and the fewer the risks the greater are the chances of safety. Absolute safety is of course unattainable; and when everything has been done to give a ship a fair start, human mismanagement or a storm may give a ship a fair start, human mismanagement or a storm may cause its destruction; but it does not follow that therefore all precautions are unnecessary. The general statement of the Commissioners that a large part of the casualties at sea may be ascribed to preventable causes other than the faulty construction,

insufficient repair, and overloading of ships, is possibly true, but does not affect the argument of those who sak that all preventable causes should, as far as possible, be put a stop to. The Commissioners return to this point at the end of their Repost, where they remark that, "as far as we have been able to accretain, the losses of life and property at sea which may be directly ascribed to negligence of the shipowner, are faw in comparison with those which are caused by subsequent neglect, or by events over which the shipowner has no control." All this may be true, and yet it is no reason why the negligence of a shipowner in regard to matters over which he has control should not be prevented or punished. The observation of the Commissioners is irrelevant and misleading, but it is important as a key to the spirit in which they have approached the subject. The President of the Board of Trade has stated that, under the recent Act, 294 ships were detained on account of defects in hull and equipments, of which only 13 were fit to go to sea; 281 were repaired or broken up. In the same period, 22 ships were detained for overloading, and lightened to the surveyor's satisfaction.

The Commissioners are of opinion that the discretionary powers which have been letely bestowed on the Board of Trade modes it

The Commissioners are of opinion that the discretionary powers which have been lately bestowed on the Board of Trade render it which have been lately bestowed on the Board of Trade render it unnecessary and inexpedient to subject all British shipowners to the delay and annoyance of official surveys and inspections; and they suggest that the Board should interfere only when there is ground for suspecting some gross mismanagement, and that, when the case for detention appears doubtful, they should be content with giving a hint to the shipowner or manager that the officials have an eye on the vessel. The figures given by Sir C. Adderley show that the officers of the Board of Trade have been particularly careful in detaining only vessels which deserved to be detained; and the suggestion of the Commissioners that they should be more careful has an invidious appearance, which was perhaps not intended. We quite agree with the Commissioners that the line which they suggest is that which the Government ought to follow; and it is of course desirable which the Government ought to follow; and it is of course desirable that the Marine Department of the Board of Trade should be revised and strengthened, with "additional nautical assistance," and the help of a legal adviser exclusively attached to the Board. As far as the direct action of the Government is converted this segment to be crowded. and the help of a legal adviser exclusively attached to the Board. As far as the direct action of the Government is concerned this seems to be enough, at any rate in the meantime. It is undoubtedly very important that responsibility should not be transferred from the shipowner to the Government; and it is only fair to the large body of honest and respectable shipowners that they should not be plagued and injured by measures which are required only for the black sheep of the flock. The great object should be to make the reckless shipowner feel that, if he is not more careful as to the state in which his ships are sent out, he will be likely to suffer for it. Ships are not sent out in an unsound condition in order to be lost, but merely to take their chance of being lost. To keep a ship in proper repair and equipment is necessarily expensive. It is cheaper to go on working with an old ship patched up just enough to keep out water, as long at least as she has an easy time in quiet weather, than to have her thoroughly repaired or to buy a new vessel. Consequently the shipowner is disposed to take a rosy view of the condition and prospects of his ship. He persuades himself that very likely she will get on all right, and even hopes she will, but at the same time he cannot resist the consolation of the reflection that, if she does come to grief, he at least will be no loser. The that, if she does come to grief, he at least will be no loser. Commissioners themselves point out that at present a shipowner can insure himself against every loss which can occur to his can insure himself against every loss which can occur to his vessel, and thus becomes indifferent to its proper maintenance. Suppose the owner of the ship is also owner of the cargo; he can insure the ship for the full value, he can also insure the cargo, the freight, and ten per cent profit on the cargo. Mr. Farrar gave another illustration of the tendency of the present system. A ship is bound from London to Calcutts and back. She is lost in the Bay of Biscay on her outward voyage. In this case the owner, if he has insured prudently, though not exorbitantly, may recover the value of the ship at the commencement of the voyage, and the freight on the outward and homeward exorbitantly, may recover the value of the ship at the commencement of the voyage, and the freight on the outward and homeward voyages, while he would be exempted from paying seamen's wages from the date of the disaster, the expenses at Calcutta, including purchase of provisions, and the expenses in London on the ship's return. So that, to this extent, the owner would actually be a gainer by his loss. In certain cases an owner has been allowed to recover fifty, and even a hundred, per cent. more than the value of his vessel. Here we have the source of all the mischief—that the shipowner is himself protected against loss, whatever happens to his vessel, and may even turn the loss into profit.

his vessel, and may even turn the loss into profit.

How is this tendency to negligence and parsimony in maintaining ships to be counteracted? The Commissioners propose to enlist the underwriters in the cause of humanity. They suggest that a shipowner should not be allowed to recover his insurance, whether under a time or voyage policy, when it can be shown that he or his agent has not done everything reasonably within their power to maintain the ship in a seaworthy condition, and that unseaworthiness occasioned the loss. This would no doubt be a very most recovered accordance if there was any likelihood of its being enforced. seaworthiness occasioned the loss. This would no doubt be a very good provision, if there was any likelihood of its being enforced. An underwriter, however, naturally wants to do as smech business as possible, and he would be in some danger of finding that he was not making way quite so fast as his neighbours if he spent much of his time in exposing the delinquences of reckless or dishonest alignowners. In the first instance, no doubt, it is the interest of every underwriter that the ships he insures should be sound, but it may be assumed that he conducts his business so as.

is the long run, to cover all rishs. Even if a shipowner took the graditest using to been his vessels in excellent condition, they would still be liable to disaster from natural causes; he must insure in any case, and he thinks he may as well take the full advantage of the insurance by keeping down expenses on the ships, and loading them to heavily adjusts his own charges accordingly. Then there is the captain, who has perhaps a small interest in the proceeds of the voyage, and whose life is also at stake. But captains of merchant ressels cannot afford to be very independent. If they make difficulties about the repairs of a ship or the amount of cargo, they get a had name among owners; and they are themselves rather disposed to speculate on a mere chance of safety. They trust that the weather will be good, and everything will go well, or perhaps even if there is a wreck, that no lives may be lost. In the case of the crew, however, there is very little as a set-off against the chance of being drowned. They have no hope of any share of extra profits, and their chief interest is to get their wages and be brought back alive. The best way, therefore, to counteract the tendency to recklessness on the part of shipowners is to strengthen the scamen in refusing to sail in a doubtful ship. There is a public opinion among the scamen which has its influence on the captain, and the captain is also encouraged to assume a bolder attitude towards his employers when he knows that the men will stand by him. What then can be done to help the sailors in this respect? employers when he knows that the men will stand by him. What

employers when he knows that the men will stand by him. What then can be done to help the sailors in this respect?

The Commissioners propose that the present system of discretionary survey by the Board of Trade should be continued, with an appeal to two or more competent shipmasters to be mominated by the Shipping Master or Collector of Customs. Thus the seamen will know that, if they have a good case, they have only to give notice to the Board of Trade, and it will be taken up. The Commissioners further recommend that "in analogy to the principle involved in the 11th Section of the Merchant Shipping Act Amendment Act, 1871, the shipowner's liability for damage to property or person should be unlimited in cases where the death of the seaman or the danger to person and property has been occasioned by the ship having been sent to see in an unseaworthy condition, unless he proves that he, or those to whom he commits the management of his business, used all reasonable means to make and keep the vessel seaworthy"; and that the shipowner "should also in these cases be made liable under Lord Campbell's Act to the family of the deceased liable under Lord Campbell's Act to the family of the deceased liable under Lord Campbell's Act to the manny or the deceased seaman." The meaning of this somewhat confused passage is, we suppose, that, when a wreck occurs, the onus of proving that reasonable care was taken to send out the vessel in a seaworthy condition is to be thrown on the owner. This would be a very good rule; but it would be desirable that it should be more distinctly expressed. As the paragraph stands, there is perhaps a suggestion that a ship might in pure permanents and itself to see in an unseaworthy condition is perhaps a suggestion that a ship might in pure perversity send itself to sea in an unseaworthy condition without the owner or his managers knowing anything about it. Another recommendation is that every merchant-ship without the owner or his managers knowing anything about it. Another recommendation is that every merchant-ship should have marked upon each of her aides, amidships, a vertical scale of feet downwards from the edge of her main deck; that a note of the reading of this scale should be entered in the log-book after the vessel has received her full load and is about to start on her voyage; and that a record of it should also be kept by an officer of Customs or the British Consul. This rule would also be useful as far as it goes, but it would require to be supplemented by other means for placing on record full and authentic information as to the condition of every ship at the time of departure, which may afterwards be used against the owner in case of any disaster. It is also suggested that when a deck-load is carried, the quantity and character of such cargo should be stated in the the quantity and character of such cargo should be stated in the and a copy of such statement left at the Custom House; but the Commissioners cannot screw up their courage to the point of proposing the prohibition of deck-loads during dangerous months proposing the prohibition of deck-loads during dangerous months of the year, except indeed in the case of timber, though they almost admit the necessity of a general rule of this kind. "Merchant ships," they say, "would undoubtedly be safer if they were clightly laden and carried no deck cargoes; but a merchant ship is a machine employed for earning freight." This is the constantly recurring refrain of the Report. A ship is a machine for earning freight; the great thing is to earn freight; freight first, and the safety of crews afterwards, as quite r subordenate consideration. sideration.

ENAMELS ON METAL AT SOUTH KENSINGTON.

ENAMELS ON METAL AT SOUTH KENSINGTON.

THE art of enamelling on metal is not of English origin; the word "enamel" is foreign (Fr. en esmail, and Ger. Schmels), and the terms describing the processes employed are foreign likewise. The remarkable collection now on view at South Kensington, chiefly brought together by means of loans, will no doubt render many persons familiar with the results of these processes, and may even induce a few to seek amplanation of such mysterious words as clossome, champlest, &c. It may therefore be well, before noticing the contents of the collection, to amplain what enamel means. The word, no doubt, as at present used is more elastic than precise in its signification; enamel "en metal," however, limits it in some degree, and excludes from consideration the material applied to cost or describe arthogeness, percelsin, glass, &c. For our present purpose smalled in the series of metals, and to there are many methods of applying this ritroots.

material, it is also necessary to explain she term tinguishing these methods. The surface of the material, it is also necessary to explain the terms used in discinguishing those methods. The surface of the metal to be enamelled may be scooped out into cavities, the enamel petare put into them, and then melted; this is championed, also called a taille deparant. Again, the surface may have slendar partitions, clossons, of metal soldered edgewise on it, and the intervals between the partitions filled with anamel pasts as before and melted; this is clossoned. Again, the metal surface may be engraved with a design and a transparent enamel melted over it so that the design shows through; this is de base taille. Or, lastly, the metal may be left smooth and the enamel applied with a brush or other tool, and then melted; this, the most frequent process, is the "painted enamel." As to the metal employed, pure gold or pure copper has been gonsidered best among European artists; silvershot quite so good mixed metals and iron have been for the most part shunned. Enamelling processes, however, applicable to iron have now been perfected, and, as regards mixed metals, the Orientals have non-stantly employed various alloys of copper for the base of enamels executed on a larger scale than any produced in Europe.

So much for the material illustrated in the collection, and its methods of use. With respect to the exhibition itself, it alms at illustrating the art of enamelling on metal more completely than has hitherto been done. The result is, that objects have been brought together not merely of interest to the antiquary and collector, but often of high artistic excellence as examples of splendid decoration. Many of the specimeus are valuable with that intrinsic

ration. Many of the specimeus are valuable with that intrinsic value which human genius alone can confer on things inanimate a value not to be measured by market worth, though this lowest estimate is of such an order that more than a hundred times their weight in gold would not represent the saleable value of many of these admirable works of forgotten or doubtfully known artists. The range of periods embraced by the exhibition is wide, commencing with the Roman, including the Mediaval and Renaissance. and coming down to the modern work of Europe as well as of

Japan.

Little is really known of Roman enamel, and it has been

Domana can be truly said to have questioned whether the Romans can be truly said to have employed the process. There is no doubt, however, that the Greeks used it to enrich their jewelry; neither is there any doubt that under the Roman dominion the Celtic races were in the habit of inserting enamel to give the effect of colour to their bronze personal ornaments, as well as to their horse-trappings.

Among the specimens here exhibited, a few small objects lent by Mr. Nesbitt are believed to be antique Roman; of these, two (Nos. 896 and 898) are very interesting, being delicate cloisonné enamel, with a rich lapis-lazuli coloured ground—a kind of work analogous to the Byzantine specimens presently to be noticed. The other Roman pieces—a rude representation of a boar, and a small fibula—have so close a resemblance to the work produced on the fibula—have so close a resemblance to the work produced on the confines of Caul during the Roman dominion by the "barbarians dwelling in the ocean," that one is disposed to consider them either as importations to the imperial city, which had become a great art emporium, or as close imitations of the semi-barbarous provincial work. Of genuine Celtic work, at least contemporary with the last mentioned, if not earlier, is an interesting and rare specimen of cloisonné enamel, the decoration of a horse-trapping (No. 918), shown by Mr. Franks. Next in order may be mentioned the Romano-Celtic specimens found near Bristol, and lent by Mr. Edkins (No. 917). In some of them, notably in the fine circular disk, is seen the application of a process which allies these enamels to the inlay work of Merovingian and Saxon artists. Small sections of vitreous substance, composed of minute coloured "canes" or threads, like the Venetian millefori glass, are cut transversely, and or vireous substance, composed or minute coloured "canes" or threads, like the Venetian milleflori glass, are cut transversely, and, being laid in order on the metal, are fused sufficiently to cause adherence to the surface without obliterating their delicate patterns. Similar processes occur in ancient Irish work, and come down to comparatively late dates.

Some links of the chain that should lead the art of enamel down through the dark ages are wanting in the collection, otherwise so copious; the rare Byzantine work is, however, represented, as it existed about the tenth century, by Mr. Beresford Hope's pectoral cross (No. 901), a well-known and important specimen of the cloisonné enamel of that school; it came from the Debruge-Dumesclose one ename of that school; it came from the Debrige-Dumes-nil collection, and has been more than once engraved. The cros-of cedar wood overlaid with gold belonging to the Museum (No. 897) is another valuable illustration of similar art, having inserted in it portions of enamel of the same rare character. This was one of the treasures of Prince Soltikoff's collection.

was one of the treasures of Prince Soltikoff's collection.

These objects are, however, comparatively small, and, interesting as they may be to the antiquary, might be overlooked by the ordinary visitor. The productions of the early German and of the Limoges workshops exhibited in cases near together are more striking, and among them appear very important and valuable examples of medieval art. Interesting above others is the covered cup, ciborium (No. 889), lent by Lord Balfour of Burleigh, not only for the elaboration of its details, but for the vicisaitudes of its history. It was made in the latter part of the twelfth century, most likely at Cologne, perhaps in the workshops belongnot only for the elaboration of its details, but for the vicinitudes of its history. It was made in the latter part of the twelfth century, most likely at Cologne, perhaps in the workshops belonging to the monastery of St. Pantaleon, and must have passed early into Scotland, for it has been traditionally regarded as having belonged to King Malcolm Cammore, 1056-1092; though this date, it must be admitted, is inaccurate, being probably too remote by nearly a century. It was, however, given by Mary Queen of Scots to Sir James Balfour of Burleigh, from whom it has descended to its present preservation; and now it is placed as a fair state of preservation; and now it is placed

side by side with its fellow-cup, produced doubtless in the same workshop and probably by the same hand (No. 888). This other, more completely preserved, is lent by the Rev. G. W. Braikenridge, and equally with its companion is most elaborate moverhamments and vivid and varied in colour. It is said to have originally belonged to Malmosbury Abbey, and it is interesting to see the two companion pieces brought together after perhaps seven hundred years' separation.

Near these is placed the remarkable shring or reliquery (No. 886), in form of a Byzantine church, with domed top, obtained for the Museum at the dispersion of the Soltikoff collection. It is also of Rhenish-German work of the twelfth century, and has had its share of vicissitude before finding its present secular, but, we may hope, secure, resting-place at South Kensington. Its first home when it came in its original splendour from the Cologne workshop was the monastary, ancient even then in the twelfth century, of Hoch Elten, near Embricha, now Emmerich, on the Rhine. Hence it remained as far as is known undistanted for unwards of six it remained, as far as is known, undisturbed for upwards of six hundred years, till at length the tide of the French Revolution swelled even to the height of the lonely Rhenish convent. Republican soldiers, reared in the religion of pure Reason, were apt to show a convenient disregard for old-fashioned notions of morality, and a profitable sacrilege was especially pleasant in their eyes. They hoped to possess themselves, besides other rich plunder, of the sacramental vessels, but the then abbess of the convent, the Countess Salm-Reifferscheid, hid these last, at the risk of her life, in the chimney of her house at Nieder Elten. The reliquery, not being composed of silver or gold, but only precious to some for the sake of the relics it contained, to others for the sake of the art, more prized than gold or silver, of which it is a memorial, was disregarded by these practical-minded robbers. It came into the possession of an old priest named Poel, of a religious house at Emmerich. He ultimately parted with it to a certain Jew at Anhalt, who called it his "Antique de cuivre," but nevertheless knew how to make profit thereby, and sold it accordingly to Prince knew how to make profit thereby, and sold it accordingly to Prince Florentin Salm-Salm for "200 fecus de France." The Prince left it to his son, Prince Alfred, who sold it for about 1501 to a dealer in antiquities of Cologne. The fame of the ancient treasure was now spread abroad, and Prince Soltikoff secured it at a great advance of prince and journaved himself to Cologne to accurate the secured in the secu advance of price, and journeyed himself to Cologne to ensure its safety. Other remarkable examples of German champlevé enamel safety. Other remarkable examples of German champieve changes are the fine altar cross (No. 884), the triptych formerly belonging to the Earls of Shrewsbury (No. 891), and the casket (No. 887) lent by Mr. Beresford Hope.

Contemporaneous with the Rhenish school of enamel was the champieved, and having many character-

early Limoges work, also champlevs, and having many characteristics in common with the German. Of this the collection contains good examples—caskets, crozier-heads, pyxes, book-covers, &c.—carrying the art on to the fourteenth century (Nos. 789, 796, 792); also interesting specimens of the rich-coloured translucent enamel which was produced during the same period as well in Italy as in France (Nos. 815, 816, 793, 794, 826). This last process flourished as an art when the champlevé method, which preceded it, had lost much of its early excellence.

In England, and in Scotland also, the application of enamel was early practised with success: the well-known Lynn Cup, formerly

arly practised with success; the well-known Lynn Cup, formerly early practised with success; the well-known Lynn Cup, formerly shown at South Kensington, dating from the fourteenth century, is a fine example of the employment of translacent enamel to enrich the goldsmith's work of that period; in this, as in most examples, the enamel is applied on silver, over which the rich purples, blues, and greens tell with brilliant effect. The "Bruce Horn" or tenure-horn of Savernake Forest has its silver-gilt mountings enriched with enamels, including the arms of the Earls of Moray; it dates from the early part of the fourteenth century, and appears to be Scotch work; it was exhibited at South Kensington in 1862. Another remarkable application of this translucent process is shown in the beautiful covered beaker (No. 795), one of the rarest specimens in the collection. In it the enamel is without background, the various colours being separated from each other and supported by delicate closens or partitions of gold, so that when ground, the various colours being separated from each other and supported by delicate cloisons or partitions of gold, so that when the cup is held up the light passes through the enamelled portions of its sides, base, and cover. It is an elegant specimen of Gothic design, and must have been the work of a most accomplished artist. Cellini mentions having been shown by Francis I. a cup, ancient in his time, which appears by his description to have been enamelled in a like manner, the process being new to him and much existing his interest. Another specimen of cloisonné enamel, not very distant in date from the last mentioned, is seen in Mr. Percy Doyle's pectoral cross, semi-tenshicent, and not wrought as jour or transparent, as in the case of the beautiful cup, but backed in the ordinary method by metal.

It is possible that a link may be wanting here in the chain of

backed in the ordinary method by metal.

It is possible that a link may be wanting lare in the chain of emasol history. At all events a gap in time occurs, for it was not until the latter part of the fifteenth century that there areas at Linegee a second development of art in enamel, and a school of artists whose works have made the manse of the town notable. The accient processes of champleve and this one had fallen into deesy, and the method of painting, which ultimately attained experimently delicary and perfection, was brought into use. The emits t efforts that are known, dating but little after the middle of the fifteenth cantury, show the influence of the translucent enumels which preceded them; transparent colours were much employed, and paidlettes," small raised disks of foll coated with chlour, were added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of jewils and heighten the internal added to give the effect of the translation of the particular and t

may be noticed No. 352; lent by Mr. B. Fishery it is a large plaque, the centre of a triptych representing the Crandinion, and although it shows that too line tone in the fish tinta which is the defect of that period, it has nevertheless a good deal of that helliant combination of colours which gives somewhat the client of that helliant combination of colours which gives somewhat the triplet of the same large was a large was a fine of the same who is the colour was a large was a la illuminated page of a missal to much of the early Linsupges work. In this specimen the pullettes of foil are freely used; its data is about 1490. No. 592 is an early specimen (the data on the label attached is not correct), and in it the disks of foil are effectively employed. No. 596, the Adoration of the Magi, formarly in the Bernal collection, and the assalt piece of the Riessed Virgin and St. John with the body of Christ (No. 599), are works of the early school; as are also No. 590, lent by Mr. Gambier Parry, a small plaque enriched with intense colour, and two pieces (Nos 666 and 672) forming one subject, though here hung apart.

The second and finest period of the Limoges school is splendidly represented in the present collection. The lease of the Daire of Marlborough, the Earl of Warwick, Mr. Magnise, Captain Leyland, Sir Richard Wallace, Mr. Napier, and others exhibit the works of the chief artists of the school. The series of portraits of very large size and of great importance and interest formerly lent to the Museum by Mr. Danby Seymour are indeed absent, having been unfortunately sold out of England some time ago, and being now

unfortunately sold out of England some time ago, and being now in the hands of a French collector; the splendid specimene also which once belonged to Sir Dudley Marjoribanks have disappeared, and in this case irretrievably, having been barnt after they had come into the possession of Sir Richard Wallace, with others of his treasures in the late fire at the Pautechnicon. Nevertheless the collection is abundantly rich, some thirteen large cases being filled

wholly with the painted enamels of Limoges.

The works of the later enamellers of the Penicaud family are well The works of the later enamellers of the Penicaud family are well represented, for in addition to the large picture belonging to the Museum (No. 629), composed of eighteen plaques, which is not surpassed by any productions of their period now in existence, other examples may be seen in No. 624, the large oval disk by another of the artist's family, and in the fine plaque (No. 665) representing the Ecce Home, lent by Mr. Gambier Parry, besides various minor specimens. The work of Leonard Limousin, the greatest of the Limoges artists, is well illustrated by most important examples. The large portrait (No. 673), 18 in. by 12 in., of Louis de Lorraine, Cardinal de Guise, is among the most striking with the companion picture of the same size, representing a lady, prothe companion picture of the same size, representing a lady, probably a princess of the House of Guise. These are lent by Mr. Maguiac; the enamels which decorate the carved-wood frames are not all ancient, duplicates of two of them being seen elsewhere in the collection. Earlier than these remarkable portraits, and of the highest interest for the elaboration of its artistic details, is the beautiful hunting-horn, also belonging to Mr. Magniac (No. 730). Rarity, that cardinal virtue in the collector's eyes, lends additional Rarity, that cardinal virtue in the collectors eyes, lends accurronal value to this much-prized object; it is, moreover, signed in full and dated 1538, when the artist was about thirty years of age. The qualities by which enamel mainly asserts itself among art works, force and vividness of colour, are well shown in this admirable specimen, painted on the inner side in grisaille, on the outer in most brilliant tints. In the same case is another work of the artist most worthy of note, a remarkable portrait of Charles Tiercelin, Chancellor of France, a subtle-eyed, ancient man, with square, soft, white beard. The fine casket (No. 728), with an unavalatinal monogram supposed to be that of Margaret of Valois, is explained monogram supposed to be that of Margaret of Valois, is painted by Jean Limousin, perhaps the grandson of the greater artist. Pierre Raymond, or Rexmon (his name has as many spellings Pierre Raymond, or Raxmon (his name has as many spellings as Shakspearu's), a contemporary of Leonard Limousin, was one of the most prolific of the Limoges painters, working much in grisaille, and with great freedom and vigour of execution, often, however, wanting in refinement. He is represented here by many specimens (Nos. 694, 699, 700, &c.), although among the loans there is scarcely any masterpiece of his skill. Of his work in colour the series of oval plaques painted with Scriptural subjects gives a fair idea.

Speciment are shown of many other executions.

oval plaques painted with Scriptural subjects gives a fair idea.

Specimens are shown of many other enamellars who, like Raymond, were most successful in grisaille, sometimes heightening the flesh tists. Among them an example of the artist known as "Pape" is notable (No. 601), a large triptych, with subject of St. John the Beptist preaching; it is remarkable for the vigorous handling of the arabesques enriching its upper portion, the black ground of which throws up the ornament with excellent effect. Of those artists who lavished colour on their work, none perhaps amploved more brilliant tints or with more gorgeous effect than ground of which throws up the ornament with excellent effect. Of those artists who lavished colour on their work, none perhaps employed more brilliant tints or with more gorgeous effect than Martial Courtois, who wrought in the latter half of the sixteenth century; two splendid specimens of his art may be noticed—No. 713, belonging to Sir R. Wallace, and No. 732, lent by Mr. Magnisc. Both are large eval dishes, painted in colours which have a jewelled richness not surpassed by any specimens in the collection. The subjects are most chaborate in detail; on one Apollo seated among the Muses, is leading a concert, in which quantit master instruments of the Remaissance time are carefully more and instruments of the Seven-headed Beast of the Anonsyme. The headest in both are nearly alike, and the tark permanents design of the backs, with grotesque demi-figures, grows, and subject to the backs, with grotesque demi-figures, grows, and subject to the backs, was Susanno Court. The state of the application of the backs, was Susanno Court. The state of the application of the ware almost equally gorgeous, although has applicated was Susanno Court. The state of the application of the root of the root of the partial state of the application of the root of the root of the state of the application of the latest of t

indules in profess and unrestrained ernament ferstalla the therefore of art, and thus the Limoges school such, and by the end of the seventeenth century became almost extinct; but the ert of ministens painting in casual had already established itself, and the greatest artist who ever practised it, Jean Politot, a native of Geneva, was at work.

The present exhibition contains, chiefly in Mr. Jones's remarkable collection (No. 1995) admirable examples of Potitot's work, portraits shiffully drawn, often excellent in colour, unequalled for alaborate finish and enquisite delicacy of touch. Their value, according to dealer's phrase, " in the market," has created many imitators, and dealer's phrase, " in the market," has created many imitators, and country " original Petitots" looking with satisfaction at the cases in which his own productions were placed almost side by side with in which his own productions were placed almost side by side with the works of the great artist whom he had so skilfully copied. Burdier, the sou-in-law of Petitot, aided him much in the accessories of his miniatures, and produced good work of his own. In England, Zincke, Boit, N. Hone, and others worked well; specimens of the art of each of these are shown in the present

specimens of the art of each of these are shown in the present collection, besides the productions of more recent artists.

The Eattersea and Eliston enamels, as well as the French and German works which suggested many of them, have, at their best, but slight art value; they for the most part exhibit the defects of chins painting, while they want its soft transparency. The caskets lent by Mr. Field (No. 317) and by Lady Eden (No. 200) are as good examples of Batterses work as one is likely to meet. Much older than these, but, as being English, classed near them, are the curious fire-dogs (No. 345) of the early part of the seventeenth century, lent by Lord Cowley, and the candlesticks of the same rude but effective and durable enamel shown by the Earl of Warwick (No. 343). No doubt other similar specimens might have been disinterred from country houses, probably from the housekeepers' or the lumber-rooms, but few seem as yet to have turned up. Lord Cowley's specimens were obtained in France.

The enamelled jewelry, necklets, pandants, rings, &c., and

turned up. Lord Cowley's specimens were obtained in France.

The enamelled jewelry, necklets, pendants, rings, &c., and objects of personal use exhibited, include some specimens of exquisite workmanship and of admirable art. Notable among them and of unrivalled beauty are the collar of gold enamelled and jewelled belonging to the Countess of Mountcharles; the splendid sewer of Oriental sardonyx known as the "Cellini" ewer, lent by Mr. Beresford Hope; the gold missal cover formerly in possession of Queen Henrietta Maria; and Mr. Field's little book gold-covered and enriched with enamel of English work, which was made for Queen Elizabeth, and is represented in her portrait at Warwick as hanging to her girdle.

Little space is left us to notice what really are in point of decorative effect as striking as any of the varieties of enamel exhibited—namely, the ancient Chinese. These are for the most part wrought by a process, combining the cloisonne and champlevé methods, known and practised in China from a remote period. Some of the specimens are ancient, and are believed to date from the lifteenth

specimens are ancient, and are believed to date from the fifteenth century. Among the examples of early work may be mentioned the metal-mounted vase shown by General Gascoigne (No. 1065), and the tall cylindrical vessel lent by the Queen (No. 1049). Another vase (No. 1052), though of somewhat cearse execution, is an admirable example of decoration in colour, such as it seems now herebeat to be the convention the East. hopeless to look for except in the East. Nos. 1056, 1086, 1095, 1102, 1104, and 1114 are also excellent. The most splendid specimens, however, are the two great vases (Nos. 1086 and 1088) contributed by Lord Wharncliffe; these are dated, and were made in the last century. As an example of rich colour the lapis-lazuli ground on which their ornament is shown is unrivalled for its intense and brilliant tone; it is moreover a rare colour, and is prized accordingly. A small but beautiful little vase (No. 1093), belongaccordingly. A small but beautiful little vase (No. 1093), belonging to the Rev. Montague Taylor, shows the same rich deep blue. The case of enamels from Japan lent by Mr. Boyes shows the ingenious art of that country to perfection. The forms are quaint but ungraceful, and the colour, though often very harmonious, cannot compete in decorative effect with the more ancient work of the Chinese. The skill, however, with which the processes are carried out has perhaps never been surpassed.

The exhibition will remain open, we believe, until the autumn; it affords an opportunity such as has not before been presented of seeing what the art of enamed on metal has produced in very many seeing what the art of channel on metal has produced in very many countries and at nearly all periods during which it has been practised. Sink a collection offers suggestions in art which it is just possible may not be wholly thrown away on the producers of objects intended to be decorative, as well as on their patrons, who often need education much more than the workmar

THE THEATRES.

WONDERFUL, and we had almost said kmentable, spectacle is now presented at the theatres. It may be doubted their foreigners any longer believe either in the courage or emission of John Bull, but their faith in the profundity of his class positive remains unstables. On what limit the calculations, determination of John 1941, but their faith in the profundity of his breeches posher remains unstalans. On what hists the calculations of theatrical managers proceed we do not know, but we empose that each of them does not entirely forgot the indistance of others. They have perhaps considered that the population and wealth of Labelon are not less this season flow hand; while the below is general. This will have believe it affects or more limited that Publicate history will have believe it affects or more limited the highest less than the populations, yet it is possible that some of them.

disposed of without making or inspired full houses for war, many nights. Foreigners may of course be mistaken, but it does seem that they must be under the impression that there is little to do and plenty to spend this month in Leaden. The golden harvest must be respect in the next fortnight or not at all, and certainly the number and energy of the respect of warious asticuality is surprising. There are two houses of wast size open for Italian opera at least four nights a week; then there are Franch Plays at the Princese's Theatre, as a regular feature of the season; the company of the Parisian Vaudeville has migrated to the Queen's; the plays of Racine and Corneille are being acted at the St. James's; and a company from Brussels is performing Giroff-Giroffe at the Opera Comique. All these theatres charge high prices, and depend principally for income on their boxes and stalls, because there certainly are not in London enough people of knowledge and teste to like French plays and operas, and willing to see and itear them from pit and galleries.

The results of this wild competition are painful to witness,

The results of this wild competition are painful to witness, although inevitable. There are Mile. Fargueil and M. Parada and an efficient company performing L'Oncis Sam almost literally to empty benches. It may be admitted that curiosity is almost the only motive that could take one to see the play. Of the actors we must speak with profound respect, and wish that they were better engaged. But the piece, although it might be received in Paris, is manifestly defective as a picture of American life when presented to a London audience. There have been life when presented to a London audience. There have been hife when presented to a London audience. There have been so many attempts at adapting French plays that we wonder this play has not been translated into English, or rather into American. It is not particularly worth the trouble, because even from the French point of view it is rather a poor affair, but still it is the product of a elever and practised mind, and a skilful adapter likes to have some good material to work upon. To us the most striking peculiarity of American society is its speech, like our own, yet so different, and a play which, being written in French, necessarily suppresses this feature, must appear tame and inadequate in London. We think that this rather than written in French, necessarily suppresses this feature, must appear tame and inadequate in London. We think that this rather than the extravagance and absurdity of the picture of manners given in the play is the true reason why it does not strongly attract Londoners. Dickens's pictures of American life are extravagant and absurd, yet there are so many touches of truth in them that they can never be otherwise than interesting. We have all laughed at the English milord of foreign dramatists, although we may never have most exactly his follows in a London club or descripe recovery. English instord of foreign dramatists, although we may never have met exactly his fellow in a London club or drawing-room. He is like one of those caricatures where minute particulars of dress and manner are exactly copied, while the picture as a whole is a gross burlesque. If some clever English writer who knows Americans well were to take L'Oncle Sam in hand he might produce an amusing play. He would not have much to go upon, but still there would be an outline, and he would not have to depend wholly on his own constructive skill, which is the quality least common in English playwights. It is perhaps surprising that so few attempts have been made to extract material for comedy from American life and manners. M. Sardou has at least the merit of showing the way to other dramatists, although he has travelled only a short distance on it himself. He resembles his countryman who, having to write an essay on the camel, went and studied him at a menagerie. The actors have indeed taken pains to produce the outward semblance of American men. The women, with the exception of Mrs. Bellamy, might be American, or English, or anything. They wear as many fine dresses as conveor English, or snything. They wear as many the dresses as convenient in the course of the piece, as is done nowadays in all theatres of the civilized world. The incidents have been pronounced outrageous, and certainly the author seems to have forgotten that Saratogs is not in the backwoods. A duel with revolvers among the chairs, tables, and mirrors of a sumptuous apartment appears ab to us who know America better than Frenchmen do; yet it is not very surprising that M. Sardou, if he did take the trouble to read a few American newspapers before writing the play, inferred from them that Saratoga is in the backwoods, or at least so near to them that the same proceedings are equally natural and probable in both localities. In the first act the colour is pretty broadly laid on, and the author's opinion of America seems to be that which an English naval captain pithily expressed as to the natives of an island which he visited, "manners none, customs beastly." Afterwards the conversation is carried on less with the boots of the gentlemen; and as regards certain proceedings on a sofa, which have been said to be improbable at a fashionable hotel, we happen to remove that exactly the same removal we have been said to be improbable at a fashionable and as to an exactly the same removal we have been said to be improbable at a fashionable and as to an exactly the same removal we have been said to be improbable at a fashionable and as to an exactly the same removals. to remember that exactly the same remark was made as to an English play which has been performed every night this week. The author seems to have got firmly into his mind the notion that Americans are great readers of newspapers, and we are not entitled to blame him because one of the performers happens to have supplied himself with a copy of our respectable contemporary the Evening Standard, which we cannot suppose to be largely circulated in America.

lated in America.

We have not yet exhausted the list of foreign dramatic enterprises now carrying on in London. Mr. Roucianult has adapted a French play to the American stage, and brought it, with some of his original company, to the Gaisty Theatre, where, in spite of so many powerful rivals, it enjoys fair success. We class this among foreign plays because the prices charged for seeing it are exceptionally high, and we can discover no other pretext, unless the magnificance of the upholstery can firmish one, for charging half so a set again as was paid for seeing Phelps and Toole or Charles Hatkews in plays of storing merit. We think very highly of Mr. Thorne's acting in a line where excellence is rare and violence

or yulgarity would be distressing. We only wish to say that his warmest friends could scarcely claim for him that he is better than the best of English actors in their favourite parts, and we fail to understand why more money should be charged for seeing him. If Mr. Boncicault seriously asks the public to pay more because they are to see a greater quantity or superior quality of silk or lace, it is time to protest against an impudent and dangerous pretension. Except Mr. Thorne, there is no actor or actress in the play who is more than reasonably competent. We have neither desire nor capacity for criticizing ladies' dresses, and we can only say that if, as appears probable, a good deal of money has been spent in getting up Led Astray, the result is not to our mind conspicuously successful. We have heard of an English lady who went for the first time to the magnificent opera English lady who went for the first time to the magnificent opera at Milan, and, after carefully scrutinizing the whole arrangements for some minutes with a good glass, ahe whispered to her husband that the prima donna had on a cotton-velvet dress. This lady would now be invaluable as theatrical critic to a London newspaper. It was bad enough to have to accept dress and furniture as a substitute for literary and dramatic talent, but and nurniture as a substitute for literary and dramatic talent, but now a further outrage is inflicted, and we are asked to declare a preference by paying a higher price for them. There is no objection to Mr. Boucicault or anybody else asking as much for their wares as they can get, but we think that theatrical prices are high enough already, and surely a full house at half price is better than half a house at full price. It is impossible to suppose that there can be either the people or the money in London even in July to full all the theatres that are open. The sight of Mile. Fargueil and M. Parade playing to less than half a house is impressive and porten-M. Parade playing to less than half a house is impressive and portentous. Mr. Boucicault would hardly pretend that his company is better than that of the Parisian Vaudeville, and if it comes to dressing, French actresses will wear any amount of splendid dresses that a manager may choose to pay for. It must be owned that Mr. Boucicall that shown much skill in rendering an undeniably French play intelligible and interesting to an English audience. He has, so to speak, naturalized in America and here an indisputable citizen of France. The duel, which is the chief incident of the play, would of course be impossible in England, and indeed the adapter of course be impossible in England, and indeed the adapter has discreetly retained the French names of persons and places. But the passions which produce the duel are of all times and countries. The universality of the interest of these scenes is well shown by the fact that Thackeray in Emond has used the same device for saving the honour of a noble family by making the ostensible cause of the duel in Leicester Fields a quarrel at cards, while the real cause is the attention of Lord Mahon to the wife of Lord Castlewood. It would be difficult to speak too highly of the acting of Mr. Thorne as the husband in these scenes. And it is perhaps more impressive because in the earlier part of the play he is heavy, or rather perhaps not act the lover badly, but it is unfortunate that when he is charged with cheating at cards he looks quite equal to it. The charged with cheating at cards he looks quite equal to it. The world will always distinguish between corrupting a man's wife and picking his pocket, and it is a dubious compliment to an actor's versatility to say that he seems equally capable of either sort of

villany.

The irrepressible Fille de Madame Angot declines to die and make room for a successor, and therefore another opera by the same composer has been brought out in French, while the original favourite still commands the ears of English audiences. It is favourite still commands the ears of English audiences. It is impossible to calculate on popular caprice, and therefore we will not predict that Girofte-Girofta will not take a place which perhaps may not soon be vacant. To say that we have seen and heard comic operas that we preferred is nothing to the purpose. The French have been very prolific of late years in this kind of amusement, and although the perplexed parents of the abducted Giroffa, the irascible Moor, and the amorous Spaniard are all very droll, yet our recollections of the Grand Duchess and her Court, of Bluebeard and his wives, and of the gods celestial and infernal who danced to the strains of Offenbach, are hardly yet effisced. It may be remarked that the merit claimed for the costumes of this opera depends not merely, as in some of our plays. costumes of this opera depends not merely, as in some of our plays, upon the cost, but upon the designs. The get-up of the pirates who abduct Girofla is a work of art, and the burlesque Othello with the curved falchion who has lost her, and Admiral Mata-moros with the nodding plumes who brings her back, are figures not soon to be forgotten.

REVIEWS.

FROUDE'S ENGLISH IN IRELAND .- VOLS. II. AND III.

WHEN we reviewed the first volume of this work a year and a half agot, we found ourselves a good deal puzzled, both by the difficulty of making out the object of the work and by its utterly chaotic arrangement. In the two remaining volumes which we have now before us Mr. Froude comes a good deal nearer to the form of a regular narrative, and it is much cleaver

what the object of the book is. The book is an indiagainst all liberal government in Ireland, with occasional dealt by the way against any kind of liberal government. It is a yet fuller setting forth of the doct. Thrasymaches than was to be found in the first volume. I The book is an indi Thrasymachos than was to be found in the first volume. Fathers the doctrine that might makes right—except, of course, where might is on the side of an Irishman—is nowasre so clearly put forth in so many words as it was in the first volume; but the doctrine is still more clearly worked out in the narrative. Mr. Froude's doctrine clearly is that Ireland is only to be governed by the sword, and things look ever and anon as if he held that the rest of the world could only be governed with the sword also. The main position which runs through everything is that all concession is folly; coercion must be the only rule. If not every native of the island, at least every one who professes the religion of the vast majority of the natives of the island, is to be kept beyond the pale of political rights; to deal with him as an ordinary fellow-subject, to admit him to Parliament, to give him the elective franchise, even to relax the penal laws against his religion, are all, in Mr. Froude's creed, instances of folly. Mr. Froude has nothing but hard words for every Lord-Lieutenant or other civil officer who was ready to treat those whom he was sent to govern with kindness and consideration; he has nothing but hard words for every military officer who showed any signs of mercy towards and the second of the same and the horsever mismudad wars at least fellow-men and for every military officer who showed any signs of mercy towards enemies who, however misguided, were at least fellow-men and fellow-subjects; he has nothing but hard words for every earlier historian who has written of the times with which he has had to historian who has written of the times with which he has had to deal under the idea that an Irishman was entitled to have his feelings consulted, and that even a Celt or a Papist might have wrongs to complain of. The picture is indeed sometimes varied by declamations against others besides the native Irish; Mr. Froude has his fling, and not without cause, at the absentes landlords, and at the jobs by which people who could not be decently provided for in England were provided for by Irish offices or Irish pensions. He allows that the native Irishman, when well treated, is faithful and affectionate to ma master; he allows that, whon put under discipline, he makes a good policeman and a good soldier; but the passages in which Mr. Froude thus, ever and anon, falls away into reason and fairness serve only, by their incongruity, to set forth more strongly the blackness of his general indictment against the Irish people. Mr. Froude's inconsistencies on this head have already been Mr. Froude's inconsistencies on this head have already been pretty fully pointed out by Mr. Lecky in a late number of *Macmillan's Magazine*. It is enough that they should be pointed out; we have got beyond the range of argument when we have to deal with a writer who on the one hand lays down the rule that no Irish Roman Catholic can under any cir cumstance ever be voluntarily loyal to a Protestant Government, and yet admits that, under the peculiar circumstances of policemen and of soldiers, Irish Roman Catholics have been found eminently loyal to Protestant Governments. These amisble mistakes, these occasional flounderings into a better state of mind, may show that Mr. Froude is himself better than his own doctrine, but they leave the general teaching of the book where it was. The main sum of that teaching is the uselessness of concession in Irish effairs. If we were to look on Mr. Froude's book as a serious history of past times, it would be off the question to ask why Mr. Froude should have chosen to set forth this particular doctrine at a time when so many concessions have been made to Ireland, and when reasonable men are waiting to see what the final result of those concessions will be. If Mr. Froude's object were simply a truthful record of will be. If Mr. Froude's object were simply a truthful record of the events of past times, he might answer to questions of this kind that history seeks truth for its own sake, and cannot be responsible for the results. But it is impossible to look on Mr. Froude's work as intended to be simply a truthful record of past events. It is plain that he is throughout thinking far more of the present than the past, that past events are looked at by him almost wholly a truthful lesson, and that the past less than the past are truthful lesson, and that the past lesson are truthful lesson are truthful lesson and that the past lesson are truthful the past, that past events are looked at by him almost wholly as teaching a practical lesson, and that that practical lesson can only be that Ireland ought to be dealt with, not as reasonable statesmen of all politics have long agreed to deal with her, but as she was dealt with in the good old days of Protestant ascendency. Mr. Froude's book is in fact a pamplet Protestant ascendency. Mr. Froude's book is in fact a pamphlet in condemnation of every act of just or liberal policy which has been done towards Ireland for the last ninety years. It is as such a pamphlet, not as a sober history, that the book must really be looked at; and when we look at it in this way, it is perfectly fair to say that Mr. Froude has chosen a most inappropriate time for putting forth the doctrine which can have no result but that of further irritating a large class of our fellow-subjects, whom

that of further irritating a large class of our fellow-subjects, whom wise men of all parties, while refusing unreasonable demands, are striving to conciliate by every fair and reasonable means.

When a man sits down to write a so-called history in this frame of mind, especially when he has to deal with a history so full of crime and sorrow as that of Ireland, it is very easy for him to make out his case. We were going to say that it useded only a listle dexterous handling, but Mr. Hepworth Dixon has convinced us of Mr. Froude's sincerity in his paradoxes. What therefore we might otherwise have been inclined to call dexterous handling, we will look on simply as the treatment ustured to a fleroe partiant who does not wittingly sin against either truth or inclinately, but who is swept many by a wild and passioners partianable which gives him to time to stop to the much about alther. When he many rimes have been done against the stripe which are the stop in the stripe which gives him to time to stop to the say Irishmen, and so many comes have been done against the stripe which are the stop in the stripe which are the stop in the stripe which are the stripe with t

^{*} The English in Ireland in the Eighteenth Century. By James Anth-Prouds, M.A. In Three Volumes. Vols. II. and III. London: Longon & Co. 1874. * Saturation Review. November 30, December 7, 1872.

give the fullest prominence to the crimes done by Irishmen. give the fullest prominence to the crimes done by Irishmen, and dwell on them is detail, to color to them at every appropriate moment, to moralize ever them, to draw inferences from them, perhaps admensions to speak of the crimes of individuals as the crimes of whole values. Meanwhile the crimes done against Irishmen may be alarred over, welled under general language, excused when there is any shadow of an excuse, and pessed over as a painful subject when there is none. In this way the same kind of actions that they may be lightly tripped over as, at worst, acts of a righteous severity which may perhaps now and then have gone a little too far. In this way Mr. Froude can very easily put together a soul-harrowing picture of cruelties done by Irishmen. It would of course be just as easy for an Irish writer to put together a picture just as soul-harrowing of cruelties done to Irishmen. And of course he just as easy for an Irish writer to put together a picture just as soul-harrowing of cruelties done to Irishmen. And each of the pictures taken alone would be as unfair as the other. Only, in the long take of evil on both sides, we must in common fairness remember that at least it was not the Irish who began. And, as we said a year and a half sign, Mr. Froude, who grudgingly admits Irishmen to be partakers of human nature, cannot fairly judge them by the same standard by which he judges men of a superior race. And we must never forget the real difference between crimes done in the madness of religious or national hatred and crimes done from merely personal motives. It is certain hatred and crimes done from merely personal motives. It is certain that crimes of the former kind do not affect the whole moral nature of the criminal in the same way as crimes of the latter kind. This in no way justifies them; it is rather the great evil of religious or national hatred that it often leads the noblest natures into gious or national hatred that it often leads the noblest natures lifto crimes. In strict morality it is a greater crime to have a hand in such deeds as were done in the Irish Rebellion of 1798 than to have a hand in any of the personal crimes with which everyday justice is concerned. This is one of the cases in which the lesser crime needs the worse man to do it. We can believe that "flogging Fitzgerald," whom Mr. Froude takes some pains to whitewash, may have been a just and estimable man in dealings with may of his corn need and exceed. But no can believe average. that "flogging Fitzgeraid," whom are Fronce small in dealings to whitewash, may have been a just and estimable man in dealings with men of his own race and creed. But we can believe exactly the same of many of the rebels who piked innocent victims at Vinegar Hill. We must remember also how easily the commission of crimes under emotions of this kind leads to their babitual commission, and how easily both the irregular patriot and the caldies who is sent to put him down may gradually degenerate radiual commission, and now easily both the irregular patriot and the soldier who is sent to put him down may gradually degenerate into common ruffians. All these things must be borne in mind in weighing the conduct of men engaged on either side in a civil strite. But they are all forgotten in Mr. Froude's easy process of saying as much as he can about the evil deeds done on one side. and as little as he can about the evil deeds done on the other. No doubt this way of writing gives something of the glitter of romance to Mr. Froude's narrative. By its side, such a narrative as that of Mr. Massey, who, in a plain way and without much rhetoric or descriptive power, honestly records the crimes of both sides without trying to justify either, seems somewhat tame. But, on the whole, Mr. Massey's way of writing history is that which does most to serve the main end of history, that of recording the truth. We should say that no one ought to read Mr. Froude's account of the rebellion, especially the part where he slurs over the crimes which were done in putting down the rebellion, without turning to see what the plain tale of Mr. Massey has to say on the other side. To take one case out of many, it would be just as well to compare the two or three lines in inverted compare. We know by this time the value of Mr. Franchickers. would be just as well to compare the two or three lines in inverted commas—we know by this time the value of Mr. Froude's inverted commas—which Mr. Froude gives to the execution of Sir Edward Crosbie (iii. 365), with the fuller narrative of the same deed given by Mr. Massey (Vol. iv. 317). On the whole, the sneers of Mr. Froude at Lord Cornwallis and Sir Italph Abercrombie, because even in the most trying times they did not forget that there were such things as justice and humanity, are as honourable to them as the kindred sneers with which in our own time Lord Canning was assailed in the same cause.

So much for Mr. Froude's doctrine about concession and coercion as applied specially to Ireland. But it is perfectly clear, as Mr. Lecky has remarked in the article to which we have already referred, that it is not merely in Ireland that Mr. Froude would be well pleased to set up the dominion of naked force. His sneers at liberty, at Liberal ideas, at the theory of Parliamentary government as understood in most constitutional countries, are almost as thickly strewn through the book as those constant sneers at "Irish ideas" which can have no object except to insult Irishmen, and thereby to increase the difficulties of Englishmen in their relations towards Ireland. In these volumes, as in the one which went before towards Ireland. In these volumes, as in the one which went before them, Mr. Froude has taken to a way of putting forth sayings about political matters, the results of experience, and the like, with so much of sententious solemity that they might often easily mislead the unwary reader into the belief that Mr. Froude had read history and had thought about politics. When these stately utterances come to be looked into, they are commonly found to come to little more than protests against all that the present age is agreed to believe in political matters, protests against the belief that man has any kind of rights, protests against the received doctrines of Parliamentary representation, and above all against the received notion of the use and duties of a Parliamentary Opposition, a subject on which Mr. Froude makes himself very many indeed. No doubt every form of government, every political condition, has its weak side, but we do not think that many people either in England of Ireland will be inclined to

give up all that they have been used to reverence for generations simply because Mr. Frouds has thought good

give up all that they have been used to reverence for the country generations simply because Mr. Froude has thought good to put forth the not very novel teaching that might makes right with the not very novel teaching that might makes right with somewhat of the sir of a prophet. The more solemn the six which Mr. Froude puts on at these times, the more we feel how shallow have been his researches, and how short a time it is after all that he has been at them. It is when Mr. Froude puts on a look of wisdom that might rival Lord Thurlow that we most keenly feel that we are dealing with one who, by his own confession, took to writing history only because he had nothing particular to do. On some special points in Mr. Froude's narrative we mean is speak more fully in another article. We will now only say a few words as to his treatment of his subject as a mere literary effort. In reviewing his first volume we pointed out that, as compared with his earlier work, there was a praiseworthy absence of that namby-pamby way of writing which we believe that some people admire. The present volumes are still more free from it, and this is so far a gain. But it is Mr. Froude's ill luck that whenever he tries to be good, he commonly succeeds only in being dull. He does really better when he lets the natural man speak after his own natural fashion. Now that Mr. Froude is content to cast aside metaphors and parables, we see more plainly how little he knows the art of telling a story in a clear and instructive way, and how heavy and inaccurate is the construction of many of his sentences. We cannot help comparing him with Lord Macaulay. Mr. Froude, like telling a story in a clear and instructive way, and how heavy and inaccurate is the construction of many of his sentences. We cannot help comparing him with Lord Macaulay. Mr. Froude, like Lord Macaulay, has to deal with a piece of history of which very few people know the details, and where it is specially necessary to define all persons and places with the utmost clearness. This Lord Macaulay always does. The first time he mentions any one he gives such a description of him that we are sure to know him again the next time we meet him. This is of course specially needful of the lesser actors in the story, and nearly all Mr. Froude's actors are lesser actors. Of one or two persons, especially of his favourite Fitzgibbon, afterwards Earl of Clare, he does give a description, but it is by no means his rule to do so; and he never takes care to make his story clear by mentioning the various promotions and changes of titles of the several actors in the way in which Lord Macaulay does. There is, for instance, a member of the Irish There is, for instance, a member of the Irish iulay does. Parliament whom Mr. Froude has to mention several times, and whom he always speaks of by the familiar name of "Tom Conolly." Mr. Froude may be on such intimate terms with Mr. Conolly as to speak of him as "Tom"; but we do not feel that we have any right to do so, at least till Mr. Froude has done us the honour of a formal introduction, which he nowhere does. We first hear, not of "Tom," but of "Thomas Conelly," in a list sent to England not of "Tom," but of "Thomas Conolly," in a list sent to England in 1771 of "members considered as friends who have voted against Government." In p. 156 we find "Tom Conolly" in a list which Mr. Froude gives of "the patricisn pseudo-patriots, the landed magnates, who were allied with the English aristocracy." In p. 239 "Tom Conolly" in the Commons is bracketed with the Duke of Leinster in the Lords, and so he goes on being mentioned several times, but with no account of who he was or why Mr. Froude speaks of him so familiarly. We are so sorry to find that the less time he is mentioned, in Vol. iii. p. 113, "he was drunk when he rose to sneak." he rose to speak."

Another person who plays a considerable part in Mr. Froude's story is also brought before us in the same dull and vague kind of way. In Vol. ii. p. 145, we find in the year 1772 Lord Harcourt coming over as Lord-Lieutenant, and Mr. Froude adds that "with him came a satellite very far more interesting than his primary, the secretary John de Blaquiere, himself a Colonel of Dragoom, descendant from a Huguenot tamily, who had come to England at the beginning of the century." Here Mr. Froude falls back into his old metaphorical style, forgetting perhaps that the application of the word satellite to a star is itself a metaphor. Moreover, it is of the word satellite to a star is itself a metaphor. Moreover, it is only chronology which helps us to see whether Mr. Froude means that it was the Colonel himself or his forefathers who came over to England in the beginning of the century. At this stage the Secretary figures in the headings of the pages as Colonel Blaquiere. In p. 153 he speaks in the Irish Parliament; in p. 176 he appears as Sir John de Blaquiere; and in p. 394 as Sir John Blaquiere. And so he goes on indifferently Blaquiere and De Blaquiere to the end of the book. At what stage he was knighted or haroneted, whether he did or did not drop the French prefix or baroneted, whether he did or did not drop the French prefix to his name, how he was at once provided with a seat in the Irish Parliament, are all matters about which Mr. Froude leaves us to Parliament, are all matters about which Mr. Froude leaves us to guess. To be sure, by the easy process of turning to a peerage, we find that Sir John de Blaquiere became a K.C.B. in 1774, afterwards a Baronet, and lastly in 1800 an Irish Baron. As for his appearance, and that of other Secretaries, in the Irish Parliament, it was doubtless easy to find a seat in such a Parliament for any Government official, but we feel quite sure that Lord Macaulay would have told us exactly the way in which it was done, and would have made things clear about the other smaller points Through the whole course of these volumes we have had constantly to look back to find out who people are and whether they have been spoken of before. With Lord Maraulay this never

happens. In another article we propose to go through some of the special points in Mr. Froude's narrative which illustrate the general character which we have given of the book

LORD HERBERT OF CHERBURY.

CHARLES DF. RÉMUSAT has given us in this little book an interesting atudy of a writer who has perhaps been too much neglected. We are tolerably familiar with George Herbert, but few of the poet's admirers remember that he was the brother of the supposed originator of English Deism unless to draw some plous moral from the contrast. Lord Herbert of Cherbury has, however, more than one claim upon our attention. When Horsce Walpole discovered his autobiography, in 1763, he read it, with Gray, to amuse Lady Waldegrave, and says that they "could not get on for laughing and screaming." It was published at the Strawberry Hill Press, with a dedication and a preface; the dedication being intended to flatter the proprietor, Lord Powis, into consent to the publication; and the preface to allow the intelligent reader to see that Walpole was not really blind to the absurdity of the performanca. The reader, he said, would discover to his astonishment that "the history of Don Quixote was the life of Plato." Herbert was not quite a Plato; but the phrase is sufficiently characteristic. Other writers of more philosophical power than Walpole have spoken respectfully of Herbert's abilities. Hallam assigns to him a priority in order of time, and a respectable place in order of ability, amongst English metaphysicians. Colaridge notices him with respect, and Sir William Hamilton says that it is "truly marvellous that the speculations of so able and original a thinker" should have been ignored by later writers of congenial principles. Leland, long ago, gave him a bad name by placing him first in the list of Deists; and perhaps this evil reputation contributed in some degree to depress him below his proper rank, as a similar injustice was done to the perhaps this evil reputation contributed in some degree to depress perhaps this evil reputation contributed in some ucgree to the lim below his proper rank, as a similar injustice was done to the incomparably higher reputation of Spinoza. There are, indeed, other reasons for the neglect into which he has fallen; but we may be obliged to M. de Rémusat for his careful study of one of our

be obliged to M. de Rémusat for his careful study of one of our neglected reputations.

The contrast indicated by Walpole gives a piquancy to Herbert's autobiography. The Quixote side of the writer appears most conspicuously in its pages; but we are also able to see enough of the Plato to make a tolerably complete portrait of this original figure. Lord Herbert, in fact, was a character such as could only be developed under very special conditions. He was one of the transitory forms between the old feudal noble and the modern time gentleman. His ancestors had fought in every civil war, and in times of peace employed themselves in hunting down outlaws in gentleman. His ancestors had fought in every civil war, and in times of peace employed themselves in hunting down outlaws in the factnesses of Wales. He was as ready with his sword as the best of them, though his martial spirit had to satisfy itself rather in duelling than in active warfare. He was knighted, as he tells us, with the old ceremonies and taking the old oaths, "not unlike the romances of knight errantry." And he tried to act in the spirit of those romances with sufficient vigour to show that the satire of Cervantes must have had a very intelligible point for his contemporaries. The mad Fuight could not have been more punctilious and eager for adventures reseason and out of season. Soon after he was knighted, a French gentleman playfully snatched a riband from a little girl of ten and gentleman playfully enatched a riband from a little girl of ten and put it in his hat. Lord Herbert at once saw his chance; and went through all the forms of a solemn quarrel with the utmost seriousness, thinking himself "obliged thereunto by the oath taken when he was made Knight of the Bath." In Paris he met Balagny, a celebrated duellist of the time, and was evidently made very jealous by the favour with which the ladies of the Court regarded the fireby the tayour with which the ladies of the Court regarded the fire-eater. Some time after he met Balagny at the siege of Juliers, and after some bravade the two heroes walked up to the bulwarks of the town with three or four hundred men firing at them. Herbert declares with great complacency that Balagny ran back stooping, whereas he walked after "leisurely and upright." Not content with this, he soon challenged Lord Walden to a duel; and in order to fight it borrowed a horse without leave from a Sinin order to fight it borrowed a horse without leave from a Sir James Areskin, which produced him another challenge; whilst unable to bring about either duel, he felt himself in American phrase "spoiling for a fight," and therefore amiably proposed to Balagny to fight a third duel in honour of their mistresses. Balagny put him off with a jest, much to Herbert's disgust; and, indeed, it would appear from his constant failure to bring any of his numerous challenges to their natural result, either that his contemporaries considered him to be slightly crazy, or that he was rather a closer relation of Boladil than one could either that his contemporaries considered him to be slightly crazy, or that he was rather a closer relation of Bobadil than one could wish. He did, however, succeed in getting into a desperate fight with a Sir John Ayres; at one point of which Herbert, according to his own account, was bestriding the unlucky Sir John and striking furiously at him with a fragment of a sword, broken at a fact from the hilt, whilst every time he lifted his sword to strike he warded off the blows of two other assailants. In short, Lord Herbert would have been qualified to join the immortal monequatures of Dumas, and regards his performances with infinite complacement. As an ambassador, and especially an arabassador from the not very martial James L, one would have thought him a little out of place. He was rather too fond of laying his hand upon his sword; and the diplomatic expedient which occurs to him most naturally is to send a trumpet to the Minister of the French King "to offer him the combat." As we have said, however, Lord Herbert's brain him the combat." As we have said, however, Lord Herbert's brain man, full of comething much better than mere fire-cating bayedo. His punctilioueness as a duellist was oddly blended with pedantry more suitable for a professor. According to Mr. Herbert Spences he would be an interesting example of the process of differentiation.

" Lord Herbert de Cherbury. Par Cin de Rémuset. Paris : Differ &

14.

In our time the characters of bully, of fine gentleman, and of man of learning have become so distinct that combinations are rare. In Lord Herbert we find these different types harmoniously blended, and tempering each other. He is as particular about his Latin style as about a rigid observance of the etiquettaked tours or camps. In his remarks upon education, which are by no means devoid of sound sense, he insists equally upon the advantages of learning Greek and of riding the great horse, and fanding. He will not speak "vaisglorieusly," he adds that nobody ever understood the use of his weapons better, or used them more dexterously on all occasions. He is equally proud of his medical knowledge, and besides running over a long list of the Pharmacoposias in his study, and the authors whom he has read, declares that he has himself worked some marvellous cures by means of a "harle nut of a cortain rare receipt," a "deception of roots," and other devices, of which he unfortunately retains the secret. It is characteristic that he regards the study of judicial astrology as fit only for "general predictions," insamuch as particular events are "neither intended by or can't collected out of the stars."

With all his failings, Herbert was a man of genuine vigour, both

with all his failings, Herbert was a man of genuine vigour, both of intellect and character. According to his own account, one of his first inquiries when he learnt to speak was how he came into the world. The philosophical tendency thus indicated survived, and induced him to compose two treatises, of which M. de Rémusat has given a careful analysis. We cannot quite share the surpriso expressed by Sir W. Framilton at the neglect into which they had fallen. According to that high authority, with whom M. de Rémusat entirely agrees, Herbert gave the most distinct statement which had hitherto ("I might almost say which has," adds Hamilton) appeared, of the doctrine of common sense, afterwards characteristic of the Secteh school of philosophy. The importance to be attached to this distinction will of course vary according to the view which may be taken of the value of that philosophy. Hamilton and M. de Hémusat, who accepts the French version of the doctrine, naturally estimate Herbert's merits very highly. But, however this may be, the neglect of his speculations seems to be easily explicable. Herbert's exposition of the theory is trammelled by a peculiar system of psychology, couched in language which has long been obsolete, and of which it may safely be said that it has long been antiquated, though students may find it worth while to follow M. de Rémusat's careful and detailed statement. The doctrine which he shared with later thinkers has been sufficiently expounded by them without this encumbrance, and it is, therefore, natural enough that they should have superseded his labours. We cannot here go into his analysis of the human faculties, which has nothing but an antiquarian interest. The main object of Herbert was to discover certain common notions, divinoly implanted in every human being, and therefore possessing a validity superior to any empirical generalizations, and providing the tests by With all his failings, Herbert was a man of genuine vigour, both implanted in every human being, and therefore possessing a validity superior to any empirical generalizations, and providing the tests by which the operations of the understanding or the "discursive faculty" are to be judged. It is enough to say that these primary faculty" are to be judged. It is enough to say that these primary truths are to be distinguished from the secondary by the aix characteristics of priority, independence, universality, certainty, necessity, and manner of formation. By the last phrase he means that their validity is intuitively recognized so soon as they are presented. This doctrine is of course familiar in many later philosophies. Herbert used it chiefly in a religious sense. He laid down five principles having the required character, which, as he thought, were no be discovered in every religion in the world. These are the doctrines—that there is a God; that He ought to be worshipped; that virtue and piety are the chief parts of His worship; that we should repent of our sins; and that we shall be rewarded and punished both in this life and the next. A book on the religion of the Gentiles is an attempt to perform the task which Oudworth afterwards attacked with much wider learning—namely, to show that all the Gentile religions, which with him the religion of the Gentiles is an attempt to perform the task which Cudworth afterwards attacked with much wider learning—namoly, to show that all the Gentile religions, which with him of course means the pagan religions, implicitly recognize these principles, though defaced by an accretion of gross superstition. M. de Rémusat agrees with the general theory that the doctrines in question are intuitively perceived and have a divine authority, but pronounces Herbert's attempt to show their universality in a geographical and historical sense to be nugatory. The old question arises whether much is gained by declaring a principle to be self-evident and implanted in all minds, when you are forced to admit in the same breath that a very large proportion of the human race have never perceived it. It is, however, enough to say that Herbert's theory seems to justify Leland's view of his relation to the later Deists. He did in fact attempt to create a natural religion which was independent of revelation, though he takes some pains to show that it does not necessarily exclude a belief in revelation. It is an odd circumstance, as has often been noticed that whilst Herbert was about to publish a book which implicitly attacked, though it did not openly deny, the value of all special revelations, he believed that he himself provided a direct thing from heaven. He prayed solemnly for a direct influenced that the provided and t

from all the hopeless warface of conflicting seats by discovering some element common to them, and indeed to all the world. This is indeed the characteristic trees of the writers who may be called constructive Deiste of the eighteenth century; whether, like Looks, they still litheard to the truth of revealed religion as including the natural, or, like Tindel and others, rejected it as an illegitimate, addition. The other school of Peists, headed by Collins, adopted a gazely critical line of argument, and may trace their encestry to Hobbes, the greatest destructive force of English literature before Hume. We must leave our readers to judge of the degree of praise or blame to be awarded to Herbert on this ground; but we may at least say that he was, in spite of all his failings, not only a man of great shifty, but also of a true, though eccentric, sense of honour, and of deep, though some will think of perverted, religious fedings.

There is one other character in which we might consider Lord Herbert. He was, like his brother, a poet, though not possessing

There is one other character in which we might consider Lord Herbest. He was, like his brother, a poet, though not possessing such gesuine postical power as his brother. A stanza or two from one of his hat performances may suggest a curious likeness to a posse with which everybody is now familiar. "Melander and Celinds" are walking in a wood and talking of love:—

When, with a sweet though troubled look, She first brake silence, saying, "Doar friend, Oh, that our love might take no end, Or never had beginning took."

Earthly love, in fact, must be temporary, or, as she says:-

Only if love's fire with the breath
Of life be kindeled, I doubt
With our last air 'twill be breathed out,
And quenched with the cold of death.

Melandar replies, amongst other consolatory remarks:

And shall our love, so far beyond That low and dying appetite, And which so chaste desires unite, Not hold in an eternal bond?

Oh no! beloved! I am most sure
Those virtuous habits we acquire,
As being with the soul entire,
Must with it evermore endure.

Nor here on earth, then, nor above, Our good affection can impair; For, where God doth admit the fair, Think you that he excludeth love?

These eyes again thine eyes shall see, And hands again these hands unfold; And all chaste pleasures can be told Shall with us everlasting be.

The resemblance to In Memoriam is not in the metre alone.

ENGLISH SCHOOL-CLASSICS.*

THE object of these volumes," says Mr. Storr, the editor of the series, "is to supply preparatory schools, and the fourth or fifth form of large schools, with cheap annotated text-books for English reading. It is intended that each volume shall contain enough for one Term's work." We should have scarcely thought, by the way, that a book could well serve for two sets of boys of such different ages. Between the preparatory school and the fifth form there is surely a great gulf fixed, the crossing of which, though not an impossibility, is nevertholess generally an affair of some years. Perhaps, however, it has been found by experience that, by the time a boy has worked his way up to the fifth, he has managed to forget all the English he brought with him when he entered the larger school. It used to be said in the good old days before the Universities were reformed, that the course at Oxford was so nicely calculated that it was just sufficient with its four years' duration to enable a man to forget all he had learnt in the eight years that he had passed at school. But we may leave off considering for whom these volumes are specially intended. If the books are good in themselves, they will of themselves fall to the use of those for whom they are best suited. If they are bad, they will, with still greater certainty, fall out of the use of all. Whatever may be the merits of any particular series of English School-Classics, it is a most hopeful sign that the works of so many of our own great writers are being brought out in editions especially contrived for the achoolboy. It may be the case, as has been asserted, that down to the days of Cobbett there was scarcely a great writer of English who had not received a classical education. Nevertheless, we may, without being suspected of any disrespect to the classics, sasert that men would write English far better if they had studied it more thoroughly. We doubt moreover whether of late years a change has not some over the whole style of translations from the Greek and Latin

At one of the great annual diamens of a very great school, algorithms heard to wishper during the Head-Heatur's speech, that he only wished it had been delivered in Latin, fire in that case there would certainly have been some among the company who head have followed his meaning. Part, no doubt, of the weakness and confusion in expression which are so common in man; who have been trained in our Universities is due to the fact that they do not think with clearness or bolieve with means depth of conviction. The Radicalism of Oxford, which, like the arms of the cuttle-fish, is restlessly stretching out in all directions without gotting any long and sure hold, is not favourable to the formation of a strong and even style. But part also is due to the mossic-work style of translation from the classics which is far too fishionable both at school and at college. A man does not learn to write his own tongue well who, in translating a favoign author, has been taught to piece in a word or two from this past, and a line from that, and who has striven not so much to produce one consistent whole, as a string of next renderings taken from a dozen different authors. Whatever may be the explanation, the fact itself admits of no doubt that, considering the time spent by the ordinary English gentleman on the study of words, the power he has grained of expressing hissaelf in his own language is very slight. "Whoever," says the author of the Lives of the Posts, "whoever wishes to attain an English style, familiar but not coarse, and elegant but not estentious, must live his days and nights to the volumes of Addison." Without limiting the study to that of Addison, we still hold it true that the better English a man writes the more familiar he is with the great authors of the last century.

We are, therefore, as we began by saying, glad to find that towards their study not a little has been done. In the Clarendon Press Series, in spite of many faults and some failures, thoroughly good work has been done. The series before us has also merits of its own, though it by no means comes up to what we could have desired. The editions are of a convenient size, the type is clear, the price is small, while the selection is, on the whole, satisfactory. We could have wished, however, to have seen to nine volumes or so of poetry more than one volume of prose. What admirable readings for the upper forms of schools might be made by any one who was familiar with the humourists of the eighteenth century! The introductions to some of the volumes, and the general method on which the notes have been arranged, are also open to criticism. Much of the information which is scattered through the notes should have been given in a separate volume common to the whole series. If there is no grammar which the editor finds altogethes suited to his purpose, he might have had one written. Or, if this was beyond the scope of his series, he should at all events have gathered together all the facts of grammar which are now scattered through the series. Why, for instance, should a boy be stopped at the close of the first canto of the Lay of the Last Minstel to study Grimm's Law of the variations of consonants? The last note he comes to on the canto itself is as follows:—"Here paramed the horp. Observe the fitness of the break and the change of style." And then, as soon as, under Mr. Phillpotts's direction, he has taken his observations, he finds that, before he can again, after the fitness of the break, listen to the minstrel, he must first thoroughly master lip-letters, teeth-letters, throat-letters, and what not. This is not the way Sir Walter himself chested the dear schoolboy of his hour of play. There is more chance, we should fear, that the schoolboy may remember the passage in the introduction where Mr. Phillpotts writes:—

The germ of the Lay was a suggestion that Scott should write on the legend of Gilpin Horner. This was a mischievous dwarf, perhaps invented to account for the unaccountable blunders man make through their own clumsiness. It is a natural instinct "to cry over split milk," and we like to vent our spleen on some creature other than ourselves. Now, we should abase our friends for putting something in our way; in earlier times we should have abased some imp as the cause of our misfortunes. Such an imp was Gilpin Horner.

May not a schoolboy, as in his delightful progress through the Lay he is stopped by Grium's Law, begin to look out for some modern Gilpin Horner whom he may abuse as the cause of his misfortune? Why, too, in coming to the word "scarlet" in the fifty-fourth line of Cowper's Task, should any one be stopped with such a note as the following:—

54. Scarlet. Fr., "écarlate;" cf. "écrire;" scribe; "épouse," spouse. The initial e was prefixed to facilitate the promueintion of the harsh sounds so, sp. &c. After the 16th century the s was dropped, and the suppression was marked by the acute account of the initial e. In the 5th century Latin we find "spiritus" written "ispiritus," &c. See Brachet's Historical French Grammar, 78.

This information, again, is all very useful, but it has, to quote a writer of last century, "no local propriety." We are surprised by the way that Mr. Storr, after so carefully giving the rule for the accentuation of the initial e, should is his introduction to the same volume have written cont. "Seprit." Perhaps the introduction was written before the notes on the Trast, and before the occurrence of the word "scarlet" led to an investigation into the formation of languages so far back as the fifth century. In the note on "burly languages so far back as the fifth century. In the note on "burly languages, he is quite justified in calling the student's attention to "the fondness, not of poetry only, but of all language, for alliterative repetitions"; but then he should not give as specimens of alliteration the German Schritt und Tritt, and the English pellmell, helter-skelter, hurly-laxy, hagger-mugger, &c. Alliteration is not the same as a jingling rhyme. Mr. Phillpotts has a note on rhyming which is startling for the ignorance of sound it shows;

Action Charles College Landon, Mille Land Cautholing

doubly startling in a man who has for years been a master, not in some cockney school, but in Warwickshira. He says:—

Notice in the rhymes that they sometimes seem rhymes of spelling rather than of sound, as "gone" and "throne," "state" and "sate"; generally these are the relics of an older pronunciation; thus "sate" was "salet." Ithyming being traditional, "war" can rhyme with "bar" or "jar," but not with "poor" or "paw."

We have of late heard a good deal of what is traditional at Rugby and what is not traditional. It is not traditional there that "poor" and "paw" rhyme with "war"; otherwise they would pass for good rhymes of sound, it seems, though not of spelling. The law of the variations of consonate might be with good reason enlarged so is variations of consonants might be with good reason enlarged so us to show how one of the noblest sounds in our language is passing away. We shall next have some writer maintaining that, the aspirate being traditional, though we write "oust" and "optic," we must not write "ouse" and "op," but "house" and "hop."

We do not at all like the way in which, in the notes, the various annotators mix up questions and information. A lad of any real poetic or literary taste would almost resent as an impertinence the advantage that is taken of some beautiful line to pop off on him a question. In "Hohenlinden," for instance, on the lines

Commanding fires of death to light The darkness of her scenery,

this note is found:—" Fires of death. How more picturesque than guns!" In the "Burial of Sir John Moore," on the line

O'er the grave where our here we buried,

O'er the grave where our hero we buried,
we find, when we turn to the notes, "Where. What is it here
put for?" A boy would naturally think, as we ourselves at first
sight thought, that Mr. Mullins, the annotator, meant to ask why
is the corpse, which had been mentioned two lines before, put in a
grave on the rampart. He really, no doubt, wishes the boy to
notice that "where" stands for "in which." Mr. Storr, in his
note on a line in the Sofa, where, or in which (to remember
Mr. Mullins's hint), the seat is described as "with plenteous
wadding stuffed," writes:—"Wadding. German, 'Watte'; Fr.,
'ouate' (cf. Fr., 'ouest'; En., 'west'). What language is the
termination -ing?" The information is good in itself, and the seat
of the sofa may be as well stuffed with learning as with wadding.
But why did Mr. Storr fire off that ungrammatical question at the
end? We shall, we suppose, if we turn to the edition of Handet
which some of these masters have lately brought out, find
handet's great soliloguy some such note as this:—"To be,
or not to be; that is the question. Conjugate the verb to
be in the subjunctive mood, and show how the absence of the
present participle is supplied in Latin. What language is the
termination -tion? As the first half of the line contains, on no less
authority than that of the hero himself, a question, consider why authority than that of the hero himself, a question, consider why it does not close with a mark of interrogation."

While notes are given and questions are constantly asked which do not bear in any way on the poem itself, it happens now and then that the most pertinent reflections are withheld. On the following lines, for instance, in the Tusk—

Grudge not, ye rich (since luxury must have His dainties, and the world's more num'rous half Lives by contriving delicates for you), Grudge not the cost,

there is not a note, a question, or even a reference, given which might lead the young student to inquire into the truth of the statement contained between the parentheses. The short space of a note might not be sufficient to contain a full exposure of the poet's fallacious argument. Nevertheless reference might have of the poet's fallscious argument. Nevertheless reference might have been given to some manual of political economy where the muchneeded information might be found. There is, however, no proper economy of space. Why, because in one of these volumes the poem of "Lucy Gray" is given, should the reader be told that "Wordsworth lived to see the Abolition of Slavery, the Accession of Queen Victoria, Sir Robert Peel's Ministry, the Repeal of the Corn Laws, and the Revolution of 1848 that made Louis Napoleon President"? Why Peel's Ministry is especially mentioned, and which of Peel's Ministries the author refers to, we do not know. Perhaps he is not aware that Peel was twice Premier. A Wordsworth died in 1850, Earl Russell might with some reason ask why his Ministry is not also mentioned? In the same book. Wordsworth died in 1850, Earl Russell might with some reason ask why his Ministry is not also mentioned? In the same book, in a note on Southey, occurs a passage which even at Winchester or at Uppingham could scarcely pass muster so far as grammar is concerned:—"Among the best known of his poems are—Joan of Arc...; among his prose works—the History of the Peninsular War, the Doctor, and the Life of Nelson, this last, described by Byron as beautiful took its place at once as one of the standard biographies of the language." A proper attention to punctuation might indeed have made the passage grammatical, but the author, no doubt, was so busy in telling the world that Byron called a book beautiful that he forgot to put in the right stop.

It is a pity that these little volumes should not have been prepared with more care and judgment. Much information is indeed given in the notes which is both apt and interesting; and the series may be found for a time to supply a want. But, if the English language and English literature are to be studied as they deserve to be, we shall before long require greater literary skill in those who undertake to be the student's guide along paths that have been far too little trodden.

DARWIN ON CORAL REEFS.

ELDOM has a single stride of greater importance how taken in terrestrial physics than that which was marked by the publication of Mr. Darwin's work on coral reefs thirty years ago. A whole generation of geologists has since grown up with the advantage of entering upon their studies with clear and settled ideas upon a group or range of phenomena largely underlying any comprehensive view of the formation of the existing earth-crust. It was not enough to have learnt over how wide an area of the global the present aspect of the surface is due to the section of minutes submarine organisms, or to how wast a denth or thickness the was not enough to have learnt over how wide an area of the globe; the present aspect of the surface is due to the action of minute; submarine organisms, or to how vast a depth or thickness the growths of these patient workers had accumulated during untold agos, if science was still unprepared with any adequate or wall-grounded theory to explain the mode in which these mighty structures were gradually piled up, and the causes which determined their distribution over various parts of the earth's surface. The bold and original generalizations of Mr. Darwin left little room for doubt in any reflecting mind that the theory of coral formation was thenseforth to take its place among the established certainties of science. Controversies might still arise over matters of detail, and much might be added by way of development, and even of correction, to the views laid down by this eminent naturalist. But for the main hypothesis, if that were to be called an hypothesis which with most men of science was accepted as an attested fact, nothing remained beyond wider expansion or more explicit enunciation. Several points of much interest have indeed been mooted in the intervening period by naturalists of note, which have given occasion to Mr. Darwin to go once more over the ground he explored with such good results a generation ago, criticizing with his usual candour and close logic the reasonings of later writers, and fortifying with new arguments and a fresh array of facts the main positions taken up by him in his original treatise.

The most important work upon corals and coral reafs is that of his original treatise.

his original treatise.

The most important work upon corals and coral reefs is that of Professor Dana, published in 1852. Professor Dana, whilst concurring to the full in the fundamental proposition of Mr. Darwin that lagoon islands or atolls and barrier reefs have been found during periods of local subsidence, demurs to more than one point in his general scheme. One of these objections refers to the limitation of the area over which the growth of coral is at present known to of the area over which the growth of coral is at present known to extend. The limits laid down by Mr. Darwin, which he still sees no reason to alter, range no further north than the latitude of Bornuda (32° 15' N.), their extension so far northwards being no doubt due to the warmth of the Gulf Stream. In the Pacific the Loo Choo Islands (27° N.) have reefs on their shores, and there is an atoll in 28° 30' situated N.W. of the Sandwich Archipelago. In the Red Sea there are coral reefs in lat. 30°. In the Southern having here they do not extend so far from the generoid see In the Sea there are coral rees in lat. 30°. In the Southern hemisphere they do not extend so far from the equatorial sea, Houtmans Abrolhos, on the western shore of Australia, in lat. 29° S., being the most southerly reef. A glance at Mr. Darwin's chart will show how evenly the coral reefs of every kind are spread along the belt of the equator, leading to his original inference that the law of their distribution depends upon the range of ocean temperature. We could wish that the author had taken into his appaidmental on the far wider extension of coral growths in cashing consideration the far wider extension of coral growths in earlier geological ages—their extensive distribution, for instance, over the limestone area of our own islands; and had indicated the inference which he would have us draw from facts like these as to the higher which he would have its draw from facts has these as to the higher temperature of the Northern waters at remote periods. What has now to be accounted for is the remarkable fact of the absence of coral growths over a large area within the tropical seas. None were observed during the surveying voyages of the Beagle on the west coast of South America, south of the equator, or round the Galapagos Islands, nor have any been seen there north of the line; and though living corals have been found in the Bay or Panama, no reefs seem to have been formed by them. Mr. Darwin at first attributed this absence of reefs on the coast of Pennand Panama, no reefs seem to have been formed by them. Mr. Darwin at first attributed this absence of reefs on the coast of Peru and elsewhere to the coldness of the currents from the south; but, on the contrary, the Gulf of Panama is one of the hottest pelagic areas in the world. The deficiency of carbonate of lime in certain waters cannot be taken into account, for at Ascension the waves, charged to excess, precipitate a thick calcareous layer upon the tidal rocks; but there are no corals there, nor at St. Jago, in the Cape Verdes, where carbonate of lime is not only abundant on the shores, but forms the chief part of some upraised post-tertiary strata. At the same time it is found that the bottom of the sent round certain islands is thickly coated with living corals, which nevertheless do not form reefs, either from insufficient growth owing to one cause or another, or from the species not being adapted to contend with the breaking waves. Another reason assigned owing to one cause or another, or from the species not being adapted to contend with the breaking waves. Another reason assigned was the accumulation of sediment brought down by rivers into the sea, and forming banks of mud whereby the polypiters were choked and their growth suspended. But this explanation, however plausible as regards the seaboards of South America, the Wast Usast of Africa, or the Gulf of Guinea, cannot be hald good in the case of St. Helena, Ascension, the Cape Verdea, St. Pault, or Noronha, which are free from reefs, though far out to see, and composed of the same volcanic rocks, and having the same of which are surroughled by gigantic walls of coral rock.

Exception has been taken by Mr. Dana, and judge at the Darwin allows, to that part of the argument which contains the mean.

The Discountry and Distribution of Cheef Sand Mr. Charles Discountry S.G.S. With 3 Pietra. Balance S.G.S. School Strategy School Sand

temperature of the sea, upon which sufficient weight, he considers, had not been laid. Yet even if Mr. Darwin had to some extent undervalued the effect of temperature during the coldest season of the year, it does not appear that we are any nearer an explanation of the remarkable absence of reafs in the cases enumerated, and our author, had in consequence allowed those paragraphs of his work to stand as they were in the first edition. In the central and apparently hottest parts of the Pacific there are islands entirely free from reafs. Not that latitude has much to do with marine any more than with aerial temperature. The Galapagos are on the equator itself; and there the mean surface temperature was made out by Fitzroy to be 68° F. between September 16 and October 1835, the minimum at Albemarle Island being 58'5° at the S.W., and 62° or 63° on the western shore, whilst near Tahiti, over 17° S., the mean observed was 77.5°, the lowest any day being 76'5°. There is thus a difference of 9'5° in mean temperature, and of 18° in extremes; quite enough, as Mr. Darwin allows, to affect the distribution of organic beings in the two areas. Yet, even if we knew more of the variations of ocean temperature, we might remain almost as far from any satisfactory reason for the absence of coral reafs in such areas as we have, mentioned. This is one of the points in regard to which we must look hopefully to the results which the cruise of the Challenger in equatorial waters may bring forth.

The proximity of volcanic land, owing to the lime generally evolved from it, has been thought by some to be favourable to the

The proximity of volcanic land, owing to the lime generally evolved from it, has been thought by some to be favourable to the increase of coral reefs. Mr. Darwin, on the contrary, shows that nowhere are coral reefs more extensive than on the shores of New Caledonia and of North-Western Australia, which consist of primary formations, whilst the Maldiva, Chagos, Marshall, Gilbert, primary formations, whilst the Maldiva, Chagos, Marshall, Gilbert, and Low Archipelagos, the largest groups of stolls in the world, are formed exclusively of coral, without any nearness to active volcance. He had indeed urged the opposite view, that volcanic action impedes the growth of coral reefs. And it is made a point of objection by Professor Dana that he had not pushed this argument far enough. Mr. Darwin has in turn to question how far the heat or poisonous exhalations of a volcano could affect an area so wide as Professor Dana's theory implies. In the central parts of the Pacific there are islands wholly free from reefs, and in some of these cases this may be due, he considers, to volcanic some of these cases this may be due, he considers, to volcanic action. But the existence of reefs, though scantily developed, and, according to Dana, confined to one part of Hawaii (one of the Sandwich group, and a volcanic centre of tremendous power), shows that recent volcanic action does not absolutely prevent their growth. Upon the question of the seemingly capricious distribu-tion of coral reefs Mr. Darwin ultimately brings to bear the doctrine of the struggle for life. In those parts of the sea in trine of the struggle for life. In those parts of the sea in which there are no such structures, there are, we may conclude, other beings supplying the place of the reef-building polypifers It is shown in the chapter on Keeling Atoll that there are some species of large fish, besides the whole tribe of Holothurise, which prey upon the tenderor parts of the corals. On the other hand, the polypifers may suffer from the diminution through whatever cause of the organic beings on which they prey. The relations which determine the formation of reefs on any shore must be very complex, and, with our present means of knowledge, inexplicable. Changes in the condition of the sea, not obvious to our senses, might restrain or destroy all the coral growths in one area and cause them to appear in the coral growths in one area and cause them to appear in another. The Pacific or Indian Ocean might become as barren of coral reefs as the Atlantic is now.

of coral reefs as the Atlantic is now.

It has been a question whether a position of calm is more favourable to coral growths than the being exposed to the free and violent dash of the sea. Certain polypifers in the saxigenous lithophytes cited by MM. Quoy and Gaimard may be able to flourish only where the water is quiet and the heat intense. Yet, on the other hand, the most careful researches confirm the remark of Ehrenberg, that the strongest corals love the surf, and are most rich and massive where most exposed to the waves. The great mounds of living Porites and of Millepora round Keeling Atoll, occur exclusively on the extreme verge of the reef, which washed by the breakers. It is indeed to the solid rampart formed by these massive outworks that the more delicate and more richly-branched corals of the inner water owe their exisand more richly-branched corals of the inner water owe their exisand more richly-branched corals of the inner water owe their existence. In proportion to the protection thus afforded do they gain in variety and delicacy while decreasing in bulk. If the question were put under what conditions the greater number of species of coral, not regarding their bulk and strength, were developed, Mr. Darwin would answer, with MM. Quoy and Gaimard, that this would happen where the water is tranquil and the heat intense. The total number of species in the chaumtropical seas must be very great, 120 kinds, according to Ehrenberg, having been yielded by the Red Sea.

Whilst agreeing in cameral with Mr. Demonstrates the chause of the

the Red Sea.

Whilst agreeing in general with Mr. Darwin's view that atolls or lagoon islands, as well as barrier reefs, have been formed during a period of subsidence, Professor Dans has instanced certain of the lagoon islands of the Low Archipelago and elsewhere as showing signs of recent elevation to the extent of a few feet; a view which had obtained support from the observations of Mr. Outhouy on the atolls of Panmotu and Fiji. Our author, while under reducing the difficulty of judging the evidences of local elevation or subsidence, adduces notwithstanding many considerations tending to show that here too his fundamental proposition holds good. Here in the present Time of his present work do we see more of his characteristic grasp of facts and insight into natural course.

The Memory, N. Theory is to not consideration are, he shows, often but illusery. If they is to not construct the proposition are, he shows, often but illusery.

undergone subsidence, these atolls or reefs may at least have remained stationary. Such circumstances as corals standing on the aboves or in the midst of the lagoons from twelve to thirty inches above the sea-level, with the tops of their branches dead; the great shells of the Tridacna vertically embedded in coral rock at a height at which they cannot now exist; and the discovery of masses of coral rock which could never have been carried to their present places and have become water-worn while they stood at their present level, may be explained by the action of water breaking upon the shore and carrying up the living polypifers, aided by the agglutination of fragments of dead rock shells, and sand. Bathed by the troubled waters, their building action would long continue. The wide fields of rotten coral at Keeling Island, with the tips of their branches projecting above the surface Island, with the tips of their branches projecting above the surface of the lagoon, may be simply the result of the tides not rising so of the lagoon, may be simply the result of the tides not rising so high as formerly since the closing, as reported by the inhabitants, of the channels between the islets, and of the lagoon being partially-choked by the growth of corals. Here, so far from there having been elevation of the land, there is reason to see proofs of subsidence, to which may be added the manner in which Chain Atoll, in the Paumotu group, suffered from a storm, and the statement of Sir E. Belcher that after an interval of fourteen years well-known island themselvest had discussed and the lagrant a well-known island thereabouts had disappeared, and the lagoon at a particular spot had become deeper than before. Among other causes of change which might easily lead to a mistaken belief in the recent elevation of low coral formations, Mr. Darwin suggests that during some special season, the currents of the sea and the prevalent winds coinciding in direction, the waves would rise to a higher level, and that the corals would grow higher, the result being that these corals at a subsequent season would expose their dead summits, and give the appearance of the land having been slightly elevated. Should, however, the conclusion arrived at by so excellent an observer as Professor Dana be hereafter confirmed, the question, an observer as Professor Dans be hereafter confirmed, the question, in Mr. Darwin's opinion, will be whether, seeing how vast an are has been thus affected, those geologists are not right who believe that the level of the ocean is subject to changes from astronomical causes. We understand him to speak here of Mr. Croll and those who take his view of the varying curve of the earth's orbit, and the increased angle of the inclination of her axis. He might have given a prior place to the growing conviction of the geological truth of what is known as the equatorial bulge in the figure of the earth.

On the fringed coasts manifold and unmistakeble proofs of

On the fringed coasts manifold and unmistakable proofs of On the fringed coasts manifold and unmistakable proofs of recent and active elevation are readily accumulated, and, as Mr. Darwin shows, corals attached to a rising coast would necessarily form a fringing reef. The areas including reefs of this kind, and their connexion with active volcances, are well shown by means of the coloured map, as well as by the details of evidence brought to bear upon this point in the appendix. In revising this map, which must have been the result of much patient labour, one new volcance has been inserted on the north-eastern side of New Caledonia, whilst that in Torres Straits has been omitted. Some broad generalizations of great value have been added regarding the subsiding areas marked blue on the map, as indicating the presence of atolls or barrier reefs, and the rising or stationary areas marked atolls or barrier reefs, and the rising or stationary areas marked red, as known by upraised organic remains or inferred from the presence of fringing reefs. If the existence of continents shows that the areas which have been upheaved are immense, the proofs which are brought forward in support of Mr. Darwin's theory show that the areas which have subsided have been not less immense. We may follow in imagination the spaces held by wide continents and lofty mountains sinking, beneath the sea, with a movement so slow as to allow the corals to grow up to the surface, where the atolls now stand like monuments, marking the place of burial.

VON HELLWALD'S RUSSIANS IN CENTRAL ASIA.

WE have had occasion lately to review several works on the subject of the ceaseless flow of Russian enterprise or ascendency over the steppes and Khanates of Central Asia. These books have much of the interest and animation of a trial at Bar, M. Vambery plays the part of counsel for the plaintiff, and roundly asserts the innocence of the lamb and denounces the apathy of the shepherd as against the wolf. The Russian apologist, through the mouth of Captain Spalding, endeavours to show that the fable is of no application. The author now before us, after hearing the arguments of both parties, analyses the evidence, reviews the proceedings, and closes the suit by dismissing Great Britain with a warning, and condemning her in costs for lackes in the case. Amongst the various contributions made towards an accurate comprohension of the exact aim and position of Russia in Asia, which had been applied what take a high small. Her comprehension of the exact aim and position of Russia in Asia, this book of Herr von Hellwald must take a high rank. He has gone far and wide in search of facts. Scientific disquisitions, records of perilous adventures, the official returns of Russian naval officers, the speeches of members of our outer Parliament, the opinions of Continental writers on disputed points of geography and politics, the statesmanship of Lowell Lawrence, and the views of Mr. Grant Duff, have all been aid mades requisition, and have respectively contributed to the under requisition, and have respectively contributed to the

^{*} The Russians in Central Asia: a Critical Examination down to the Present Time of the Geography and History of Central Asia. By Frederick von Hallwald, Member of the Geographics: Societies of Vienna, Mexico, Paris, Genera, New York, &c. Translated from the German by Lieut.-Col. Theodore Wirgman, LLB. With a Map. London: Henry S. King &

formation of very strong conclusions. The book moreover has been constructed on a thoroughly artistic and methodical plan. The reader is conducted through pertions devoted to ethnology, geography, and national characteristics, to the final deliverance in a chapter of nearly eighty pages, which leaves England with but small pretensions to political ponetration or diplomatic success. In fact, the whole process by which the writer arrives at his de-In fact, the whole process by which the writer arrays at me eductions somewhat reminds us of the charge of the Chief Justice in the case of the Claimant. The rivers and sands in the neighbourhood of the Ses of Aral are discussed as minutely as the college days at Stonyhurst and the geography of Seuth America. Then we are shown the cold gradation and wall-balanced form by which each Czar in succession has felt himself called on to explore. which each Ozar in succession has left himself called on to explore, remonstrate, occupy, chaatise, lecture, and annex. Next our hanging judge proceeds to demonstrate that, while we have been driven out from Afghanistan, and have had nothing but petty border wars and internal difficulties for the last thirty years, Russia has been quietly extanding her frontier, accuring her acquisitions, and gradually digesting and assimilating the heterogeneous elements that have come under her away.

that have come under her sway.

It is not difficult in such a work to point out some mis-It is not difficult in such a work to point out some mistakes of actual facts, or some deductions which, owing to erroneous information, appear absolutely untenable. At p. 168 we are told of an Indian paper called the Culcutts Despatch. We apprehend that by this term the author, or possibly the translator, designates, not any one of the independent local journals, but the official Indian publication known as the Government Gasette. At p. 224 it is implied that Lord Leavence was Viceroy at the time of the Indian Mutiny. It is, however, venial for a laborious and untravelled German to have forgotten or misapprehended the distinction between a Chief Commissioner of a frontier province and the Governor-General of the whole Empire. No Rajpoot princes were present at Lord Mayo's Umballa Durbar, inasmuch as that nobleman, for political and departmental reasons, studiously refrained from raising any of those irritating pretensions which would have infallibly been excited by the arrival of Meywar or Jyspore to meet the Mahommedan Amir who came from over the border. Then it is hardly fair in a writer who is so well infermed to say Then it is hardly fair in a writer who is so well infermed to say that he passes over "in silesce the cruelty and berberity with which English squatters and settlers, merchants, and even missionaries, know how to extirpate the native populations." There have been, as Indian administrators and English Secretaries of State know, collisions and jars in our oldest provinces between indigo or tes planters and coolies, between English landholders and Bengali tenants, between capitalists working at the high presure of the nineteenth century and Oriental artisans and mechanics who plod along with the implements and are hardly wakened up out of the customs described in Manu. But whatever may have been the errors of the impetuous, strong-willed, and occasionally overbearing Anglo-Saxon, the case between him and his Ryots and coolies cannot be dismissed offhand in such a sweeping sentence; and as for extirpation, it would be difficult to point out any place in which the immediate result of English ascendency has not been vastly to increase the native population. It is rather hard, too, on the missionaries to be accused of thinning the villages in which they plant their churches and schools. On previous occasions these same reverend gentlemen have been roundly abused by the hardest exponents of the Manobester school for intruding into the sacred domain of politics, or for asserting the claims and equities of the toiling millions, who may go at one step from helpless submission to wild and unreasoning revolt. They will be rather startled to learn that, instead of showing their converts, and, as a direct consequence, the unconverted Hindus of adjoining villages, how lawfully to resist oppression and to meet force by tional means, they have been veiling extreme Malthusian doctrines under the cloak of Christianity. The distinguished traveller Mr. under the cloak of Christianity. The distinguished traveller Mr. T. T. Cooper did not, we believe, accompany Major Sladen in his expedition of 1869 to the Panthay kingdom lying between Burmah and the Chinase Empire. Mr. Cooper was then engaged on his own account in a very different direction, and Major Sladen's expedition, from which the King of Burmah could accrealy have imagined that the "English had nothing less in view than the annexation of his kingdom," took place in 1868 and not in 1869. We are indebted to a writer in the Pall Mall Grantle for nointing out. in addition to the above-mentioned Genetic for pointing out, in addition to the above-mentioned mistakes, that Sadik, the leader of the Dunganis, was not killed, as stated, in January 1864, but that he is alive and was aiding the Khiwans only last summer. But these mistakes will not prevent our recommending this book as an excellent work of reference for any Englishman who wishes to understand the whole gist of a political discussion wherein hardihod of assertion has often been inverse proportion to sufficiency of knowledge. It is the result of much training, inquiry, and research. Its style is clean. The work of translation has been excellently performed by an English officer who has served for ten years in the Austrian army, and who is well acquainted with colloquial as mall as cleaned Gorman. officer who has served for ten years in the Austrian army, and who is well acquainted with colloquial as well as classical German. When any new and ambitious member is desirous of pushing Mr. Bourke, of supplementing Mr. Grant Duff, or of putting Lord George Hamilton through a competitive examination on the geography and pulities of Eastern Turkestan, he should fortify himself with the facts and statistics amanged by this learned programmy and pulsates of mastern Turkestan, he should fostify himself with the facts and statistics arranged by this learned German, and illustrated by an annellest map, which is coloured in a fashion to bring politics house to the eye. It is worthly of an author who is a member of at least half a dozen Gaggaphical Societies.

One of the chief merits of the writer is that he shows One of the chief merits of the writer is that he shewn smethy what Russia has done and is doing in Central Asia, up to date. Events tread on each ether's heels so quickly; the tracts overrun, annexed, or taken "under protection," are so distant, unfamiliar, and remote from the ordinary Special Correspondent; the names an application of many different ways; and the whole subject is he republish to the general reader, that we have additional course to thank a writer who traces for us the shb and flow of Russian accordinary from the days of Casr Pater to the campaign of 1873. The position of affairs may be concisely described as follows. Adment the whole of the Sea of Aral is within the Empire of Russia, and no land, except a very minute portion abutting on a guil at lea the whole of the See of Aral is within the Empire of Russia, and no land, except a very minute partion sbutting on a gulf at he south-western extremity, could be chimed on any pretense by any Khan, Kirghis Sultan, or other potentate of the Resert. The Caspian, though not similarly encircled by the Russian dominious, is practically an inland lake, subject to the will of the Czar, commanded by his forts, traversed by his fleets, and sounded and explored by his officers. If the penetrating eye of Gibbon, evan-looking the whole range of history, could only discern the flags of two navies on the waters of the Caspian, one of which was that of a Russian admiral, it may be asfely predicted that no other nation is henceforth ever likely to launch a fleet there; nor will laron Restar, whatever he may accomplish in the construction of a reitroed from whatever he may accomplish in the construction of a reilroed from Resht to Teheran, be likely to use his concession for sutting down the Resht to Teheran, be likely to use his concession for sutting down the forests of Mazanderan and for building Persian ships. Eastward of the most southern point of the Sea of Aral, the Ressian line encloses the worthless desert of Kizzil Kum, or the "Red Sand," and also a comparatively populous and fiveful district in which are such cities as Samarcand, Tashkend, and Khojend. In fact the boundary here goes some way to the south of the riwar Zarafshan (the scatterer of gold), and enables the Russian Vicercoy to command "Kokand the charming" on the one side, and "Bokhara the ennobled" on the other. We may remark, by the way, that it is not easy to find an exact parallel in English to the epithets Latesf and Shareef, which, in Mahommedan parlance, are invariably appended, the former to Kokand, and the latter to Bokhara. Lutesf is equivalent to graceful, elegant, charming, and reminds us of the epithet λπαραί appropriated for his city by the Athenian. Shareef expresses more qualities than one. It significs noble, eminent, and holy. There is a flavour of sanctity about the word, for it is usually applied to the Prince of Maoca, to the descendants for it is usually applied to the Prince of Mesce, to the descendents of Mahommed, and to the Koran itself, by any Museulmen of ordinary education or intelligence. The accomplished writer of of Mahommed, and to the Koran Itself, by any Museulmen of ordinary education or intelligence. The accomplished writer of the article on Russian advances in the recent number of the Quarterly translates the word by "illustrious," which to our thinking does not do full justice to the sentiment.

But to return to our annexations. The exigencies of Russian officialism have in some respects a striking resemblance to those with which we are familiar with in Oude or the Punjab. The

with which we are familiar with in Onde or the Punjab. The palace of the Amir at the old capital of Timur has been converted into a hospital and a magazine. The want of bread, felt for some time, has been obviated by two enterprising persons, one a Tartar, the other a German. These were succeeded by an Italian organ-grinder and his monkey; and a "kind of restaurant" has also been opened. Tashkend has actually a Russian church, and a newspaper published in the conqueror's language, the Turkestanskiya Vyedomoste, and the officers of the garrison of Samarcand have set up a "club." We should not have expected to find a complaint that Russian politicals had not acquired the Bokhariot or vernacular, and Parsian, the diplomatic language of the country. But the fact is so stated. There can be little doubt that with a Government so liberal, and with officers so accustomed to master all the Continental languages, this drawback will soon be surmounted, and that we may speedily hear that Licutenant Nevsky has "passed" in the language of the district, or that Captain Mikhailovich has been presented with a thousand roubles for his ovich has been presented with a thousand roubles for his complete mastery over the Gulistan and the Anvari. The operations against Khiva, we all know, have been very recently the se tions against Khiva, we all know, have been very recently the subject of diplomatic reference and polite evasion. But the upshot of the whole matter in regard to the Khanates may be fairly stated in the following way. A considerable part of Kokand has been incorporated; and Russians possess the whole country from the lake of Issik-Kul on the east to a good way south of the Ser Darya or Jaxartes; Samarcand is garrisoned; Bokhara is spared. The Commercial Treaty of 1868 does, however, vest Russian merchants with special privileges in the whole Khanate of Bokhara, and provides for the appointment of Russian agents in the towns. Khyra with special privileges in the whole kinamate of normars, and provides for the appointment of Russian agents in the towns. Khira, though overran by a Russian column, has neither been formally annexed nor openly abandoned; but a mere glance at the map will show the extreme importance of its retention to Russia as a will show the waterne importance of its retention to Russis as a means of sounding off its agguisitions in Turkenten, and of completing the communication between the castern shows of the Caspian north of the Attrek and the cities of Kette-Russis, Samanand, Khojend, and Tashkand. Here were Hellwald hys stress on the active preparations for railways, telegraphs, and made; as the fletillas which command the Caspian and the Israeles; and as the enormous moral influence which his telescopic over so many physical and political obstacles has assured for the Case with the normals and priests of the Khanatas.

The conclusions drawn from the fields we have analysed chore any action with the results of the Case which allows a substance by irregular laterality witching and the Done of Elizabeths and cases by irregular laterality own language. The comments of the Caster has a substance by irregular laterality of cavalry extensions and from the Caster has a substance by irregular laterality of cavalry extensions of the comments of the lateral lateral desires have a large lateral desires in the lateral lateral desires have a large lateral desires in the lateral l

sight of two other main objects—the establishment of a vest commercial monopoly in Asia, and the solution of the "Turkish question" by a preparadrasing influence on the frontiers of Persia and Adhanatan. In other words, the Care is to get at Constantinopla by "way of Tabaran, Khiwa, and Samarcand. That a Russian governor-general occupying Makommedan cities, "protesting" or overshadowing Khanatas, constructing forts, putting down robbars, and assuring a safe transit to heatler, will have anormous facilities for attracting trade into new phanuals, will hardly be disputed by the most complacent optimist. Nor is it possible to view without deep interest the completion of the long basis of operations which enables Russia at any one moment to threaten the valley of the Euphratea, the fiontier provinces of Persia, and the road to Herst. We must refer readers to the work itself, in which a series of connected facts and well-chosen arguments is adduced to prove these two alms neither visionary nor impracticable. It cannot be supposed that a Russian expedition, organised and successful at considerable cost, has no other object than the suppression of a few plundering hordes. Another consideration has presented itraility apprahended. It is quite possible to anticipate serious obstacles to the secure and effective government of our Indian dependency by events very far short of an actual collision between the Exitiah sepoy and the Cossaek somewhere in the neighbourhood of the Oxus. The Tisses on more than one occasion has written as if the close proximity to India of a Russian province would be the most natural and unobjectionable thing in the world. Practical Indian statemen think very differently. Russian agents are adepts at intrigue and diplomacy. Natives of all ranks and castes are proverbally oxedulous, excitable, restless. In every large Criential town or State there is always a set of fanatics or revolutionists who detest regularity, who welcome disturbance, who rise during anarchy like soum to the surface of a boil

PATON'S LIFE OF BEYLE.

In writing the life of Henry Beyle, Mr. Paton has called attention to the works of a man whose name is too little known, and whose influence is too little recognized. Every one who takes an interest in literature has heard of the great struggle between the Classical and Romantic schools in France which ended in the acknowledgment of the genius of Victor Hugo and other writers of the new school. Comparatively few probably are aware that Henry Beyle was one of the foremost movers in this literary revolution, or have heard of his pamphlet Rucine et Shakespeare, which, published in 1823, excited the hitter wrath of the French Academy of that date. Again, most people have either read or heard of Michelet's volume entitled L'Amour, while few know anything of the De L'Amour of Henry Beyle which preceded it. This book expressed some curious and original ideas of Beyle's on the nature of love, and excitainly no one was better qualified than its author to speak on such a subject both from observation and experience. He appears to have been one of those men who are by no means uncommen in the world, who, without being insincers, are radically fields. He had many violent pensions in the course of his life; but so long as each one lasted he conceived it to be the one and only absorbing emotion of his being. Sometimes the duration of these phases of feeling was determined by external circumstances, sometimes by the inward working of that selfahness, or one should rather may self-consciousness, which often combines with the artistic sensibility of natures like Beyle's. There is a curious instance of this in a letter which he wrote in 1824 to a lady for whom he had, or supposed that he had, a deep feeling:—

"Adies! Everything is insupportable to me since I know that you are no longer here. Yesterday I had a delicious dinner, where there were nine man of wit and myself. Uninchily I was not in the least brilliant. I spoke very little, and the little I did say was heavy. This constrains will agitate my great soul. Perhaps I will have to renounce love. How can I reconcile myself to not shining!"

Another strange example of the manner in which his ideas, taking in the main an exalted sphere, recurred to the central figure of self, is found in a letter which he wrote at an antiliar period to his favourite sister:—

I have hired some spartments, noble, simple, and freshly done up, and hang with charming engravings. I sought to enjoy them with my soul of 1804, but found it impossible. I have a fine view from the window of my little cabinet, and I contemplated a sunset afficient rain and heavy clouds riven by a suspensess wind. I opened mechanishilly the drawer of my bureau, in which I put interesting pages. I opened a little letter, and it was from you. I never falt with more delight the planeaus of laving you. This charming letter is of the 15th March; but I do not know what year. All that you say in this letter is in perfect harmony with what I feel; it is another myself whose letter I was reading. The resemblismose of our fland-writing increased this charming illusion.

writing increased this charming illusion. The "charming illusion" of receiving a letter from a second self is somewhat amusing, and one cannot help entortaining a little distante for the reforences to his own exquisite sensibility which abound in the writer's earlier letters. Beyle, however, is by no means the only instance of a man of undoubted genius who had also a vein of littleness. And it must be said that this characteristic of self-coneciousness is closely allied with the keen observation and imaginative faculty which distinguished Beyle's writings. By the labit of analysing his own feelings the author helped himself to acquire that of analysing those of other people. It is to be regretted that he never turned his power to the best account by carrying out a project which he formed of writing a kind of autobiography which, as Mr. Paton says, was to have been a real basis with an ideal superstructure. Among his papers M. Colomb, an intimate friend of Beyle's, found an unfinished self-portraiture of the author under the name of Roizard which would no doubt have figured in some form in this projected work. As far as one can judge of Loyle from external evidence, this representation of himself seems to have more truth and discarnment than such performances generally possess:—

and discarament than such performances generally possess:—

A word sometimes affected him to tears; at other times is was ironical and hard, from the fear of being moved, and of being despised by himself as a man of weak character. His countenance was not handsome; his features were large, and subject to mobility; his eyes expressing the slightest shadle of smotion, so as to mortify his own self-love. He was brillent, amusing, and, full of unexpected salies, he electrified his suditors, and excluded the possibility of a yawn from the people in the room is which he happened to be. But this vivacity of his salies sometimes created aversion and enmity, and offended the dull and the medicare. When he was without emotion he was tlat, and discained to call his powers of memory to his aid. A touching word, a true expression of misortune heard in the street or in the shop of an artisan, affected him. But for pomp and affectation there was enty-irony to be expected from Roizard. From the age of sixteen, this man was in the sphere of the activity of Napoleon, and had followed him to Moscow and elsewhere. While he made these campaigns his father was ruined, and he himself was also ruined in 1814 by the full of Napoleon. Roizard lived in Italy, and at the Revolution of 1830 he returned to official employment for the sole purpose of completing the tabirty years requisite to enjoy a pension. He arrived at Rome without ambition, solely in order to pass ten years without ennui, and then to return to finish his life at Paris in a situation a little above poverty.

But it is time to leave off speaking solely of Beyle's character, although it is a study of great interest, and to come to his writings and doings. His life, as may be gathered from the passage quoted above, was by no means an unoventful one. His independent spirit as his friends, his vagabond nature as his enemies, might call it led him to seek a varied life, and circumstances favoured his wishes. By the interest of the Daru family he was employed as a supernumerary clerk in the Ministry of War when Pierre Daru was Secretary of that department, and he accompanied Napoleon's army to Italy in the campaign of Mareago, during which he managed to combine warlike and musical enthusiasm. The impatience and intelerance of boredom which belonged to his character induced him finally to throw up his commission in diagust at the dull garrison life which he led in Piedmont, and he returned to Paris to renew his literary studies. His letters at this time are charged with that love of moralizing about everything and nothing which was part of the spirit of the age, but they all have a truth and freshness which redeem them from dulness, if not from pringgishness. One of them contains a vivid description of the daily life of a Parisian of the day. Upon this Mr. Paton makes a remark which will perhaps be resented by Englishmen, but in which we cannot help thinking there is some truth:—

Such a sketch of Paris, so different in costume, hours, and manners, from the Paris of our day, is not without its interest. The extreme politeness of the ancient regime extended itself into the beginning of our century. The Frenchman of this old school, with his obsequious compliments and dancing-master airs and graces, has disappeared in the course of the political shocks of half a century. One cannot help thinking that the English coldness and nonchalance has acted rather perniciously than otherwise on the upper stratum of this gay and anniable nation.

The next three or four years of his life were occupied with studies of books and men and with love affairs, one of which was violent enough to induce him to accept a place in a counting-house at Marseilles under pretence of a sudden passion for husiness. The real object of his passion, however, was an actress, who at the end of a year married a Russian noble, upon which event Beyle's love of the counting-house disappeared, and he returned to Paris. In 1806 he re-entered the public service, in the first instance as a subordinate commissariat officer, and from that time until the downfall of the Empire he remained in the service of Mapoleon in various espacities. During this time he visited Berlin, Brunswick, Vienna, where he was present at the Requiem Service of Haydn, and subsequently Milan, for which town he had a strong attachment; indeed in his later years he came to consider it as his home. He found that Italian society was free from affectation and the small vanities which made intercourse with the world in Fixis so distantiful to him at times. During all this dismale neture." As he sailed himself. This rather incentious

Study. Affact by Original Documents and Unpublished Letters from the Network Topone of the Sundly of Doyle. By Anthew Attellial States, Anthew of Sensorshed on the Dunnie and Sen Attrible, distinct the Editory of the Egyptian Revolution." Loudon: Tribute: A Co. 1872.

description drew upon him on one occasion in later years the unpleasant reputation of being a police spy. Immediately after his visit to Milan came the expedition to Russia; and, in order to accompany it in the Commissariat Department, Beyle resigned a comfortable post at Court. Probably had he foreseen the troubles of this campaign, he would have hesitated to do this; the department to which he was statched came in for a large share of the blands for the ill-fated march to and from Moscow. Beyle may be considered fortunate in having reached France again in as good condition as he did, although that was bad enough. He returned deprived of all his possessions, and wrote from Mayence that he was "in a state of repulsive filth, and on his knees before potatoes." Puring the cight years following the Russian campaign Beyle may be said to have taken up his residence in Milan, for although he paid visits thence to other parts of Italy and to Paris, he always returned to Milan as to a home, until he was expelled from it by the Austrian authorities under suspicion of being a spy. In this time he made the acquaintance of many distinguished men, among others Byron, and published the Lives of Haydn, Mozart, and Metastasio; Rome, Niplas, et Florence, and also Histoire de la Peinture en Italie. On his return to Paris after his expulsion from Milan he published the De I'Amour, which is probably better known than any of his works, except perhaps La Chartreuse de Parme, of whose merits Balzac had so high an opinion. Mr. Paton thinks that Balzac's estimate of this work was exaggerated; and in this most roaders will agree with him, as also in thinking that Beyle was fitted for analytical rather than romantic writings, and that a novel was not the best vehicle for his peculiar talents. On this subject the biographer makes some sound and interesting remarks which will be found in the chapter concerning La Chartreuse de Parme. De L'Amour was succoeded by the Racine et Shakapeare already apoken of, and in the six following years at R matters which concerned the administration. When the Consermatters which concerned the administration. When the Conservator pointed out that Beyle was universally considered to be an original genius and a man of superior intelligence, "You call him a man of superior intelligence!" replied the Mayor; "allons donc! I dined twice in his company, and know better." As has been indicated, Beyle's analytical and critical writings are of more importance than his romances. His remarks upon the literature and fine arts of his time will always retain some value, although many of them may be over-ruled by the criticisms of the present day. Mr. Paton's book is carefully and clearly written, and has meant turns of thought and expression, of which the following romark, apropos of the Great and the Second Napoleon, may serve as an example: as an example :---

The potent who move the wheel of forcune are impotent to fix it. The greatest men begin revolutions in human affairs, and revolutions finish the greatest men.

AGAS'S CIVITAS LONDINUM.

JUST thirty-five years ago, when the Society for the Diffusion of Useful Knowledge was in its most high and palmy state, and nobody apprehended that its fall, or even its decline, was among events to be, it began the publication of what promised to be by far its greatest work, the Biographical Dictionary. Mr. Bolton Corney was even then somewhat advanced in years, but may be said to have been only commencing what proved in the said to have been only commencing what proved in the but hay be said to have been only commencing what proved in the end to be a very useful literary career, in its own particular direc-tion and within its own particular limits; and the first number of the first part of the first volume had not been a week from the press, and the inevitable "Aa, Peter Van Der" had hardly been consigned to the tomb, when some letters appeared in the then congenial pages of Sylvanus Urban containing a criticism upon the

conduct of the undertaking so close and so convincing that we believe the portion already issued to the public was in effect cancelled, and the whole scheme systematised in accordance with his views. The enterprise was doomed to an untimely end, but, thanks in some degree to Mr. Corney, the work was admirable so far as it went, and many a student has uttered a sigh as he came to the name of one Azzubeydi, a Spanish Moor, which winds up the first letter of the alphabet and the seventh and last volume of the Dictionary. Among the short-comings particularly brought to notice was the comparative neglect with which the first of our English surveyors had been treated. The authors did not even know his name, which was Radolph Agas, and not Ralph Aggas, as they had set it down; and they had dismissed him after "a tribute of twenty lines" abounding in errors, and without any signature attached to them. The memoir as it now stands is a "tribute" of six times the former length, and bears the initials of "J. T. S.," the well-known "Nollekens Smith," who was then the Keeper of the British Museum Prints. Mr. Corney's object, as far as the Biographical Dictionary was concerned, was thus fully attained; but still further attention was called to the character and career of Radolph Agas by the course adopted by the writer of the original memoir, who sought information in the Museum Reading-Room as to the books and manuscripts which Mr. Corney had recently been consulting, and accused him of deriving his knowledge of their existence from the references contained in the article which he had found fault and accused him of deriving his knowledge of their existence from the references contained in the article which he had found fault with. It was another case of "That eagle's fate and mine are one," and the sensation caused in the antiquarian Little Pedlington was of more than usual duration and asperity. The result of all this was that the works of Agas were zealously sought for and carefully preserved, and many minute points of his history, and the history of his productions, were incidentally brought to light. It is a singular fact that the work from which he derives all his

It is a singular fact that the work from which he derives all his fame may very possibly have been the handiwork of an altogether different man. This large bird's-eye view of London must apparently have cost the labour of years, and yet, it we are right in fixing its date at about 1561, it must have been surveyed and engraved before Agas was out of his teens. Nothing but actual inspection of the original, or of this facsimile, will give any notion of the genuine interest and value of the performance. Only two copies of it are known to be in existence. One is among the collections of the indefatigable Samuel Pepys, and the other, from which the facsimile is taken, is in the appropriate keeping of the Corporation of London. We have no particulars of the state of the Cambridge copy, but the one before us is evidently what is now too often called a "new edition," i.e. a reissue with a fresh title. The body of the work remains unaltered, and the arms of Elizabeth, the glorious Semper Eadem, are traceable on the flag of the royal of the work remains unaitered, and the arms of Elizabeth, the glorious Semper Eadem, are traceable on the flag of the royal barge which floats off Baynard's Castle, but the great shield in the left-hand upper corner bears the quarterings of James. Of the points which determine approximately the date of its execution, the limit in one direction is fixed by the absence of the lofty spire of St. (Paul's, which was destroyed by lightning on the 4th of June, 1561, and never rebuilt. The limit in the other direction is not so clearly defined; but many circumstances combine to convince us clearly defined; but many circumstances combine to convince us that it could not have been beyond 1564, amongst which we may mention that Stow notices the erection in that year of a castellated building over a spring on the north bank of the Thames, which could not have failed to be most conspicuous from the point at which the view was taken.

The map is 6 ft. ½ in. long, and 2 ft. 4½ in. wide, and takes in the whole space longitudinally between Lambeth Palace and the present St. Katherine's Docks, with a foreground of Lambeth Marsh and Horselydown, and a background of the Northern Heights. On the far left are Lambeth Palace and Lambeth Church and on the other side of the river Westminster. Abbur Northern Heights. On the far left are Lambeth l'alace and Lambeth Church, and on the other side of the river Westminster Abbey and St. Margaret's Church and "Rufus's roaring hall"; and on the far right is the Tower, with its ramparts and ditches. When we have mentioned these, and perhaps the Temple Church and St. Saviour's Church, we believe we have set down every building in the whole of this large area which the closest inspection would enable an Elizabethan Rip van Winkle to recognize. This is not altogether pleasant to think about, and the reflection ought to make us doubly resolute in withstanding further tameering with any of those preresolute in withstanding further tampering with any of those pre-cious remains. Of the most important of all, the Abbey, we are in no fear, but we confess to a little trembling about St. Margaret's, which is so rich in historical associations. Fortunately, it is just at present the fashion to recognize it as a judiciously placed foil to its magnificent neighbour, but it is impossible to say how long this feeling may remain. The Hall appears to be safely buried in the midst of Sir Charles Barry's Palace of Westminster, and it will be more secure atill if the exection of the Law Courts are in brings midst of Sir Charles Barry's Palace of Westminster, and it will be more secure still if the erection of the Law Courts again brings its west side into prominence. Till then we shall not be altogether free from some slight degree of fear for the building which "witnessed the just sentence of Bacon and the just absolution of Somers," and whose "lofty arches of Irish oak" (which by the by are made of chestnut) "resounded" to the impassioned eloquence of Edmund Burke. The recent establishment of a flaunting and obtrusive neighbour in the shape of St. Thomas's Hospital has compalled the Ecclesiastical Commissioners to smarten up the brown and modest dwelling of the Architishops of Canterbury, and it has been done in a manner which reflects infinite diedit on the good taste and good feeling of all consumed in it. Would that the hapless church of St. Many Ovenie at Southwark, with this still more unhappy eastern chaptel, had had the good luck to still into sim'by hands! There is one confert, and one only, in the

^{*} Civitas Londinum—Ralph Agas. a Survey of the Cities of London and Westminster, the Borough of Southeard and Parts Adjacent. With a Biographical Account of Ralph Agas, and a Critical Examination of the Work, by W. H. Overall, Esq., F.S.A. London: Adams & Francis. 1874.

contemplation of their present condition. It is beyond the power of even churchwarden ingenuity still further to degrade them. With asgard to the Tower we hardly know what to say. The ditch is its great feature, and yet there is no denying that filling it up, and laying out the recovered land as an open esplanade, are changes which seem to have reason on their side.

It is impossible to look at any part of this interesting plan without feeling astonishment that no more than three centuries have passed since the great espital presented the appearance which is here delineated. The middle foreground is taken up with a jungly kind of garden, and two circular erections which must have been rough likanesses of the Albert Hall with its lid taken off. The jungle is Paris Garden, and its state exactly corresponds with the description which Fletewood gave of it to Burghley in 1578. He is relating how the watch had discovered the French Ambassador holding a secret interview with Sir Warham St. Leger and Sir William Morgan, and mentions that the place was so dark with trees that one man cannot see another "except they have lyneses ocules, or els cattes eys." They resisted the watch, and "the ambassador swore great othes that he wold do many thinges," but the Dogberries told him that they knew nothing of his dignity; they only knew that he and his companions were "night-walkers contrarie to the law." The westernmost of the two buildings is lettered "The Bolle Bayting," and the other "The Beare Bayting." Outwardly they are almost identical in appearance, and their surroundings are equally similar. The front towards the river is clear for the reception of visitors in boats; the rear is abut in with ponds sacred to a special branch of the amusement, and the sides are formed by the kennels of the dogs, all of whom are represented in the one attitude of rampaging to get at their prey. We do not see that any lodgings are reserved for the Bolles or the Beares, unless some odd-shaped buildings in the gloomy grove of Paris Garden we

The meat boat of Bear's College, Paris Garden, Stunk not so ill; nor, when she kissed, Kate Arden.

It is not to be wondered at that the sport was a favourite one with Henry VIII., but the writers upon the subject have never had the wit to relate an adventure with a bear in which he was himself personally concerned. They were perhaps not very likely to come across it, as it is only to be found in Foxe's Book of Martyrs, a work somewhat out of their ordinary line of reading. The story is far too long to quote in this place, and it is sufficient to mention that it turns upon the confusion among "the multitude of boats" when a bear chanced to get loose and was pursued by the dogs into this river. "The flying of the people, after that the bear was loose, from one boat to another, was so cumberous that divers uproons from one boat to another, was so cumberous that divers persons were thrown into the Thames; the King commanding certain men that could swim to strip themselves naked, and to help to save them that were in danger. This pastime so displeased the King that he bade 'Away, away with the boat, and let us all go hence!" that he bade' Away, away with the boat, and let us all go hence!' In those days the young princesses seem to have had "bearwards," just as they might now have ladies-in-waiting or equerries; for the venerable martyrologist goes on to say that the offender who had caused the mischief was "an arrant Papist, far from the religion of his mistress, for he was the Lady Elizabeth's bearward, now the Queen's Majesty." Long after she had attained that exalted dignity she continued her liking to the sport, and so habitual was her attendance at the Ring that in 1580, when all Europe was ringing with the first intelligence of Drake's exploits in the Pacific, and she was particularly anxious to find out what Philip II. really thought upon the subject, she invited the Spanish Ambassador to a bear-baiting, hoping that during the intervals of the engaging sport she might be able to wheedle the secret out of him. During the reign of the Saints, as we may gather from Hudibras, the sport was in little favour, and we are only surprised to discover that the establishment was in full force so late as 1655, when it attracted the favour, and we are only surprised to discover that the establishment was in full force so late as 1655, when it attracted the attention of Colonel Pride, who, after his celebrated "purge" of another place, had settled down as a justice of the peace in Southwark. Availing himself of the experience gained on that memorable occasion, he caused, says an old manuscript authority, "all the Beares to be fast tyed up by the noses, and then valiantly brought some files of musketiers, drew up, and gave fyre, and kild 6 or more beares in the place (only leaving one white innocent Cubb) and also all cockes of the game." The old journalist slily adds, "It is said all the mastives are for to be shipt for Jamaica." The glories of the place revived with the Restoration, and in 1670 Evelyn describes the scene to be very much the same as it was a century earlier when this map was executed. Bulls were baited as well as bears, and one of the former "tossed a dog full into a lady's lap as she sat in one of the boxes a considerable height from the arena." We can imagine the consternation and screening that ensued.

height from the arena. We can imagine the consternation and screaming that ensued.

Paris Garden was situated exactly where the present road from the Elephant and Castle comes upon Blackfriare Bridge, and the two arenas occupied the ground immediately to the east between the new Southwark Street and the riverside. Still further to the east, in the next generation, but before the end of the century, arose "the Globe, the glory of the Bank," which Ben Jepson well describes as

Flank'd with a ditc' and fore'd out of a marian-

Wretched as its own actual site was, it was rendered still worse by a wretched neighbourhood; and yet what everlasting glory is attached to it! We are next brought to the church and churchyard of St. Saviour's, formerly St. Mary Overie, which contains the dust of Gower, and Fletcher, and Massinger, or rather did contain it till it was carted away to aid in raising the level of some building land near Kennington Oval. When studying this part of the map we must never forget that the new London Bridge occupies a position well to the west of the old one. The representation of the latter, as given in this map, conveys a vivid idea of what Sir Thomas Wyat saw in front of him a few years before, when he found this only access to London barred against him, and had to march his wearied soldiers to the distant bridge of Kingston. How the bridge, pleturesque as it was, was permitted to exist so long we never could understand. The annual expense of its repairs was something enormous. So early as 1625 Ben Jonson speaks of an ungrateful man as minding man as minding

A courtesy no more than London Bridge What arch was mended last;

and Gifford in his note upon the passage anticipates a joke of Sydney Smith's by saying that, "had an alderman or a turtle been lost there, the nuisance would have been long since removed."

Nothing can say more for the exceeding interest attaching to this facsimile than the fact that we have filled our allotted space without having cut havond the foreground of the nicture, and started.

without having got beyond the foreground of the picture, and every square inch of what remains would have afforded equal matter for illustration and comment. The reproduction has been effected most successfully. The attendant letterpress is clear and to the most successfully. The attendant letterpress is clear and to the point, and the whole is presented in a handy and attractive form. No moderately good library should be without it.

THE PROVERBS OF JOHN HEYWOOD.

THE PROVERBS OF JOHN HEYWOOD.*

If for no other purpose than to show how many of our best and tritest proverbe are over three hundred years old in their present form, Mr. Sharman has done well to re-edit the quaint Dialogue of John Heywood. Though Heywood is known to literature as "the epigrammatist," it would be hard to find a score amongst his six hundred epigrams that could earn him a place among wits; and though it is recorded of him that he amused Henry VIII., and moved to a smile the rigid muscles of his daughter Queen Mary, it would be equally hard to find any solid title to the merit of humour in his dramatic works. It is more than probable that the favour he found in his lifetime, as well as than probable that the favour he found in his lifetime, as well as his subsequent reputation, depended chiefly on the large and curious collection of "old said saws," which, taking a hint from Skelton to do for the public ear what Polydore Vergil and Erasmus had done for scholars, he strung together in a framework sufficiently inartistic to modern tastes, and yet attractive enough in his day to make the earlier fashion of allegories give place to the adage. How completely this was the case will be seen by an extract from Mr. Sharman's introduction, where he notes that on the publication of these proverbs

the romancers were rejected; Heywood's volume was hailed with acclaim. It became the most popular of all popular books. Ten times it was sent to press during the sixteenth century. Immediately on its appearance, it gave a fillip to the nation's appetite for literary enjoyment; poets, play-writers, and statesmen made capital of its mine of proverbs. The Elizabethan dramatists are brimming with them. One orator delivered a speech in the House of Commons in which a proverb formed the substance of every sentence. Proverbs were adopted everywhere as devices for tapestry, as mottoes for knives, as inscriptions for rings and keepsakes.

So strongly does "the wisdom of many and the wit of one" commend itself to the generality of mankind, whether spoken or gathered up into the pages of a book, that Heywood's proverbs were probably his passport from a humble birth and a gratuitous education to a place among the landed gentry; for whereas he is shown to have been, as a child, one of the "Children of the Chapel Royal," and draughted thence to Oxford, he died the Chapel Royal," and draughted thence to Oxford, he died possessed, through Mary's favour, of a manor in Yorkshire, as well as, it would seem, of lands at North Mimms in Hertfordshire. Although the volume before us is printed from the edition of 1598, it would appear that Warton for his account of Heywood in his History of English Poetry had access to the first edition, namely, that of 1546. And it is not a little curious that two or three proverbial sayings which occur in the Dialogue spring from events contemporary with the earlier date. Thus, of a total change of aspect in one of the couples whose ill-assorted marriage supplies the groundwork of the Dialogue, it is said their faces told people of aspect in one of the couples whose ill-assorted marriage supplies the groundwork of the Dialogue, it is said their faces told people that "Totnam was turned French"; a phrase explained as originating in the migration of French workmen to Tottenham early in the reign of Henry VIII. which aroused the jealousy of English mechanics, and led to a street-riot on May Day, 1517. Such a proverb would have more force when this disturbance was thin living mamory, but two others awards and a street of the same of proverb would have more force when this disturbance was within living memory; but two others synchronize yet more closely. "To robbe Peter to pay Paul" (p. 54) is shown to have arisen from the appropriation (temp. Edward VI.) of the lands of St. Peter at Westminster to raise money for the repairs of St. Paul's in London—an appropriation in course of execution at the precise time of Heywood's first edition. As Mr. Sharman notes, the French form of the proverb, "Découvrir Saint-Pierre pour courrir

^{*} The Promerts of John Haywood. Edited, with Notes and Introduction, by Julian Sharman. London: Bell & Eons. 1874.

Seint-Paul," gives additional colour to this explanation. Lister in the Dialogue, where a jealous widow is represented as taking on "after Rediam sort," he finds an allusion to the conversion in 1546, "after Hedlam sort," he finds an allusion to the convenion in 1546, the very year of Heywood's publication, of the Priory of St. Mary of Bethleham into a lunatic asylum. In these and similar scraps of internal evidence (e.g. where he refers to epochs posterior to the Norman subversion of England the sawing "Jacke would be a guntleman if he could speak French"), Mr. Sharman has been as happy as he has shown himself industrious.

The plot of the Dialogue, if plot it can be called, is of the slender—set. A young man seaks advice sate a chair, hetween a young maiden

est. A young man seeks advice as to a choice between a young maiden with no means but rich relations, and a grey-haired widow with a good jointure and money in her hand. The author, his oracle, indertakes to discuss the question with the help of proverbs, and begins by citing several to the tune of wedding in haste and repenting at leisure. Presently he resorts to a fancy picture of two couples he has known, and the evils which resulted in the one instance from marrying "all for love" and in the other "all for money." In the issue, we gather, Heywood's client declines both matches and remains in single blessedness. It is with the plums of the cake, however, rather than with its baking or kneading that we have to do, and here, at any rate, there is no lack either as to quantity or quality. The editor has aimed at trading back each proverh to its earliest use in our own or kneading that we have to do, and here, at any rate, there is no lack either as to quantity or quality. The editor has aimed at tracing back each proverb to its earliest use in our own tongue, or that of the French, rather than to the classical originals to which not a few might be referred. Thus he illustrates the adage "Between two stooles, &c." (p. 13) by a proverb in a French MS. of the fourteenth century, and by the expression of Rabelais, "S'asseoir entre dsux selles le cul à terre"; but not by the Latin "Duabus sellis sedet," which is recorded by Seneca, and made the matter of an amusing anecdote by Macrobius. For "Tho' nye be my kirtle, yet neere is my smocke," he is content to give an English parallel of a later date than Heywood's dialogue; but he omits the "Tunica pallio propior" of Plautus, whom he might, had he chosen, have cited (Curc. I. i. 53, "Flamma fumo est proxima") in illustration of "No fire without some smoke" (p. 120). It does not, however, seem to have been part of Mr. Sharman's plan It does not, however, seem to have been part of Mr. Sharman's plen to go back to the classical origins of current proverbs, although we to go back to the classical origins of current proverbs, although we cannot quite agree with his implied depreciation of these as compared with early English. Undoubtedly there is room for both treatments of the subject, and philologically the latter has superior attractions; but it is not the less certain that a very large part of our proverbial philosophy, in common with that of Continental nations, comes to us from the secient Greek and Latin authors, through conduits laid down by Erasmus. It is true that Mr. Sharman cites for "Every cocke is proud on his owne dunghill" as early an authority as the "Ancrea Rivele, strea 1250"; but still we might go a long way further back and trace it to Phedrus and Rabrius, if not to the shadowy Alsop. The same may be said, if we substitute the name of Juvenal, for the adage (p. 82) that "Beggers may sing before theeves"; but we observe that our editor does not barm with equal strictness patristic parallels and originals. He allows us to refer "Love me, we observe that our editor does not have with equal strictness patristic parallels and originals. He allows us to refer "Love mes, love my dog," to so venerable an authority as St. Bernard, although he does not consider it his province to point out that the original of the saw about the "shoe's pinching"—"Myself can tell best where my shoe doth wring mee" (p. 121)—is St. Jerome ad Jovin., i. 29, "Nemo soit preser me ubi soccus me promat." The interest is surely enhanced when this sort of illustration is vonchback to the Latin of the anthor of the Initatio Christi, and within due limits, perhaps, a little more of it would have been welcome. At the same time we must be thankful for the care which watcome. At the same time we must be thankul for the care white has furnished us with so many early versions of proverbs still in vogue, e.g. "Out my cote after my cloth," "The nearer to the church the further from God," "To hold with the hare and run with the hound," "Seeing far in a milestone," "Better one bird in hand than ten in the wood," "Throw no gifte spaine at the giver's head, for tetter is halfe a lofe than no bread," "Small pitchers have wyden to be the like. All those are itslicited in the text and see for better is halfs a lofe than no bread," "Small pitchers have wyde eares," and the like. All these are italicised in the text, and so stand out from the rest of the Dialogue; and besides these we light on one or two proverbial expressions which are not so distinguished. One such is "Home is homely, though it he poore in sight"—an early version of a well-known proverb, though the sense of homely in 1546 was not the same as it bears in our sdage. Another is in 1546 was not the same as it bears in our adage. Another is where the young man speculates that by marrying a rich widow he shall be able to punish former alights, and to "hold their mose to the grindstone, and sit on their skirts That erst sate on mine." In the course of the Dialogue we come across a good sprinkling of old friends in novel faces. For example, a man is said to go on a distastsful errand." With as good will see a beare gooth to the stake."—a figure which takes us back to bear-baiting; and "in hasts like a small." "The parish priest forgetteth that ever he hath been holy water clark" is but another form of the "beggar mounted" and of the Plentine provert, "Ab seims ad boves transcenders." "Better spare at heim than at bottom recealls a well-known line of the satirist Parsins (ii. 50-1); and though most readers know the oft-cited edage "Better he anold man's darling than a young man's werling," it is probable though most readers know the off-cited edage." Better be an old man's darling than a young man's werling," it is probable that few are acquainted with the young man's meter to his old wife, when she parades before him the virtues of his deceased.

to his illustrative or interpretative vein. By the proved "While I beat the busk other men eatch the burden" (p. 13), which has its parallel in Spanish and other modern languages, he hange the tale of Henry V.'s recort when the citizens of Orienas, whom he was besieging, professed their willingness to yield the town to the Duke of Burgundy, who was in the English camp. "Shall I," said the King," beat the bush, and another take the bird!?" The adage "When the steeds is stolne shut the stable doors? Is made more explicit by the parallel courset which Mr. Shaman's research has brought to bear on it:—

The steed was stollen before I shut the gate, The cates consumed before I smelt the feast (p. 44);

and "the poor cat i' th' adage," and the saw about "belling the cat" meet in these pages with pertinent illustration. A propose of the proverb that "The grey mare is the better horse" (p. 110), Mr. Sharman is entitled (in common wi's several other writers) to the credit of having upset one of Lord Macsulay's plausible but unsound "divinations." The historian too hastily referred the proverb to the time when foreign breeds of horses were in most esteem, and the "grey marcs of Flanders" were preferred to "the finest coach-horses of England." Unluckily that time was the latter half of the seventeenth century, and Heywood's proverb belongs to the first half of the sixteenth. But, as is proverb belongs to the first half of the sixteenth. But, as is shown in the notes to p. 110, the phrase occurs in a drams about 1550, as well as in Hudibras; and there is no need to both for historical and chronological fixity in the case of a domestic phenomenon which the English express by a metaphor from the stable, while the Spaniards my, "In the house of the spiritless fellow the wife is magistrate." Upon the version of our proverb, "A worm will turn," which is given by Heywood—i.e. "Tread a worme on the tayle and it must turn agayne"—we are not sure that the editor does not do wisely in simply citing Shekweare. 2 King Henry VI. does not do wisely in simply citing Shakepeare, 3 King Henry VI.

The smallest worm will turn, being trodden on ; And doves will peck in safeguard of their brood.

There has been too much over-ingenious speculation upon this adage, and we are asked in divers quarters to believe that "worm" here means a stake or serpent. Perhaps the quietus to the question is to be found in the Greek iambic cited by Ray—

ένεστι κάν μύρμηκι κάν σέρφη χολή-

and in the study of that line with the help of "Liddell and Scott." The adage "Bachelors' wives and may des' children be well taught" is illustrated, as we might expect, from quaint old Latimer. Some of the proverbs enshrined in Heywood's Dialogue belong to more or less debatable ground, and Mr. Sharman has, to say the least, held his own in it. For instance, there has been no little disputation as to the interpretation of "a sleeveless errand." Tooke, Todd, and Richardson agree that it means "an errand without cover or pre-text." but the general sense of the word it something "unprofittext," but the general sense of the word i. something "unprofit-able." Why should "sleeveless" signify this, as it does in English writers from Chaucer to Addison? Our editor suggests with much plausibility that the phrase is referable to the custom of favoured knights wearing their mistress's sleeve for a badge; "such aspirants as failed to obtain the budge being dubbed sleeveless" (p. 29). Another proverb, at first sight obscure, is "I might put my winnings in my eye, and never see the worse" (p. 73), and this is elucidated by a quotation from a letter of Erasmus, complaining of a certain Gardinal who only gave him so much in return for two volumes of the New Testament, "quantum ai incidat in occulum quantum sist allaturum." We talk of "popjoys" being likely to catch as many fish "as they can put in their eye." In explaining the proverbial expression "by hook or by crook" (p. 77), the editor adopts the theory which refers it to the custom on certain manors for tenants to take of underwood so much as could be cut with a crook, and of loose and rotten timber so much as a hook could detack from the boughs. He discredits the reference to two rival arbitrators named Hooke and Crooke: and with good reason, seeing that they are summoned to cidated by a quotation from a letter of Erasmus, complaining of a and Crooke; and with good reason, seeing that they are supposed to have had their palmiest days just after the Fire of London, whereas the phrase is found in one of Wycliffe's Controversial Tracts whereas the parass is found in the cat in the pan" is an odd pro-wirb for fickleness and for frequent changing sides; but it is one which those who recollect "the Vicar of Bray" will remember;

When George in pudding time came in,
And moderate men look'd big, sir,
He turned a cat-in-pan once more
And so became a Whig, sir.

It may be regarded as certain that "cat" in this old proverb is g. oute, or cake. With two more explanations of proverbs we shall conclude our remarks on this amusing reprint. One is "as flures as a lion of Cotswoldo" (78), and it turns out that this is an old expression for a Cotswold sheep, on the same principle that "Basex, Rons" are "calves," and "Bristol milk" "sherry." It is hat ever he hath been holy water clark" is but another form of he "beggar mounted" and of the Plentine proverb, "Ab semined boves transcenders." "Better spare at heim them at bottom a corious that, in the line just preceding that in which a lice of Conswolds appears, it is said of an angry wife that "she formeth like bough most readers know the off-cited edage "Botter he as bots." Did Hoywood mean a wild hoar, or the formeth like a bots. "Did Hoywood mean a wild hoar, or the formeth like a bots." Did Hoywood mean a wild hoar, or the formeth like a bots. "Did Hoywood mean a wild hoar, or the formeth like a bots." Did Hoywood mean a wild hoar, or the formeth like a bots. "Did Hoywood mean a wild hoar, or the formeth like a bots." Did Hoywood mean a wild hoar, or the formeth like formeth like of the formeth like of the formeth like questionable compliances of his oversight? If the formeth like a fabric is God's honour; but if the latter, is may thinks more probable, the allower is to a small image of the Bevil which stood for many years on the top of the college. Perhaps it is not a question to contact bothy; but Mr. Shermen seems to favour the latter solution, when he quotes Glies Goaling the Cumnor land-lord's address definestiin in Kambuorth, "Here he a set of goad fallows willing to be marry; do not scowl on them like the Levil looking over Lincoln," Mine host of the "Black Bear" would know more of the college than the cathedral. No collector of "adagla" should be without this volume.

MRS. HEATON'S LEONARDO DA VINCI.º

MRS. HEATON'S LEONARDO DA VINCI.*

Promuon consent, to discourse on Leonardo da Vinci is about the most tempting and difficult of undertakings; to write on the genius and works of MichaelAngelo were scarcely a more arduous teak. The two subjects indeed have something in common; the lives of these great contemporaries lie in parallel lines. The genius of each alike tended to universality; painting, sculpture, and the constructive arts, poetry and song, the sciences of anatomy, perspective, and proportion, not to mention speculations and experiments tentative and sometimes prophetic, were domains coarcely vast enough for those capacious intellects, restless in activity and insatiable in thirst for knowledge. Almost the only similar examples that can be named are to be found in the multifarious labours of Albert Düzer and of Raffaelle. And it is a remarkable examples that can be named are to be found in the multifarious labours of Albert Düser and of Raffaelle. And it is a remarkable sign of the times that Leonardo, Michael Angelo, Albert Düser, and Raffaelle were something more than contemporaries, or even rivals and fellow-workers; each is after his own sort a representative man; in the life of each and of all we read the history of a people and of an age. Italy in those days was turbulent and unstable, she fostered at the same moment the arts of peace and of war, and her painters, like her princes, were driven from city to city to seek for fortune or to find a refuge from

The life of Leonardo was singularly chequered. His sarly home, near Florence, could not have been over-pleasant; an illegitimate son, he lived in the house of his father, the playmate of children by three successive wives. The youth, as the pupil of the great sculptor Andrea Verocchio, entered the Tuscan school, then the foremost in Italy; but meeting with disc unagement, he passed over to Milan, and at the age of thirty bound himself at a salary of 500 scudit to serve the notorious Ludovico Sforza, Duke of Milan. Da Vinci, being troubled with luxurious habits, seems even when most favoured by fortuse to have found poverty staring him in the most favoured by fortune to have found poverty staring him in the face. But though his labours were often ill directed, he was never In Milan he modelled an equostrian statue of France he also turned out of hand countless drawings and designs; he he also turned out of hand countless drawings and designs; he executed moreover his masterpiece "the Last Supper," and formed in the Academy the Milaness school which preserved the principles and perpetuated the types of the master. The end of these labours came when the Duke of Milan fled before the King of France. Leonardo, fleeing likewise, reached Florence in time to compete with Michael Angelo for the decoration of the Palazzo Vecchio; with Michael Angelo for the decoration of the Falazzo Vecchio; the one executed the grand design known as "the Battle of the Standard," the other the equally famous "Catton of Pisa"; and these two cartoons, which Benvenuto Cellini calls "the School of the World," met with a common fate—both were alike destroyed. Disastrous indeed was in these days the lost labour of genius. Da Vinci next migrated to Rome, where again he auffered disappointment; then he returned to Milan content to serve the enemies of his former patron, and lastly in his old age he was tempted over to France, where, according to a tradition which the latest inquiries seem to confirm rather than to overthrow. which the latest inquiries seem to confirm rather than to overthrow, the venerable painter died in the arms of Francis I.

The present volume is the most careful of Mrs. Heaton's tasteful compilations; though eminently popular, and even showy, it displays praiseworthy research, and the sentences are less loaded than heretofore with superlative epithets; indeed fine writing is than herotofore with superlative epithets; indeed fine writing is fer the most part given up for close thought and sober diction. The work unfortunately belongs to a class from which we have been led to expect little in the way of study or taste. The primary purpose seems to be to publish photographs, and the letterpress is abserved in to connect materials which otherwise would not hold tegether. A large number of the photographs are taken from engravings, and thus in relation to the originals they rank no higher than copies of copies. We think also it might have been better to have given the names of the engravers. The most valuable of these reproductions are from original drawings in the Boyal collection at Windsor, in the little Callery at Florence, in the British Missium, the Royal Academy, and in the private collection of Mr. John Malcokn. We had also been led to hope for a seproduction of Oggione's copy of the Last Supper, the property lection of Mr. John Malcohn. We had also been led to hope for a reproduction of Oggione's copy of the Last Supper, the property of the Royal Academy. As this, the best extant copy, made at a time when the original remained as the master had left it, has never been engraved or photographed, a factingile executed by the Woodbury permanent process would have been a real boon; but we learn from the preface that the photograph ennounced in the text' was "impossible to obtain." We used, indeed, to see Oggione's colabrated copy in the Lecture Roem of the Academy when that institution was calained, catabled, and confined in Turkelgar Square, and Mrs. Heston naturally supposed that as important a work

* Leonardo da Vinci and his Wonks. Consistent at a side of Leonardo vinci, by Mrs. Charles W. Heaton; an Essay on the fidentide and Liberary fuchs, by Charles Christopher Elizak, M.A.; and in december of his most reportest. Paintings. Landon and How York: Missistens & Co. 1874.

would be still "accessible to English students"; but or she found that it is "bept relied up and stowed away as at the Royal Academy, and that the authorities there is allow it to be unrolled for the purpose of supredictions che adds, "they have chosen an odd way at dispose great a treasure." The reproduction given in these page the well-known engraving by Raphael Mongham. Mrs seems to have modified some of her views, as most our has matured her style, since we last had the ulcames a the well-known engraving by Raphael Mongham. Mrs. Riestan seems to have modified some of her views, as most certainly she has matured her style, since we last had the pleasure of meeting her under the title of "A Concise History of Painting." We then asserted that what she was pleased to call "Rephael Mongham's noble engraving" is about the most inaccurate work ever vouched for by a great name. Mrs. Heaton, who has a happy facility in turning round difficult corners, now discovers in this "fine engraving," "an eighteenth-century rendering rather than a team-lation from Leonardo. Morgham's 'Christ,'" she adds, " is of refused but somewhat effemines beauty, and the melancholy of the countainne word "Wortherian" is one of many affectations which disfigure these pages; an epithet more incongruous could sourcely be appaired to any of the copies or other reproductions of Leonardo's had of Christ. Of more value than such far-fatched criticisms are the Of more value than such far-fatched criticisms are the

Unrest. Of more value than such far-fatched criticisms are the apparently exhaustive catalogues of paintings and drawings by Da Vinci; yet even here we detect omissions.

As to Leonardo's head of the Saviour, Mrs. Heaton does us the honour to quote the notice of her "Concise History" which appeared in our columns, wherein we complained of "bold and bouncing exaggeration of acknowledged historic fact." We have to observe that this importation was intended to combe matter at the saviety of the contract of t that this imputation was intended to apply not to a specific instance only, but to a general and habitual mode of trustment—which only, but to a general and habitual mode of trustment—which treatment, we willingly admit, has now been amended. Mrs. Heaton proves herself a true student by having cared to reconsider and revise the judgment to which we objected as to the central head has far as we can discover, without having had the evidence of the original picture ever before her eyes—that "this divine face is but the perfect development of the type founded at Bysantium." It so hamous that we have now before us a large untotowach from It so happons that we have now before us a large photograph from Leonardo's head, which, though no doubt mercilessly painted over, still preserves the original type, and also all the photographs of the heads of the Saviour made by Mr. Parker in Rome, from the catscomb paintings and from the church messies, besides photographs from the messies at Ramana. With all the existence photographs from the messics at Rawana. With all the originals we are familiar, and after a fresh survey of such historic evidence, we are bound to repeat that the conclusion to which life. Heaton has committed herself, though wall swited for broad scenic effect, has committed hereoft, though wall saved for mode scene affect, is far too sweeping for the actual facts of the ones. As for these Byzantine heads scattered over Ravenna and Rome, and diffused through Russia and other territories belonging to the Eastern Church, they are found on close-observation to be almost as diverse in character as they are enormous in number. That some one or more of these forms were reflected and matured in the Christian art of the middle ages is of course well known. It is a fault but too common with tyros in art, and with popular writers generally, to rush headlong at some grand general conclusion. When we last dealt with this subject, we pointed to the close studies made by Its. with this subject, we pointed to the close studies made by Da.
Vinci direct from nature, especially to a head well known in the Gallery of the Brera, as evidence that the grandest conception of the Saviour as yet given to the world is something more than a development from the art of the catacomies; and we repeat that a writer might as well talk of the development of light out of darkness as persist in the assertion that Leonardo's Christ came from Byzantium. Assuredly the time is gone when vague assumptions which might date back to the schooldays of our grandmothers could pass minuter unquestioned. The researches of Mesers. Crowe, Cavacaselle, and other persistent investigators go far to remove the history of art from the vague region of fiction to the strict domain of facts.

"Leonardo da Vinci in Science and Literature" is the title of a valuable chapter contributed by Mr. C. C. Black. Leonardo is here truly designated a "universal schemer"; like Michael Angelo, as we have said, the range of his mental action and artistic creation was too wide for the narrow confines of human life. Evidence is adduced to show that the philosophic painter and forcest in knowledge which artisinated the percentage. Evidence is adduced to show that the philosophic painter made forecasts in knowledge which auticipated the penetrating vision of Galileo and the "eagle spirit" of Bacon. The following maxims culled from extant manuscripts prove that Da Vinci, free-ing himself from the schoolmen, took his stand on the solid ground of inductive and experimental research :

Experience never deceives; only man's judgment deceives when promising effects which are not supported by experiment. Speculators do not trust authors who wish to interpret between nature and man through their own imaginations, but trust only those who have exercised their understandings upon the results of their own experiments. That painter will produce works of poor quality who takes for his guide the paintings of others, but if he will learn from natural objects he will bring forth good fruit.

Massaccio showed by the porfection of his work how fruitless were the labours of those who followed any other leader than Nature, the mistress of all masters.

Whoever flatters himself that he can retain in his memory all the effects of nature is deceived, for our memory is not so capacious; therefore consult nature for everything.

A painter ought to study masversal flattum, and season much within himself en all he sees, making use of the ment excellent parts that compose the species of every object hebre nim. His mind will by this method be like a mirror, reflecting truly every object placed before it, and become as it were a second nature.

These maxims, which lie as the sure foundations of all noble art whether in Greece or in Italy, rise so completely above conventional and traditional styles as to give final refutation to the notion that the Christ in the "Last Supper" is a development from the effete art of Byzantium. They are so clear that no one can be excused for misunderstanding their meaning; they are more definite indeed than the much-disputed words of Raffaelle, who said that he strove to form in his mind an ideal. And they become all the more intelligible through the studies which Leonardo made direct from nature—drawings which are as faithful as the pictures of Hogarth, humorous as the comedies of Shak-speare, true to life as the tavern scenes of Teniers, and yet ever and anon rising to the ideal and the divine. It is curious to observe how closely the last passage we have quoted corresponds with certain touches on the philosophy of art thrown into the Winter's Tale; Shakspeare might almost have been reading Da Vinci when he wrote that the art which "adds to nature is an art that nature pages."

Hallam asserts "the right of Leonardo to stand as the first name of the fifteenth century," and 'yet at the same time he calls in question the claim of the universal investigator to the position of a great discoverer. The times were full of prophetic thought, the air was stirred by the approach of sought-for knowledge, and Leonardo stood as an advanced guard watching the movements of an irregular and unformed science ready to make onslaught on the camp of the schoolmen. But never has there been known, not even in the case of Michael Angelo, a worse economy of time or a more unwise direction of discursive genius. The career of Leonardo is as the misadventures of an ill-fated bark cast on a troubled sea, seeking ports of refuge but finding none, and all the while losing rich treasure by the way. The review of all the while losing rich treasure by the way. The review of such a life, strangely diversified by success and fault again the mind between admiration and regret. Again and again the the mind between admiration and regret. Again and again the goal is all but resched, and then through procrastination, inconstancy of purpose, and perhaps even by reason of insatiable appetite for knowledge, this greatest man of the time is found struggling in the slough of despond. Imperfection perpetually reminds us of the wide interval between aspiration and achievement; thus Mr. Wornum, quoting as his authority Dr. Sharpey, asserts that Da Vinci's anatomical drawings "are not always correct," and that "very few can be of the least service to artists." The works of Leonardo, with some noteworthy exceptions, are fragmentary, and yet in the fragments we have proof of a power in reserve, and we get glimpses of a genius which the volume now before us, in common with its forerunners, leaves as a grand enigma. It is strange that the greatest men in the Italian epochs remain for the most part enigmatical. for the most part enigmatical.

One thing, however, Leonardo succeeded in consummating—the perfect human type, to which all his studies pointed. In the head of the Medusa, which inspired the sonnet of Shelley; in the head of Mona Lisa, a face something more than a portrait, which has moved Mona Liss, a face something more than a portrait, which has moved Mr. Pater to a passage of surpassing eloquence; and, lastly, in the head of the Saviour, which embodies the divine in the human, we find alike the ever-recurring but never satisfied endeavour to reach through the individual to the species, and to rise from accidents to immutable truths. This ideal art is usually found to be the gift of men who in their own persons realize an ideal type. The head of Leonardo was of singular dignity and beauty, and his wall-built body served as a perfect instrument for the functions of well-built body served as a perfect instrument for the functions of life; it is in such men that we find the possibilities of high and typical art.

"B": AN AUTOBIOGRAPHY.

MR. DYNE FENTON has to learn that exaggeration is not is best utilized when kept most in hand. It is comparatively easy work to exaggerate and to caricature; but real art deals with truth, and that art is the highest which produces the most interesting results by the most natural means. "B": an Autobiography is neither natural nor artistic. In the very first pages the reader's sense of fitness is jarred by the terms in which "B" speaks of his sense of fitness is jarred by the terms in which "B" speaks of his father. Granting that the Major was as great a tyrant as he is painted, a son might have indicated his faults without such direct abuse as "B" thinks it well to bestow. "A domestic Reign of Terror, in which my father was the Robespierre," is a phrase scarcely balanced by the admission a few lines lower down that he was "strictly honourable and conscientious, truthful and urright, in every thought and action." And in the description of his person it somehow accords ill with one's notions of filial reverence to read of "round eyes, fixed in their unwinking and impassive stare." and "an ever-watchful stare from two fish-scale style of grey eyes seemed to envelop us unceasingly." By the by, now can a stare envelop? The picture of the Major in the armchair at one side of the fireplace, "not only like the god Vishnu lost in contemplation of his own excellences, but also sharply detective of any deviation on our part from the after-dinner routine his ingenuity had devised for us," is rendered still more unpleasant by the unqualified harshness of is rendered still more unpleasant by the unqualified harshness of the inventory of physical peculiarities:—" Very erect about the back, at the knees sharply angular, his hands resting on his thin

thighs, in an attitude not unlike that of an Assyrian statue at the British Museum; he would remain thus wakeful and watchful till bedtime." The conversation of the Major is on a par with his appearance; priggish and pedantic, as might be expected from a man who looks like an Assyrian statue, and whose children consider him the tyrannical Robespierre of their domestic Reign of Terror; but we think that very few fathers, or men not fathers, in their right minds, speak as the Major does when he is sitting in his armchair by the fire, with his hands on his thin thighs, enveloping his family with the ever-watchful stare from his two fish-scale style of grey eyes: fish-scale style of grey eyes :-

fish-scale style of grey eyes:—

"The present state of the garden is, according to my judgment, far from satisfactory. This I have, after some research, discovered to be due in a measure to the insidious inroads of the slug species. ('B,' I regret to observe that your shoulders are bent double. Sit straight, sirrah, at once!). I have in consequence decided that, after early lessons to-morrow, the children will devote an hour to collecting these devastating insects, with a view to their extermination. (Grace, my love, thank you; more to the right—a little more. The fringe has caught in your dress, I think.) Ahem! I have read that in some foreign countries a very wholesome description of food is compounded; in short, a culinary delicacy (Alice, I must request you will not slouch) from the many varieties of slug and anail. This is said to be singularly palatable, and peculiarly adapted as an article of refection for youthful stomachs. Here we get a lesson on the prejudices to which we give in, but which it is so much our duty to overcome."

The mother of the three misurable children belonging to this

The mother of the three miserable children belonging to this Assyrian statue of the fireplace is more tenderly touched. She is a pretty, silly, impassive kind of person, whom her children adore because she is gentle and kind, but who has the terrible failing known as "dipsomania," as "B" discovers later in the story. The slave of a domestic tyrant, whose soul was so sorely exercised about neatness and the straight line, without power to resist her despot, and having to find in means outside horself the courage to bear the misery of her daily life, it was perhaps not surprising that she should have taken to the easiest and nearest relief at hand. "B" indicates the failing in the beginning with com-Assyrian statue of the fireplace is more tenderly touched. hand. "B" indicates the failing in the beginning with com-mendable delicacy and tenderness; and it is unfortunate that he should have fallen into the coarseness of his later descriptions.

Thurbridge, too, who plays such an important part in the story, is simply a disgusting figure, and needlessly minute in detail. When an author catalogues such items as "two horrid tusklike jets of hair that protruded from his nostrils," hands of "enormous width and thickness of finger, with white, flat-topped nails, covered from wrist to knuckles with masses of brown free from which sprang a thick crop of coarse, sandy-coloured hair," adding that "the heat of the room had caused some beads of erspiration to be apparent in a hideous moisture on the back of these revolting fists, to remove which their owner would dab them with a huge scarlet cotton handkerchief"—we have not art, but mere spiteful caricature. The man's inner nature is made to correspond in hideous exactness with his horrible exterior; but the character is altogether outrageous; and it is impossible to conceive that poor Grace, for all her sin, could have ever fallen so low as her son represents her to have done. Mr. Denton's art, we must suppose, has failed him, and for careful work we have an exaggerated daub, for lifelike rendering the coarse monstrosity of a heated imagination. When the domestic Robespierre dies, Mr. Thurbridge gets immense power over Mrs. Morville; and, in proportion to his power over the mother, excites and returns the hatred of the son. This is the way in which the mature saint schools the youthful sinner; but are there many mature saints who unbosom themselves in this fashion?—

"H-m-m1" at last began Mr. Thurbridge, as he scowled at me with a savage glare in his yellow eyes, and held out one arm, exhortingly. "When I see angelic sweetness opposed by piggish exuberancy of spite, when I see those which should be lowly and meek and grateful, go about doggedly swelling, and puffing themselves up against Providence incumbent on me to unwrap or unfold or divulge my sentiments on this subject—without any put-offs or delays—and to the uttermost of my best endeavours."

subject—without any put-offs or delays—and to the uttermost of my best endeavours."

"I hope you are paying attention to the beautiful remarks that Mr. Thurbridge is so kind as to make, B," said my mother. "You don't mind anything that I say—that, of course, I know—but perhaps when a gentleman tells you what a wicked boy you are growing, it may improve you."

I felt very far from being improved, and I believe I repeated the word "gentleman" in a smeering way, that was not lost on the preacher, as he resumed, more malevolently than before, switching his cane all the while:—

"When I see a sweet accostable nature met only by twitchy and fretty sullenness—when I see a two-legged viper making a spring at the bosom that brought it up and suckled it, then it is high time for me to give my humble aid to put a stoppage on such like figaries. It becomes my duty, then, to bend the stiffacekedness and proud-spiritedness of one which will not take to heart the aweet emollient oil of grace if applied by other means. Rods, switchings, and blows being requested of the by proper legal guardians, I proceed to administer them freely."

It would almost appear that Mr. Denton had been studying Mr. Dickens's later works while he was engaged on "B's" graphy, and that he has gone beyond his model. Mr. Thurbridge and Mr. McDrumstick have both an echo of the Dickers twang; and Mr. McDrumstick have both an echo of the Dickens twang; and we trace the master's influence also in the lighter portions of the book. Mrs. Jupe is one of the figures of the well-known gallery; so are Mrs. Harrington and her crippled son Amos; and even Miss Gurgess and her friend Miss Tyzacke remind us of the hand which drew Miss Betsy Trotwood, and made semi-imbecility amiable. The scene in the little back parlour at Lower Thames Street, where "B" was taken when he minted under the horse's Model, is really not a had copy of Mr. Dickens. The minute takellation of everything, down to the "dish of fried fish on the milital, together with one of cold holled beef that Seagreen

[&]quot;B"; an Autobiography. By E. Dyne Fenton, Author of "Sorties from Gib" in Queet of Sensation and Sentiment," "Eve's Daughters," doc. 3 vols. London: Sampson Low & Co. 1874.

ad procured from a neighbouring ecolulop," is exactly after his sense, and the convenation is vulgarly imitative:—

manner, and the convenation is vulgarly imitative:—

"These relliching and recetaring ways will end by bringing you to a bad end," and his mother, making a show of speaking steroly, but with a great love and nity shining in her eyes as the locked at the poor crippled fellow. "He's so flerce and wilful, you see, ma'am, we poor women have no chance in managing him."

"Toung men will be young men," remarked Mrs. Jupe, clearly feeling that the conversation was diverging annecessarily from herself. "Young Chater Twinks will be shocked at what he hears. Will our young stranger forgive me if I seem to stare at him rudely? His sad smile and earnest ayes, together with some freckles under the left eyelid, bear a strange similingtude to the features of a well-remembered face—to you all I may say it was in fact that of my first love."

"Then he," said Amos, glancing to the ceiling, as representing the abode of Mr. Jupe, "was not your first?"

"Ah! no. This poor heart has been battered by many a confluctuating emotion, Mr. Amos. I love Kingup—I honour, respect, and obey him, or tantamounting to it; but no—he was not my first love. Oh dear no."

"Was the first a genteel one, like you are?"

"Ha' done, you bold boy. Whatever will you be saying next, Mr. Nimbletongue, I should like to know? You must excuse his bad ways, ma'am. I'm getting quite afraid of him," said Mrs. Harrington.

Most of the comic characters have the trick of catchwords,

Most of the conic characters have the trick of catchwords, which designate them like so many labels. Colonel Morville, who has served in Spain, has the usual military epithets which one does not hear from military men. "Gad, sir," "perish me," "vilify my veracity if" so and so, "by gad," and the like, are the spices wherewith he seasons his extravagant discourse. For the gallant Colonel is a romancer as well as a sponge, with ideas of truth that match his ideas of honour; and he pours out stories of his doings in Spain of which nothing is real but the fertile invention whence they spring. But indeed the characters all talk as people in real in Spain of which nothing is real but the tertile invention whence they spring. But indeed the characters all talk as people in real life never talk; and even little Evie, a mere child, delivers herself of sentiments which read marvellously like those of a grown young woman. "There's a long way, B, betwixt folks that get up early in the morning, and those that get up late," she says, out of the depths of her mature experience, when she is young enough to dance round a fairy ring, and small enough to look like an elf herself. Her further remarks on the differences between contletoks and Her further remarks on the differences between gentlefelks and farmers show even less knowledge of child-life and child-thought on the part of "B" and his editor. "B" himself every now and then breaks out into a philosophical strain not quite in harmony with his tender years; as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" as when he looks round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round a "large room, crowded in the part of "B" and black round ro with people, full of gay colouring, and with a marked preponderance of bright faces," where "the perfume of flowers, the glitter and sparkle of silver-plated crystal ornaments, the profusion of everything most pleasant to behold," inspires his young brain with a sensation of intense pleasure, so that he says to himself, "And so this is life!"

As some relief to the general wearisome absurdity of the story may be mentioned the letter which Miss Gurgess, the eccentric old maiden lady who speaks so roughly and acts so kindly, writes to her nephew, the curate, when about to marry "B's" sentimental cousin, Anna Maria, and her exhortation to those misguided young people when they come to see her the day before the wedding. She prophesies, and not smooth things, beginning with a family of sixteen children, whom presently she raises to twenty:—

teen children, whom presently she raises to twenty:—

"They will say," the lady went on, "here we are. Brought into the world from some inscrutable motive that we cannot help wondering about, we are referred to you who, as having caused our misfortune, may be able to solve the mystery. To try and cover your ignorant folly, you will quote to these poor wretches, 'Honour your father and mother,' and leave them as wise as ever. 'We are hungry,' then they will say: 'Take us where we may feed; here are shops full of food, orchard trees covered with fruit.' 'Impossible!' will be your answer to this. 'The things in the shops, the fruit on the trees, are not our property. The police would interfere. We have two hundred and fifty pounds a-yoar; our aunt Matilda allows us another hundred; you must be hungry and not complain; and above all, don't cry.' These creatures, of quickly-expanding size, will want socks and shirts and long clothes—possibly crutches—out of so many one or more must be cripples—as our absurd, soon-learnt conventionality will suggest. You will have to say, 'You can't go naked, and you can't have long clothes and crutches and things.' If they reply that you are illogical, again you will mutter, 'Honour your father and your mother.' What, then, may be taken as the most obvious idea to suggest itself to the sixteen brains—not being idiotic? Won't it be this? 'Our parents must be fools.' Do I convey your meaning, Letitia?"

Indeed there is no lack of smartness of a certain kind in

Indeed there is no lack of smartness of a certain kind in "B," and, we are sorry to say, no stint of bad grammar and queer metaphor, as for instance, "Who else could Evie fall in love with?" and "a volcanic eruption of tender or vehement feelings beaming madly forth from burning orba." Eyes which are called brown, but which have "a well-defined black iris, which dilated or contracted with every change of thought in a way that made you think of the weird-like constant changing movements of made you think of the weird-like constant changing movements of a sea anemone," and hair that varies from black to gold, are personal peculiarities by no means common. There is an unnecessary quality of rudeness and grossness in the language when "B" intends to be emphatic, as when he says that he "always felt an inclination to rush away to spend a quarter of an hour seated on a dung-heap in a stable-yard" after he had been in certain "rooms of tarrible state." "Hard-eyed, malice-ecreeching, and she macawa," for women who object to the presence of an equivocal person of their own sex, is not a emphonious phrase; "the wine-incited, systematic, prurient drivel that can fall so readily from men's lips" is not much better. On the whole, the book is deahing, but coarse; hrisk, but not well sustained in character; wanting more careful and delicate treatment throughout.

We beg leave to state that we decline to return rejected Con cations; and to this rule we can make no assemblen.

THE UNITED STATES.

The Annual Subscription to the SATURDAY RAVIEW, inch postage to any part of the United States, is £1 10s. Cd., or \$7 80 gold, and may be forwarded direct to the Publisher, at the Office, 88 Southampton Street, Strand, or to Mr. B. F. PRINCE BISMAROK.

DRINCE BISMARCK is no doubt perfectly confident that under any circumstances he can carry out a policy on the success of which he has staked his reputation, and he would not be likely to give way in his great contest with the ecclesiastical authorities simply because he met with strong opposition in varied forms. But to have his task made easier for him, to have a sudden burst of honest enthusiasm showing itself in his favour, to see his enemies suddenly placed in a new and most unfavourable light, would no doubt have been a prospect by no means dis-agreeable to him if only it could have been somehow managed. It has been managed. This measure of good fortune has actually befallen him, and if he could have forescen everything, and have arranged every detail as he wished, he could not have thought of anything more perfect throughout than what has occurred. To have been shot at by a Catholic fanatic who was aided publicly by a Catholic priest, to have been wounded just enough to show that his life was seriously in danger, and not enough to cause any great apprehension, to have had this happen almost in the sight of his daughter, and, above all, to have had it happen in Baveria of all places, is a combination of circumstances all calculated to participate the significant company. combination of circumstances all calculated to gratify him by the feelings they will awaken in every part of Germany, which he could not have dreamt of if he had set himself treaming. Even his worst enemies will own that he took advantage of his opportunity with admirable coolness and good judgment. To say that he showed no fear is not saying much, for all royal and conspicuous persons seem able to go through the frightful ordeal of having their lives attempted with the composure that befits their station. But Prince BISMARCK did more than this—he addressed the excited crowd that thronged to congratulate him on his sscape, and he shaped his speech so as in every possible way to identify himself with Germany. It was not, he said, he personally who had been attacked. What had been attacked in him was the great cause of German unity, and when he reflected how many thousands of his countrymen faced death four years ago in defence of the same sause; the could not complain if their lot had been his. There were few of his hearers who had not had to moan aver some loss in their home circle during the great war, and the was content that what they had gone through his aven family should, if it had been so ordered, have gone brough for him. He was only one more German ready to the for his country. This, it must be remembered, was said in Bavaria; and the Bavarians have a keen recollection of the glory which they won, but of the very sufferings which the tactics of Moltke or the exigencies of the war imposed on them. They are also except evenly divided between the ecclesiastical and the laberal parties; and to associate the Liberal party with the sufferings and glories of the French campaign, and to speak of himself as equally ready with the humblest Bavarian soldier to die for the cause which the ecclesiastical party is labouring to destroy, was a stroke of statesmanhip perfectly legitimate, but effective in the highest aver some loss in their home circle during the great war,

The imposin was very nearly successful, and the results of founts to assessibate are by no means so uniformly unbecaute as the world would like to believe. Park and supplies above both killed; and Park died of a wound in the wall, which shows how near the assessin whose ball grasses. It is a limited of wrist was to effecting his impose. It

if Prince BISMARCE'S life had really been taken. referred to the subject himself, and expressed his belief that the great cause which he upholds would have been found to be independent of his support. This may in part be set down to a proper modesty; but it is probable that he was substantially saying only what he had good ground for thinking to be the truth. Prince BISMAROK has encouraged controlled to a limit of the country of t couraged, controlled, and directed the movement against Ultramontanism in Germany, but he has not originated it, nor do those who most sincerely and enthusiastically it, nor do those who most smoorely and enthusiastically support it receive their inspiration from him. It is a general movement of the German educated classes. The Emperor gives it a rather reluctant sanction; but the Prussian Court and most of the minor Courts are by no means favourable to it. A large part of the rural population is decidedly adverse to it. What gives it its peculiar strength is that the middle class is devoted to it heart and soul, and that where the greatest enlightenment prevails the fervour of this support is the most intense. There are exceptions of course, and especially the leading Ultramontane newspaper at Berlin is written with an ability which places it, even in the is written with an ability which places it, even in the judgment of Liberals, at the head of German journalism in point of literary morit. But the exceptions are very rare, and, speaking broadly, it may be said that educated Germany is unanimous in its devotion to the ecclosiastical policy of Prince BISMARCK. To Englishmen who are accustomed to regard the advocacy of religious liberty as one of the essential parts of the Liberal programme, and who think the persecution or repression of opinions on spiritual matters shortsighted and wrong, this seems not a little remarkable. All that can be said is that the unanimity of the German educated classes in regard to the ecclesiastical laws may remind us how difficult it is to judge of another country by our own, and how very apt we are to judge our own country not by a general review of its history, but by a hasty survey of what happens to be thought and felt under arising circumstances. existing circumstances.

It is possible that, a year or two ago, an assassin who had succeeded in taking Prince Bismarck's life might really have done much to arrest the movement. For it was principally on the authority of Prince Bismarch's statements that the struggle was discovered to be not an ecclesiastical but a political one; and it was Prince Bismarch who fixed the wavering resolution of the Emperical. But assassins are seldom willing to incur the gnilt and run the risk of an attempt at murder merely on the speculation that a public man is likely to do harm to what the assassin thinks to be a sacred cause. There was always the chance that Prince Bismarch might not mean what he said. He might be only going to threaten the priests, and might not have the courage ever to touch them. It is only when it has been made practically manifest that Prince Bismarch dares to lay his rod on the backs of the priests and make them feel his power, that fanaticism has lisen to the pitch of attempting murder. Most happily the wickedness of the young fanatic has been in vain, and Prince Bismarch has escaped. But even if this attempt had been successful, it would probably have been found that success had come too late.

Although, however, it may be conjectured with reasonable confidence that, if Prince Bismarck had been killed, his cause would not have received a fatal blow, you first preservation will probably have averted a serious danger from his supporters. If he had perished by assessination, these would have been a burst of national resentment which

might have hurried those excited by it into extreme mea-If in Bavaria there was so much deep and instantaneous feeling elicited by an unsuccessful attempt, what would have been the feeling in Protestant Germany, and specially in Prussia, if the attempt had been successful? There might easily have been a tempest of wild indignation which would have looked on the eccleminatical party as indisoriminately guilty, and have seen in the priests the enemies of the human race. As it is, Prince BISMARCK will be the first to moderate the feelings which the attack on his life has awakened. It is absurd to think that the Catholic party is in any way answerable for the crime of two or more wrotches. The Catholic laity will, as a body, display a genuine detestation of the crime, and if some priests have been so false to their religious principles as to instigate or connive at the outrage, it is most improbable that anything will be discovered to implicate more than a few isolated and obscure individuals. As Prince BISMARCK reminded his hearers, the whole affair has now passed into the hands of the tribunals, and although every effort will be made to trace the threads of the conspiracy, if a conspiracy has been at the root of the crime, yet everything will have to be done and proved in a legal way. Bavarian Covernment will be put on its honour to give every facility for the detection and punishment of the guilty, and the present Bavarian Ministry will be glad to derive all the support it can from the inevitable odium that will be thrown on the ecclesiastical Opposi-The law will take its course, evidence will be collected and sifted, and if it can be proved that the actual assassin was, according to the statement which he is said to have made, the tool or accomplice of a religious society, the offect on Germany will no doubt be very considerable. But Prince BISMARCK is quite wise enough to know that the more moderation and justice he shows at this crisis, the more loudly he proclaims that he dissociates the great body of Catholics from the acts of a few fanatics, the more careful he is to prove that the measures taken against occlesiastical bishops and priests are not in the least more severe than they were previously, the greater and more durable will be the feeling in his favour and in favour of his cause.

MR. DISRAELI ON PUBLIC BUSINESS.

MR. DISRAELI'S statement on Monday last of his intentions as to the conduct of public business had as little as possible to do with its professed object. He had already expressed with obvious sincerity his regret that Mr. GLADSTONE had so long absented himself from the House. It had not been worth his while to encounter IDOMENEUS or MERIONES when ACHILLES was sullenly reposing in his tent. Now that the hostile chief had been tempted back to the field by new quarrels in which he took a personal concern, Mr. Disraell was determined to engage his ancient rival in one regular combat. The opportunity was not ill selected when the stoutest of Mr. GLADSTONE'S Myrmidons shrank for once from following their leader. The form of Mr. DISPARLI'S challenge is characteristic and amusing. thanks the House for the confidence with which it has entrusted to the Government the disposal of its time; and he explains the facility with which he can arrange the order of business in the absence of any unexpected cause of disturbance. The Scotch Patronage Bill has since passed a second reading with a majority which secures its success; and it is expected that Lord CAIRNS'S Bills will pass through Committee with little delay. Mr. DISTANLI even hopes that the Indian Budget will for once attract a respectable attendance, though Lord George Hamilton will scarcely venture to imitate Mr. The Endowed GRANT DUFF'S exhaustive expositions. Schools Bill, and Lord Salisbury's Bill for appointing a Minister of Public Works in India, will occupy but a short time; and on the whole the Commons may reasonably hope to be dismissed on the 5th of August. Nevertheless it was Mr. Disraell's duty to offer a solemn warning that circumstances might still interfere to cause an unwelcome delay. If, for instance, the leader of a divided Opposition were, without motive, pretext, or possibility of success, to give notice of a motion amounting to a vote of want of confidence, it would be impossible to refuse an opportunity of discussion. It is true that Mr. Gladstone had no intention of doing anything of this kind; but Mr. Distant kept in view the remotest constitutional possibilities.

The strength of parties was to be tested by a division in

which nearly all the Liberals were certain to w Mr. GLADSTONE, in order that Mr. DISBARLI might attribute to confidence in himself and his Government the victory of which he was fully assured beforehand. No objection can be made to the arrangement by which the vote on the Public Worship Bill was to be taken on Wednesday last, and the debate on Mr. GRADSTONE'S Resolutions on Friday; but there was something somic in Mr. DERARL'S announcement of uncompromising opposition to Resolutions which, if they were passed, would, in his opinion, "give a new "form and colour to English milities." It would indeed be "of great danger to the country" if proposals "of "commanding interest were not to be discussed." Pompous exaggeration is in ordinary cases irritating, but the exaggeration is in ordinary cases irritating, but the country never feels more amused admiration of Mr. DISRAELI than when he is deliberately and consciously pompous. It is always easy to understand that he has a purpose in his fictitious solemnity; and on this occasion he hoped to obtain a personal and political triumph over Mr. GLAUSTONE. Mr. DISRABLI is the last person to believe seriously that a series of Amendments on a Bill introduced by a private member would in the smallest degree affect the form and colour of English politics. His desire for a trial of strength would have been more legitimate if he had chosen an occasion on which the respective forces on both sides could be fairly numbered. On ecclesiastical questions the House of Commons breaks up into cross sections. WILLIAM HARCOURT had announced his refusal to follow Mr. GLADSTONE before Mr. DISRABLI intimated that he might possibly have to meet a vote of want of confidence. On the Scotch Patronage Bill also several of Mr. GLADSTONE'S most devoted followers were compelled either by their own convictions or by the feeling of their constituencies to reject his guidance. The division on Lord Sandon's Endowed Schools Bill may fairly be claimed by the party as a victory. It was hardly worth while to assume, in opposing Mr. GLADSTONE'S Resolutions, the character of a champion of the Constitution.

Mr. DISRAELI'S observation of public opinion in and out of Parliament has perhaps caused him to suspect that his colleagues had, in the early part of the Session, followed too closely in the footsteps of their predecessors. Mr. HARDY took the earliest opportunity of repudiating any design of reversing Mr. CARDWELL'S measures, and Mr. CROSS gave Lord ABERDARE the satisfaction of adopting the principle of his Licensing Rill. Sin Sampon Name principle of his Licensing Bill. Sir Stafford Northcote framed his Budget so as to court and secure the approval of Mr. GLADSTONE; and the only charges which Liberal writers and speakers could prefer against the Government took the form of taunts against their servile imitation. Criticism which involves only an imputation of plagiarism. might be easily endured. As long as the majority was satisfied, opponents could do little harm by charging the Ministers with want of originality. Mr. Goschen's attack on Mr. Cross and Sir W. Harcourt's occasional sarcasms produced no perceptible effect, but Mr. DISRABLI seems to have been disappointed with the general acquiescence in his measures. He thought it expedient to show that there was some difference between his Government and the Opposition; and as soon as Mr. GLAD-STONE reappeared in the House of Commons, there was no fear that the Session would close in the tranquillity which had attended the greater part of its course. Various reasons have been suggested for the refusal of the Government to undertake the conduct of the Public Worthin Bill. By adopting what may be thought the popular side in the controversy Mr. DISRAELI might have enjoyed an opportunity of obtaining a large majority for a measure in which he probably feels little interest, though he has since expressed an opinion that the Bill ought to be passed. Having at first resolved to be neutral on the main question, it anited him to attach fictitious imputance to Mr. srong's proposed Resolutions. No more favourable on tance to Mr. Grancould be found for the utterance of sonorous platitides, and for the equally congenial use of personal epigrams. The delay of ordinary public business for a day or two was

The delay of ordinary public business for a day or two was a cheap price to pay for a regular dust in which the challenger had every advantage of position.

In Parliament, as elsewhere, business that a remarkable tendency to accommodate itself to the time which may be allowed for transacting it. The lieuton which is most counsed with work lasts little more than air months, and this year five months will have been fully occupied with the discussion of measures which will the most part only be recollected by an effort.

various stages of the Intoxicating because, it involved no the details of which it was composed were sinteresting. It is but fair to admit that no c business has been prolonged or delayed by undue city on the part of Ministers. Mr. Dissauti has set reclient example, which has been sple, which has been generally followed s. In the last Parliament scarcely trivial to attract a burst bien was too of Mr. Gladstone's copious eloquence. If a conversation s about the salaries and circuits of County Court Indges, or any similar matter of third-rate importance, the Prime Minister entered eagerly into the discussion, often at the cost of offending some of his own supporters. At present the Gold Ceast is left in the competent hands of Mr. LOWTHER, and Lord Sandon is trusted with the conduct of Bills on education. The House is in a humour to appreciate habitual silence and seasonable reserve. Mr. DISEARLI'S rure speeches are always heard with attention, and his popularity in the House is not subject to disturbance by unnecessary squabbles with adherents or opponents. He had perhaps carned the right of indulging himself in a regular assage of arms with Mr. GLADSTONE, whose temperament is not deficient in responsive pugnacity. It is a singular circumstance that the only serious political contest of the Session threatened to arise on a Bill unconnected with party, and promoted neither by the Government nor by the Opposition. If Mr. GLADSTONE had been disposed to move the vote of censure which Mr. DISRABILI hypothetically apprehended, he would have scarcely found pretext for an attack in a Bill introduced by a private sember. Whatever might be the merits of the six Resolutions, there could be no doubt that Mr. GLADSTONN framed them without any party purpose. It was perhaps for that reason that Mr. DISRAGLI discovered that the success of the metion would colour and affect the whole system of English politics. His alarm may have been in some degree allayed by the knowledge that the Resolutions, if pressed, could not fail to be rejected by a large majority. Mr. DISRAELI thought that, if Mr. GLADSTONE was in danger of defeat, it would be convenient to make the most of the issue involved in the discussion. He must have been seriously disappointed by Mr. GLADSTONE's withdrawal of his Resolutions, although the Constitution and the Government are saved from the mysterious dangers which Mr. DISRAELI had discerned.

MARSHAL MACNAHON AND THE REPUBLIC.

ARSHAL MACMAHON has not left the Assembly in doubt as to the drift of his Message. The mere mention of the three points upon which he thinks it neces. tary to insist is enough to make his meaning clear. If he had wished to be the President of a genuine Republic, he need only have identified himself with M. CASIMIR PERIER'S Bill, and its passage through the Chamber would have been assured. Even as it is, it is on the cards that it may be adopted, and the support of the Masshal would have turned chance into certainty. Instead of this, Marshal MacManon confines himself to demanding the right of dissolution, the right of nominating a majority of the Second Chamber, and the adoption of the arrondissement instead of the department as the electoral unit. These three stipulations are not inconsistent with a Republican Government, though the second of them would give great power to the Executive, if the command of a French Second Chamber could ever give power to anybody. But they are equally consistent with any other form of govern-ment; and the selection of them proves that all that Marshal MACMAHOR cares about is the consolidation of his own power. As long as he is in office the Septennate will power. As long as he is in office the Septennate will have at least one faithful friend and admirer left. At present, history, it has in addition the majority of the Committee of Thirty. The Report of this body, which was read on Wednesday by M. Ventavon, goes further in some respects than Marshal Mac-Manon himself. The Committee recommend the conclusion of a seven years peace. All constitutional contraversies ought, they think, to be adjourned until the end of the Marshal's term of office, unless he should himself be minded to raise them. If he is discontented with the working of any of the provisions which it is new proposed working of any of the provisions which it is new proposed to sneet, he may domand their revision. It is to be pre-sumed, at least, that this is the meaning of the fifth clause of

the Committee's school; though it is not quite cle ording of it, whether he may not revise the Constitu-of his own more will. He is to have the right of tion of his own mere will. dissolving the Assembly, and he need not convoke the me Chamber until six months after the dissolution. In the In the event of his death or resignation, the two Chambers are to meet in congress, and to have the power of re-electing the Marshal. Probably this permission is meant to apply only to the second of the two events just mentioned, though the devotion of the Committee of Thirty is so unrestrained that they may perhaps contemplate the apotheosis of the Marshal as a sort of tutelary Prosident when he is no longer capable of being President in the flesh. The scrutin de lists is to be abolished, and each arrondissement is to return a deputy or deputies. The composition of the Second Chamber is to be determined by a subsequent law; but, if the Assembly accept the Committee's Report, there cannot be any doubt that the Marshal's wishes will be fully consulted in forming it.

In substance this is the old Right Centre scheme revived. But it comes before parties very differently distributed from what they were in the time of the Duke of BROGLE. The Conservative party has been broken up by the total secession of the Extreme Right and the partial succession of the Right Centre. The Duke of Brookin apparently believed that the Extreme Right, in their pleasure at living under a dictatorship, would overlook the fact that the dicta tor was not their legitimate king. The Committee of Thirty cannot now indulge in any hope of this kind. The suspension of the Union for publishing the Count of CHAMnord's letter makes any further alliance between the Logitimists and the Marshal altogether impossible. What could a Republican or an Imperialist Government do more than this? It would be difficult to retain the support of the clorical party if the Univers were suspended for publishing a Papal Allocution, and in the eye of Legitimists who deserve the name a Royal Allocation is not less sacred. The opposition of the united Left will, therefore, be strengthened by some ninety votes from the Right, and this conlition is more than sufficient to dispose of the Committee's scheme. M. Casimir Perier's Bill will then remain to be discussed, and here it is very much more difficult to calculate the Parliamentary chances. The Left will probably give it a united support, since even the most Radical section of that party may be expected to see that it is the only chance of establishing the Republic which is at all likely to offer itself. The Right will vote against it because it is anti-monarchical. The Bonapartists will vote against it because it promises to give France that peace and stability which they wish to come from the restoration of Napoleon IV. The Right Centre will probably be divided. The Orleanist section will vote against the Bill on the ground that it ties the will vote against the Bill on the ground that it use the hands of the nation and prevents a Restoration from being effected hereafter. The purely Conservative section will probably support the Bill on the ground that the Republic is the only permanent Government that can now be set up, and that it is essential to the well-being of the country that it should no longer remain under a Provisional Government. If all parties in the Assembly do just what is expected of them, the Bill is on Assembly do just what is expected of them, the Bill is on the whole likely to pass, but the voting will be close, and a small defection on the side of its friends would be enough to ensure its rejection.

After all, however, the question of most moment is still what Marshal MacManon will do. Even supposing that a majority of the deputies are at this moment prepared to voto in favour of M. Casimir Perieu's scheme, it does not follow that this majority would survive an intimation from the Marshal that he disapproves of it. A part of the Right Centre may have reluctantly convinced themselves that the Repub-lic with Marshal MacManon is the best available combination for France. But the thought of a Republic without Marshal MacManon has probably lost none of its terrors for them, and if the Marshal thinks M. Casimin Pénien's Bill too revolutionary, he may refuse to remain in power after it has become law. Or he may remain in power and refuse to carry out the law. This is not probable, because though he has said in his Message that the Assembly had made over to him a part of its own sovereignty, he has not denied the right of the Assembly to make such laws as it thinks fit, provided it does not fouch the powers actually invested in the PRESIDENT. But the Marshal has advanced some way toward autocracy during the last tortnight, and his movement in this direction is likely to become more rapid as it goes on.

In some respects, however, he may be held to have hampered himself by the announcement, which was cortainly implied in his Message, that he considers himself bound not to retire till the seven years are over. If he adheres to this view, he will have denied himself the use of one most negrowful wearen the threat of resignation. of one most powerful weapon, the threat of resignation. It is bard to believe that either the Assembly or the country would not prefer almost any alternative to the retirement of Marshal MacMahon; but if it is understood that, come what may, he is a fixture for seven years, both the Assembly and the country may be tempted to try experiments how much pressure the Marshal will stand. The Times' Correspondent thinks that the Marshal's dislike of M. Casimir Périre's scheme rests not so much on the Bill itself as on the Ministerial combinations that may arise out of it. The Marshal's constitutionalism does not, it seems, extend to the acceptance of a Cabinet from the majority, if that majority be made up from the wrong parties. He is willing to govern with Ministers imposed on him by the Right and the Right Centre, or with Ministers chosen by himself. But it is expected that he will refuse, to govern with Ministers imposed on him by the Loft Centre and the Left. Such a refusal must end either in a dissolution or in a further development of personal power. The first alternative would probably end in a reproduction of the original dilemma, since if the Marshal is bent upon taking his Cabinet from the party with which he feels in accord, not from the party which commands a majority, he may find it harder to pull with a new: Assembly han with the present. In these complications the wisest course for the Left Centre would be to allow that section of the Right Centre which is prepared to accept the Republic an amount of influence in the Cabinet proportioned not to its numbers so much as to its weight with Marshal MacManon. This is not quite consistent with constitutional ideas, but at this juncture the main thing is to get the Marshal on the side of the Republic, and the best way of securing this is to let him feel that to be a Republican President is not necessarily to be surrounded with Radical Ministers.

MR. DISRAELI AND RITUALISM.

MR DISRAELI has certainly used unambiguous language. Mr. Russell Gurney had purred very prettily over his nursling, and Mr. Cross, in a speech the conclusions of which strangely contradicted the premisses, had laboured hard to recommend the Archuseners' measure to the favourable consideration of moderate Churchmen. But Mr. Gladstone had made his move, and so to extinguish Mr. Gladstone became the sole object of an ingenious art short-sighted policy. The PRIME MINISTER absolutely ridiculed (in a phrase which the Times omitted though the Standard caught it) any "elaborate mystification" as to the object of the Bill; it was one to "put down "Ritualism"; and he then wont on to define "Ritualism" as "practices in the Church to which they "(the House and the country) "ere not used but which they believe and the country) "are not used, but which they believe and the country) "are not used, but which they believe "are symbolic of doctrines which are most uncompromisingly expressed and acknowledged by writers of that school," a definition which is peculiarly elever in defining nothing, as the one thing which it forgets is any description of those doctrines. It is not only elever, but too elever by half, as Mr. Disafeld may learn, if he has not already made that experience. Neither the supporters nor the opponents of the fill have ever formed a compact phalanx. There have Bill have ever formed a compact phalanx. There have been on one side the few men who desire to maintain all the excesses of Ritualism in unchecked exuberance, and against them the large number who desire to put those and only these, practices down. Mr. Cross may be taken as the representative of the latter class. But there is also the far larger body of opponents who regret more deeply, because intelligently, the folly of the men who have brought about the catastrophe, but who at the same time see in the Bill an engine for repressing, under the into see in the 15th an engine for repressing, under the man yeary grauntoning dug a very deep ambiguous parts of Ritualism, that remarkable revival himself and his Government. After the of conformate religious life, and of decorpus worship in the River Minister in his new and anomal stabilished Church, which more than to any other thing the Church which more than to any other thing the Church which more than to any other thing the Church which has been moulded onto the Church which has been moulded on the continuous of the minister of the property of headers of the property of headers of the property of the continuous continuous and the continuous continuous and the continuous contin

Mrt GLARGIONA, unfortunately for his po leader, and still more unfortunately for his resistant the Church of England, chose after his ten long at to burst out with what an Trishman might be particled calling a simultaneous suggestation of uppeoches on the questions in no way necessarily confected together than the manner of the manner tunity which it was beyond Mr. Dispania's nature to regist He knew that he could confidently rely upon the ignorated of ritual, history, and logic in which one side of the House so spiritedly competes with the other, and he reckoned on the unpopularity of a great mail down and black Accordingly—conveniently incompanies the fact that M. luck. Accordingly—conveniently ignoring the fact that Mr. GLADSTONE'S Resolutions did no more in fact than drive home the policy of that Ritual Commission which had been launched during his own former leadership of the House of Commons—he "read them with most anxious attention, "and he found out that they meant disestablishment. So ticksteed by the leader, they had about as much chance of life as a respectable Frenchman during the Revolution whose reigh-bour deposed that he was an aristocrat. All this, as we have said, was clever; and had Mr. DISEARII been content to the amen to Mr. Cross, he would have made good his claim to the prize of strategic dexterity. But he could pay resist improving the situation. He saw that "Ritualism" unpopular in a House of Commons which had the variant ideas of what Ritualism really meant, and he shaped his support of the Bill accordingly. He got a loud cheer, but he has rudely shaken the confidence of High Churchine throughout England, who could only read the Present a words as an invitation to the mob to run amuck at the Church revival. In what form the results of his specific may manifest themselves we can hardly predict. It is not likely that the Churchmen whom Mr. Dispant has hurt will seek their balm at the hands of Mr. Walter. Mr. Goschen, or Sir William Harcourt, and if they offer themselves as recruits for the ranks of disestablishment, they will only show that among other Japanese arts which have lately become fashionable, that of the happy despatch has not been forgotten. But to affront any large number of his followers is never a thing about which a Minister can afford to be indifferent. Still less can he do so when the majority to which he owes his pre-eminonce has coalesced, rather than been welded together, by many fortaitous circumstances. No one can doubt that the strong wish of the unajority of the constituencies of England, distinctively from those of Scotland and Ireland, to keep up the English Established Church, was a very powerful element by the combination, it is equally moontestable that the High Church section was a potent contributor to this result. We may were additional that it is for Conservative calculations a motive flower in that it is for Conservative calculations a motive flower is excess of its numerical value, for out of the three Church parties the one which most emphatically takes the Libertal side is the Broad.

We do not care to follow our conjectures further ... Mr Diskabil ought for partisan purposes to keep friends both with High Churchmen and Low Churchmen, wife, to with High Churchmen and low Churchmen, wind, has takes care to handle the Broad school as gently as possible. He had many ways of dealing with the Architestope Bill which would have enabled him to play of the various sections of his elated followers and of his discomfitted opponents. He has deliberately wholes, to put all his eggs into one pannier, to repudiate elaborate "mystification," and to "put down Ritualism" under conditions which, so far as the Premier is concerned leave no High Churchman safe in the enjoyment of his most High Churchman safe in the enjoyment of his most cherished practices. Mr. DISRAELI is not yet, we suppose, so constant a vetary of the Church Association that he will continue for conscience sake to incur the distract of his High Church followers. How he can be a retreat, what atonement he can make, is not our built to suggest. So versatile au intellect as his is 's take any poor suggestion of ours as and gult. We have fulfilled all neighbourly decur actual ruler in pointing out to his nery gratuitously dug a very deep himself and his Government. After the

dispersion. The principle which is a simple to greek them would only have included the extended to greek them would only have included the extended to greek them would only have included the wangle and spoiled such temper as House independent wrangle and spoiled such temper as House independent with the Bill should receive the Royal which in the shape in which it left the Lords, the people shops we shall very little envy will, be the agitators who have clamoured most loudly for it to pass. Still Committees in very mysterious things, and we hardly dare to pronounce in that one certain and significant fact is that the postport had taken a long step in the way of conciliation by postporing the commencement of the Act from the language had taken a long step in the way of conciliation by postporing the commencement of the Act from the language had taken a long step in the way of conciliation by postporing the commencement of the Act from the language had taken a long step in the way of conciliation by postporing the commencement of the Act from the language had the confident of the Act from the language had read to pay a little more regard to the temper of the age and country in which they live; and if the new somewhat unreasonable public opinion can be taught to distinguish the loyal exhibition of a stately, but language had control of Roman termondal.

THE LATE LORD DERBY.

Lord DERSY was conducted in a graceful and peroming pagers 'Mr. Diseasers would have been, as the political **Misconaracter and career; even if he had not also been the Minionaracter and career; even us no mad not also been the presented living matter of ornate and formal eloquence. Mr. Spickers as a Parliamentary orator, in the interpretation is more ready, more copious, and incomparable more similar with the practice of public business, one when it is necessary to pay in concise and stately angulate a dignified compliment to the living or the dead, the Tribia material stately angulate a dignified compliment to the living or the dead, the Tribia material stately and the property of the particular contents as the contents of the cont fr. District is without a rival. In his happiest manner is debiced the aspect of the statue facing the "famous Parliament of England," between the two Houses of which Lord Dress divided in almost equal parts his political life. The power of debate, the ready wat, the high parit of Mr Diseaser's former chief were obvious topics, attenduced with perfect propriety and skill. The assertion hat Lord Dener possessed great aptitude for business and nations of detail was less consistent with general belief, ant Lord DEER's principal colleague had every opportunity if forming's judgment on his administrative capacity. As work of art Mr Diskasti's speech would have been more aultless if he had abstained from introducing one in two debatable topics. In praising the dead it s fudicious to abstain from provoking any difference of prinion in a sympathetic audience. Among the subscribers the statue who surrounded Mr. Dispania some at least List state who surrounded Mr. Displet some at least listpiroved of two out of three measures with which he speciated Lord Deby's pame. It was also too glaring a syndex to represent Lord Deby as the author of all the measures which he had advocated in his official apacity is a bold stretch, of fancy, or rather of language, to delegath a Lord Deby abolished slavery, that he educated reliand, and that, as it afterwards appeared, by two successions at the stretch of Parliaments of the way at least place that Lord Perry abolished slavery, that he educated reland, and that, as it afterwards appeared, by two successive stees, he reformed Parliaments It was at least usual on to challenge the approval of a Conservative assembly to the real or supposed schievements of a Liberal filmshar. Lord Derry was Colonial Secretary under Lord have when he conducted through Parliament the Bill for manufalpating the West India, slaves, as he had been Irish becreasy under the same Minister with he established the gatest of national education in Ireland which has long made to exist except in name. There is no warrant for the little extent in the the success of the first sation. Bill was owing to the energy of Lord Derry, though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at though he is said to have proposed at a meeting at the proposed in an ardent would have a finite to integrate the could make and political lines of separation integrated and and the said and the

and proper purpose of his speech under the temperation of boasting of the successful a questionable experiment of his own. He asserted that Lord Drass, after carrying the first Reform Bill, corrected its impustice and supplied its defeats by the Bill which he passed thirty his years later. Whatever may be thought of the merits of an alectoral change which has not yet produced its full effect the measure of Lord Drass's wisdom and patriotism in yielding to the inspiration of his daring lieutenant is to be found in his own confession that he had taken a leap in the dark, and in his more careless private remark that he hid "dished the "Whigs" It is not to the credit of a responsible states, man to introduce an organic importation in professed disregard of its consequences. Mr. Dishakali thought, and thinks, that he has penetrated to a stratum of voters below the reach of Liberal theories or influence. It may be doubted, whether Lord Drans formed any distinct anticipation of the results of the Bill of 1867. Mr. Dishakli well knows that, when at some distant time a statue is erected to his own memory, the orator of that future day will fairly claim for his here any morst which may attach to the authorship of the second Reform Bill Lord Drans probably acquiesced but unwillingly in the first draft of the Bill, and he had not the courage to withdraw his assent when it was moulded by the unfriendly hands of Mr Gladsione into its present shape. A year or two later, after his retirement from office, he felt deeply the indifference to his counsels which was displayed by Mr. Dishakli and Lord Cairns when they foldly and adroitly compelled the Ifone of Lords to acquickee in the destruction of the Igish Church. The whole matter is of too polemical a character to have been appropriate to a ceremonial occasion.

Lord MAI MYSBURY, who has no pretonsion to be an orator, made for once even a better speech than Mr Diskari because he spoke as a warm and hiclory friend of Lord Dikhy. His testimony to the sweetness of Lord Diam's temper, to his household virtues, and to his many accomplishments, will not be less willingly received because he in touching phrase "confessed that he loved the man" Dispassionale impartiality is not the first requisite for the just appreciation of character. The affection which any man is able to abtract is the most certain proof, of the degree in which he descrives to be loved. Those who have watched and studied the history of the time are qualified in some degree to criticize and check Mr. Disamai's estimate of Lord Dirm's capacity and achievements. Strangers can have nothing to say in depretation of the character described by Lord Maintenance, and other competent witnesses would probably confirm the statements of Lord Di RBY's intimate friend His errors as a state sum were in fagt often condoned because he inspired personal admiration. His oratory, though not of the highest order, was that of a man of spirit and of wit, and a certain interest attached to the combination of rank and wealth with high personal distinction. The country, or the cultivated part of society, laked Lord Derny all the better, as for the same personal distinction reason it have Mr Giabsions, because he took a keen pleasure through life in the classical studies of his youth. His translation of Homes falls short of poetry, but it proves that Lord Druss possessed a scholarhke intellect and a respectable faculty of versification. A great peer and Prime Minister who could produce such a version was certainly not an ordinary man. Of Lord Dikuy, as of many predecessors, it may be said that his admirers have no difficulty in calling him a good man, and, if they please themselves by call-ing him a great man, they do little harm to the world

The indulgence with which Lord Derny's changes of opinion were regarded was suggested by a reasonable belief that he was not a serious politician. Sir Robert Perr was denounced as a traitor, though his opinious revolved through a narrower segment of the political circle, but it was known not only that he had changed his political course, but that he had deliberate convictions to modify or to retract. His political conscience was more sensitive than Lord Derny's; and consequently his condition was emerc severely criticized by others, as well as by himself. Once a high Tory, Perr carried Catholic Emancipation, which was supported by a large section of his own party; and have a bonvert to Free traits. Lord Derny passed in helf-underson years from the table on waich he jumps, at the boomes's into the Consequence of the hadder which he after the boomes into the Consequence of the hadder which he after the boomes into the Consequence of the hadder which he after the boomes the detail of the hadder the most the boomes the detail of the hadder.

throughgoing of Tories. But for the influence of Mr. Disraell, he would probably have supported Protection to the last, and he would assuredly never have extended the franchise. His enemies, if he had any, never called him a traitor, because it was generally and justly felt that as an opponent of change he was, notwithstanding his previous conduct, in his proper place. In a certain sense it may be said that he touched nothing which he did not adorn. He was the most brilliant member of Lord Grey's Government, and, with the exception of Mr. Disraell, he had no rival in his own Administration. It was perfectly right that he should receive honour after death as in life; and there was much truth in Mr. Disraell's remark that such men are only to be found in England.

LEGAL EDUCATION.

ORD SELBORNE pursues his efforts in the cause of CRD SELBORNE pursues his efforts in the cause of legal education with his usual activity and resolution. He has prepared two Bills, the general character of which he has described to the House of Lords, and he has asked that they may be read a first time, not with a view of carrying them any further this year, but in order that they may serve as a basis of discussion. The first Bill deals with the Iuns of Court, the second with the creation of a General School of Law. That the Iuns of Court are bodies discharging duties sufficiently public and holding property for uses sufficiently public to justify the control of the State over their constitution and general course of action is admitted on all hands, and therefore it is unnecessary to have recourse to antiquarian arguments to prove what no one denies. They enjoy the monopoly of deciding who shall practise at the Bar, and they exercise some supervision over the conduct of members of the profession. They have also funds to administer which in two instances are very considerable. No one can say that those duties are now badly discharged, whatever may have been the case in former times. The Benchers will not permit any one to practise at the bar unless he has previously satisfied an independent Board of Examiners. They are very loth independent Board of Examiners. They are very loth to interfere with any member of the profession, except in grave cases of misconduct, and they are indulgent and impartial when they do interfere. They manage their trust-property with care, recognize that one of the main objects to which it is to be devoted is that of legal education, and give large sums towards its furtherance. Lord Selborne has, however, two imperfections to notice in the Inns of Court. They are not incorporated, and are perhaps somewhat hampered by this when they have to act as Courts of Enquiry into cases of alleged misconduct; and their Governing Body is too much the result of accident. The remedy which Lord Sun-BORNE proposes is to incorporate them, and to define their Governing Bodies by Act of Parliament; and he drow the outlines of an elaborate scheme, by which the election of members of the Governing Body, the numbers of which should be limited, should the lander alternative of the existing members. The in the hands alternately of the existing members and of practising barristers of five years' standing. The Lord Chancellor, who behaved as usual like a brother to Lord Selborne, and intimated such dissent as he had to offer under a shower of compliments, suggested another mode of proceeding. He proposed that the luns of Court should be dealt with as the Colleges of Oxford and Cambridge have been dealt with, that a Commission should be appointed, that the Inns should have a Parlimmentary power, of making statutes for themselves, subject to the approval of the Queen in Council, and that, if no satisfactory statutes were made in this way, the Commis-The proposal of the CHANsioners should make them. THEOREM Seems to us * much better than that of Lord Sellorne. The House of Lords is little fit, and the House of Commons is totally unfit, to discuss such a subject of mere detail, but of detail of considerable importance to one special set of people, as how the Benchers of the Inns of Court should be appointed, and what their powers should be. If a well-chosen Commission was appointed, both the interests and the wishes of the Bar and the claims of the public would be adequately considered; and regard could be had to a number of small points which could not

be discussed in Parliament.

In the next place, Lord SELBORNE wishes to set up a General A head of Law in which future attorneys and future barristers are to be taught together. He finds that nearly

5,000l, a year is now paid by students for the Bar in the shape of educational fase, and as much by young men in-tending to practise as attorneys; and with ro,cool a year to start with he thinks there is no difficulty as regards money. He did not, if the whole of his speech was re-ported, intimate whether he proposed to call in the aid of the revenues of the Inns of Court. If he did, he certainly need not trouble himself about money; and if he did not, then he would have separate schools of law which would necessarily compete with his general school. It is probable that he means to get all the money he can and devote it to the purposes of his main institution. Lord HATHERLEY supported the scheme mainly on the ground that it would afford an opportunity to outsiders, such as military men and persons acting, or likely to be appointed to act, as Justices of the Peace, and all persons interested in the laws of England, to attend the courses of lectures, and learn what a beautiful thing English law is. He thought that if these ardent and intelligent outsiders certainly need not trouble himself about money; and if he He thought that if these ardent and intelligent outsiders did but go to the right lectures, the public in general would cease to look upon the law as a dry, barren, pestilential waste, full of pitfalls for the unwary, and would see it in its true light as a noble and beneficent institution. If this would really be the effect on these outsiders, they would have worked very hard and given themselves infinite trouble in order to attain a totally erroneous impression. In real life they would not be likely to get much further on in the study of English law than that attained by an ordinary Puisne Judge, and it is seldom that an ordinary Puisne Judge lets a year go by without expressing a strong opinion that a large part of the statutory law which he is called on to administer is totally unintelligible. Any one who likes to pay can at present attend the loctures of the Inns of Court; but an outsider in attendance is a very rare bird. To know anything of law a man must work hard, and outsiders do not like working hard. The only question of any practical importance is whether it would be advantageous that attorneys and barristers should receive their education in common. The LORD CHANCELLOR virtually expressed an adverse opinion, for although he supported the institution of a General School of Law, he explained that he merely meant that there should be one examining body which should examine both attorneys and barristers, while the educational institutions of each branch should exist and work separately. At bottom this is not so much an educational as a social question. The attorneys are mostly in favour of having education in common, because they do not like their branch of the profession to be considered so much lower in social standing as they think it is, and they imagine that if all were educated together they would be more on a par in after life. Barristers are mostly opposed to this amalgamated education, not only because they are jealous for the superiority and dignity of their own branch, but because they think that an intimacy with young solicitors in early life would lead young barristers to look on private connexions even more than they do now as the surest road to fame and fortune. There is, as is usually the case when any difficult social point is under discussion, much to be said on both sides; but it is not necessary at present to come to any definite conclusion. Lord CAIRNS is supreme, and Lord CAIRNS will not hear of anything which would do more than allow both branches to be examined by the same examiners, and it may be doubted whether the attorneys would think this concession worth

Even when men are actuated by the best will in the world, it is by no means easy for them to set up a really good system of legal education. They will be sure at the outset to make many mistakes, and all we can hope for is that they will learn by experience, and not be discouraged by their early failures. The Inns of Court, after much discussion, and with the most sincere desire to do the best in their power, instituted a year and a half ago a new system. Very great pains were taken to ensure success. Funds were voted with more than ample liberality. Appointments were most carefully and honestly made. A sufficient number of persons really interested in legal education was found to take the management of the scheme, and it was placed under the presidency of Mr. Walrols, who has done all that could be done to make the scheme work well. But hitherto it has proved if not a failure, yet far less of a success than was hoped. Providedly, it is found to have three very sections defined. A success that was hoped.

instrument for attaining the end was to encourage ly of Roman Law. On the principle of doing a my heartily if it is done at all, the study of Roman w mes not only successful hat every sixpence given by of pecunitry reward to successful students was devoted ease proficiency in Roman Law. To be able to high in Roman Law a student must be a good Latin bolar, and able to read German and French commentators a. He must also be willing to go into numerous with ease. He must also be willing to go into numerous antiquarian details which are totally unconnected with the general history or theory of law. Nine students out of ten are thus excluded from any hope of getting any tangible reward, however hard they may work. Nor is this all. The study of Roman Law is in this way kept apart from that of English Law. One does not illustrate the other. The study of Roman Law becomes antiquarian and technical; the study of English Law is pursued as if anything but the lowest acquaintance with the elements of Roman Law need not be wished for. In the next place, although honours were to be given to those who chose to although honours were to be given to those who chose to compete for them, yet those who got honours had no further reward than that of the glory. At the Universities a first class means generally a Fellowship, and perhaps the prize is even too splendid for the merit that is shown. But the Inns of Court kept all their money for another purpose, and left those who might obtain honours without any ulterior reward. It is, however, perhaps too early to judge of the effect of this arrangement, and it is just possible that some day a high place in the class-list of the Inus of Court may be thought in itself, and apart from money, a more described distinction than it seems to be at present. Lastly, the teaching part of the system was dissociated from the examining. That teaching and examining should be in different hands is essential to any sound system; but experience shows that, if attendance on teaching is voluntum, and the teaching if attendance on teaching is voluntary, and the teaching does not bear directly on the examination, students who are going to be examined will not spend their time in attending lectures. They only wish to pass, and the simplest and elisiest way to pass is to be crammed for a few months before they present themselves. Difficulties of this sort are not perhaps to be wholly overcome under any system All that can be looked for is that they of legal education. shall be overcome to a reasonable extent; and those who take the greatest pains to overcome them will be the first to acknowledge that to arrange a really good system of legal education is by no means an easy thing.

THE REVENUE RETURNS.

DISCUSSION commenced last week by Mr. CHILDERS on the revenue returns of the first quarter of the year was chiefly profitable in furnishing Mr. FAWCETT with an opportunity of a seasonable criticism on party finance. Mr. CHILDERS contended that the results of the quarter had falsified the calculations of the Chancellor of the Ex-OREQUER, who in answer manipulated the same figures so as to prove that the state of the revenue was highly satisfactory. The trade returns for June favour the more sanguine estimate of the public resources, inasmuch as both imports and exports have increased in quantity, while they have diminished in value. The decline in the weekly recoipts of the principal railways has, with the exception of the Great Western, been arrested, although the increase, as compared with the returns of last year, is small. The prospects of the wheat harvest are favourable, though all other crops will suffer from the prolonged drought. On the other hand, the excise revenue will necessarily fall off in proportion to the heavy reduction of wages in some chief branches of industry. Colliers, miners, and workers in iron have for the most part been compelled to surrender the margin of income which was largely expended in the consumption of taxed luxuries. expended in the consumption of taxed luxuries. The conversation in the House of Commons turned exclusively on actual or estimated receipts; but some saving of expenditure may probably result from reduced prices. If Sir Supposed Northcorn succeeds at the end of the financial year in balancing receipts with outlay, he will be considered fasturate, and be may plausibly attribute the result to his own assacity and foreight; but it is not judicious to calculate on the steady and indefinite continuance of commissional prosperity. Mr. Lewe's practice of deliberably deliberably in the revenue at the smallest possible amount had indefinite accusing the revenue at the smallest possible amount had The state of the s

risk of a deficiency; and the professedly unexpected surplus furnished the means either of reducing the debt or of covering some extraordinary charge, such as the payment under the Geneva award. The great surplus of the present year, though it might have been more usefully employed, was provided by an extremely low estimate.

If Mr. Childers and other members of the same party still acknowledge allegance to Mr. Grancows there are

still acknowledge allegiance to Mr. GLADSTONE, they are scarcely in a position to criticise the financial policy of the present Government. Sir Starvord Northcore has always deferred to the authority of his carly master in finance and during the discussion on the Budget Mr. GLADSTONE expressly defended the practice of accepting without question the estimates framed by the permanent heads of the revenue departments. To the non-official mind it would seem that calculations based on an assumption of a certain percentage of increase require to be checked by careful consideration of the particular circumstances of each finan-cial period. If the Excise receipts were likely to decline, no feeling of propriety or etiquette ought to have restrained the Chancellor of the Exchequer from modifying his estimates according to the probable fact. If Mr. Gladstone's sanction justified Sir Stafford Northcorn in following the ordinary practice, any subsequent disappoint-ment of the expectations which had been formed can scarcely become the subject of consure. It is perhaps a wholesome superstition that a certain merit attaches to Governments which have the luck to hold office during a prosperous period. Mr. CHILDERS may have been unconsciously influenced by the popular sentiment when he virtually imputed to the Chancellor of the Excurquen the diminished consumption of beer, spirits, and tobacco. Sir W. HARCOURT, who followed on the same side, professed himself an advo-cate of close estimates. The only error with which Sir STAFFORD NORTHCOTE can be reasonably charged is, in accordance with Sir W. HARCOURT'S theory, that he has left himself an insufficient margin. It is fortunately improbable that there should be any formidable deficiency; and if there is some difficulty in establishing an equilibrium, the Government and the House of Commons will have learned a useful lesson. The Budget of next year will be extremely simple, because there will be nothing to distribute amongst competing claimants; and there is no reason to four that it will be necessary to increase taxation. The sources of elasticity of the national revenue have to some extent been closed by the abolition of many duties on articles of consumption.

There would have been no cause for difficulty or anxiety if the Chancellor of the Exchequer had not for reasons independent of fluancial expediency unnecessarily thrown away a million and a half of revenue. It was well that Mr. FAWGETT should remind the leaders of both parties that they had culpably deranged the system of taxation for purely, political or solfish objects. Mr. GLADSTONE was more to blame than Mr. DISEAELI, both because he was the first to commence the auction for votes, and also on the ground that he is a scientific financier, while Mr. DISEARLI has never affected the character of a sound economist. The refusal of the constituencies to accept Mr. GLADSTONE'S lavish bribe will probably prevent the repetition of the experiment. Mr. DISEARLI has perhaps since regretted that he hastily entered into the bidding on the challenge of his adversary. That one of the two chief living statesmen should offer the repeal of the Incometax as the price of a majority, and that his competitor should reply by the assertion that his party had always opposed the tax, was not a creditable result of representative government. There can be little doubt that Sir Stafford Northcore would have gladly retained the tax at its former percentage. He is perhaps scarcely to be blamed for a partial redemption of the reckless and thoughtless promise of his leader; but the possession of another penny in the pound would have rendered him invulnerable to Mr. CHILDERS'S criticism. The gratuitous abandonment of revenue was in itself blamable; but the main objection to the reduction of the rate is that it strengthens the popular objection to the tax, or rather to one of the schedules. Tradesmen who dislike paying complain bitterly of inquisition into their affairs; and it is evident. better worth while to provoke a certain amount of real and fictitious discontent for threepence than for twopence. The agitators against the tax will also contend that the amount which remains is not too large to be refugnished. The moccesive reductions of the Sugar duty in A 1 and 1873 rendered its abolition inevitable.

Although the late Budget furnished the opponents of the Income-tax with a plausible argument, it is of the utmost importance that the three millions which it still produces should not be lost to the revenue. An attack will certainly be made on the remaining portion of the tax on the next opportunity. The local associations of tradesmen still opportunity. maintain the organization to which they perhaps attribute their partial success. A still more formidable enemy of equal taxation has plainly intimated his intention of attempting to abolish the tax. In his complimentary criticisms on the Budget, Mr. Gladstone said that his satisfaction in the reduction of the tax was mainly caused by the hope that the removal of the remainder in a future Session will have been rendered less difficult. It was reassuring to find that, when a resolution adverse to the impost was brought forward some weeks ago, a large majority was opposed to attempts to tamper with the revenue. All the most weighty speakers defended the principle of the tax, nor has either party adopted the policy hastly adopted by both the leaders; yet the opposition of Mr. Gladstone is not to be despised. If Siring and Management of the second of t STAFFORD NORTHCOTE is well advised, he will abandon the attitude of neutrality which he has hitherto thought fit to adopt. To the Income-tax deputations which attended him soon after his accession to office, he replied that he should willingly receive suggestions for some unobjectionable substitute. It would have been more to the purpose to explain that, if incomes are to be taxed, the only means of effecting the object consists in an Income-tax. Any alternative tax would fall exclusively on realized property, which may often be divided into shares as small as those of trading undertakings. When Mr. GLADSTONE promised a readjustment which should supply the void left by the abolition of the Income-tax and the Sugar duty, it was evident that he pointed to additional charges either on land or on proporty in general; and probably his scheme might have been equivalent to the revival of the Income-tax without Schedule D, and perhaps without Schedule B. Even the agitators have in the course of thirty years gradually begun to understand that the tax must be maintained or abolished as a whole. The circuitous course of repealing it, and then re-enacting it in a flagrantly unjust shape, is not to be approved.

THE ENDOWED SCHOOLS BILL.

MINISTERS have skilfully availed themselves of an excellent opportunity. Their party may venture to hope that it can sustain itself in power for three or four years, and by vigorous efforts the work of reorganizing the Endowed Schools ought to be completed in that time. There can hardly be any work more necessary to the future strength of that party, and Conservatives will do well to suppress minor differences and moderate their demands upon their leaders until that work be accomplished. It was frankly stated by Lord Sandon that the party were "stunned" and "dazed" in 1869, and submitted to things which they would have struggled against if their nerves had been a little calmer. They have now recovered their strength and spirits surprisingly, and circumstances are favourable for getting back much which they had surrendered. Their opponents have displayed rather too much astuteness in turning to account the ambiguities of the Act, and they have caused or allowed it to be so worked as to excite hostility on the part not only of all Churchmen and Conservatives, but also of many persons who, except upon this subject, have no sympathy with either. Further, they have incurred the censure of practical politicians by meddling unnecessarily with things which might have been let alone. Mr. Disrarli would be far less clover in party tactics than is commonly supposed if he failed to profit by an occasion singularly favourable.

Lord Sandon starts with the admission of the Commissioners themselves that the Act needs amendment. It might be amended in the direction of obliterating the Church of England; but, as that is not now to be thought of, the only other course is to do justice to that Church. Mr. Gladstone insists that hitherto the principle of our political history has always been vestigia nulla retrorsum, and that now for the first time it is proposed that a Conservative Parliament should under the line of Liberals. But there is a great difference beament conservation. It is at any rat place, Lord to this Parliament to transfer the working oil of Lett from Commissioners appointed by Liberals to the Charity Commissioners and to Assistant

Commissioners who will be appointed by Conse And, besides, it is open to Conservatives to allege that the consequences of the Act were unforcesen, and that they did not knowingly consent to the absurdation which legal subtlety has implied from it. A reductio ad absurdam of the 19th Section renders amendment inevitable, and Churchmen ask no more than that the Church should be treated with the same equity as other denominations. The grammar schools at Sherborne and Birmingham were both founded under charter of King Edward VI., and in both alike respect to the school. both alike regulations for the management of the school could be made only with the consent of the Bishop of the diocese. Yet under the 19th section the Commissioners decided that Sherborne was, but Birmingham was not, Denominational; and the effect of this decision would have been that the religious teaching at Sherborne would have been that of the Church of England, while at Birmingham it would have been scrambled for yearly in the elections of the town. One of the Governors of Birmingham School told the Committee which sat last year that they had asked the Commissioners that the religious instruction should be in conformity with the Established Church, in order to make it precise, but they were told by the Commissioners that there was no chance of that being accepted. The Governors wished this matter to be taken wholly out of their charge, and laid down distinctly in the scheme, "in order "that they might not fight about it." Under the present Bill Birmingham will fall into the same category as Sherborne, and there will be no fight over the religious teaching. It may be hoped indeed that matters will go on nearly as they used to do at Birmingham, and they always went on very well.

The present Bill has been described by Mr. GLADSTONE as "asserting an exclusive claim, with the exception of a conscience clause, to the revenue of nearly all the schools which were founded anterior to the Toleration Act." Mr. GLADSTONE repeats an argument which has been often used before, that, inasmuch as Dissent was illegal before the Toleration Act, it was necessary, and not optional, that every school should be a Church school, and that no inference ought to be drawn as to the founder's intention where he had no choice. It might suffice to say, in answer to this argument, that there is no occasion to draw any inference at all. The Church is, and always has been, in possession, and a prudent legislator would regard possession as a suffi-cient title. It is not as if the question were between the Church and any particular denomination. Mr. GLAD-STONE puts the question as between the Church and the Nonconformists generally as representing Episcopacy and Puritanism. But what is Nonconformity? If these endowments are to be taken from the Church, to whom or to what are they to be given? The weak point of the system of the Commissioners under the Act is that it supplies no satisfactory answer to this, which a great number of persons consider a vitally important question. A scheme would be made, and a Governing Body established, and then that body would proceed to make "proper provision" religious instruction, or, in other words, to hold a free fight over it. All the arts of electioneering and every species of intrigue would be used to obtain a majority of some sect or combination of sects upon the Board, which would then proceed to settle the religion of the school. The Commissioners saw their way to produce by this process a colour-less article called "religious teaching," to which unfortunately Churchmen and Dissenters almost equally objected. But if the proposal of the Commissioners be put aside, there is really no other course except that of leaving matters as they are, and this is what the present Bill proposes to do. Where the original instrument of foundation is silent, or where there is no evidence of its contents, the usage of the last one hundred years as to religious instruction shall prevail. In an ordinary grammar school under this enactment the status quo would be merely preserved. The bulk of the boys would continue to be taught the destrines of the Church of England, but the Governing Body might, if they thought proper, make provision for teaching other doctrine to those boys who might require it. Practically things would go on as before. The religious doctrine would be moderate and unaggressive, as it usually has been at well-conducted schools and there would be a conscience. well-conducted schools, and there would be a conscience clause of which no use would ever be made.

The question of the religious emissions of members of Governing Bodies is involved in rather state difficulty. It may be taken that, if the Bill passes of an present form, the largest part of the grammar schools will be Denominational

under the Act. Now if a school be Denominational the clause of the Act which provides that religious opinions shall not disqualify members of Governing Bodies does not apply to it. As regards the majority of grammar schools, therefore, this chause would not apply. But it would not follow that religious opinions would disqualify members of Governing Bodies of those schools. That question would depend upon the law as it stood before the Act of 1869 was passed, and we believe that both Churchmen and was passed, and we believe that both Churchmen and Dissenters used to assert that the law was in their favour. We may, however, accept upon this point the authority of Lord Selborns, who, being Attorney-General when the Schools Inquiry Commissioners were sitting, informed them that a grammar school was a Church school, and that in the view of the Court of Chancery the Governors of a Church school ought to be Churchmen. We may remark, however, that there were many grammar schools where some of the Governors were Dissenters, and it was far from certain that the Court would remove a Governor, otherwise unobjectionable, merely on the ground that he was a Dissenter. It is not desirable to make the law more strict than the practice was in the thirty years preceding 1869, and we think that upon this point the Bill requires reconsideration. Under the Act of 1869, as interpreted by the Commissioners, the Church was exposed to a double disadvantage. Dissenters were placed upon the Governing Bodies of schools which had always been Church schools, and then the religious teaching was left to be settled by the Bodies thus constituted. But if the Bill secures Church teaching to those who have hitherto had it and still desire it, the presence of Dissenters on the Governing Body could not deprive the Church of that which the law would give it. And, besides, the children of Dissenters have rights in these schools which the presence of their co-religionists on the Governing Bodies would best secure. In this respect we think that the Bill should more clearly define the law. We do not suspect its authors of any purpose that could be fairly described as retrograde. As regards what it is now the fashion to call secondary education, they propose to make the Church of England secure in the position which she has hitherto held, at least until a competitor appears. Possession is a good title until a better be produced, and, as the new Gospel does not seem to be appreciated by parents, it follows that schoolmasters must go on teaching the Creed and Commandments in the old humdrum way. As regards the qualification of schoolmasters, the Act requires that in every scheme for a non-Denominational school it shall be provided that a person shall not be disqualified for being a Master by reason only of his not being in Holy Orders. But as the majority of schools will be Denominational under the Bill, this requirement will seldom have application. It does not, however, necessarily follow that in Church schools the Master must be in Holy Orders. In many cases the existing instruments of foundation require only that the Head Master shall be a Master of Arts, and it may be presumed that the Charity Commissioners would leave these cases as they stand. It is not desirable to substitute for the zeal of the Endowed Schools Commissioners against the Church a zeal equally inconsiderate in the Church's favour. The Charity Commissioners will be likely to follow the traditions of the Court of Chancery, which has usually applied to these questions that good sense which makes true equity.

THE BENGAL FAMINE.

THE Bengal Famine has happily passed beyond the stage at which any doubt can be entertained of the sufficiency of the Government preparations. The question that now presents itself is, whether these preparations have not been calculated on a scale which far outruns the actual need. The majority of the English newspapers published in India are constantly occupied in making fun of the authorities who find the famine escaping them whenever they have come up with it, and of the English press which is credited with having egged the authorities into an utterly needless expenditure. It would be difficult, if not impossible, to disprove the charge of extravagance, because the very fact that the famine has been met and conquered destroys the principal evidence of its existence. If the people are left to starve, the Government are naturally held to blame. If starvation is accurated, some sanguine persons are expect to come

this point the testimony of the Indian authorities may be taken as more than usually trustworthy. They have been spending a great deal of money at the instance, in some degree, of the Home Government. If this outlay had been quite uncalled for by the facts of the case, the authorities would naturally have hinted as much in their fortnightly No one could have been offended with them narratives. for simply telling their tale of grain remaining unsold, of relief works abandoned for want of labourers, of charitable relief appropriated by the professional mendicants who swarm in every Indian village. The simple mention of these things would have been the most effective intimation. to the Home Government that England would have been better advised if she had left India to manage her affairs for herself. But the official parratives of the famine speak in a wholly different tone. They admit that the distress is less than it was feared it might be, but they nowhere say that these fears were groundless or even excessive. On the contrary, the burden of their testimony always is that, but for the aid given by the Government, the famine would have been exceedingly serious, and that it is only the thoroughness of the preparations made to meet it that has prevented it from becoming so. What means the writers in Anglo-Indian newspapers have of being better informed than the Government of Bengal does not appear, and, until they are proved to be right, it is certainly safer to accept the official view.

The last three narratives that have reached England deal with the period from the 16th of April to the 28th of May, and each of them contains a minute from Sir RICHARD TEMPLE on the state of the districts which he had been inspecting. From Durbhunga he reports, and adopts, the opinion of the civil officers that "in most parts of this specting. great subdivision the scarcity has reduced, or soon will re-"duce, the majority—in some places even the great majority
"—of the people, to a condition of dependence on State
"assistance for several months." In about two-thirds of the Mudhoobunnee subdivision there is no food, no employ-ment, and no wages, and "at length the whole people, "with individual exceptions, will come to be fed from our granaries." On the 25th of May Sir RICHARD TEMPLE estimated the total number of persons receiving or likely to require assistance from the Government at upwards of two and a half millions. This includes the purchasers of grain from Government stores, and under this head a further increase is to be expected. It is possible, he admits, that some persons not really distressed may have gained admission to the relief works. But every officer employed "believes that nearly all the persons on these works need the "relief more and more each week." Most of them had exhausted their resources before they came on the works; some might have had, or may still have, enough to keep them for a few days. But none can get any employment until the rains begin, and during the interval from the middle of May onwards "it is difficult to understand how "any of them could preserve themselves from miserable "emaciation, or how the majority could escape death." It seems clear that if large preparations had not been made by the Government, there would by this time have been an absolute dearth, not morely of the means to buy food, but of food itself.

The Government of India has very properly discouraged the sale of grain to private purchasers so long as there was a possibility of their being supplied from private trade. The sales are to be made through the agency of the traders, the selling price is to be fixed at that of the nearest large mart, and sales are to be stopped as soon as the local traders receive further supplies on their own account. only discretion left to the local Executive is the determination when the private stocks are on the eve of exhaustion. Down to the 11th of May these rules had been very little acted on. Less than 10,000 tons had been sold, and the places in which sales had been ordered constituted only one-fifth of the distressed districts. On the 25th of May Sir RICHARD TEMPLE mentions that the grain merchants said that only a small stock of rice remained in Eastern Tirhoot, that little or none was immediately coming, that they could not undertake to import anything at present, but that they would buy wholesale from the Government and retail it among the people. In some other places the petty dealers had asked to have only to buy from the Government stores so as to go to be relicion-trule by which to make a living. which to make a living. "The to be reliable RICHARD TEMPLE, "who have heard the tage when the Government storehouses were to be opened, or who have seen

"the crowd of expectant purchasers gathering round the Government retail dealers, knew how necessary the "measure was."

One of the greatest difficulties with which the Government have to contend is the disposition of the labourers to believe that any new measure must be for their hust, and consequently to face inevitable death rather than work on a plan which they do not understand. In Mudhoobunnee the local authorities found that the plan of concentrating the people on the central relief roads on daily wages led to many abuses. Piece-work was accordingly substituted in the hope that the better part of the labourers would accept the new terms at once, that another large part would be drafted off to the village works, and that those who might offer passive resistance by remaining unemployed would soon be brought to their senses. About 200,000 labourers at once left off working, of whom a very few came back immediately and accepted piece-work; many were sent to the village works, and many who were unfit for any real work were admitted to charitable relief. After all these had been allowed for, there still remained nearly 100,000 labourers who continued out of employ, and came nearer every day to the extremity of destitution. It appeared on inquiry that they imagined the piece-work to be too hard for ordinary villagers, and thought it better to die at home than to die on the roads. Sir RICHARD TEMPLE decided therefore to put out new and more liberal terms, and in a few days all who did not prefer going to their villages were again at work. These village works are being extended in every direction. They consist almost entirely of the excavation or deepening of old tanks. These are now being dug out to a depth of from twenty to twentyfive feet, at which point the springs are usually reached. In this way the imminent failure of water will be checked and the permanent supply will be greatly improved. These works have the additional advantage of being carried on close to the labourers' homes, and under the unpaid supervision of the village headmen.

On the central works piece-work has taken the place of daily wages over almost the whole of the distressed districts, and those still in receipt of daily wages are paid at the very lowest possible rate. The piece-work had to be framed to suit labourers originally in very poor condition, and it is possible that as their strength improves they may earn more than a bare subsistence. Labourers who are strong or skilful at the outset do undoubtedly earn more, but, though the wish of the authorities is to keep the rate of Government pay as near a bare subsistence as possible, Sir RICHARD TEMPLE is not of opinion that this unavoidable excess does any harm. Some of the labourers are saving up their surplus earnings against the interval between the closing of the works and the gathering of the next crop. Others carn their day's food by less than a day's work, and spend the rest of their time in ploughing their parched fields in the hope of showers. Others support their families by their single labour, so as to allow their wives and children to remain at home instead of coming to the works. These minutes of Sir RICHARD TEMPLE's are interesting as showing how much energy is being devoted by the Indian authorities to the saving of the people from starvation. When the famine is over we shall have to deal with economical problems of the first magnitude; but in the meantime the whole strength of the Government of India and Bengal has been spent upon this single object. Whatever other shortcomings there may be in our relations with the people of India, it cannot be said that we have left them to die. The preparations of the Government to meet the scarcity have been on a scale fully proportionate to the need, and there is every reason to believe that, after the first hitch in the transport system was sur-mounted, the zeal which dictated them has had all the success which it deserved.

MONUMENTS.

COMPLAINT has been made that the obelisk erected to the memory of John Wilkes at the foot of Ludgate Hill is rapidly going to decay. It is "begrimed with soot and dirt," and much interior to that of Alderman Waithman which stands opposits. Certain patriotic persons consider that, though Wilkes was a dissolute and selfish agitator, he was the occasion of vindicating an important principle, and that he ought therefore to have a descrit obelisk for himself. Others may be inclined to think that his fame would best be typified by the most decaying and soothershood morannest in the metropelis. Nobody, it may be presumed, would think of erecting a new monument to Wilkes at

the present day if he were not already provided with one; and it is almost touching to remark how a kind of smoothy comment to invest the ugliest old black of some associated with the memory of the most questionable hero. To the immenses majority of Londoners it has probably never occurred that such a thing as this monument exists; and very few indeed are the bosoms which would glow with patriotic fervour on hearing the name of Wilkes. But when it is a question of allowing a poor memory to go down into oblivion, we feel as though there were something sacrilegious in our neglect, just as we might be disposed to put out a hand to save the most discountable of our fellow-creatures from drowning. Wilkes's fame is but a poor flickering taper emitting no very sweet sevour, but we have a certain reluctance to actually clapping an extinguisher upon it. The reluctance we rectually clapping an extinguisher upon it. The reluctance we had severe as accessible to historical associations; but we cannot affect to feel much interest in the question whether the obeliek should be restored or carted away as so much rubbish.

affect to feel much interest in the question whether the obeliak should be restored or carted away as so much rubbish.

Meanwhile the discussion suggests the expediency of some general rule in regard to our monuments. Everybody admits that nine out of ten of them—we speak within bounds—are a disgrace to our artistic taste, and rather an insult than an honour, to the persons commemorated. And yet everybody rejoices over the erection of a new one, and declares that now at last we have something worthy ox plained; but we need only infer that some restraint is desirable upon the tendency, whatever may be its origin, which has lad to the multitudinous growth of ngly images. The most obvious rule for adoption might be suggested by the Roman Catholic system of canonization. Nobody should have a statuse erected to him till he has been dead for seventy years, and till it has been proved that the has done some permanent work. A man whose memory is fresh when all his contemporaries have finally departed may be considered to have fairly escaped oblivion. It may perhaps be doubted whether this period is quite long enough. A poet can scarcely be said to have established his claim to immortality until a century after his death. His fame has then undergone a regularly graduated series of tests. His contemporaries may have been impressed by some accidental circumstances, or by his knowing how to hit the fashionable taste of the day. The next generation probably begins a reaction, but is still more or less impressed by the judgment of its fathers. The prestige, for example, which still surrounds the names of Wordsworth, Scott, and Byron is strong enough to awe any dissentiont, if such dissentients exist, into silence. But in the third generation the smouldering elements of revolt break out. Nobody is afraid of saving that his grandfather was a fool. in the third generation the smouldering elements of revolt break out. Nobody is afraid of saying that his grandfather was a fool, though he may have some little delicacy in making the same remark though he may have some little delicacy in making the same remark about his father. It is probable, however, that during this period the reaction may be carried a little too far, and though some reputations may be permanently extinguished, others will only be subject to a temporary eclipse. It is in the succeeding period that people finally recover their equilibrium, and are able to pronounce upon their ancestors without too much prejudice. Shakspeare's reputation first began to stand out prominently and unmistalably about a century after his death, although his modern idolaters would not be quite satisfied with the terms on which he was then exalted. The same of Pope and his contemporaries imposed upon the world for a generation or two, was then trampled under foot too unsparingly, and is now at last being judged by a discriminating criticism. Of course there are reputations in regard to which we can decide more rapidly. The men who make great discoveries in the natural sciences have the advantage that their fame is susceptible of a kind of mathematical measurement. They can is susceptible of a kind of mathematical measurement. They can show a definite and appreciable result. No one could dispute Newton's claims to be a first-rate mathematician, or deny that Watt did a great deal for the steam-engine. On the other hand, of course, there are reputations which are the subjects of an eager controversy for a much longer period, and indeed some in regard to which discussion only seems to increase uncertainty. We are not yet all agreed as to the moral character of Mary Queen of Scots, and the modern taste for whitewashing the villains of history gives us an uncomfortable feeling that we are not quite safe in regarding anyhody with unmitigated hatred. In such cases, however, it may be said that a person who succeeds in being discussed a century after his that a person who succeeds in being discussed a century after his or her death has performed a feat sufficiently remarkable to deserve a statue. Whether Mary was or was not a murderess and an adulteress, she played so conspicuous a part upon the stage of the world that we should not complain of being reminded of her. Perhaps Mr. Froude might find it difficult to pass her status without surreptitiously chopping off a bit of her ness; but, on the other hand, it is just as likely that he would regard her image, if it resembled those of other sovereigns, as injurious rather than examplementary to her memory.

it resembled those of other sovereigns, as injurious mather than complimentary to her memory.

Some such lapse of time would secure us from many of the ment offensive works of art which deface our streets. There is already a kind of vague understanding, though it has been broken through in some conspicuous instances, that a man is not to have a status during his lifetime. The National Portrait Gallery very properly refers to receive pictures of living man. But the year or two after a man death is the mest damptons than of all. We may know perfectly well that somehody mans subter is going the remain of all the papers was in fact a subject to possile that he middle his reputation by flatturing the formula possile present that he middle his reputation by flatturing the formula possile. To my applicable to his reputation by flatturing the formula possile. To my applicable to his absorbed middle when his power of doing the lattings of his absorbed middle when his power of doing the lattings of his absorbed middle when his power of doing the lattings of his absorbed middle when his power of doing the lattings of his absorbed middle when his power of doing the lattings of his absorbed middle when his power of doing the lattings of his absorbed middle when his power of doing the latting the latting of his absorbed middle when his power of doing the latting the latting of his absorbed middle his reputation.

77

inhebited has posse to me end? In it not better to ambinit with much posses as we saw, to unboushe our guiness, and allow one humbing much to enjoy an undeserved tribute of postunitions position. We entered even him the most conscientions objection, for fear it should be taken for an abellition of impotent spite. We do not complain of what is in the main a generous feeling, as long as it is not allowed to inflict any permanent injury upon us. The theory that we should not speak ill of the dead, though it may be disputed by some puritans, at least corresponds to a natural fashing of decency at the moment of a complicuous line. We have any number of years in which to speak our minds, and we may as well allow a poor follow-creature to be buried and the feelings of his relatives to cool down—no very long time is guarantly required for that purpose—before we proceed to show that, after all, his heart was hard and his brain soft. But then two much advantage should not be taken of our compassionate fashings. Our desire to preserve elemes about a man's faults should not be consumented by a brasen image. And therefore it would be convenient for all parties if we could shelter ourselves behind a general rule susceptible of no personal application. Your husband, we might then say to the widow, was everything that your fancy painted; but nebody, he he saint, martyr, or patriot, is to be honoured in this way till we have all followed him to the grave.

If in mits of this, the netural summather of a creat man's friends

If, in spite of this, the natural sympathy of a great man's friend If, in spite of this, the natural sympathy of a great man's friends insists upon finding some vent, there are various methods as open to the same objection. They many, for example, found a scholasship of fifty pounds a year from the funds which would have exected a very modest statue. Probably it will not be wanted, and many do more harm than good; but, at any rate, a large mustler of lads will periodically go through the tortures of excessive competition, and perhaps the manes of the departed may be exactled by the manufactor. Moreover, it is nearly contain that in the merifice. Moreover, it is pretty certain that, in eration or two, some reforming Commission will lay gratified by the merifice. another ge hands upon the money and devote it to any purpose which may be convenient at the time. They will, it may be hoped, be ful to the donors who have, though unintentionally, provided grateful to the donors who have, though unintentionally, provided them with the means of supplying the wants of somebody quite unconnected with the person commemorated. Or, if the lamp of sacrifice is to be lighted, it is probably better that the meniorial should take the shape rather of a picture than a statue. A picture may be cheaned at some future day, and some ugly features in the face of the original may be thereby radically changed. A picture, too, may easily he turned to the wall if the man's reputation decays, or may come in conveniently as spare convex for wrapping up a parcel. Or again, if the name has been judiciously omitted, it may come to be regarded as the likewors of any great man of the day who happens not to have been authentically commemorated. It is exceedingly seful to have a few such portraits lying about unattached, and spable of serving indifferently for Shakspeare, Spenser, Hen mason, or James I. The historian of the future will have a Josson, or James 1. The austorian of the future will have a alessent occupation in showing how distinctly all the special isliceyncrasies, say of Mr. Gladstone, can be traced on a countenance which we happen to know was intended for Mr. Disraeli. Unlackily, the industry of contemporary caricaturists and photographers will probably preserve too many authentic likenesses of commitments warrants to leave more for much future discussion. of conspicuous persons to leave room for much future discussion, and therefore perhaps we might take a hint from the Willies memorial and allow statues to be creeted immediately after a man's death on condition that they are erected of perishable materials. A status might be calculated to crumble away just about the time at which a satisfactory judgment would probably be passed on the original. In any revolution this would save the inconvenience which has been recently illustrated by the case of the status in the Place Vendôme. The here for whom people had sed to call would be gradually eaten into by the soot and washed to call would be gradually eaten into by the soot and washed away by the rain, and would disappear without revolutionary violence by the tranquil action of the atmosphere. In many cases this would be in every way a satisfactory consummation, and in others something more permanent might be put in its place. Meanwhile a permanent Committee of Taste might have been sitting upon the subject for a century with a complete model before them, and in that period it is not impossible that some approach to unasimity might have been obtained.

WOMEN AND UNIVERSITY DEGREES.

ONIEN have not been idle lately in asserting their claims to V positions bitherto occupied by men. There has been a discussion in the House of Commons on a motion by Mr. Cowper Temple to authorize the Universities of Scotland "to make such negulations as they may think fit for the admission and complete education of female students." There has also been a discussion in the Senate of the University of London on the question whether it is desirable that the University "should be assessment to admit women to its degrees." This, however, same to seem less than the motion in the House of Commons, being rejected by a decirive majority. The recent meeting at St. Jemesh Hall in support of women's suffrage, and the announcement start some that has no fourteen hundred pounds have been spanting appoint of the first hat, in political life as well as in literalization against appoint of determined to seek a place. We shall specime our hand making to obtain University Jugrees and in decime

members of the various professions to which the diagrams are regarded as preliminary steps. It appears to be admitted that the number of women possessed by this ambition is small; and this is used as an argument in favour of greating what is saked. We are asked to believe that no great harm can result from allowing these few women to have their way, and to obtain, if they can, the object of their ambition. On the other hand, however, those who take a wider view of the subject may reply that it is monstrous to allow so amail a minority, moved in a great measure by the strange teaching of Mr. Steart Mill, to disturb the whole relations of social life. We have here a patty section of restless women constituting themselves leaders of their opposed to the good sease and feelings of the wast majority of women; and it is only reasonable in such a case that the interests of the majority of the sex and of society generally should be taken into account. It has been said that women in seeking University degrees merely desire to possess evidence of their competence to teach. But the desire of these fair candidates for caps and gowns of a new fashion, as expressed in their letters and unanorials, everywhere testifies that their object is more ambitious. They seek for an "opportunity of correcting their deficiencies by a comparison under a common standard of their attainments with those of men," and they declare that they are "ready to take their share of the world's work "if allowed to do so.

There are some who work" if allowed to do so.

are of the world's work" if allowed to do no.

There are some who, while recognizing the folly of these efforts, There are some who, while recognizing the folly of these efforts, are yet willing good-humanwedly to sanction them. They plead that the evil, if it be an evil, will cure itself at last. If this argument had any force, the world by this time must have become supremely wise. Unfortunately follies not only grow old and flourish, but propagate their kind. If it be a folly or an evil that women should assume the character of men, and attempt to do men's work and to compete with men; if it be wrong to oncounage women to repudiate an education suitable to their sex, to neglect duties which become them and for the performance of which they are expressly qualified, in order that they may undertake other tasks which nature never designed them to perform, then it becomes the duty of those who see this, not to look on idly in the hope that the folly will cure itself, but to expose and cure it, if cure be possible. To cure a folly as we cure disease, its nature and extent must be understood. In the present instance we find it asserted that there is no reason why men and women should not nursus the same course of intallectual training. should not pursue the same course of intellectual training, seek the same University distinctions, and adopt the same professional pursuits. In fact, it is argued that men and women should be educated alike, and should work alike, and that, as far as may be necessary, all distinctions between the searcs should be obliturated. It is difficult to treat such proposals as regards mental and physical One can only wonder that persons poss labour seriously. ordinary perception and even a small amount of common as should fail to recognize the impracticability of such a course. do not need the physiologist to tell us that the organization of the do not need the physiologist to tell us that the organization of the sexes is different. It is well known to be so throughout animated nature; the male is organized for rougher, harder work than the female. Possessed of greater strength, of greater endurance, he is the natural provider for, and the protector of, what must ever be a weaker sex. Woman, more finely, more delicately organized, less capable of protracted labour, has her own special duties to perform. In the duties that belong to her she is complementary to man. Nature has ruled it so. If we could concaive it possible that in some future age these fundamental principles should be set aside or that man should look on woman as his rival, not his helpmate, or that woman should reverd man, not as her protector, but as her that woman should regard man, not as her protector, but as her opponent—then would the women of that ago have cause to read story with sorrow, and to lament that they were not as their sisters had been. Nor do we need physicians to tell us, as they have done in this country and in America, that women cannot enter on these competitions in which the brain and nervous system are deeply involved without serious peril to the peculiar functions of their sex. The women who are easier to enter into this new struggle for life with men and to drag others after them would be fighting an unequal fight; not only would they see themselves besten by men on account of a difference in strength and in powers of en-durance, but there are also few of their sax who would not find the regular course of their labours interrupted from time to time by causes which would not affect their male rivals and over which they had no control.

Passing from the general to the particular, let us suppose a woman entering a learned profession. The medical profession seems to be the special object of women's choice, because, as is said, women, being good and tender nurses, are supposed to be therefore easily convertible into skilful physicians and dexterous surgeons. It is said that women desire to be attended by women, and that at least women are specially well fitted to attend to the diseases of children. It is also asserted that there is a scarcity of medical men, and that women might supply this deficiency. It does not require much examination to see that these arguments are feeble and fallacious. It does not all follow that a kind and watchful muse will become a skilful and experienced physician, fall of resources, ready in applying them, or a dexterous surgeous, sood and unfaltering in difficulties that would paralyse a weaker least. It does not appear to be true that women generally desire to be attended by women, and it is absurd to suppose that less skill is required in technique that the reputed scarcity of medical man is due, not to a want of young men ready to enter the pro-

feesion, but to the greater strictness of the examinations which it is necessary to pass—a difficulty which must equally present itself in the case of women, and which, as a recent case has shown, is not very likely to be surmounted by them. On the other hand, what must be the position of a female medical student if she associates with her fellows in the harrowing scenes of a post-mortem room or amidst the dismal horrors of the dissecting-room? No one who knows what the course of study of a medical student is can doubt that a woman must be of a very exceptional character if she can pass through these scenes and still retain undimmed those characteristics which are the beauty and ornament of woman's life. If again women do, as some few have done, succeed in obtaining entrance to the medical profession, can they be supposed to be equal to all the emergencies, to the labour and the fatigue which the practice of that profession entails? "Non omnibus contingit adire Corinthum." All cannot settle in fashionable West End localities where the labour is light and where duties are almost pleasures. The rough must be accepted as well as the smooth. Have women ever made themselves acquainted with the life of a medical practitioner in a thinly peopled region of Wales or of Westmoreland—riding on horseback to places where no vehicle can travel, doing the work by night for which the day does not suffice, regardless of rest, careless of weather? Women, if they seek to compete with men, must work as men do. Again, female doctors do not repudiate matrimony and maternity altogether, and these are conditions which must present obvious and peculiar difficulties in the professional life of women. Lastly, the moderate amount of success which has been met with even by the few exceptional women who have entered the medical profession in England would seem to show how little room or need there is for this peculiar class of practitioner.

is for this peculiar class of practitioner.

It is perhaps scarcely necessary to carry the argument beyond the medical profession. It has indeed been said that some of these ambitious ladies, recognizing the force of such arguments as we have just been using, have turned their thoughts from physic to the law, and hope to find themselves ero long in Westminster Hall or in Lincoln's Inn, wearing the most becoming of wigs and dressed in the most graceful of robes. A female Solicitor-General, nay, even a pretty junior pleading before the Lord Chief Justice, would be more attractive than even Portia in the Merchant of Venice, and we have no doubt that her plea would be just as likely to be successful. It is obvious, however, that if a lady succeeded at the Bar, she would naturally aspire to the Bench. Nay, more, if we grant an identity of education and of pursuits for men and for women, the claim may be carried eventually to the woolsack itself, and further we cannot go in the law. There still remains the clerical profession, and around it, though not in it, women have no doubt done good and useful work. The Church itself is, however, for the present apparently beyond their hopes. If women, in pursuing a University career, succeed in entering one or other of the learned professions, the result must be the same. They can only partially succeed in the performance of duties which they are not qualified to undertake, whilst they will fail to fulfil those duties for which nature has adapted them. In their own interest women would do well to avoid, not only the slippery paths of frivolity and false excitement, but the rough and rugged road along which some of their strong-minded sisters are seeking to drag them. A woman's bost chance of happiness is in her real place in life, untarnished by silly vanity, undisturbed by mistaken ambition. Sound-minded intelligent women must sooner or later discover that the education which will most fully develop the peculiar faculties of their sex, and enable them to apply those faculties

A HUNDRED A YEAR.

THE increased cost of living has given rise to a class of publications professing to furnish lessons in economical management, of which How to Live on a Hundred a Year, Make a Good Appearance, and Save Money (Ward and Lock), may be taken as a fair example. It purports to be written by a lady, who, as she talls us, with a view to inspire respect and to disabuse our minds of any fear of shabbiness in her system, has seen better days. Her parents occupied a good social position in the middle class of life, and she was "brought up as a lady." She is under the impression that not many people have seen much more of the world than she has, or seen it in better style. "My parents," she says, "kept as good an establishment as most people"; a rather indefinite phrase, which reminds one of the lady who, when she was asked her age, said she supposed it was the same as other people's. "I am fully accustomed to all that wealth can obtain, and I know full well the power of the silver key. The landau, with the pair of high-stepping bays and the liveried servants, were (sic) at one time all at my command, and everything else in accordance." She adds that she has lived in the best hotels in the United Kingdom, and also on the Continent, and "did everything in first-class style, which of course means great expense." She now lives in a little cottage in a country village, but her visiting circle consists of the best people in the neighbourhood, who receive her on an equality with themselves, and none of whom know the depth of her pocket. Her income is only 100% a year, though she expects before long to have 1,000%. In the meantime she makes the smaller sum

supply all that is really essential to a single lady, living a quiet and rather secluded life. She thus describes the distribution of the money. She gives 121. a year for her house, with 11 162. taxes. There is a plot of turf in front of the house and a kitchangarden behind, the walls are covered with ivy, roses, and jamine, and in the winter the place wears, we are told, "the mante of sheltered elegance." A mantle of this kind may be supposed to be quite consistent with the severest economy in a country village, and it would greatly simplify accounts if the lady could only obtain a mantle of elegance for herself on similarly easy terms. There is a small entrance-hall, which is a grand way of describing a passage, on each side a sitting-room (dining and drawing-room), at the end a kitchen, then a brew-house, and upstairs three bedrooms. This is not a dear house at the rent, but no doubt rents are low in country villages. The establishment consists only of the lady and one female servant—a strong and active woman of twenty, to whom she gives 31. a year wages. The mistress took the girl into her service when she was twelve years of age, and trained her entirely herself; and she thinks Mary is now as good a general servant as can be found in these days. It may be that she is a very good servant, but, if so, she is also an unusually cheap one; and the question is how long her mistress expects to keep her. She cannot be always training up servants from twelve years old, and Mary may very naturally wish to better herself. Neither the lady nor the maid ever want for anything in the way of food. They have tea, toast, and cold boiled bacon (being more economical than fried or done they always have a change, if only a change in the way of cooking, and cold meat very seldom. They have vegetables and either pudding or tart every day. The garden supplies a sufficient quantity of fruit and vegetables for use, and something more, which is sold and pays for a holiday trip. When the lady buys a chicken or rabbit, she generally

obligation.

The writer of this manual gives an account of her expenditure, of which we shall have to say something presently, and she also describes what she calls her "general management." She rises at half-past seven; at half-past eight she has her breakfast, after which she goes through her kitchen and larder, and superintends anything which she thinks requires it. She also sees that the maid arranges everything properly for cooking the dinner, which she insists upon being always nicely served, with a clean table-cloth and the things neatly laid. She always trims the lamps herself ready for evening, and does many other little things to herself ready for evening, and does many other little things to help the girl. She also keeps a sharp eye on the coals. The secret of economizing coal, she says, is to have the fires properly made up with one fair-sized lump of coal and some slack. For the kitchen after dinner riddled cinders are used for slack. She has a gardener at all the arms to take cars of the garden and spends a couple of after dinner riddled cinders are used for slack. She has a gardener at 3l. 12s. a year to take care of the garden, and spends a couple of pounds in seeds and manure. Our guide is not extravagant in clothes, but she frankly confesses that she had a very good stock of clothes to start with, and all she has to do is to keep it up by repairs and occasional additions. She requires a new dark dress every year; this costs 10s. She wears it only in the middle of the day, having an old gown for the morning and an old black silk dress for evening wear. In the summer she has one new dress for general wear, but never gives more than 7s. for it. Her dressmaking costs her 10s. never gives more than 7s. for it. Her dressmaking costs her 10s. a year. She has all the work done in the house and assists in it hernever gives more than 7s. for it. Her dressmaning costs ner ice. a year. She has all the work done in the house and assists in it herself. She also has a sewing-machine. Once in three years she has a new black silk dress, which she pays for out of her savings. This is her best dress, and "if," she says, "I am going to a friendly dinner party, or anything that requires something more dressy, I just leave the body of the dress a little way open in front, turn it in, and put on some point-lace, my own work; if more dress than that is required, I wear a black net dress over the silk, and vary it with a change of flowers." "Of course," she adds, "these things are in my stock, as also out-door jackets and shawls." It will be observed, therefore, that she relies in dress to a large extent on the observed, therefore, that she relies in dress to a large extent on the stock in hand. She is very particular about her boots, stockings, and gloves, and pays good prices for them, and here she certainly shows her wisdom. She buys two pairs of new boots every year-one a strong pair, suitable for country wear, made by the village boot-maker, for which he charges 13s., and a pair of town-made boots, at 16s. She spend 11.10s. a year on stockings; a guines on gloves, huying three-and-sixpouny ones, and taking ours to clean and mend them regularly. In the morning she wears coloured colliers and cuffit to three-and-sixpenny ones, and taking care to clean and mend them regularly. In the morning she wears coloured collars and cuffs to save weahing; these cost 5s. One new bonnet a year is enough for benjand for that she gives a pound. She also allows herself a trimmed straw hat, at 18s. She reserves this for visits, and wears an old one at home. She keeps up her supply of lines by buying 7s, 6d, worth of calico and making it up herself. She also works subtroidery to well that are now come to the annual balance-sheet, in which papers was in fact a reserved to the papers was in fact a reserved to the bitual discount of the benefit when the bitual discount of the benefit we was a fact of the second to the fact of the benefit was a fact of the second to be supplying the benefit was a fact of the second to be allowance; but 2s. 3s. for butter, a shilling for eggs, and a shilling for milk are clearly insufficient, especially as there are frequent puddings; and so is three shillings for beer, if beer is taken requirely. Three shillings worth of wine may do very wall for such a household, especially when supplemented with half-a-crown's worth of brandy. The various items, including rent and wages, run up, as we stated, to 73k 10s. 6d. a year, and the garden, dress, fiannel, subscriptions to charities (2k), &c., make a total of 92k. 18s. 6d., leaving a balance of 7k. 1s. 6d. It should be stated that on this expenditure the lady also professes to be able to provide soup every week for some of her poor neighbours.

It is perhaps scarcely necessary to inquire too curiously into the actual existence of this sage and economical spinster, but there is no difficulty in conceiving the possibility of a person in such circumstances making 100k suffice, or at least nearly suffice, for her wants. Some of the estimated expenses are clearly inadequate, and various expenses are omitted, such as the cost of breakages,

and various expenses are omitted, such as the cost of break and various expenses are omitted, such as the cost of breakages, house linen, umbrellas, parasols, and other little things. Still there are some items on the other side which might perhaps be reduced or dispensed with; and, on the whole, we are quite ready to believe that any single woman who chose to lead such a life could do it for the money. Indeed the only thing that surprises us is that there should be thought to be anything wonderful in such a feat. Everything, it will be seen, turns on the conditions assumed. This is the case of a single lady of simple and inexpensive tastes who lives in a quiet out-of-the-way village, and spends most of her time looking after out-of-the-way village, and spends most of her time looking after her house, doing a considerable share of the house work with her own hands, and assisting the servant by close and continuous supervision. It should also be observed that she starts with peculiar advantages. She has a large stock of clothes, and she has peculiar advantages. She has a large stock of clothes, and she has a servant whom she has trained from a child, and who, out of gratitude, is supposed to submit to all her plans and orders, and to be content with 8l. a year. She is established in a place where provisions are cheap, where the scale of living is extremely simple and homely, and where there is not much temptation, and indeed not much opportunity, to spend money. Her list of expenses includes absolutely nothing for literature, not even a newapaper, or for postage, or stationery, or for conveyances of any kind. We are told that she visits the best families in the neighbourhood, but it must be supposed that when she goes out to dinner, she but it must be supposed that when she goes out to dinner, she walks through the mud or gets a lift from a charitable carter. weak point of the whole scheme is in the exceptional circumstances under which it is supposed to be carried out. There is no difficulty in a single woman in a country village making a decent appearance and saving money out of 100l. a year under the conditions here suggested; and we should imagine that with a little pinching and ingenuity it might even be done for less. But these are not the sort of persons who are especially in need of guidance; and we do not see how such a precedent is likely to help the very differently situated people who really want help in this respect—people who have families to feed, clothe, and educate, and who have to live in towns where rent is high and food dear, and conveyances cannot be altogether dispensed with, and where maid-servants are not exactly grateful angels at 8t. a year. The truth is that there is no magic secret of economy to be unfolded. As a rule, everybody must pay pretty much the same prices as other people for what he has, and the really essential questions are these—what one can do for oneself, and what one can do without. The only safe general principle to follow in regard to living within one's means is simply not to buy anything without having money to pay for it. Absolute necessaries must of course be provided first, and other things must take their chance. Food is more important than clothes, and it is better to go ragged than starving. On the other hand, it is better to wait on oneself than to sacrifice either food or decent clothing. As a rule, elaborate schemes for making money go a long way, however pretty in theory, are apt to break down in execution, or else take so much trouble to carry out that it would be easier to earn by regular work more than is saved. It is safer to begin by reducing one's wants to the lowest possible point than to trust to any magical contrivance for making a shilling do duty for eighteenpence; only when economy comes to be merely doing without things which one cannot afford to pay for, it seems commonplace as philosophy, though it may be hard to practise. One very obvious form of saving, however, is not to waste money on useless manuals of household management.

LAW, HISTORY, AND SIR WILLIAM HARCOURT.

WHEN the Times represented the Bishop of Lincoln as W arguing in the Upper House of Convocation in defence of the Eucharistic vestments that they served to remind the con-gregation of the Reformers, and of the blood which they had shed in defence of their principles, all sensible people of course. defence of their principles, all sensible people of course at once took for granted that there was no sort of occasion for the Bishop to for granted that there was no sort of occasion for the Bishop to take any notice of so ridiculous a statement. It was indeed said that the Bishop spoke in a tone of voice scarcely audible; but probably few people beyond the staff of writers in the Times are so hopelessly ignorant of ecclesiastical matters as not to have seen able to understand the Bishop been appeared to toth inst.; in the state of the political life as well as in literature to toth inst.; in the state of the state

the same kind of defence which has been applied to the observations attributed to Bishop Wordsworth. Unfortunately, hir William Harcourt has precluded himself from the beacht of any such defence by his letter to the Times on the following day, in which he objects to certain expressions which had been attributed to him in the report of his speech on Thursday night. Whilst, therefore, we entirely acquit him of the charge of having said or implied what he denies in that letter—and indeed we are quite glad to think that so distinguished a member of the House did not really suppose that Laud lived in the reign of Charles II.—we are nevertheless constrained to observe that, if he is acquainted with the history of the times of Laud and Charles I., he is most lamentably ignorant both of the history and principles of the Reformation of the sixteenth century, and of the ecclesiastical legislation of the date of the Restoration. It would seem moreover that there were a good many members of the House of Commons in the same boat with the ex-Solicitor-General; for the more the same kind of defence which has been applied to the of mons in the same boat with the ex-Solicitor-tieneral; for the more ridiculous his blunders the more vociferous was the applause amongst the raw recruits of the House, if we may speak in so disrespectful a manner of those members who hardly appear to us

We do not remember ever having road a speech in which so many assertions were made or propositions implied which were so distinctly at variance with fact. Sir William Harcourt, though he does not know much of the principles or the history of the Reformation, ought at least to know that the National Church was not founded by Cranmer or in the sixteenth century at all, but that, having had a continuous existence for many previous centuries, it survived the shock of the sixteenth century, and in 1661 reversed to a very considerable extent the doctrines which had had a shortlived existence of a few months at the conclusion of the reign of Edward VI. These doctrines had indeed been put forth, but they had scarcely anywhere been acted upon, and much of them disappeared for ever at the accession of Mary. Perhaps Sir W. Harcourt will at some future time condescend to explain what represents the property of the National Church was what were the principles upon which the National Church was founded in the sixteenth century; from what books he learned that Archbishop Cranner was the "great author of the Reformation"; and what evidence there is to show that the Ireface to the Liturgy of the Church of England came from the Archbishop's Further, we should be glad to know on what occasion "the national will upon which the National Church was founded " was expressed, and which of the hundred varieties in the form and manner of ordering Divine Service which have co-existed for 212 years pretty much undisturbed may be supposed to represent the national will. The nation does not seem to have had its own way exactly if it wanted to have the Athanasian Creed recited in every church thirteen times in the year; nor has it been signally successful in getting the Acts of Uniformity enforced in the daily saying of Matins and Evensong in the churches of the country; and we think we may presume that, in spite of his new-born zoal for Acts of Uniformity, and his cloquent denunciation of those who desert the principles of the Reformation, Sir William has but little hopomall we say also but a faint wish?—to restore these long-forgotten enactments of the Act of Uniformity, and to insist upon the strictest obedience to the letter of the law. It may appear to some that "that freedom and that comprehensiveness" which we are told are to be sought in "the breadth of the formularies and in the tolerance of the Creed" require some qualification. No one, we should think, excepting Sir W. Harcourt, and perhaps not he in his cooler moments, would assert that the Athanasian Creed was the peculiar property of the Church of England, specially distinguished by its intentional "tolerance," whatever that term may mean in relation to a creed, which we always imagined implied a declaration of that which a man believed for himself, and not what he bore in another. As regards formularies it may be supposed of that a mobile another. As regards formularies, it may be suggested that a rubric which ties the clergy to the daily recitation of Matins and Evensong leaves them no great amount of freedom to omit them, and certainly does not seem to be comprehensive enough to justify the great majority of clergy whose churches are closed and their doors barred from Sunday to Sunday

It will scarcely be pretended, then, that the "successive Acts of Uniformity on which the Church of England was founded" have ever produced any uniformity of practice. There was, therefore, the less excuse for Sir William Harcourt's entire misrepresentation of Mr. Gladstone, who pleaded distinctly in favour of such diversity being permitted as has been practised with impunity for more than two centuries, and who had as distinctly avowed his desire in two of two centuries, and who had as distinctly avoiced in state in two or his resolutions to provide against any departure from 'sw' which may give evidence of a design to alter the spirit of the Established Religion," and to also protect "members of the Church against arbitrary changes made by the sole will of the clergyman." But Sir William's new statements are not confined to the high road of his speech. His obiter dicta, like Gibbon's celebrated innuendoes, are even more telling because they are indirect. Thus, wh accusing Mr. Gladstone of sanctioning everything which priest and congregation together should desire, he added that he was bound to say that a great many clergymen introduced these changes without the consent of their parishioners. Now this is precisely the statement upon which every article which has apprecisely the statement upon which every article which has appeared in the Times on this subject has been based—namely, that the present state of things has been brought about by clergymen acting in defiance of the wishes of their congregations; whereas the contrary is so notoriously the case that perhaps it would be impossible to find a single church in England where the majority of worshippers at each service was not distinctly in favour of the

practices adopted, and in nearly every instance have supplied the means to enable them to be carried out.

But we have yet to notice the most fatal of all the blunders of the ex-Solicitor-General. It is alike a blunder in law and in history. No one knows better than Sir W. Harcourt that the believe made the lithunged VI without the believe of Comparting changes made by Edward VI. without the help of Convocation, and those made by Edward with its concurrence, are nikil ad rem. because there has been a subsequent Act of Uniformity which overrides all that preceded it, enforcing some parts and abrogating overrides all that preceded it, enforcing some parts and abrogating others in such a way that there is no occasion now to refer to anything anterior to the date of 1661 except for the purpose of explaining what the enactments of 1661 mean. And how does an ex-Solicitor-General venture to treat the last great and decisive change of 1661—made—whether people may like it or not, by Parliament, with the sanction of Convocation—in the Prayer-Book of the Church of England? He simply declines to go for ecclesiastical principles to the period which is the only possible period to which reference can be made for the existing law. And at this point we are obliged to quit the Times, which we have hitherto taken for our guide through the intricacies of Sir W. Harcourt's speech, for here occurs the blunder about Laud and Charles II. which the speaker has disclaimed. After reminding our readers that it is the Times, and not Sir W. Harcourt, who is responsible for the statement that Archbishop Laud's ecclesiastical policy was equalled only by the corruption of his private manners, we proceed to observe that the divines of the Savoy Conference, who in 1661 remodelled the English Prayer-Book and made it what it is at the present moment, certainly inherited the traditions of Laud's ecclesiastical policy, and as certainly were not very tolerant of opposition either in an Independent or Presbyterian sense. We are not careful to defend them from the charge of following the corruption of his private morals. But here we at last light upon a fact of history about which, we are heavy to say, we are entirely accred with Sir others in such a way that there is no occasion now to refer to any private morals. But here we at last light upon a fact of history about which, we are happy to say, we are entirely agreed with Sir William. He tells us "It was not in the time of Charles II. that the Reformation was established in England." But then we should like very much to know when it was established. According to what we can make out of the ex-Solicitor-General's view, after declining to accept the settlement which nobody else disputes was made at the Restoration, he falls back upon the Prayer-Book of Elizabeth as remodelled by Cecil. What charm this particular period may possess, and why it should be adopted in preference to the reformed Second Prayer-Book, which went a good deal further the reformed Second Prayer-Book, which went a good deal further than Elizabeth's did in the direction of Zwinglianism and Calvinism, we are quite at a loss to determine. The Second Prayer-Book of Edward VI. would have suited the "principles of the Deformation" much better, whilst the Prayer-Book of 1662 can in no way be made to suit those principles without putting a strain upon its language which it will hardly bear, and interpreting the opinions of its framers, acting inder the guidance of Archbishop Sheldon, in exact contradiction to all that they are known to have held. What, it may be asked, is there in the law or the history of the Church of England that should entitle the sixteenth-century disturbances of the reigns of Edward and Elizabeth to be cited as a precedent in preference either to periods of to be cited as a precedent in preference either to periods of the legislation or to that later period from which the present law of the land is derived, according to which all ecclesiastical judgments must of necessity proceed? If the Church was founded by Henry VIII. and Cranmer, as Sir William Harcourt seems to think, he can scarcely profess to believe that what they did was either final in point of fact or on any reasonable grounds entitled to hold its ground against subsequent enactments of law. If, on the other hand, the Established Church has remained the same in ossence as she has always been, a plea can be put in for ancient practices and regulations, unless they have been specially forbiddon or abrogated.

Throughout his speech Sir W. Harcourt seems to have had some misgiving about his favourite Acts of Uniformity and their rigid enforcement. And so he does not scruple to provide for the case of their failing, just as if it were at all doubtful whether under present circumstances uniformity could be rigidly enforced. He seems to say, Let us pass this measure for the rigid enforcement of the law, and there will be a dead lock, which you may proceed to remedy by legislation. It would surely be more statesmanlike and prudent to admit that, if it is intended to enforce strict uniformity, which we ourselves think by no means desirable, it would be well to try first what can be done in the way of laying down the law, to try first what can be done in the way of laying down the law, and then to invent easy methods of enforcing the new laws which may have been made. But, unfortunately, that would not serve the purpose of stealing a march upon the clergy and enforcing an already exploded judgment of the Supreme Court of Appeal against those who, as is gradually being found out, have the law on their side for most of the practices for which they have been condemned by public opinion.

Lastly, one word about the optional uniformity against which Sir W. Harcourt inveighs. He quotes the Preface to the Liverne

Lastly, one word about the optional uniformity against which Sir W. Harcourt inveighs. He quotes the Preface to the Liveryy (by the way, he seems to be of opinion that Liturgy and Prayer-Book are synonymous terms, and here perhaps he may claim the sanction of the so-called first Protestant Archbishop of Canterbury), sanction of the so-called first Protestant Archbishop of Canterbury), and enlarges on the One Use that is henceforth to prevail in lieu. of the diversity of Salisbury, Hereford, Bangor, York, and Lincoln usege. It may fairly be doubted whether at any period since these words were written there has ever been as much uniformity in the offices of the Church as there was when those different Besvizzies and Missals were in use; but unquestionably, if we are to go to the opinions of those who remodelled the service as now

arranged by the Act of Uniformity, they themselves never to tended that it should be rigidly enforced. Witness the Ornament Rubric, which they altered and reinserted for the express purpose of encouraging the use of Eucharistic Vestments, though they reserved to themselves the power of dispensing with their use in their own persons and those of the inferior clergy. And this they did because they knew that in the prevailing state of Puritamianit was hopeless to expect them to be universally wors. This tack dispensing noiser is all that can be elleved in favour of their noise. it was hopeless to expect them to be universally wors. This tack dispensing power is all that can be alleged in favour of their non-usage, and this must exist, although Sir W. Harcourt is against that particular provision of the Bill which allows the bishop any dispensing power at all. It is, in fact, this allowance of discretion in bishops which ought to have determined him to oppose the Bill altogether, unless he is prepared to propose a resolution when the Bill is in Committee to abolish the provision, and to force the bishops to entertain every complaint which is made against a priest by any three cantankorous parishioners. We are not, however, concerned any further with his intentions. We trust that, before he makes another speech on the subject, he will make himself acquainted with the speech on the subject, he will make himself acquainted with the history of the Church of England, and notably with that part of it which is included between the periods of the divorce of Catharine of Aragon and the Restoration of Charles II.

THE FLYING MAN.

IT is perhaps rather hard that all the blame for the death of the "flying man" should be laid upon the lesses of Cremorne Gardens, who undertook only for his ascent, and had nothing to do with his fatal fall. If indeed the lessee had advertised that a man would fall three hundred feet and be killed in the Gardons, he would, we fall three hundred feet and be killed in the Gardens, he would, we suppose, have been able to sell many tickets at a high price. But this entertainment was offered equally to the whole of London and its suburbs, and the intention of the "flying man" was to descend into the river. The proximity of Oremorne Gardensmay be considered by many persons as an evil, but it can hardly be said that this occurrence furnishes any special argument for closing them. It is true that the people who go to see these perilous attempts indulge a brutal and morbid taste; but the ascent of a balloon has long been regarded as an ordinary incident of an outdoor fête, and if experiments are to be made in "flying" down, it will be necessary first to go up. The question how far such experiments should be allowed is difficult, and clearness of thought is not likely to be difficult, and clearness of thought is not likely to be proposed by mixing up with it the question whether Oremorne Charder a not a runance to the neighbourhood. We have entire disbelief in all projects for constructing an aerial machine "as a safe adjunct to man's necessities," but, at the same time, we heartily concur with the Secretary of the Aeronautical Society. who recommends that any such machine should possess the power to ascend from the ground before it be trusted to descend. This advice resembles that of the mother to her son, that he should never yo into the water until he had learned to swim. If M. de Groof had been advertised to fly upwards, we doubt whether he would have brought much money to Cremorne. A Society whose members undertake to fall no further than they can rise by their own exertions is not likely to evoke much excitement out of its transactions. We believe that experiexcitement out of its transactions. We believe that experiments sunctioned by this Society have been sometimes made at the Crystal Palace, and the useful results if any, have probably not affected the treasury of that establishment. We remember to have read that a member of this Society had imitated to his own satisfaction the hopping of a had initiated to his own satisfaction the hopping of a bird, and he doubtless expected, by further perseverance in the same method, to be able to fly, but we have never heard that he had succeeded. It appears that a public meeting is to be held to devise means for putting a stop to such dangerous exhibitions as that of M. de Groof; but as poor M. de Groof himself has been put a stop to it means scercely processor to discuss the exhibitions as that of M. de creot; but as poor M. de creot himself has been put a stop to, it seems scarcely necessary to discuss the subject further. The next enthusiast who risks his life in public will doubtless proceed in an entirely new manner. As Parliament happens to be sitting, a question was of course asked upon this subject, and it belongs to that large class of questions which are more easily asked than answered.

It would be difficult to define the circumstances under which the desire of interference with proposed exhibitions as decreases.

the duty of interference with proposed exhibitions as dangerous should arise. The same question has arisen in reference to ropewalkers and trapezists; and it might be observed that persons go on the Thames every Sunday who are innocent alike of aminaming and of the smallest capacity for managing a boat, and persons also go out on shooting parties who under no circumstances could be safely trusted with a gun. It may be conceded that there is a degree of madness which would justify interference without any special law. Thus, suppose that a man were to minounce that he would jump off the Duke of York's Column in expectation of being miraculously supported, there would be no difficulty in dealing with him. In the case of the Groof mechanical support was relied on, and the notion can havely be altogether about, because Mr. Simmons, the belloomist, street that the first time his took up M. de Groof he did descent analy, and actually assisted as securing he halloon when it followed him to the ground. Doubtless then the Taying was amounted many persons repected that, sooner or the would have his needs. And the same expectation with probably entertained comand of the smallest capacity for managing a boat, and person

Realize was precipitated to the seath by the hearting of his balloon and periods, it would have been easy, if he had seemed from the mightourhood by the proximity of those gardens. A "Resident Householder," who writes he the Times, wridently request the secont and this of "the inflatest and the of the inflatest and the of the inflatest and documed performer" as one performer man one performer are one performer as one performer as one performer as one performer as one performer and the of the inflatest and documed performer" as one performer man serion of that, owing to the peculiar condition of the atmosphere, the balloon would not rice. He had been told that his own, heart mile from the Gardone) narrowly escaped with its roof, and that the conversation between the occupant of the balloon and the "flying man" could be distinctly heard, discussing what was to be done. The cord was cut; the balloon shot upwards; the man fall like a stone and was killed. "Here," he says, "is a spectacle mere brutal and demoralizing than any presented to a Pagan people in a Roman amphitheatre." One cannot help suspecting that some part of this virtuous indignation is due to the general umplessantness of Cremorne. We have some of us perfage experienced the sensation of our next-door neighbour giving a ball to which we are not invited. This is the sensation of the "Resident Householder" throughout the Cremorne season, with the additional aggravation that his principles would not allow him to go to the ball even if he were invited. We are reminded of the copious evidence given in favour of early closing of public-houses by those who never enter them. Oremorne was not designed for the amusement of householders in the neighbourhood, and, deal with it how you will, it is and must be a nuisance to those who live near it but do not frequent it. The lesses doubtless endeavours so to conduct it as to avoid magisterial cansure, and he probably believes that by balloon seconts and otherwise he provides intellectual recreation for the people. H

the chimney-pots of Chelsea.

It is difficult to draw the line in words between the feelhardiness which we condemn and the courage to which we ascribe valuable results. An experienced and successful aeronaut, Mr. Glaisher, has expressed the opinion that the balloon should be received only as the first principle of some aerial instrument which remains to be suggested. It must be acknowledged that recent attempts to improve upon the balloon by various forms of flying-machines have failed to obtain confidence and have largely incurred ridicule. A parallel may be drawn between the use of balloons and other machines, and those mountaineering expeditions which were originally undertaken with the same object of testing the conditions of the atmosphere at various heights above see level. The ascent of Mont Blanc by M. de Saussure was made with this object, and it was regarded as a daring and wonderful exploit. If he had failed disastrously, as was possible, he would have been reckoned in the class which now comprises the unfortunate M. de Groof. But M. de Carea de Ca Sausaure's feat may be imitated by any visitor to Switzerland who chooses his time well and exerts a fair amount of energy. The construction and management of balloons is now well understood, and we are apt to forget that this comparative safety has been purchased by the deaths of some aeronauta and the hair-breadth escapes of others. In 1803 Count Zambeccari's balloon fell into escapes of others. In 1803 Count Zambeccari's balloon fell into the sea, and he was only saved from drowning by a passing ship. In 1812 his balloon caught in a tree and took fire, and the Count leaped out and was killed. Speaking of the bursting of a balloon, which happened more than once in early times, and might happen now, Mr. Glaisher says that "it is not an inevitable result that every one must be dashed to pieces." The canvas, torn and rent, acts as the mainsail of a ship, and the balloon gyrates through the air in falling. In consideration of his own and other authenticated experiences Mr. Glaisher allows that certain early Italian macronauts might have survived the catastrophe of their machines. But then they might not. In 1812 Mr. Sadler ascended at Dublin to cross to Liverpool, descended into the sea, and was saved from drowning by a ship. Mr. Sadler junior ascended from the Green Park, and nearly lost his life from intense cold affecting the working of the balloon. Mr. Green descended into the sea near Sheerness, grappled the balloon to a sunken rock, and was picked up by a boat. M. Tissandier had a narrow escape from drowning in his first ascent, which he made in company with an experienced aeronaut, M. Duruf, and an assistant. They ascended from Calais, had gone far out to sea, and by good fortune got tack to land, and were preparing to descend, when M. Tissandier, being a novice, threw out too much ballard, and they rose instantly. After some time they heard a vague nummur below the douada, and allowing a little gas to escape, they descended slightly, and discovered an immense assessed the cause of sea. The sun was esting, the breezed assist them towards a same, and the question of life or death was winther the balloon would seach this cape or be carried inyoud its antismes anxiety, sa, and he was only saved from drowning by a passing ship.

for all depended upon our reaching the side of the cope, and in spite of all my efforts, the idea of a tragical death rose visibly to may thoughts." But the balloon touched the cape, and M. The sandier lived to become a distinguished account. Yet, lied he and his companious parished on that day, the verdict of Calain would have been that it served them right. They descended at Cape Grisnez Lighthouse, near the appt where Pilêtre de Rosier was deshed to views among the works a continue before

deshed to pieces among the rocks a century before.

It is not easy to see why M. Tissandier should be a here and M. de Groof a "wetched, rach, intruding fool." We have small belief in the practicability of any flying-machine; but it is certain that no success can be attained in such experiments without incurring the same risks as attended early voyages in balloons. It appears, indeed, that M. de Groof's machine had been imperfectly tested, and we are not sware that any person headed himself believed that it would be successful. But it is rather hard to condemn him as a sordid adventurer because he happened to go up from Cremorns. If he had gone up from the Crystal Palace, and the public mind had been properly prepared, he might have been regarded as a victim in the cause of aeronautic science. However the poor man would have been dead all the same.

THE SWISS FEDERAL COURT.

IN the late debates on the reform of the Swiss Federal Constitu-tion one of the things which to a foreigner seemed most in Leton one of the things which to a foreigner seemed most in need of reform was the infarior position and the narrow range of powers given to the highest Federal Court, as compared both with the highest Courts in England and with the tribunal which of course most strictly answers to the Swiss Court, the Suprama Court of the United States. Without going largely into detail, two points at once struck the observer from outsids. One was that, while English judges and the judges of the American Suprama Court are avointed by the Eventure revers for Big or for good Court are appointed by the Executive power for life or for good behaviour, the Swiss Federal judges were, like the Federal Council, chosen by the Federal Assembly for the three years of its own being. The other point was that a great number of questions which, according to either English or American ideas, were simply matters for a judge and a jury, were brought by way of appeal before the Legislature and the Executive Government of the Confederation. The tendency both of the debates and of the changes in the Federal Constitution which were actually voted looked in the direction of reform in both these points, though the arrangement of details was left to be settled by the Assembly in the course of ordinary Federal legislation. We have now before us two Acts of the Federal Assembly, of June 26 and 27, in which we see the way in which they have exercised the powers just confured upon them. By one of these laws it is decread that the sittings of the Federal Court shall be held at Lausanne. This is of course a fair concession to the feelings of the Homance Cantons. As the Executive and Legislative branches of the Federal power are permanently fixed on German ground, it is not unreasonable that the third, the Judicial branch, should be fixed on Remance ground. Lausanne, as the representative of the Romance Cantons, as the most centrally placed among their chief towns, is thus raised to something like a share in the honours of a Federal This concession is clearly meant as a disclaimer of any over-centralizing tendencies, and especially of any claim of superiority in the German element over the Romance. The other law deals with the graver questions of the constitution and attributes of the Court; but this, too, cannot avoid dealing with geographical matters. And we cannot keep down a certain feeling perhaps not even a slight pang, at seeing the territory of the Confederation divided for judicial purposes into five arrandissements d'assises, which do not in all cases follow the boundaries of the Cantons. Language is taken as the test, and we thus get three German divisions and two Romance, those two last naturally being one Burgundian and one Italian. Some of these divisions are instructive; with Geneva, Vand, and Neutchitel are grouped the Romance-speaking parts of Freiburg, Wallis, and Bern—that is to say, the piece of Savoy which was conquered by the League of Wallis in the sixteenth century, and the Bishopic of Basel, which was hold much in 1814 to the league bear sinches. we hold ought in 1814-15 to have been made a separate Canton instead of being added to Bern- are now, for the purposes of the Federal Court, to be joined on to the lands with which they have a more natural connexion. The other Romance division is formed by the one Canton of Ticino and the Italian-speaking part of Graubinden. The three German divisions suggest little Graubunden. The three for mention, except that, almost for the first time in their lives, the three primitive Cantons are parted, and Uri appears strangely divorced from Schwyz and Unterwalden. In Switzerland, as everywhere else, it is hard to make a new administrative divi (M) without sometimes painfully running counter to, sometimes calling into new life, some earlier geographical landmark whose historic meaning has often been forgotten.

But the weightier matters of the new law are those which deal with the constitution and function of the Court. The old Federal Constitution fixed the number of judges and their mode of appointment; the new Constitution leaves both these points to ordinary Federal legislation. It was therefore within the power of the Assembly to have decreed that the judges should be appointed after the English and American precedent, appointed, that is, for life or good lishaviour by the nomination of the Executive power. This of course in Switzerland would mean that the

judges should be elected by the Federal Council. Instead of this, the new law still gives the election of the judges to the Federal Assembly, and as for their term of office, it simply extends it from three years are longer than six, and also because something is gained by the mere fact that the tribunal will outlive the Assembly which elected it, and therefore will no longer seem to be in the same way its mere creation and shadow. So again, though it is hard to see why the President and Vice-President of the Court should be chosen from among its members for two years by the Federal Assembly, the term of two years is better than either one or three, inasmuch as it cuts into the life of two successive Assemblies. This provision would seem to be imitated from the existing rule with regard to the yearly election of the President and Vice-President of the Confederation. But then steps in the all-important difference between the executive magistrate and the judge. After all, though the new law has not magistrate and the judge. After all, though the new law has not hit on the best way of appointing judges, yet neither has it hit on the worst. The new law does not innovate in the direction in which all the talk about veto and referendum might have made us fear that it would. Election of judges by the Assembly is at any rate better than the direct popular election common in the State Courts of America. Still one might have hoped that improvement would have gone much further; but it would seem that one of the ideas have gone much further; but it would seem that one of the ideas which appear to be most peculiar to England and to America, wherever America has kept to it, is the necessity of giving the judges a dignified and independent position, securing them in the tenure of their office in every case, except that of proved misconduct. Something however has been done towards securing the independence of the judges in another way. By the old Constitution the members of the Federal Council could not be at the same time members of the Federal Court, but members of the Federal Assembly might be. Members of the Assembly are excluded by the new Constitution; and one or two further disqualifications are brought in by the new Federal law. Two persons cannot be judges at the same time, if they be of kin to one disqualifications are brought in by the new Federal law. Two persons cannot be judges at the same time, if they be of kin to one another in any degree of direct descent—say great-grandfather and great-grandson—or collaterally up to the degree of first cousin. And the disqualification extends not only to kindred, but to affinity within the same degrees, and even to one case where there is neither kindred nor affinity. It extends to the case where two men chance to have married sisters; and the law goes so far as to decree, that if a judge should marry the sister of another judge's wife, he is at once to lose his office. It is further provided that the judge may not act in any case in which any person connected with him in any of these degrees has a direct or an indirect interest. And in this case the list is enlarged by adding causes in which the wife and—hard-hearted legislators will provide for every contingency—the betrothed of the judge shall have an interest. All this seems amusing to us, as these are all points which we are accustomed to see, not ruled by law, but left to the good sense and the good feeling of those concerned; and people have been found heartless enough to suggest that the reason why a judge is forbidden to act in a case in which the mother or sister judge is forbidden to act in a case in which the mother or sister of his wife is concerned must be the strong temptation under which he would lie to decide against her. But all these restrictions breathe in its fulnage the spirit of the small ancient Common wealth in which the feeling of kindred has in all times and places played so great a part. It is of a piece with the law of Uri which decrees that a proposed change in the law can be taken into consideration or law to the law can be taken into consideration or law to the law can be taken into consideration or law to the law can be taken into consideration or law to the law can be taken into consideration or law to the law can be taken into consideration or law to the law can be taken into consideration or law to the law can be taken into consideration. decrees that a proposed change in the law can be taken into consideration only when it is proposed by seven men of as many distinct families. And not so many years ago there were Courts in England, though not Courts of Common Law, in which all concerned, judges and counsel and everybody, made up so much of a family party that such a law as that which has just been passed in Switzerland might not have been altogether useless. And a further clause, which forbids a judge to act in any case which touches any body of which he is a member ("une personne morale à laquelle il appartient"), might be contrasted with the anomaly of our own law which constantly makes Justices of the Peace deal with acts of Poor-law or Highway Boards of which they deal with acts of Poor-law or Highway Boards of which they are themselves members.

The new law makes a great improvement by considerably enlarging the powers of the Federal Court, though, according to English ideas, it would have been well to enlarge them still further at the expense of anomalous powers which have been exercised by the Assembly. By the old Constitution, the attributes of the Court, as a tribunal judging between Canton and Canton and between the Confederation and one or more Cantons, were very narrowly restricted. Such cases were brought before it only through the Federal Council, which was to decide whether the matter came within its own competence or within that of the Court, and it was expressly said that the Court entertained such questions only "pour autant qu'ils ne touchent pas le droit public." By the new constitution the Federal Court is expressly authorized to decide differences between the Confederation and a Canton, and differences between Cantons "lorsque ces différences sont du domaine du droit public." The Court is to judge in cases of extradition whenever the application of the treaty with the foreign power is disputed. And it would seem that a great many of the complaints made by individuals and corporations against the authorities of their own Cantons, which have hitherto been brought before the Federal Council and Assembly under cover of the legal faction that they are breaches of a Constitution guaranteed by the Confederation, will now come before the Court.

come under the clause of the new Constitution which assigns to the Federal Court "les réclamations pour violation du droit constitutionnel des citoyens, ainsi que les réclamations des particulters pour violation de consordat on de traité." But by virtue of the next clause of the Constitution—" sont réservées les contestations administratives à déterminer par la législation fédérale"—the new law still assigns to the Assembly the hearing of a large class of appeals. One class is specially to be noticed, both in the rule and in the exception:—

Concernant la liberté de conscience et de croyance et de libre exercice des cultes, etc., restent néanmoins dans la compétence du Tribunal Féléral, les contestations relatives aux impôts et les contestations de droit privé suxquelles donne lieu la création de communautés religieuses nouvelles on une scission de communautés religieuses existantes.

On the whole, both the clauses in the new Constitution and that law founded upon them are decided steps in advance. Still we might have hoped that yet further steps might have been taken, especially as the terms of the Constitution left it open to the Assembly to decree as it might think good on the important points of the way of appointing judges and the duration of their office.

THE MIDLAND RAILWAY AND POOR EVICTIONS.

CORRESPONDENCE between the Home Office and the Solicitors to the Midland Railway Company which has just been presented to the House of Commons affords a convenient illustration of the spirit in which the clearances of which there have been so many in London of late years have been carried out. The Midland Company are greatly in need of land on which to extend their St. Pancras Station. Every yard of available space which they possess is occupied, and their traffic, in goods especially, is rapidly increasing. Under these circumstances the ordinary course would have been to apply to Parliament for compulsory powers to buy the land they want, but the Directors preferred to limit their application to powers to purchase the property in question by agreement, "as they did not intend to pull down the houses or evict the population, but simply desired to purchase such interests as the owners were willing and desirous to sell." Read in the light of the Chairman's statement as to the wants of the Company in the matter of land, it is a little hard to understand the moderation of the Company's wishes. If no houses were to be pulled down, and no tenants evicted, how were the Company to be the better by their possession of this property? The philanthropic pleasure of looking after poor of this property? The philanthropic pleasure of looking after poor tenants can hardly have been in their minds, and yet without some ruder process than that of simply buying up such interests as the owners were willing to sell, the land must have been useless to them for any other purpose. The question must remain in effectiantly since, owing to objections raised to the form of the application, the clause was withdrawn from the Bill with a view, it is stated, to applying for compulsory powers next Session. This withdrawal is perhaps of less importance than may appear, inasmuch as the Company had already acquired the freehold of the property and purchased some of the leasehold interests, but, "with the desire to reduce to a minimum the inconvenience to be caused by the eventual demolition of the property," the Directors "had given instructions to their agent not to evict any tenants, or serve any notices to quit, or take any proof this property? property, the Directors had given instructions to their agent not to evict any tenants, or serve any notices to quit, or take any proceedings to recover rents in arrears, but at the same time not to re-let houses voluntarily quitted." If this policy had been persevered in long enough, there would have been no need to apply for any further powers of dealing with the houses. Though the accommodation available for the poor in London is very much less than it ought to be, there is a constant inter-migration going on between different parts of it. Change of work and other circumstances make change of place necessary or convenient, and a certain proportion of houses in any given area are sure to fall vacant every year. Consequently, a resolution not to re-let houses voluntarily quitted year. Consequently, a resolution not to re-let houses voluntarily quitted would of itself have brought the larger part of the property into the Directors' hands, though the process might have taken some time to work out. The instruction not to take proceedings to recover rents in arrear would have had a swifter operation. Some of the tenants would very soon have got behindhand in their payments, and as the fact that they were not molested became known, their and as the fact that they were not molested became known, their numbers would have increased at a rate which would shortly have placed every tenant on the property absolutely at the mercy of the Directors. Fortunately Sir Sydney Waterlow came to their rescue, and, by dint of invoking the Home Office, succeeded drawing from the Directors an assurance that the property will not be dealt with until Parliament shall determine to what extent the Company shall be subject to conditions for appropriating a portion of the land taken by them as sites for the erection of houses for the working class

The first reflection suggested by this correspondence is the necessity of some definitive provision applicable to all cases in which the help of Parliament is asked to enforce clearances of land in large towns. This necessity rests on a plain principle of justice. In all applications of this sort Parliament is asked to go out of its way to benefit a particular interest, which in this case is a Railway Company and the traders who use the line for the carriage of their goods. The Midhaid Company, if it had more space at its disposal, could convey more goods, could convey them at a cheaper rate. This additional traffic would put more money into the pockets of the shareholders, and

the owners of the goods conveyed would resp their share of the henefit in the shape of quicker returns and larger orders. Indirectly, the consumer; that is, the community at large, would also be the better for it, and this last consideration makes the question a very proper one for Parliament to entertain. But even the good of the community must not be promoted at the exclusive cost of a single member or class of members. Northumberland House has been taken away from its owner because the interest of the public is supposed to demand that there and nowhere else there should single member or class of members. Northumberland House has been taken away from its owner because the interest of the public is supposed to demand that there and nowhere else there should be a street opening out upon the Thames Embankment. But no one proposed that the Duke of Northumberland should make a present of his house to the Metropolitan Board of Works; on the contrary, every London ratepayer will pay his halfpenny in the pound, or whatever the percentage may be, towards the cost of buying it. In brdinary cases the question of compensation is capable of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to the class of being reduced to money; but when we get down to take Belgrave Square for a goods station there would be no difficulty in coming to terms with the owners or the occupiers of the houses pulled down. The former would be paid the fair value of their property, the latter would have no difficulty in finding houses elsewhere, or if they had any difficulty in this respect, landowners and builders by the dozen would be ready to help them. But when the land taken is covered with small houses, each perhaps inhabited by several families, the situation is wholly changed. The owners of the houses in Belgrave Square would be dealt with; but The owners of the houses no doubt can be dealt with just as the owners of the houses in Belgrave Square would be dealt with; but what is to be done about the tenants? So far as money goes the matter is simple enough. They pay their rent weekly, they can be evicted at a week's notice, and a few shillings to each family would cover any actual loss they may incur by the destruction of their miserable homes. But where are they to go when they are turned out? Already there are not houses enough for the decent accommodation of their class, and even if in some distant suburb they might be able to find rooms as good and as cheap as those they have left, they would be unable to go so far away. Artisans in regular employment at fixed hours may be able. away. Artisans in regular employment at fixed hours may be able to live some miles from their work, and find in lower rents a com-pensation for the cost of a railway ticket. But the charwoman or the costermonger or the small tradesman who depends for a livelithe costermonger or the small tradeaman who depends for a livel-hood upon a little circle of employers or customers whose wants must be met as they arise, cannot afford to do this. They must at any cost find lodging in the neighbourhood of those on whom they depend for support, and as the cost is merely that of submitting to a little more crowding, they make up their minds to bear it. Now as a simple question of justice this ought not to be. Every so-called improvement which necessitates the not to be. Every so-called improvement which necessitates the infliction of suffering or degradation upon a single class is effected by improper means. The enlargement of the St. Pancras Station, for example, if it had been carried out as the Directors proposed, would have been as much paid for by the poor inhabitants of Somers Town as though a special rate had been levied on them for the purpose. The only means by which this injustice can be avoided is by insisting that space sufficient to decently house all awall tenants existed in the execution of any street inprovement. small tenants evicted in the execution of any street improvement shall be set apart within a certain reasonable distance of their old dwellings.

But the action of the Midland Railway Company suggests But the action of the Midland Railway Company suggests a further reflection. It is evidently possible to effect a considerable amount of clearance without coming to Parliament for help. Public undertakings such as a Railway Company are not likely perhaps to content themselves with what may be done in this way, because they usually want to close public thoroughfares. But smaller clearances limited to the land lying alongside of public thoroughfares may inflict a great deal of misery without having even the excuse of promoting public as well as private interests. In this instance the Midland Company has hought the freehold of the land, has begun to buy up the has bought the freehold of the land, has begun to buy up the leasehold interests, and would probably, but for Sir Sidney Waterlow, have gone on buying them until, in a very short time, they had become the absolute owners of the land. It may be objected to this that we have lately heard a great deal about the impossibility to this that we have lately heard a great deal about the impossibility of getting hold of all the interests in any given piece of land, and that if it is difficult for philanthropic Building Societies, it must be equally difficult for trading Companies. The inference is not quite trustworthy, inasmuch as a trading Company is not obliged to count every penny of percentage as closely as a philanthropic Building Society. The Midland Company probably expects to make a very large addition to its revenue by the enlargement of the St. Pancras Station, and even if it has to pay a relatively exorbitant price for the land taken, the bargain may still be a good one for the shareholders. Consequently, the terms offered to the owners of the property will be larger than can possibly be offered by a Society which has to make its income out of the rents which it charges, and is obliged to keep these rents down to a certain average on pain of seeing its houses stand empty. What is wanted is a law forbidding the making of any clearance which displaces more than a given number of parsons without the consent of the Home Office, and prescribing the conditions to be observed as a condition precedent of obtaining this consent. FRENCH PLAYS.

FRENCH PLAYS.

If the amount of attention which the managers of the French plays at the Princes's Theatre have contrived to attract to themselves by the publication of their grievances had been the measure of their success they would have had a singularly fortunate career. Unluckily this has not been the case. After complaining themselves on many occasions, and also being the cause of complaint in others, concerning the exercise of the Lord Chamberlain's powers with regard to their theatre, they abruptly closed their season with a letter in which they at the same time appealed to the generosity of playgoers and throw the burden of their ill success upon the supposed abuse of the powers against whose authority they had from time to time rebelled. This letter was followed by one in reply in which it was pointed out with much clearness and truth reply in which it was pointed out with much clearness and truth that the enterprising managers of the Princess's might have learnt by this time that a certain class of piece was sure to be forbidden, and that the censorship had in some instances been too lax rather and that the censorship had in some instances been too lax rather than too strict. Herein lies the strongest argument which the managers can bring forward. There is some justice in their representation that when plays of such an unmistakable character as Gaenut, Minard, et Cie. and others of the same class are liceused, it is unreasonable to forbid the performance of pieces like Fernande, Julie, and Le Deni-Monde. On the other hand, it must be remembered that mere coarseness involves little moral danger. It is tolerably contain that many of the audience assembled to witness tolerably certain that many of the audience assembled to witness the representation of Palais-Royal farces of the class just mentioned

the representation of Palais-Royal farces of the class just mentioned happily failed to catch the meaning of many of the jokes and allusions contained in them. That those who did understand these witticisms should have gathered much evil from them is not very probable. They might be amused, they might be disgusted, or they might be moved to laughter in spite of their disgust; but they could hardly be corrupted by the influence of such laughter.

The case is widely different with regard to the comedies and dramas which have been prohibited. There is in some of them, as we have had occasion before now to remark, an insidious corruption which is capable of great mischief. They deal always with vice, and always with one particular form of vice. Spectators with the most limited knowledge of French can have little difficulty in discovering the motive of their action. The authors of these plays profess to uphold the principles of virtue; to tell in forcible terms profess to uphold the principles of virtue; to tell in forcible terms the old tale of how surely punishment with the limping foot overtakes the guilty. But these new professors of moral science find that their lectures require some leaven of worldliness before they can ensure the attention of listeners. They wish to point out to their disciples the barrenness and desolation to which the pursuit of vice will at last bring them; but in order to make sure of their company so far, they are forced to show them how pleasant are the ways by which they them; but in order to make sure of their company so far, they are forced to show them how pleasant are the ways by which they may walk to their ruin. The catastrophe of these aminently instructive plays is ordinarily terrible enough; but over the infractions of social laws which lead to it is thrown a mysterious and fascinating halo of excitement, a romantic exaltation of risks and dangers nobly incurred, and of the raptures of forbidden fruit. It is probable that the moral lesson to be learnt from such writings will be forgotten in the allurements of the passion which they depict. Authors of this school remind one of a preacher who, in illustrating his discourse by the exhibition of a skull, is careful that its hideousness is all but concealed by wreaths of roses. We do not care to defend the licensing of such plays as Gavant, Minard, et Cic., but it is necessary to observe how unreasonable is the outery which is continually raised against the Lord Chamberlain's use of his prohibitory power. Some time ago this cry was loud against the refusal to license the Princesse Georges of Dumas fils. It is to be hoped that those who advocated the performance of such a piece were unaware what kind of a cause performance of such a piece were unaware what kind of a cause they were supporting. It is perhaps unfair to select so glaring an instance of error, but in a less degree the same observation applies

to a host of other plays.

There is one series of French plays now being acted at the St.

James's Theatre upon which it is happily impossible for the Lord
Chamberlain and his opponents to take issue. Even if the plays of Racine and Corneille were not protected by the respectable mantle of classicism, it would be difficult to find in them much objectionable matter. The subject of Phèdre is, it is true, unusually revolting, but there is no kind of attraction about the passion with which it deals. Respectability, however, has its drawbacks. The public which will flock eagerly to see a careful representation of intense physical agony or to study the beauties of costume or furniture upon the stage, is not tempted to a theatre by the sonorous verse and measured action of Corneille. If the combat between verse and measured action of Corneille. If the combat between the Horatii and Curiatii were actually represented upon the stage, it is possible that audiences might be found to witness it; they will hardly be found to listen to a mere description of a fight, and to sympathize with the emotion of those to whom the description is given. Mila Agar deserve: much credit for her courage in attempting to present the classical French drama to an English public, but she cannot be congratulated upon her success. Such a feat might be accomplished by an actress with the genius of Rachel; but Mile. Agar's gifts do not rise to that level. She has a fine stage presence, an expressive face, and a good voice, and she knows how to make use of these advantages; but her knowledge appears to be entirely the result of advantages; but her knowledge appears to be entirely the result of training. Like Mile. House, I, who not long ago was playing in Phèdre at the Français, Mile. Agar seems to know exactly how a part ought to be rendered; but she has not the peculiar force

necessary for the execution of her idea. Her acting is the result of tuition without intuition. She delivered the famous tirade against Rome in Horace with some strength, but without any real passion. Its conclusion left the spectator admiring but unmoved. Mile. Agar has fallen into the same mistake to which we called attention on the occasion of Mile. Favert's last visit to London, of surrounding herself with a company of very mediocre merit. The representatives of the younger Horace and of Curiace spoke their lines with great distinctness, and generally with right emphasis, but the art of acting cannot be reduced to tolerable elecution. Another mistake which does not affect the success of the performance, but which will arouse the anger of severe classicists, is the alteration of the text so that Camille is killed on instead of off the stage. It is somewhat strange that an actress who appears with the avowed intention of representing the classical drama with a stern correctness which extends to the abolition of an orchestra, should make so startling a departure from one of its leading earons.

It would be difficult to find a greater contrast to the French classical drama than the modern piece of L'Oncle Sam, of which some mention was made last week. It is surprising that so clever a writer as M. Sardou should have committed such an enormous mistake as this so-called comedy. It is supposed to fulfil the province of comedy in being an amusing picture of a certain type of life and manners. Part of this requirement the play undoubtedly stating for its absurable are certainly amusing. Whether are certainly amusing. attains; for its absurdities are certainly amusing. Whether any of the Parisions to whom the piece was originally represented accepted it as being moderately true to life is a matter of conjecture. It is not too much to say that, if they did, it would be quite safe to entertain them with a "rally" in a pantomine as a picture of the ordinary diversions of the London streets. That the actors have some belief in the extraordinary nonsense which the actors have some belief in the extraordinary nonsense which they are called upon to repeat seems evident from the attentive care and skill with which they perform their parts. The combined effect of the gravity of the players, the brilliancy and satirical force of the writing, and the extravagance of the play is very curious. Among many ludicrous incidents one or two may be noted. In one scene, which represents good society in America, a girl walks about a drawing-room offering her shoulder to be kissed at the price of a dollar for every kiss. In another the son of the house is more his entrance congratulated by all his relakissed at the price of a dollar for every kiss. In another the son of the house is, upon his entrance, congratulated by all his relations and friends upon his bankruptcy, and is introduced in various directions as "le jeune homme qui a fait cette belle faillite." The acting is of a high order throughout. Mile. Fargueil may be singled out for the delicacy and spontaneity of her performance as Mrs. Bellamy, who is a kind of chorus to the piece, delivering witty speeches at intervals, and coming to the rescue when difficulties arise. The grace and brightness of her manner are in themselves rare qualities; and it would be difficult to point to a cleverer piece of acting than hers in the last scene, where, taking upon herself to act as advocate for the young Parisian, Robert, she foils the schemes of L'Once Sam and of the cunning attorney Fairfax.

Mills. Fargueil's powers would seem to lie really in the direction Dallah can have little idea of her merit in characters of a different order. M. Parade, who plays L'Oncle Sam, is, as usual, conscientious, careful, and heavy. He has none of the fire and lightness which is associated with the idea of good French acting; but he can be depended on to do everything he undertakes with safe intelligence. The disagreeable practice of printing certain performers names in large type has been adopted at the theatre where L'Oncie Sam is played. Mille, Massin, who is one of the fortunate people distinguished by this honour, displayed force and faciling in the only scene which demands emotional acting. What plot there is in the play rests chiefly with her and with M. Train, who represents the Parisian Robert, the lover of the piece. This actor has evidently modelled his style upon M. Delaunay's, and he could not follow a better example. M. St. Germain, one of the leading membars of the Vaudeville company, is hardly used in having to play such an incomprehensible part as Gyp. The crowd of other he can be depended on to do everything he undertakes with safe play such an incomprehensible part as Gyp. The crowd of other characters who go through the piece, being married and divorced with lightning-like rapidity, are all well represented. The play is mounted and managed with admirable care, which one could wish to see bestowed on a more worthy, if not a more entertaining,

There is no reason why every year one or more series of French plays should not succeed in London, but there can be little doubt that just lately this form of enterprise has been absurdly overdone. Moreover, the managers have failed to show the tact which is required in understanding the tasts of the public to which an appeal is made. In some minor matters, too, they have been inattentive to English usages. The long waits between the acts in the Parisian theatres are not disagreeable when there is a brightly-lighted boulevard and a cheerful café to retire to, but they are instolerable in Loudon, where the surroundings of theatres are almost invariably dirty and disagreeable, and where the refreshment-rooms are as uncomfortable as the refreshments are poisonous.

THE PARIS SALON.

THE Salan of the present year, which has certainly not been inferior in the number, and scarcely in the quality, of its works to its predecessors under the Empire or the Republic, contained a fair parcentage of works which deserve to be held in lasting remem-

brance. Once more the gathering was truly cosmopoliten; the nations represented comprised France, Italy, Spain, Belgium, Bohemia, Hungary, Sweden, Eagland, and Russis; the only absente was, for ebvious reasons, Germany. Among "les étrangers" two pictures well worthy of note were described by us a year ago when seen in Vienna; the one is by the Pole M. Matejko, the other by the Hungarian M. Munkacsy. The Catalogue is, as usual, a curiosity; it numbers no less than 600 pages, and contains the entry of 3,657 pictures, sculptures, water-colour dissivings, architectural designs, engravings, &c. The general administration of the Salon might afford useful lessons to our Academy. The system of rewards by medals, if adopted, would come as a much-needed compensation to outsiders, and might also serve as a stepping-stone to full Academic honours. Also the plan of taking down and rearranging the pictures after the Salon has been open some weeks would give to our Academy the opportunity of rectifying errors in the hanging, and of securing a more evenhanded justice all round.

handed justice all round.

Religious art, as might be expected, is in an abnormal state. It cannot be said to be extinct; it is rather like a house divided against itself. It stands, though it totters to its fall. Yet among a multitude of products, mostly offensive, some half-dosen are not unworthy of better days. France, in common with other countries, presents two new and hopeful phases of sacred art; the one draws inspiration from the early springs whence Christian ast first flowed, the other seeks renewed vitality by insmediate contact with nature. Those conflicting schools have been well defined in the Salon, and yet it is among the best signs of contemporary art in France that the present is seldom quite divorced from the past. It is as if the living model entered the studio with the consciousness of having sat for Raffaells or for Titian. Thus the youth who served M. Cabanel for "Première extase de St. Jean-liaptiste" comes before us as one whose acquaintance we have made in the Galleries of Italy. There is much to be said in favour of the treatment which, removing sacred characters from the near foreground of present times, places them a long way off. These deep tones and sombre colours carry the mind back to the days of mystery and of miracle, and in the entranced face of the Baptist, with fixed forelook on the future, we read the message which has sounded through the ages.—"Prepare ye the way of the Lord, make his paths straight." M. Cabanel is a strange contradiction; the painter of the "Italian Poet," of "Venus Floating on the Sea," and now of "The Baptist in Ecstasy," is a signal instance of how a French artist, when he rises to a high mark, can do everything. The only analogous example in England is Mr. Milkais. M. Cabanel, the favourite of the Second Empire, survives the fall of dynastics; he rises as the Phonix out of the askes of Paris. M. Humbert, his pupil, likewise takes an exalted and serone retrospect of religious art in a truly noble composition, "La Vierge, Penfant Jésus et St. Jean-Bapt

Scarcely is war ended, when the French begin to paint its horrors. For obvious reasons, Sedan and other scenes of catastrophe have not been put upon canvas; but we have marked at least ten artists who do not flinch from the sternest reality. French painters might themselves have been trained to the art of war, so true are they in circumstance and detail. M. Neuville has depicted to the life a combat on a railway embankment; the soldiers clamber up the carthwork, but no sooner do they show their heads within fire than they are shot down and roll heavily backwards to the bottom. M. Conturier finds a dramatic situation in the siege of Paris; sharpshooters lie in ambush among buildings; the command is given to fire; we almost fancy we can hear the rattling of the shot as it strikes and rebounds from the walls. M. Dupray has won a medal by a scene of desolation. General Ducrot visits the advanced posts of the army; December rain and wind and cold pierce cruelly the wounded and dying soldiery, horses are hurrying to and fro without their riders, others are lying in blood upon the ground. No one but a Frenchman could thus relentlessly record the terrors of the battle-field; indeed the French have been for long the great battle-painters of Europe. It is interesting to observe how closely these masterly works correspond in style to Miss Thompson's famous "Muster Roll"; in fact, when reviewing the work in the Academy, we marked its French character. In Paris, the authorities properly forbade any references to the late war which might relaindle the animosity of the Germans; yet we discover a covert meaning in M. Hanvier's imaginative and masterly composition, "Prometheus Delivered." The prestrate youth who is a prey to the eagle personifies the provinces of Alsace and Lorraine. Peasants of the country stand by in constantation, while in the distance is seen avenging France prepared to slay the devouring eagle. The execution of the work

is worthy of the conception.

We have never been great admirers of French portraiture; it is

apt to be wanty or wooden in the flesh, and eradely discordant in the hashground; these defects survive from the days of Ingree, Any Schoffer, and Delaroche. But after making full allowance for the mannerism of the school, there remain the high qualities pertaining to swict desensing, artistic treatment, and general mastery ever difficulties, the last cometimes intentionally sought in order to be overcome. This condition of things in great measure arises from the fact that portrait-painters in Paris are also painters of the figure; in the words of Reynolds, they descend into portraiture from a higher sphera. Such is the case with M. Cabanel, M. Hébert, Mme. Henriette Browne, M. Duran, M. Laurens, M. Landello, and many others. The picture which naturally has attracted most attention is that of "The Prince Imperial" by M. Lefebvre. The figure stands erect; the hand rests in suppleness, yet with spring and resolve, upon a table; the head rises on a slender neck, more after the form of the mother than like the thick short type which marks the Bonaparte dynasty in common with that of the Ossars. The head thus rising on gracefully sloping shoulders asserts itself with modesty, yet command; still the whole bearing is that of the quiet gentleman rather than of the would-be emperor. The picture is carefully painted even to a fault, as if the artist felt he was treading on tender ground. It is impossible to praise too highly the reading given to the character; too much is not asserted, yet nothing is surrendered.

nothing is surrendered.

It is hardly wonderful that, out of a total of more than eleven hundred exhibitors, scarcely a quarter should be known by name in England. In fact, one great use of the Salon is to afford an opportunity for unproved talent to assert itself. Yet in walking from room to room the eye is pretty sure to settle first on the works of men of confirmed position, most of whom the trading interests of dealers have made familiar in London. Thus trading interests of dealers have made familiar in London. Thus from year to year it has been our privilege to pass under review the pictures of MM. Bouguereau, Bertrand, Boulanger, Castres, Corot, Fichel, Gérône, Lambinet, Muns. Peyrol, née Bonheur, and Mune. Henriette Browne—all of whom are in force this year. Of M. Castres more may be looked for than we have yet seen in London. Trenchant in character as in handling is "A l'aventure; Tsiganes en voyage." We remember to have seen, at the time of the Passion Play at Ammergau, a like nomany leading bears through the attent: they were all turned company leading bears through the street; they were all turned out of the town as not in keeping with the religious sentiment of the occasion. Mme. Henriette Browne has been gaining solidity, power, and thoroughness; her portraits are supreme in quietude of bearing and for intelligent reading of character, in quietude of bearing and for intelligent reading of character, the french can give to a single figure is seen in M. Robert Fleury's never-to-be-forgotten "Charlotte Corday," dressed all in white, reading in a garden. For refinement of sentiment the work is akin to the happiest efforts of our Associate Mr. Leslie, but it has more force and firmness, and implies greater resource and knowledge—a distinction which helds greater the properties of the Foundard Roberts substitute of the Foundard Roberts substitute. holds generally in the comparison of the French and English schools. M. Alma-Tadema, who has obtained the badge of the Legion of Honour, exhibits with good effect "Sculpture; portraits com-mandée," a companion to the picture in our Academy; in each alike the heads of a well-known picture-dealer and his family are made to assume historic dignity. It is to be observed that here a scale of canvas which in our Academy would appear almost gigantic is brought down to moderate proportions in the Salon; so different indeed is the standard of size in the two countries that young Mr. Richmond's monster "Prometheus," if imported into the Salon, would at once be dwarfed. The highest reward which it is possible to receive, "une médaille d'honneur," has been conferred on M. Géréme for three works incomparable after their kind, though the class is mere genre of the Dutch sort. The distinction thus conferred looks like a satire on tendencies in the French school which threaten decadence; never have we known so many silk and satin dresses painted to perfection.

The vitality and perpetual charm of the French school still mainly arise from impulse of passion, fertility of imagination, and clever caprice of fancy. Nought can stale its infinite variety. As a happy conception we may quote M. Toudouze's "Eros et Aphrodite." Venus in a bark, with Cupid blindfold at the prow, is borne across the sea by butterflies; the figures are scarcely below life size. Another exquisite idea we owe to M. Leroux. A Vestal amid the marble palaces of the Tiber asserts her virtue, and submits to the ordeal of water within a sieve; in this picture the stately structures of the Imperial city are seen through a silvery haze; the treatment is made romantic at the cost of reality. M. Bertrand is in danger of erring in the same way; moreover in "Romeo of Juliette" he repeats to monotony the gently flowing harmonies of horizontal lines which won popular approval in his romance of Virginia washed ashore. But we can scarcely find fault with an artist who is actuated by an exquisite sense of beauty whenever he puts brush to carrens. M. Bouguereau, sustaining the credit of French art for versatility and inconstancy, passes after true Parisian fashion from the nobility of "Homer et son guide" to the meretricious showiness of "Italiennes à la fontaine." The nude is not less conspicuous under the austerity of the Republic than under the indulgence of the Empire. A first-class medal has been awarded to M. Blanchard for a composition of much grace and beauty on the old theme, "Hylas entrainé par les nymphes." Another medal is given to M. Lecadre for a masterly group, wherein an undraped female presents a wreath to a god. M. Duran, evidently a man of great mark, with still some startling effect phaces a nude girl dans la rossée." Yet none of these pictures can be charged with impropriety; the art brought to bear on them

refines and elevates; the motives, too, occasionally time the products out of the sphere of sense into the region of the intellect.

We have noted no fewer than forty landscape painters, and there is little new; M. Cerot and M. Lambinet, who by this time are as much esteemed in London as in Paris, rank among the most peculiar, yet pleasing. But such is the fartility of the French mind when it feeds on nature that new fruit comes with each recurring season; this year M. Goaselin has pained a second model by a faithful and unflineling study of woods in winter; Constable never painted trues more vigorously. After leaving the Salen we travelled through France, and realized in what sense French landscape-painting is national; we traversed shining rivers bringful of water, the banks bordered by shadowy and stately poplar-trees; we tracked forcets, seldom ancestral in timber, but yet pleasingly paintable; or we encountered broken and barren ground, half-heath, half field. Nothing very sublime, but much that was picturesque in character; broad and wide stretching in surface, a land capable of varied and effective play of light and shadow, especially in the glow of sunset or under the grey of twilight. Such is French landscape, such also is French landscape art.

The collection of sculpture, which numbered 569 specimens,

The collection of sculpture, which numbered 569 specimens, again attested the unsurpassed training and talent of the school. The rewards granted are generous; a "médaille d'honneur" is given to a somewhat over-showy composition by M. Mercié, "Gloria Victis," and a first modal to M. Noel's fisherman casting a net; the action, which is specially fine, has possibly been suggested by one of the classic Discoboli. The Gallary of Water Colour Drawings must be considered on the whole inferior to the best Galleries in London. But the studies in "Black and White," especially those in charcoal, are eminently artistic. The French, after the habit of the Old Masters, usually settle a subject in light and shade before they think of colour. We observe among an interesting series of etchings a plate from Turner's "Burial of Wilkie," commissioned by Mr. Hamerton for the Portfolio.

It has been asserted that the Salon as a whole is not superior, if indeed equal to, our own Academy. To meet such a statement it is only necessary to say that the two Exhibitions are so widely different as to scale, sphere, and spirit as scarcely to admit of comparison. The Salon by the number and exceptional character of its large and life-size academic and imaginative works, not to mention genre pictures supreme in technique, attracts the regard of Europe. Our Academy fails to secure such attention. The Salon holds its pre-ominence by right. The mastery displayed in the figure gives a sway over other spheres great and small. It is sometimes objected that the French are the creatures of fashion; but they lead, they do not follow, and they lead because the artist rules. All gives place to art; therefore art is not brought down as in our commercial country to trade interests. And yet another point for observation is that the Salon shows that old landmarks are removed, the barriers which for long divided established schools are broken down. In the ateliers the pupils are expected to acquire not the manner of a master, but that command over art in the general which can be turned to account as circumstances may point the way. In fine, it is striking to see that floods of misfortune cannot quench the fire of French genius; after accumulated calonity, its vitality retains the ardour of youth with the experience of age. The school, if for the moment disintegrated and rendy to fashion itself again into something more new and strange.

THE ITALIAN OPERAS.

MR. GYE closes his theatre for the season to-night with Meyerbeer's Etoile du Nord, and the prediction which we ventured to make in our last notice of Govent Garden is exactly verified. We have had no Seruglio, no Promess Sposi, and no Life for the Car. Mozart's opera has been given in German, in English and in Italian, upon our London stage; but Clinka's Life for the Car and Ponchiello's Promess Sposi would have introduced the lovers of music to two composers about whom of late there has been much talk. Most amateurs are able to tell us something about the "Russian Bishop" would be nearer the mark); but of Ponchiello, one of the rising composers of Young I'aly, Pothing is known in England, except among those who consider it a duty to become acquainted with everything that assumes the form of lyric drama, wherever it may be produced Either Life for the Car, or I Promessi Sposi, would have created a certain amount of interest; more especially the work of the Russian composer, which is brimfull of national spirit. Clinka was by no means a learned musician, and can therefore hardly be reckoned among those "hungry contrapantists" whom Wagner denounces for snatching melodies out of the mouths of the people, employing them for purposes of their own, and submitting them to fugal trustment. He took his melodies where he found them, sont little pains on giving them more importance than intrinsically belonged to them, and invented many for himself, which occurred to his fancy as easily as the Jodel to the Swiss mountaineer. It is usuless, however, to dwell further upon what wight have happened had the Director of the Royal Italian Opera alhored strictly to the details of his prospectus. We are ready to admit that such adherence is not always possible, or, at all ovents, convenient. Nevertheless, a season chiefly distinguished by the revival of such an open as

Garden of such another opera as Mignon, does not call for elaborate comment. Luisa Miller, though not the least pretentious, is perhaps the least striking of Verdi's productions. We are by no is perhaps the least striking of Verdi's productions. We are by no means enthusiastic admirers of the play of Schiller upon which the libretto is founded; but surely a great deal more might have been done with it, both by poet (if the librettist can fairly be termed poet) and composer. Here and there strong, though not with his accustomed strength, Verdi is for the most part in this opera weak, with a weakness seldom detected in one whose works are so frequently marked by emphatic vigour and dramatic, or melodramatic, power. In Luisa Miller Verdi also comparatively fails where in other, and especially later, efforts he excels all his immediate predecessors, with the one exception of Rossini. There is little of his natural glow, little of his incisive sharpness, and least of all of that characteristic musical colouring which usually gives to each member of his dramatis personæ a distinct and unmistakable individuality. We do not think that, under any circumstances, a drama like Kabale und Liebe could be made acceptable, not to say drama like Kabals und Liebe could be made acceptable, not to say effective, in an operatic shape; yet few will be inclined to deny that the story, unscrupulously as it has been dealt with by the Italian that the story, unscrupulously as it has been dealt with by the Italian adapter, is superior in all respects to the mysterious and inexplicable Spanish drama which inspired Verdi with such music as makes the Trovators not merely endurable but sympathetic. Luisa Miller was first brought out here in 1858, at Her Majesty's Theatre, under the direction of Mr. Lumley, with Piccolominian the heroine, and Giuglini as Rodolfo. It failed, however, as it had failed, in 1849, at the San Carlo of Naples (for which theatre it was expressly written), with Gazzaniga and Malvezzi as Luisa and Rodolfo, and as it had failed also, three or four years later, in Paris, both at the Grand Opera, with Angiolina Rosio as Luisa, and at the Opera Italian, when the chief parts were assigned to Sophic Cruvelli and Calzolari. Since 1858 it has been laid on the shelf, which we cannot but regard as its most fitting place. The implied necessity, however, of furnishing Mme. Adelina Patti with a new part led to its revival; and we must confess that, uninteresting as the opera is, by the side of many works of Verdi, the acting and singing of this wonderfully gifted artist would suffice to endow even a feebler composition with a sort of temporary popularity. The other characters—sustained by Mile. Ghiotti, Signors Nicolini, Graziani, and Ragagiolo—call for no special remark. Luisa Miller was played twice only, and the performance generally was excellent; but the probability of its being heard again next season, even with Mme. Patti to afford it her aid and countenance, is not strong. Thanks to her, although it created no genuine enthusiasm, it expired with a certain halo around it; and while the opera itself may be looked upon as dead, this new achievement of a dramatic singer peerless in her way will not be readily forgotten.

The Mignon of M. Ambroise Thomas, if by no means a composition of exceptional merit, possesses certain qualities that must always render it more or less acceptable. These, however, were described adapter, is superior in all respects to the mysterious and inexplicable

of exceptional merit, possesses certain qualities that must always render it more or less acceptable. These, however, were described in detail when the work of the French composer was presented for the first time, in an Italian dress, at Drury Lane Theatre, under the enterprising management of Mr. George Wood. What was expected of Mile. Emma Albani's impersonation of the leading character has been fully carried out. That this young and ever character has been fully carried out. That this young and ever progressing artist has not yet succeeded in equalling the admirably finished impersonation of Mme. Christine Nilsson may be taken for granted. But comparisons are beside the question. That Mile. Albani has achieved a new and legitimate success in this, her latest essay, is admitted on all sides. In the first act, from beginning to end, despite the liberties taken by the librettists, MM. Barbier and Carré—who subsequently provided M. Thomas with a Frenchified pot pourri made out of Shakspearo's Hamlet—Goethe would, we are convinced, have recognized the beau idéal of his own creation. are convinced, have recognized the beau ideal of his own creation. It is almost everywhere perfect. The joy to which Mignon abandonsherself on learning that she has been liberated by Wilhelm Meister donsherself on learning that she has been liberated by Wilhelm Meister from Giarno (Jarnac), in whose "show" she has been compelled to act a leading part, is as finely and forcibly expressed as is her unwillingness to perform before Wilhelm and Filina. In the second act, too, she exhibits unusual ability, especially in the scene before the looking-glass, when Mignon endeavours to imitate the beauty of her hated rival, and, simplex mundities, looks more captivating in Filina's costume than Filina herself. The apparent refluences with which all this is done reverse that Mills Albani captivating in Filina's costume than Filina herself. The apparent artlessness with which all this is done proves that Mile. Albani possesses real dramatic intelligence, and may become an actress as well as a singer of distinction. Not to go into further particulars, however, her performance is of level excellence throughout, and justifies high anticipations of the young Canadian's future career. That the coquette, Filina, would find a thoroughly competent representative in that lively actress and brilliant vocalist, Mile. Marimon, might have been taken for granted. M. Faure, as Lothario, the old harper (Mignon's father), is strikingly picturesque, and in the last scene—somewhat tediously spun out, by the way—becomes as prominent a figure as Mignon herself; but the departure from Goethe is here of a kind which can only be described as sentimental twaddle. Signor Nicolini is not quite suited to parture from Goethe is here of a kind which can only be described as sentimental twaddle. Signor Nicolini is not quite suited to the character of Wilhelm Meister, though his assumption, taken as a whote, displays genvine merit, and he has made himself thoroughly well acquainted with the music. Mile. Smeroschi looks a smart and comely Frederica. The opers, altogether creditably given, under the able direction of Signor Vianesi, is a welcome addition to the repertory.

Besides Mignon, Luiss Miller, and the four-and-twenty works specified in our first notice, Mr. Gye has, with coassless activity, produced others. Among these are the Linds of Chameson of Domissti, and M. Flotow's Marths, about which it is almost

enough to say that Mile. Albani, the heroise in be tained her well-carned reputation. In Martha especi prightly acting and her unaffected and touching delivery of the sprightly acting and her unaffected and touching delivery of the familiar Irish melody to which, more than to anything else, this hacknied opera is indebted for its enduring popularity, made a lively impression. Mme. Vilda has also appeared as Lucrenia Borgia, a part by no means suiting her so well as Norma, and also as Alice in Robert le Diable, for the effective impersonation of which she lacks every requisite except voice. Her vocalization, however, carried her fairly through the opera, and atoned for shortcomings in other respects. It is difficult to "cast" Robert le Diable now. Signor Nicolini, as Robert, ill replaces Tamberlik; Mlle. Smeroschi, as Isabella, is by no means a substitute for Ilma di Murska; and the Bertram of Signor Bagagiolo is about the tannest we can call to mind. All the famous pageantry is, nevertheless, still to be witnessed; and the ballet in the scene of the Resuscitation of the Nuns, with Mlle. Girod as chief among the dancers, retains all its ancient splendour, with, thanks to the Lord dancers, retains all its ancient splendour, with, thanks to the Lord Chamberlain, little or none of its old objectionable character. We doubt, however, whether ever Robert le Diable will regain its old popularity, no matter under what conditions it is represented.

The performance on Wednesday night of M. Gound's Faust e Mancherita (see it is stylint in the County Garden bills) for the

Margherita (as it is styled in the Covent Garden bills), for the "benefit" of Mme. Patti, with Mme. Patti as the heroine, was one of the most successful, if not the most successful, of the entire season. Mme. Patti's delineation of Gretchen springs out of her own heart and brain. It resembles no other we have witnessed. Unlike the assumption of Mme. Nilsson, still more unlike that of Mme. Lucca, and most of all unlike that of Mme. Miolan Carvalho, it exercises a charm not easy to define. Mme. Patti has played Margherita on various occasions; and while she is a member of the Covent Garden company we are at a loss to understand why the part should, under any circumstances, be allotted to another—which, nevertheless, has been more than once the case. About the remaining characters—except that of Mephistopheles, in which M. Faure is unapproachable—there is little to be said; although since Mr. Santley has abandoned the Italian stage it would be difficult to meet with a more competent representative of Valentine than M. Maurel, pupil and emulator of the first of existing French lyric comedians. Mile. Scalchi was, as usual, the Sighel. A more enthusing and ignore has revely been session. the Siebel. A more enthusiastic audience has rarely been assembled in a theatre; but to talk of recalls, encores, bouquets, &c. where Mme. Patti is the prominent attraction of the evening is

where Mille. Patti is the property of the sake of superfluous.

The revival of L'Etoile du Nord, year after year, for the sake of Mille. Adelina Patti, whose Catherine is perhaps the best ever witnessed on any stage, and of M. Faure, whose Peter (or "Peters") has long been accepted as unrivalled, was a matter of course. To say anything about the opera itself—one of Meyer-level most gargaous lyric melodramas—would be simply to repeat the same stage of the sake of the sak beer's most gorgeous lyric melodramas—would be simply to repeat that which has been written over and over again. Of what it is, that which has been written over and over again. Of what it is, and has been since 1855, in the form of a scenic spectacle, all opera-goers are aware; and few will regret the curtailments made in the last act. Even now the opera is intolerably long, and we morely refer to it because it completes the list of the twenty-eight works produced by Mr. Gye. Thus closes the season which, however distinguished by variety of attraction, might in so far as novelty is concerned have passed almost without record. Of new singers the Director has given the frequenters of his theatre enough and to sparse, but of row or unfamiliar numic he has vouchesfed. and to spare; but of new or unfamiliar music he has vouchsafed them little or none.

Next week we propose to give a summary of what has occurred at Her Majesty's Opera since our last account of the doings at that establishment. A word must here suffice to state that Mme. Christine Nilsson's first appearance (on Thursday night) as Valentine, in the *Huguenots*, was an unqualified success.

REVIEWS.

MONTEGUT'S BURGUNDY.

N Englishman who for some reason was out of temper with A the French said that the changes introduced by the Revolution had never taken root in France, since the inhabitants calculated by sous instead of centimes, and still divided the country by provinces instead of departments. He did not consider that the sou and five-franc piece are a complete modern decimal system in themselves, answering with almost perfect accuracy to the American cent and dollar, whilst the most ignorant Frenchman who is can cent and dollar, whilst the most ignorant Frenchman who is capable of directing a letter always puts the department and not the province upon the envelope. It is perfectly true, however, that the names of the old provinces are still both well remembered and very frequently used—a fact which is very agreeable to every one who possesses what may be called the historical sense, and which at the same time is a convenience in geography, just as the above-mentioned five-franc piece is a convenience in the coinage of the country. The truth is that the departments are too inconveniently numerous for the situation of every one of them to be readily retained in the memory, and yet the division is not too small for administrative and postal purposes, since the average French department is nearly two and a half times as large as the average Kinglish or Welsh county, a fact very little known in

^{*} Soundaire de Bourgogna, Par Rmile Montégut. Paries Hachette.

Regiond. The average county contains rather more than 1,000 square miles, the average department rather more than 2,400 square miles. It is evident then that the division into departments was a reasonable measure, since a country absolutely needs such a division, under one name or another, for its own practical convenience; but, on the other hand, it is a convenience of another kind to have larger divisions at the same time. This we have in the British islands, with the names of the kingdoms which form the Union, and that of the Welsh principality; and just in the same way the French have preserved the names of their old provinces. It is curious that the province has one great advantage over the department; it can always be used in the form of an adjective, which the department never can. A Frenchman, for example, who was born in Burgundy may say "Je suis Bourgignon"; one born in Picardy says "Je suis Picard"; but a man born in Saône-et-Loire never says "Je suis Saône-et-Loirien," nor does a native of the country near Dijon ever call himself a "Côte-d' Orien." This little difference may appear of no importance, and orien." This little difference may appear of no importance, and yet it operates very strongly indeed in favour of the preservation of the old provincial division. At the same time it may be observed that in most French minds there is a great haziness about the exact limits of his department literally. A French man knows the limit of his department literally to six ness about the exact limits of the old provinces. A Frenchman knows the limit of his department literally to six inches on the high roads, where it is always marked by inscribed stones; but he hardly ever remembers the limits of his province. In a word, the province is a sentiment now, and the department is a fact; so the province has the vagueness of outline—not on maps, but in memories—which belongs to a sentiment, and the department has the clearness and definition of practical science. We remember staying some time at Sens, and amusing ourselves by asking as many inhabitants as possible whether the town was in Burgundy or in Champagne. We certainly put the question to thirty people and their opinions on the tainly put the question to thirty people, and their opinions on the subject were about equally divided; but they were all perfectly agreed that Sens was in the department of the Yonne. So we find that M. Montegut, the author of the work before us, includes Sens in Burgundy, whereas Dussieux's atlas, which lies open before us, not only places Sens in Champagne, but a considerable distance from the frontier of Burgundy, and very near to that of the Ile de France. We have also before us a Fronch elementary geography, by M. Cortambert, published by Hachette for the use of schools, and this appearantly gives a glue by efficiency that the alland this apparently gives a clue by affirming that the old provinces were divided into departments. Had this been the case, then the outline of the agglomerated departments into which the province was divided would of course give with perfect accuracy the outline of the old province itself; but there are facts which prove that either the geography or the map must be in error. According to the map, Auxerre is in Burgundy, but only just in Burgundy, the frontier being drawn close to the city; whereas in a modern map of France Auxerre is not near any frontier line at all, but is situated avantly that the province of the city is the structure of the city is the structure of the city is a second or continuous the continuous continuo exactly half-way between the eastern and western boundaries of the Yonne. M. Montegut has clearly proceeded on the principle that Burgundy included the departments of Yonne, Cote-d'Or, Saône-et-Loire, and Ain. We should have been very glad if a writer so well informed as he evidently is would have taken the trouble, before going into detail about particular localities, to preface his more especial labours by some general account of the province which, in a literary sense, he has illustrated so accurately. He tells us nothing about Burgundy, except here and there so far as an historical reminiscence is necessary to throw light upon some place in Burgundy; and he begins with a description of the cathedral at Sens, without telling us why he puts Sens in Burgundy at all.

There are historical reasons both for and against this view; but we cannot here attempt to examine them fairly and come to a satisfactory decision.

M. Montegut is one of the few Frenchmen who know England. He has translated the whole of Shakspeare, besides Macaulay's History and Emerson's Essays, and he has a particular admiration for our old historian Camden. With the sentiment of the line

Love thou thy land with love far-brought,

he has also a warm feeling of patriotism of an enlightened kind, and wishes that his countrymen would travel more in their own country; and he even wishes that some Frenchman having gifts like those of Camden might undertake a monumental Book on France. As this, however, is scarcely to be hoped for, M. Montégut thinks with reason, that the absence of it might be compensated for by with reason, that the absence of it might be compensated for by men of letters who might do something equivalent in fragments, by giving a clear account of parts of France which they have personally studied with the necessary degree of interest and affection. He lays great stress upon the necessity of feeling a warm interest in a place or building before writing upon it, affirming, most truly, that merely to have seen it is not enough, that the spectator ought to have felt moved by it before he writes:—

Pourquoi nos lettrés, dans des esquisses rapides où ils ne viscraient point à être plus complets que ne le leur permet le temps dont ils disposent, où negligeant de parier des choses qu'ils ont vues seulement, ils ne nous mirretiendraient que de celles qui les ont frappés, émus, charmés, ne nous lonneraient-ils pas plus souvent la menus monnais de ce grand ouvrage qui sous manquera maintenant à tout jamais? Ce serait une méthode plus soureuse qu'on ne pense de servir la France.

In this temper—and it is not possible to be in a better temper for such a purpose—M. Montégut travelled through all Burgundy, staying in the principal old towns, and visiting many of the most interesting places between them. He writes entirely on the artistic principle of communicating the impression he received, and nothing

but the impression, except the visible or historical facts that produced it. The consequence is that, although the book may in a certain sense be called topographic, it is not rigidly and coldity topographic, but resembles much more the work of a painter than that of a photographer. The only objections we have to M. Montégut are that he does not stay long enough in places that are well worth a more thorough investigation than he gives them, and that he is satisfied with receiving impressions instead of taking the trouble to find out what there is to be seen. He gives a couple of days to Sens, and has not a word to say about the most original and remarkable building in the whole department, the Synodal Hall, which he surely must have seen from the outside, as it is Hall, which he surely must have seen from the outside, as it is close to the Cathedral. Surely he cannot have seen the Synodal Hall without being sufficiently impressed by it to think it worth mention in his pages; for not only is it an original and remarkable building, but it is at the same time one of the most perfectly beautiful and the same of sething the page of the state of the same time one of the most perfectly beautiful. scripulously careful and successful restoration. The cathedral he sees, of course, but has nothing to say about the recent injudicious destruction of the Gothic chapels to complete the Romanesque destruction of the Colline chapels to complete the Romanesque character of the aisles, nor does he seem to have noticed the architectural history of the cathedral, which is nevertheless visible enough, and very interesting. M. Montégut leaves Sens without going to see the Château of Fleurigny, a few miles from the little city, though that château is one of the most interesting in France, and has a remarkably perfect chapel, with one window which is Jean Cousin's masterpiece and a priceless work of art, in quite perfect preservation. In the cathedral at Sens M. Montogut is wonderfully struck by the magnificent rese-windows, and by the cheerful character of the building as a promenade. He seems to be very sensitive to colour; here is his description of the rese-windows, or rather his account of the impression produced by them upon himself: reservation. In the cathedral at Sens M. Montegut is w

On peut rester là de longues heures, plongé dans une inertie réveuse du genre de celle qui s'empare de nous au bord de la mer, et qui est pour l'âme une baume si salutaire. La pensée flotte indécise pendant que l'œil se balgne voluptueusement dans cette lumière colorée d'une si harmoniouse abondance et d'une si douce chirté. L'une de ces admirables verrières surtout, celle qui représente la jole des âmes heureuses, est composée de couleurs si tandres, si pures, si chastement gales, qu'on peut, sans métaphore aucune, la comparse en effet à un lac de limpide lumière, et assimiler à la volupté du bain le plaisir que l'eil en re-sent: il en est à la fois rafraichi et caressé, il y nage, il s'y dilate, il y est vraiment en paradis. Raiement l'art humain a reussi à produire une sensation qui fût plus identique avec celle que nous donne la nature d'est une volupté physique, dis-je, comme celle dont la mer nous bers avec le mouvement de ses flots, comme celle dont le printemps nous rayé, a vec la magie de son manteau vert, comme celle dont l'été rafraichit y fronts dans les soirs des chaudes journées avec la rieussi insulte de ses vents. On comprendra comment cette volupté toute physique peut se produire, al nous disons que le tour de force de l'artiste lugénieux qui a ciée ces verrières a consiste à n'employer en quelque sorte que des couleurs pour peindre ces deux spectacles du monde surnaturel, le paradis, l'enfèr. N'ayant recomme que le moins possible à la figure humaine et à l'élément dramatique, il a exprimé le paradis au moyen de toutes les nuances et teintes de la couleur rouge, harmonieusement assorties et combinées. De cette musique de couleurs résulte la sensation que nous venons de décrire.

Soon afterwards the author begins to think about the prelates who have lived at Sens in former times, and then he is carried away into various historical recollections, which occupy seven pages, before he looks at anything in the cathedral again. The next thing that attracts him is a painted window showing the next thing that attracts him is a painted window showing the history of St. Eutrope, and this history occupies three pages more; finally we emerge from the cathedral and go to call upon Madame Chauley, who possesses the famous picture by Jean Cousin, the "Eva Prima Pandora." An analysis of this picture carries us to the end of four other pages, and finishes the chapter on Sens—a very readable and agreeable chapter, yet scarcely sufficient, as it appears to us. It would have been easy for any one having the requisite knowledge to tell his readers much more about the little city in the same space. Still we much prefer M. Montogut's method to that of a dry cicerone, and there is no necessity for him to collect details for us which we have already in Joanne's excellent guide-books.

On arriving at Joigny, our author has something favourable and pleasant to say about the River Yonne, which is indeed a very charming river, with the characteristics of the Seine on a smaller charming river, with the characteristics of the Seine on a smaller scale; but he takes the opportunity of speaking evil at the same time of the streams of Upper Burgundy, a subject on which we differ from him entirely. The plain truth is, that when you know them, and take the trouble to explore them, the streams of Upper Burgundy are charming in their own way, reminding one often very much of streams in Lancashire and Yorkshire of the class very much of streams in Lancashire and Yorkshire of the class that are navigable for no boat bigger than a canoe, and yet on whose banks the artist and the angler can pass day after day and week after week with pleasure. M. Montégut likes a river big enough to reflect the landscape and the sky, in which we agree with him; but to our taste a little river has qualities peculiar to itself, just as a good lyric or idyl hes qualities that we do not look for in a voluminous epic. Apropos of rivers, M. Montégut recalls the adjective used by Shakspeare for Burgundy in Ring Lear, when the King of France save. when the King of France says,

Not all the dukes of waterish durgandy Can buy this amprized precious maid of ma;

and then be thinks of Tasso's equally characteristic epithets for

Toursine, la terra lieta e molle
After visiting, Jeigny and Tornesse, and writing two chapters
on them, of which both are readable and the second interesting,

our traveller goes to Monthard, where Buffon lived and wrote. Here he is quite at home, for nothing is more his own than a subject closely connected with literary history. He begins with a strong protest, certainly not too strong, against the fashion of cructing bronze statues to deceased celebrities now so monotonously prevalent all over France:—

Pour tous également, qu'ils aient sauvé la patrie, écrit des romans, rédigé des lois ou interrogé la nature, nous n'avons qu'un même mode de reconsaissance, uniforme comme la taxe des lettres ; c'est le triomphe le plus complet du niveau égalitaire. De même que la décoration de la Légion d'honneur récompeuse indifféronment tous les genres de mérite pour les vivants, ainsi la statue monumentale recompense également tous les genres de gloire pour les morts. De là cette abondance de bronzes ennuyeuse et la plupart du temps sans caractère qui s'est abattue sur les places, les promenades, les marchés de nos villes, et qui geguant comme une épidémie, atteint jusqu'a nos villages, dont elle dépare la physionomic rustique et offense preque la simplicité. Itian de plus sec, de plus aride que l'éternel produit de cette contagion de la mode, ce lourd bonhomme de bronze toujours perché sur son socle de pierre dans la même invariable attitude, et qui d'ordinaire ne s'harmonise en rien avec le cadre d'édifices ou de constructions qui l'entoura."

M. Montegut goes on to observe, most justly, that many celebrated men are not at all good models for statues, and he mentions Geoffrey Saint-Hilairo as an instance, for his skull was the only interesting part of his physical conformation. Buffon, on the other hand, had a fine person, and yet the "bronze man" at Montbard does not specially remind you that the original was a naturalist. Our author thinks that the only monument which would have suited Buffon's genius was a colossul fountain, with various figures representing his conceptions, with animals, &c. We are very much of this way of thinking also, but would not the question of expense have prevented the realization of so complex a scheme on any satisfactory scale? The residences of great authors are always interesting, so we extract the description of Buffon's chateau at Montbard :

We quite agree with M. Montegut when he expresses his regret that Buffon should be little read at the present day, though ms great work had such a prodigious success in the last century. He says, and with reason, that there is no other book so full of curious facts, ingenious hypotheses, various and bold ideas and conjectures. The truth is that Buffon is at the same time one of the most entertaining writers who ever lived, and one of the most suggestive, besides which his style is so thoroughly good—a sound strong prose, always capable of eloquence on due occasion, yet not making a trade of it—that it is a pleasure to read him from a purely literary point of view. It is the misfortune of most scientific writers to be newlected by the next generation his great work had such a prodigious success in the last century him from a purely literary point of view. It is the misfortune of most scientific writers to be neglected by the next generation, although the next generation could never have been what it is without them, and although it uses their ideas as a farmer builds his barn with the stones from an old abbey or castle; but surely an extraordinary literary merit ought to preserve such a writer as Buffon. It happened to us to spend many pleasant hours last winter with those twelve noble and rich volumes of his, and it would be difficult, in reading, to spend time more profitably or more agreeably. The great pleasure in reading Buffon is to be admitted, and he admits his reader very frankly, to watch the admitted, and he admits his reader very frankly, to watch the action of so large and fine a mind, and to see the working of his indefatigable and elevated curiosity, which was always interested in something worthy of its attention. M. Montégut has nine pages about Buffen, and the last two are an excellent specimen of thoroughly good and capable criticism. After remarking the absence of amother in Buffen, he seeks the reasons for it, as follows:-

follows:—

Il y a d'ebord un peu de la hauteur propre à un gentilhomme qui s'étonne ravement par habitude et par principe; il y a ensuite le remarquable équinibre du temperament bourgignen, lequel, étant d'ordinaire plus musculeux que ne veux, est peu porté à ces mouvements qui mettent l'âme hors de son assiste et lui font perdre son aplomb. C'est aux génies nerveux qu'il appartient d'avoir des transes, des extases, des effusions lyriques ; Buffon n'a jamais un induvement de pieté religieuse par la même raison qui fait que Boesuet, antre Bourgignen, a's jamais en un mouvement de doute, ut léger fut-il, une hésitation de foi, une, inquiétude d'intelligence l'uv'est que l'un et l'autre, quelle que soit la distance de leurs doctrises, out également l'âme bien équilibrée. Enfin il entre dans estre impassibilité be succup de la nature générale propre au Français, surtout au Français, cut que l'un ret l'impagnation de Buffon quelque riche, quelque brillante, quelque féconde qu'elle soit, est la inseux ordentée et la plus régulière que je connaisse. C'est une infagination élassique, dont les viaions et les sonjectu et se développieur évents même autrinde, la même symétole, la

même enchaînement rationnel qu'une tragédie de Cornelle ou de Ruchas une expression dogmestique de Bossuet. C'est sur cette explication, qui en mêmo temps une deul-excuse et justification de cette impassibilité : vivement reprochés à Buffon, que je veux prendre congé de sa gra nt rationnei qu'une tragédie de Cornellie e gmatique de Mossuet. C'est sur cette exp

We have arrived at the limits of our space, and are still only at Monthard on our journey southwards. Perhaps we may accompany M. Montégut to Dijon and other interesting places on a future occasion.

FROUDE'S ENGLISH IN IRELAND.—VOL. IL*

WE have now to go, at somewhat greater detail than in our former notice, through some of the chief points suggested by Mr. Froude's present volumes. He begins about 1767 and goes on in a kind of way to the Union. But the last part of all is strangely cut short. When he has got through the Rebellion 1798, when he has no more cruelties on the one side to enlarge the property of the characteristics on the other wide to show over or to excuse upon, no more cruelties on the other side to slur over or to excuse, Mr. Froude seems to think that his work is over. He pulls up suddenly, gets through the Union in a page or two, and winds up with a quotation from his favourite Earl of Clare. Each of the two volumes has a kind of unity of subject. At least it might have been made to have such a unity in the hands of a writer who understood historical grouping. But this is what Mr. Froude does not understand. He can tell a particular story effectively, but he has anderstand. He can tell a particular story effectively, but he has not the art of bringing the great event of a generation or two into its due prominence, and marshalling other things in their due subordination around it. This is no doubt an art which is not granted to every one, and it is one which it is sometimes hard to reconcile with the duty of giving a real consecutive narrative in the order of time. But a subject like Mr. Froude's is one of those where a writer is least bound to be annalistic. To be sure, he need not be absolutely chaotic, as he was in his first volume. But we mean that a subject like the English in Ireland is one in which different parts of the story may well be told on very different scales. The object, we conceive, is not to narrate like a chronicler the events of certain years, but to bring out the results of certain political relations. Mr. Froude lets us know on every page what his object is, but he has not worked his story, as a story, into such a shape as to teach the lesson of itself without his having to story are recommended. the lesson of itself without his having to stop every moment to enlarge on the doctrine which we might otherwise perhaps be tempted to forget—the doctrine which teaches the folly of justice

and mercy.

Each of these two volumes then, the second and the third, has its own special subject. That of the second volume is what Mr. Froude calls the Protestant Revolt—that is, the movement which led to the establishment of the legislative independence of Ireland in 1782. That of the third is the Rebellion of 1798, which both dramatically and historically needs to be wound up with its result in the Union of 1800. In each case the movement in Ireland was closely connected with, and greatly influenced by, events which were going on in other parts of the world. In the later case, when the discontented Irish were in constant dealings with France, and when the French invasion of Iroland was actually attempted, the connexion between events in Ireland and elsewhere is plain enough. But it is equally true that the earlier movement had a close connexion with the struggle for independence on the part of the American colonies, a struggle in which again France has its share, though not the primary place which it holds in the later movement. Mr. Froude's narrative of the former movement is brought in by a chapter headed "The Revival of the Celts," which, in the hands of any writer but Mr. Froude, would be looked on as an indictment against the English misgovernment of Ireland, but in which Mr. Froude seems to use his facts to prove his strange doctrine that the fault of England was a too gentle treatment of Ireland. The doctrine comes out in full force in the first page. "Had the Irish been regarded from the outset as a conquered people whom a stronger neighbour had forced, for its own convenience, into reluctant submission, Ireland would have escaped the worst of her calamities." Presently comes a sentence which is inconsistent enough with Mr. Froude's usual way of writing, but which perhaps shows how hard it is for a theory to stille the natural facilities of right and present with which natural feelings of right and wrong with which a man is sent into the world. At all events it well expresses the facts of the case. The colonists were an army of occupation amidst a spolisted "The colonists were an army of occupation anidst a spoliated pation who were sullenly broading over their wrongs." In Mr. Froude's view, of course the great wrong was that the wrongs of the spoliated nation were not still greater. Otherwise what mean the constant revilings of any attempt to lessen their wrongs, the constant praises of coercion, the constant anears at conciliation? Still we have Mr. Froude's admission that the Irish were a spoliated nation, that they had wrongs, and that the English colony was an army of occupation. Granting this, all the rest follows naturally. The spoliated nation broading over its wrongs dealt with the army of occupation as spoliated nations always will do whenever they have the chance. We no more justify than Mr. Froude does those acts of violence on the part of the natives on which he is so fond of enlarging. But we do hold their a crime of the same kind done by a member of a spoliated nation broading over its wrongs is not equal in moral guilt to the same crime when done by a member of the same or occupation which is engaged in inflicting those of the samy of occupation which is engaged in inflicting those

* The English in Ireland in the Eighteenth Contage. By James Anthony. Fronds, M.A. In Three Volumes. Vol. II. London: Longman & Co.

wrongs. These questions belong more properly to the third volume them to the second, but we have here the manifesto with which Mr. Proude chooses to under in his account of what he calls the Protestant Revelt. The third volume has to deal with the uprising of the spolished ration, the second with the earlier uprising of the army of accounties. But it is well throughout the book, whenever Mr. Fronde stops to blacken an Irish crime or to whitewash an English one, to bear in mind that by his own showing the crimes which he strives to whitewash were the crime of an army of occupation, while the crimes which he strives to blacken were the crimes of a spolisted ration brooding over its wrongs.

of occupation, while the crimes which he strives to blacken were the crimes of a spoliated nation brooding over its wrongs. But the army of occupation had its wrongs also, and the present volume contains the record of its struggle, successful in the main volume contains the record of its struggle, successful in the main point, against the mother-country whose army of occupation it was. No government was ever more shamelessly corrupt than the Irish government of the eighteenth century, and the blame of this corruption has to be divided between the colony and the mother-country. But it is certain that, for a long time, whatever attempts were made to lessen corruption always came from the colony and never from the mother-country, and that, besides this, the most vexatious laws were made by the mother-country to injure the colony by commercial restrictions and the like. This kind of treatment will, in the nature of things, he endured by a colony only so long as it feels itself to be a mere army of occupation and nothing more. But this state of feeling cannot last for ever. The colony, though it may still feel itself an army of occupation with regard to the conquered natives, no longer feels itself a mere army regard to the conquered natives, no longer feels itself a mere army of occupation with regard to the mother-country. It may still be just as eager to keep up its dominion over the conquered race and to shut them out from all places of power or profit. But it will now do this in its own interests, and no longer in the interests of the mother-country. If it does not look on the conquered race as its countrymen, it will come to look on the conquered land as its country, a country which it is entitled to hold and rule on its own behalf, and no longer on behalf of the land from which its fathers or grandfathers set out. It could not fail but that the descendants of the English Protestant colonists in Ireland should in a generation or two come to feel themselves as in one sense Irishmen, Irishmen so far that they looked on Ireland as their country, and were no longer inclined to admit an absolute supremacy of England over Ireland. The supremacy of the English over the Irish might go on, but it was to go on in the form of a supremacy exercised by the inhabitants of Ireland of English descent, not by their kinamen who stayed behind in England. Such a feeling as this was sure to arise in any case, but there was everything in the position of Iroland to make it especially strong. Ireland was a conquered country, but it was still not a mere conquered province. It was a dependent kingdom, but still a kingdom. It had its own Parliament, and all its other chief institutions modelled according to the type of those in England. This kind of constitution at once suggested that form of change which was sought for by the leaders of what Mr. Froude calls the Protestant Revolt. They did not ask for a separation of the Crowns. They did not ask for a union of the Parliaments. did ask for what, as things stool, it was most natural for them to ask; they asked that a country which bore the name of a kingdom should really become a kingdom; that an assembly which bore the name of a Parliament, which followed in all things the model of an independent Parliament, should really become an independent Parliament, uncontrolled by any power out of the kingdom of which it was the native Legislature. The change which (irattun and his followers demanded and obtained was a change of that kind which is commonly most successful and lasting, a change which involved the least change in the existing law, which therefore was in form as little revolutionary as a change can be. All that was needed was the repeal of a single Act of the English Parliament. Either separation or union would have been a measure of a far more revolutionary kind, and would have inwolved far greater lagislative changes, and a far more thorough up-rooting of existing habits and institutions. Experience showed the dangers and difficulties of a political system in which the same King was to be set over two distinct kingdoms with two independent Parliaments, each supreme in its own range. Because the system did not answer in such a country as Ireland, and with such a Parliament as that of Ireland, it by no means follows that the scheme was foolish on the face of it, or that its supporters at ranament as that of Ireland, it by no means follows that the scheme was foolish on the face of it, or that its supporters at all deserved the scorn which Mr. Froude hurls at them. In this, as in everything else, it is very easy to be wise after the fact. Yet later experience has shown by the example of Sweden and Norway, and by the still more recent example of Hungary and Austria, that there are circumstances under which such a system may be more or less successful. It follows then that its failure in Ireland was caused by the peculiar circumstances of Ireland. What was peculiar in the case of Ireland, and most unlike the case of Norway, was that the Irish Parliament which it was proposed to make independent did not even profess to represent more than a small part of the inhabitants of Ireland, namely, the army of occupation, while, in its utter corruption, it did not even represent them. These evils naturally stood out in a far more glaring way as soon as Ireland became an independent kingdom than they had stood out as long as Ireland remained a dependency of England. An independent kingdom and an independent Parliament seemed management in the midst of an englaved nation. Independence was a mockery when these fourty was in political three-fourths of the inhabitants of the country were in political

bondage, when in the one House of Parliament a vast majority of the members represented nobody but themselves or their patrons, and when in the other House peerages were existered about with a lavish corruption to which England has seen no parallel lu the worst times. The demand for Parliamentary seferm, the demand for the admission of the Roman Catholics—that is, of three-fourths of the inhabitants of the country—to political rights, was the necessary consequence of the establishment of the legislative independence of Ireland; it followed on it as maturally as the legislative independence of Ireland followed on the growth of a national Irish feeling among the descendants of the English colonists.

Now Mr. Froude in a way sees all this. He sees as well as we do that it is possible to hold down nations by force, but that it is impossible to keep them for ever in leading-strings. He sees as well as we do that concession must lead to concession, that the possession of an imperfect liberty must had to the demand for a more perfect liberty. And he sees, or at least his hero Lord Clare saw for him, the close connexion between the original wrong done saw for him, the close connexton between the original wrong duna to the native Irish and the difficulties between the English colony and the mother-country. From such language as Clare used in the speech quoted by Mr. Fronde in vol. ii. p. 506 two opposite infer-ences might be drawn. He had found out, and he allowed it to be "a melancholy truth," that, when members of the ruling caste spoke of "the people of Ireland," they did not "speak of the great body of the people." He did not scruple to say, "The Act by which most of us hold our estates was an Act of violence, an Act subscripting the first principles of the Common Law in England and subverting the first principles of the Common Law in England and Ireland." He did not scruple to say that "the ancient nobility and gentry of this kingdom have been hardly treated." From this and gentry of this amption have been hardly treated." From this he argued, and argued wisely, that it was not prudent to press the claim of Ireland for "dignified and unequivocal independence." For a colony, for an army of occupation, to do so clearly was not wise. The "great body of the people" might be kept down by the ruling minority supported by the help of Great Britain; they could not be kept down by the ruling minority only. But then comes the question, whother the right course was to try to win over the great hody of the name by conciliation of the least to win over the great body of the people by conciliation or to keep them down by coercion. Mr. Froude throughout glorifies coercion and mocks at conciliation. His hero at least allowed that the exclusion of the great body of the people was a melancholy truth. Mr. Froude's tone throughout is that of one who does not look on this truth as melancholy at all, but rather as a subject for rejoicing and merriment. The spoliated nation has nothing to do but to sit quiet and to take what comes; they and all who sympathize with them in England or Ireland are to be jeered at. It is the jeering tone throughout which makes Mr. Frondo's work so offensive. may allow that it is often the worst result of past errors that they hinder those who follow from doing all that otherwise they would wish to do; but, when such is the case, it is surely a molaurholy truth; it is not an occasion for jeering and mocking and reviling all whose political education has not gone quite so far as at once to recognize the prudence and justice and expediency of measure, which make them bondmen in their own land. It is quite cortain that in the history of Ireland wrong has been, as usual, the punishment of wrong, and the form which such punishment has taken has often been such that it has been impossible to do what was abstractedly right. But so far as this is true it is at least a matter for sorrow, and a case in which the gentlest measures and the gentlest number consistent with safety should sarely be simed at. percion has doubtless sometimes been a necessity in Irish affairs; but it has surely been a necessity which every generous misd ought to regret. For Mr. Froude the mention of conciliation at onecalls forth a torrent of mocking and reviling, while coercion is a thing the mention of which seems at once to stir him up to the It is the brutal and offensive way in which Mr. keenest delight. Froude puts forth his doctrine, almost more than the doctrine itself, which makes the difference between him and all who share the political beliefs common to all English parties.

It is hardly worth while to refute or to quote a discourse of Mr. Froude's against liberty in general. It is hardly worth while at this time of day to collect many instances of his strange inaccuracies of expression. Still one is a little surprised when, even in Mr. Froude, one reads,

Dr. Franklin, who had been long in England, and was personally intimate with many of the chief English statesmen, took charge of the address to the Crown. He was learning on the bar of the House of Lords when the question was defeated in that Assembly whether he about the allowed to meent it.

The address spoken of is the address to George the Third from the Congress of the American Colonies before they had finally declared themselves independent. Finaldin was present at soverel debates in the House of Lords on American affairs, but it is quito certain that he never was present at any debate in which the Lords took on themselves to discuss whather a certain address to the Crown should or should not be allowed to be presented.

So again, knowing how little we can treat Mr. Freude's inverted comman, we should like to know that were the real words of Sir Herenles Langrushe, when Mr. Freude makes him say:—"Personal equality of representation, the only squality that I can conceive, would be a pure dispersory, and in a country like ours, where the democracy does not profess the religion of the State, a democracy subversive of the laws and the constitution. One is curious to know whether supporty in 1785 really was quilty of the very modern abuse of words implied in the phrase was have italicized. But, with the far graver sauts of Mr.

Fronde's book before us, we have no mind to dwell on these smaller matters. We have no mind to dwell on the great number of sentences to be found in this volume in which all grammatical construction is forgotten, or on the numberless passages which show the intense modernism of Mr. Froude's mind, his incapacity for throwing himself into the position of men of any time or place except his own. Now these matters are but dust in the palance; it seems a small matter even when Mr. Froude shows how little he understands political relations by saying, "The connexion was to be reduced to the tie of a common sovereign. Ireland was to be as Hanover." Here of course the analogy between Ireland and Hanover is altogether unlucky. The same person happened to be Elector of Hanover and King of Great Britain. But Hanover and Great Britain had no further connexion. A time might come, and as every one knows it did come, when, without any legislative enactment, by ordinary operation of the law in each country, Hanover and Great Britain should cease to have a common sovereign. But Great Britain and Ireland were, by the settlement of 1782, always to have one sovereign, like Sweden and Norman though the Lorislatures were to be distinct. Such and Norway, though the Legislatures were to be distinct. Such an arrangement might lead to difficulties in case of the Royal Family becoming extinct, or of other extraordinary accidents, but still it was something quite different from the mere accidental union of Great Britain and Hanover. All matters of this kind seem altogether of minor importance alongside the deep moral objections to be made against the book, objections which in the case of the third volume, to the examination of which we shall have again to come back, become even stronger than in the case of

MY TIME, AND WHAT I'VE DONE WITH IT.4

EVERYBODY has laughed over some of Mr. Burnand's amusing writings. He has undeniably discovered a vein of facetiousness almost peculiar to himself, and works it with an industry and a success which is really surprising. It is indeed true that the fun is not brought from far below the surface. Nobody will suspect Mr. Burnand of being a deep thinker or a powerful satirist on the strength of his incessant flow of rather mall indees. The strength of his incessant flow of rather than the strength of the streng powerful satirist on the strength of his incessant flow of rather small jokes. The strain upon the intellect of author or of readers is remarkably small; and it is partly to that circumstance that his popularity is owing. The number of people who want to be amused and dislike any approach to serious thinking or feeling is extraordinarily great; and for them Mr. Burnand habitually provides a mental food which is perfectly innocuous and distinctly pleasant. Anything like original humour is so rare that we would not speak too slightingly of Mr. Burnand's previous writings; but it is natural enough that a writer who has had a success of this kind should wish to aim a little higher. He might argue with a certain plausibility that the talent which is so distinctly marked on the small scale should be equally effectual in a more arduous task. Prompted by some such ambition, Mr. Burnand has undertaken a serious novel, with a plot, with elaborately drawn characters, with serious sentiment, and even with a distinct moral. We were serious sentiment, and even with a distinct moral. We were curious to see how far the experiment has been justified, and we cannot affect to entertain much doubt upon the subject. In fact we cannot possibly call the novel a success. Here and there there we cannot possibly call the hovel a success. Here and there there may be some amusing fragments; but to read through it from the first page to the last is about as depressing a performance as we have often undertaken. The failure does not seem to be due to any want of pains; we need not decide whether Mr. Burnand is totally unfit for drawing a full-length portrait, however cleverly he may dash off hasty caricatures, or whether his want of practice has made him awkward in this first attempt. In the latter case we might be justified in hoping better things from him in future; but we must confess that we are not very sanguine on the subject. but we must confess that we are not very sanguine on the subject.

but we must confess that we are not very sanguine on the subject.

Mr. Burnand, as we have admitted, has apparently been conscientious enough in his aims. He perhaps reflected on beginning the novel that he must give full play to his sense of humour, as his readers would expect to laugh, and would take serious work from him as they would take high tragedy from a popular comic actor. They would fancy that some hidden fun lay concealed in his pathos, and would begin to giggle precisely when he wanted them to cry. He has therefore provided a very sufficient proportion of purely comic characters, and of course he succeeds often enough in saving really funny things. Somehow or other, indeed, the fig. saying really funny things. Somehow or other, indeed, the funny things. Somehow or other, indeed, the funny that was and rather too deliberate. We are not saying really runny things. Somenow or other, indeed, the run strikes us as rather poor and rather too deliberate. We are not quite sure whether Mr. Burnand really becomes dull when he is under a sense of responsibility about his novel, or whether it is our own mood that is changed, and makes us yawn over jokes in a book which would amuse us in turning over a number of Panch. The facetiousness seems to lose its point in proportion as it becomes elaborate. Mr. Burnand's humour has a distinctive flavour in general; but here he seems to be merely one of the initators, and not one of the most successful imitators, of Dickens. Mickens himself became comparatively tiresome as he became a mannerist, or, in other words, as he took to imitating himself and trying it reproduce in cold blood the effects which came naturally from his pontaneous youthful spirits. But, if we are at times sensible of this relative decline in the writings of the man of true genius, we are simply bored by people who adopt his method at secondhand. We should certainly not have thought that Mr. Burnand was under a necessity of borrowing from anybody in this especity, and yet the likeness is unmistakable and extremely tiresome. The most deliberately funny person able and extremely tiresome. The most deliberately funsy person in this book is a Mr. Verney, a hanger-on to theatrical life, who inevitably recalls memories of Micawher and Mr. Turveydrop; and the comparison is by no means to Mr. Burnand's advantage. We will quote a sentence, pretty much at random, from Mr. Verney, which is sufficiently characteristic. He has come down with a friend to dine at Windsor, and pays a visit to the hero at the school of Holyshade, which, as it is next door to Windsor and on the Thames, may be identified with tolerable case:—

"We have [says Mr. Verney] only half an hour to walk to the hotel, to prepare ourselves for the conviviality of wine with a libation of water—and soap, which we should find at its best in the neighbouring Boyal town, whence this most useful commodity derives one of its most honoured titles." Here he took up his hat. "We must not keep our worshipful Bellwether Pipkison and the gregarious Lambs waiting. Perhaps Master Colvin would accompany us some way upon our road."

If this, or almost any other of Mr. Verney's speeches, had been introduced to us as a fragment from an unpublished work by Dickens, hitherto cast aside as a failure, we should have been easily convinced of its authenticity. And the resemblance goes further than this superficial mannerism. The hero has an old nurse, a sister of this Verney, who is modelled after Peggotty; and a father who has a strong family likeness to the elder Dombey; the father again is provided with a detestable companion in black whiskers, again is provided with a detestable companion in black whiskers, who occupies nearly the same position in regard to him as Carker does to Dombey in the original, and, like Carker, persuades a beautiful young lady to leave her husband, having first forced her into an uncongenial marriage. We do not mean to say that these coincidences are designed; probably they are merely the result of that unconscious plagiarism which misleads any fervent admirer of an original author; but they naturally occur to the reader, and do not tend to increase our interest in the book. Second-hand fun is the worst of all second-hand articles. worst of all second-hand articles.

Mr. Burnand, however, resolved that his book should not be composed purely of this matter. He was writing a serial in an composed purely of this matter. He was writing a serial in an excellent magazine, and had to do something to keep up the interest of his readers in successive numbers. Accordingly he had to design a plot. Dark hints are thrown out from the beginning of the book of a mystery connected with a certain asher at preparatory school; and the mystery keeps on recurring at intervals without being apparantly adversed a stage transfer. without being apparently advanced a stage towards revelation. It is indeed a mystery of the most commonplace kind, and we very soon give up the attempt to guess it, being perfectly sure that everything will be unravelled in the concluding pages. At first the hero is supposed to be legitimate, then appears to be illegitimate, and finally becomes legitimate again; and the persons who are in possession of the secret bully his father on the strength of it; but the whole affair, such as it is, might just as well have been left out of the story altogether. It only enables Mr. Burnaud to tantalize us at times with the promise that something is coming, if only we will have patience to read on; but it affects the characters so little that our very languid curiosity is speedily without being apparently advanced a stage towards revelation. It coming, if only we will have patience to read on; but it affects the characters so little that our very languid curiosity is speedily quenched. It seems, indeed, that Mr. Burnand meant to rely chiefly upon other sources of interest, and that, besides being a humourist and developing a complex intrigue, he intended his story to be autobiographical. We do not mean that it tells us anything of Mr. Burnand's private life, but that it is intended to give us pictures of certain scenes which he has had an opportunity of observing. There is, for example, a long account of Eton. Several real characters are introduced under the filmsiest of disguises, and especially there is a portrait of a distinguished Head-Master, well known to all Etonians whose school career was run some thirty years ago. The likeness is unmistakable, inasmuch as Dr. Courtly known to all Etonians whose school career was run some thirty years ago. The likeness is unmistakable, inasmuch as Dr. Courtjus made to pronounce the letter "s" as though it were "th;" but having told us by this ingenious device that the Head-Master lisped, and further, that he aimed at being the old-fashioned scholar and gentleman, Mr. Burnand does not succeed in passing below his external peculiarities. This sketch is very personal, but very trivial, and in his remarks upon the school discipline generally Mr. Burnand has really very little to tell us. He thinks, as other people have thought, that athletic sports are too much valued, that the knowledge in parted is parrow and superficial, and that the boys are title ledge imparted is narrow and superficial, and that the boys are idle and left too much to their own devices; and he tells us at very great length how his hero and a friend once shot a swan and how nothing came of it. Mr. Burnand might possibly write an amusing account of these things if he would devote a whole story to the subject, but this little fragment of commonplace satire is not very strong in itself, nor does he take the trouble to blend it with the other incongruous elements of his novel. Then his hero goes to a University called Cowbridge, where he has a pleasant time, and joins in founding an amateur theatrical club; but the satire, if it is intended to be satire, is weaker than before, and we only learn that, in Mr. Burnand's opinion, the theological training conferred is not in Mr. Burnand's opinion, the theological training conferred is not so complete as it ought to be. Here, however, we come across another line of reflection, which crops up at intervals throughout the story, and seems to be intended to supply its chief moral. Several of the actors, for the number of personages which are more or less distinctly introduced to us is almost past counting, have been much affected at different times of their lives by the picturesque ceremonies of the Roman Catholic Church, and by the purity and self-devotion of its priests. The pattern hero is educated with a view to taking orders, but is scandalised by the careless lives of certain English clergymen abroad, and thinks that the Ritualists, the unity party in the Church of England with whom he has much agrangathy, occupy an untenable logical position. It is, we need

to beyond our province to consider the validity of the seddiced by this intresting young gentlemen, but we straighted to observe that we have heard something very before. However, he is converted or perverted, as the

his them before. However, he is conversed or pervented, as the same may be, and becomes a highly picturesque monk, who redeems as earing alster from destruction in the most becoming way.

We must not go further in our analysis of this performance. The whole story is a thing of shreds and patches, devoid of any unity of sentiment or treatment, and manufactured with the least possible of sentiment or treatment, and manufactured with the least possible expenditure of gennine thought. If on one page we have a fragment of Diokens, we come upon the next to a bit from Miss Yonge; then we have perhaps a few "happy thoughts," then a bit of satire after the manner of Thackersy, and presently a few pages which remind us of Tom Brown's Schooldays. In each of these cases we distinctly prefer the original to the echo; and the part which is perhaps most disappointing is that in which Mr. Burnand appears in his own character. There we should naturally have expected him to succeed best; and yet his own jokes, whether from their incongruous setting, or because the author felt a certain awkwardness in his new character, strike us as a dreary and mechanical part of a performance in which a good deal of labour and genuine talent seems to have been expended to very little purpose. purpose.

ROMANISM IN RUSSIA.*

THE pursuit of knowledge under difficulties is a meritorial but not always a pleasing task. And when the difficulties do not lie in the nature of the subject, but in the manner of presenting it to our notice, the learner may be excused for feeling some natural impatience. There is a good deal of interesting information to be gained from these volumes of a kind not easily accessible elsewhere. It is quite true, as Bishop Eden intimates in his preface, that Englishmen generally know very little about the Russian Church, though we should demur to his statement that they suppose it to be "in doctrine and discipline much the same as the Church of Rome." Most Englishmen who care to know anything at all about the matter are aware that in one fundamental point of Unuren of Rome." Most Englishmen who care to know anything at all about the matter are aware that in one fundamental point of discipline—clerical celibacy—the two Churches differ; and there is nothing in this work to alter "the prevailing" and perfectly correct "notion," that in doctrine they are almost identical. Our complaint however is not that we are not told much which will complaint however is not that we are not told much which will be new to the majority of readers, and which we have no reason to doubt is substantially true, but that both author and trans-lator have combined to make the process of apprehend-ing what they tell us as difficult and repulsive as they well could. As regards the author, his judgment and temper are about equally at fault. If he had some appreciation of the difference between a commonplace book and an "historical study," and had learnt to distinguish the functions of an historian from those of a controversial pamphleteer, his work would probably have had learnt to distinguish the functions of an historian from those of a controversial pamphleteer, his work would probably have been reduced in size, but it would have gained immensely in arrangement, and would not have reproduced at every turn in an exaggerated form the unfairness which he is never weary of casting in the teeth of the "Romanists," whom he hates with a hatred not unworthy of Mr. Whalley. It may be rather his misfortune than his fault that he has been singularly unhappy in his translator. The work, we believe, was written in Russ, but there is abundant evidence in almost every page that Mrs. M'Kibbin has translated from a French version, and it is a pity that she did not take some pains to acquaint herself with the idioms of the English language before—to adopt her own phraseology—she "commenced to undertake" a task for which she is so singularly unfit. On the before—to adopt her own phraseology—she "commenced to undertake" a task for which she is so singularly unfit. On the whole, what with the clumsy arrangement, the utter want of historical method, the violent partisanship, the slipshod style, and the merciless handling of the Queen's English—to which may be added the there of the partisanship that the provider of the partisanship the slipshod style, and the merciless handling of the Queen's English—to which may be added the three of the partisanship that the partisanship the partisanship that the the absence of any index, a fault doubly unpardonable in a work so ill put together—we have seldom come across so unreadable a book. That we have read most of it is due to the interest of a subject about which information is not very easily obtained. But it is to be hoped that some future writer will be found to work up into a really systematic narrative the materials which Count Tolstoy appears to have tumbled piecemeal out of his note-book into the printing press.

Meanwhile those who are interested in the fortunes of the

Russian Church, especially during the last three centuries—for the ante-Reformation period is very summarily disposed of—and can spare time and patience, may profitably consult these volumes. But they must read them as they would read e.g. Rohrbacher or Mosheim, carefully noting the evidence for every fact, and discriminate of the constant of the c nating fact from inference and comment as they proceed. No Ultramontane ar Protestant writer was ever more completely dominated by the conviction that his belief is alone true Christianity, dominated by the conviction that his belief is alone true Christianity, and that all who oppose it are the enemies of God. Of Protestantism indeed the anthor says little, partly because it has not often come into collision with the Russian Church, partly because he does not think it particularly worth his notice. But the whole work is one long philippic against "Romanism"; and yet a Romanist assailant would not find much trouble in drawing from his own pages the materials for an effective reply. He admits indeed at the beginning that there is hardly any difference in the dogmas of East and West, but he then immediately proceeds:—

the strict observance of Change prescriptions, mearus in all Manually in Russe: on Historical Study. By Count 2, T. Hayes 1874.

The Roman priesthood, on the contrary, subtle, active, and principle recognized their Patriarch as the visible representable Saviour Himself, endeavoured without ceasing to configure his power at home, and to propagate it abroad.

The Roman priest propagated his faith by the sward; vishess he to a social institution through the Inquisition; he made the faterare, falsely interpreted, the principle and the base of his seek history of Russiu the principle and the base of his seek.

And then we are told, in illustration of this, that from the time of the conversion of Vladimir, the first Christian King of Russia, to the tenth century, the Popes were constantly endeavouring to unite the Russian to the Roman Church:—

the Russian to the Roman Church :—
Our first Christian King, Vladimir, had not yet entered the Greek Church when the Pope proposed to him to be baptized, and to introduce Romanism into Russia. To the envoys of this mission Vladimir replied, "Besturn home! Our fathers never would accept it." Later, Vladimir, being stready a Christian, having joined the Church, determined to convert his people and disseminate Christianity throughout his dominions, the Court of Roma of Bande proposals to him to recognize her supremacy, and sent delegates to present him relies by way of a bribe. Those attempts were equally ineffectual. When Russia had already become Christian and her Church actually in communion with that of Constantinople, Rome continued her efforts, and the Russian chronicles report in the years 991 and 2000 the arrivals of new envoys.

The ancient history of our country repeatedly mentions the missions, and epistles of the Popes towards the same end.

It would be obvious to remark on this that from their own, and It would be obvious to remark on this that from their own, and indeed from almost any point of view not exclusively Russian, the Popes were quite right. Their aim may have been partly ambitious, but it was surely desirable, both on religious and aocial grounds, to bring about a closer union between the various Ohristian nations, and it must be remembered that at the period of Vladimir's conversion the breach between Rome and Constantinople had only just been consummated. The Russians may have had good reasons for holding aloof from all communion with the West, but, so far as can be gathered from Count Tolatov's narrahad good reasons for holding aloof from all communion with the West, but, so far as can be gathered from Count Tolstoy's nametive, their own statement of them is not very convincing. We have seen already that whereas it is the peculiarity of Romaniam to propagate itself by the sword, "in the history of Russia the contrary is to be found." Yet we are told a few pages further ou that Roman, Prince of Galiez, replied to the plausible overtures of a Roman legate:—"As for me, I have the weapon which God has given me and while it is at my side. I have the weapon when the contrary is to be some and while it is at my side. I have the weapon when the contrary is to be some and while it is at my side. I have the weapon when the contrary is to purpose the contrary to a Roman legate:—"As for me, I have the weapon which God has given me, and while it is at my side, I have no occasion to purchase cities otherwise than by blood, after the example of my ancestors, who have enlarged the limits of Russia." As the limits of Russia were coextensive with the limits of the Russia Ohurch. this looks very like propagating the faith by the aword. A little later a Russian Grand-Duke, who is also a cononized Saint, St. Alexander Nevsky, mildly replies to some Dominican envoys sent from Alexander IV., "Behold our faith! Those who do not profess it, or profess otherwise, be cursed! And thus we curse you, miscrable Latins." This hardly exemplifies "the absence of viclence" among the Russians, nor do they seem to have had any greater objection to propagandism, as long as it was on the right side, though it was severely consured when practised by their Latin rivals:

At Novogorod some Russians even commenced to baptize their children according to the rites of the Roman Catholic religion, for which they were subjected to public penitence for six weeks..... as people who had, so to speak, two religions." On the other hand, there were according to all probability also cases of conversion to the Greek faith; for we find at this cpoch detailed also cases of conversion to the Greek faith; for we find at this cpoch detailed instructions as to the manner in which Roman Catholies should be received into the Orthodox Church.

The attitude of the Russian towards the Latin Church during the five centuries between its foundation and the period of the Reformation is summed up in the gentle and charitable avowal that the Russians mistrusted the Latin "heretics and schismatics" worse than Mahometans, fied from them as a pest, and would have nothing in common with them.

For two centuries after the Reformation the history of the rea dreary record of continual overtures on the one side, promptly snubbed—we hardly know what other term to use—on the other, supposed—we narrily know what other term to use—on the other, and in these transactions the Jesuits were naturally often mixed up. Twice during that period they were expelled from Russis, but they managed each time to effect a fresh entrance. In the eighteenth century, on occasion of the visit of the Uzar Peter, to Paris, the doctors of the Sorbonne drew up a note on the different between the Fastern and Western Churches conceived in an expensive them. doctors of the Sorbonne unew up a nonceived in an extremity of the Eastern and Western Churches conceived in an extremity of ciliatory spirit, which was submitted to the Russian Bishop ciliatory spirit, which was that the Bishops had no power. decide the question, and "referred the learned professors a four Eastern Patriarchs"—whose jurisdiction Poter had with superseded by the ukase establishing the Holy Governing under himself as the supreme ecclesistical authority—"or, was still better, advised them to abandon it to the decision the Most High," which is merely a police form of defeat the Most High," which is merely a polite form of defathe matter till the Greek Kalends. At we approach the the matter till the Greek Kalends. As we approach the reign of the Empress Catherine II., whose exclasination policy was far broader and more generous, though she cared nothing for its merely religious aspects, the plot thickens. There is much of interest, not only in its bearings on Russian affairs but on the internal condition of the Roman Catholic Church, is the long and chaquered career of Significancewitz, the Latin-Archbishop of White Russia, who, among other peculiarities,

publicly supported the Bible Society and would certainly have been called an Old Catholie in these days; but the tale is too intricate to be reproduced or even analysed here. Suffice it to say that the Archbishop, like the Jesuits after their suppression by Ganganelli, was for a long time supported by the Russian Court against the secret or avowed hostility of Rome.

The shief interest of the second volume centres in the intilient

against the secret or avowed hostlity of Home.

The chief interest of the second volume centres in the brilliant schievements and final collapse of the Jesuits, who from 1802 were for several years under the generalship of Father Gruber, one of the ablest men the Order ever possessed. They had a powerful patron in Prince Alexander Galitzen, Minister of Public Instruction, and an ardent supporter in the famous Count de Maistre, who in 4803 became Sardinian Minister at the Court of St. Petersburg; and they made the most of their opportunities. Notwith-standing the laws against what Mrs. M'Kibbin calls "the Propagand," they opened schools for the sons of the nobility, several of whom "had the misfortune to be converted to Latinism." when however they requested permission to proselytize the natives and Mahometans of Siberia, it was refused on the rather strange ples that it was incompatible with the dignity of the Empire, which ought to send missionaries to convert these savages to the Orthodox faith—but omitted to do so. White Russia was the chief seat of their operations, and they had several colleges and a noviciate there, and some 13,500 peasants under their pastoral charge. Their principal establishment was at Polotsk, and the system of training there, as described by themselves, is sufficiently characteristic to be worth quoting entire: characteristic to be worth quoting entire:-

Prince Galitzen, to whom the Jesuits again addressed themselves, accorded them his powerful protection; and in 1812 a ukase appeared upon the subject of the Academy of Polotsk, confirming its establishment, "as a signal mark of the special kindness of the Sovereign for the College of the Jesuits at Polotsk, who have rendered eminent services to education and youth." This Academy was nominally subject to the Ministry of Public Instruction, was placed beyond the limits of the jurisdiction of the University, and was administered by the General of the Order, enjoying all the privileges and rights of a university. It instructed in Theology, Philology, and a mixed faculty of Philosophy, Natural History, and Jurisprudence. It had the power to confer scientific degrees, as well as the dignity of Doctor of Theology. Its diplomas had the same value as those of the University. The Provincial of the Order was its immediate chief, or rector, and every faculty could choose, as in the University, its own Dean. With its own typography it also had the privilege of the censorship of its own publications. Every other educational establishment of the Jesuits in the empire was subordinate to that of Polotsk. Its noviciate was transferred to the town of Pouzza, in the Government of Vitebsk, between the cities of Rejitza and Dunnaburg. The educational system of the Jesuits is too generally known to require explanation, or to detain us long over it, but we must wait a moment to glance at their own account of it. Their General himself thus explained it to Prince Galitzen:—"1st. The pupils are not permitted to write or receive letters without the preliminary censorship of the Superior of the establishment, or to have any communication whatever with persons not forming part of the Noviciate, excepting only their parents. 2nd. In the establishment, is an isolated place, where the pupils cannot possibly escape the vigilance of the tutors, or have relations with any one beyond it. 4th. During the course of study, which is two years, the pup Prince Galitzen, to whom the Jesuits again addressed themselves, accorded

After the restoration of the Order by Pius VII. in 1814, the Russian Jesuits "commenced to consider everything as possible," and seem to have rather lest their heads. They felt themselves strong enough "to open a Propagand in St. Petersburg," and gained over several distinguished converts, among whom were the Princess Galitzen and her cousin, the Princess Shmedt, Prince Odoewski, and the Princess Dolgorouki. These conversions were managed with great circumspection. One of their most important proselytes, the Countess Rostopchin, wife of the Governor-General of Moscow, had been strictly bound over to secresy by her confessor, who relates with much naïveté the result of her disobedience to his injunctions in telling the secret to her husband. "When I visited her two days afterwards, I was quite stupefied on hearing this thoughtless conduct. I had occasion some time afterwards to wait on the Count, but he looked at me furiously and turned his back on me." The same priest describes elsewhere with equal frankness his ingenious methods of pro-

Of all my religious duties, it is not Confession which is the most difficult. I hear my people secretly; but it is the Communion. I can confess during the promenade, or in an open seleon, without exciting the least suspicion; but in administering the Sacrament I expuse myself to much danger. Permit me to inform you of an invention of mine with regard to this ceremony, and give me your advice upon it. I intend having a small aliver box made, which should contain the ciboire in small quantity; afterwards I shall detait this miniature chalice, and how commodicusly it can be carried the evening before into the spartment of the person desiring to communicate, so that he can himself take it in the morning after prayers. By this means all the Inconveniences attending secret Communion will be done away with.

In 1816 Count de Maistre—who must have shared the sentiment In 1810 Count de Maistre—who must have smared use sentiment of a famous English epitaph on the social qualifications for the kingdom of heaven—writes exultingly on the rapid progress of conversions, and adds, "Procelytism to Catholicism strikes one as much by the number of persons as by the rank they occupy in society. It is traly an admirable sight, as the most of these conversions are principally among the first orders of society." But by this time "the Propagand" was becoming too admirable to be

quits safe. The Binness was very wroth on discovering the version of the young senhow of Prince Alexander Galitans, it the Jesuits assured him is was purely miraculous, and that the done all in their power to prevent it. In December 1815 app an Imperial ulmae charging the Order with fomenting disce families and disloyalty in the State, and benishing them Mescow and St. Petersburg. Soon afterwards Count de Many who was known to be concerned in some of the most imperial property of the most imperial property of the most imperial property. who was known to be concerned in some of the most imp conversions, found it expedient to quit Russia, and in March 15 a second ukase banished the Jesuits from Russia altogether, with a second ulase banished the Jesuits from Russia altogetaer, when special clause forbidding them under any pretext to re-enter the Empire. Count Tolstoy sums up the case against them in language which is evidently more polemical than judicial, though it may contain a good deal of truth. But there is one passage—and it is the last which can be noticed here—to which we feel bound in the interest of literary morality to take very serious exception. We give it as it stands:—

Respect for morality does not permit us to publish here their unchristians and unnatural behaviour toward their own confrience or the ignoble visus common to their schools; but we feel constrained to state that if any member of this Society suspect the veracity of our assertion, we shall be compelled to present to the public irrefragable proofs of the vile actions committed by the Jesuits.

Nothing can justify the framing of such an indictment as this. Without making any positive statement, the writer more than insinuates charges of the most odious kind against a large and influential body of men, men of name and position and with a character to lose; nor does the circumstance of their general unpopularity in his own country as well as in ours make the proceeding one whit less offensive, but the reverse. His charges are either true or false. If false, no condemnation can be too severe for such reckless libelling; if true—and we desire to pronounce no opinion on the matter of fact—they ought not to be alleged without giving the evidence. Count Tolstoy threatens to publish "irrefragable proofs" if any Jesuit ventures to suspect the veracity of his assertion. But if he has any proofs, he was bound to produce them before making such an assertion at all; if he has them not, whatever he may suspect, decency and charity should alike have kept him silent.

REGINALD HETHEREGE.

THERE is about as much plot in one of Mr. Henry Kingsley's I novels as there is in a cracker that a boy lets off on Guy Fawkes's day. There is a rapid succession of cracks, if we may use the word, in both one and the other, and then all is over and there is nothing but a confusion of sound to remember. The first cracker that is thrown may make one start and raise a certain cracker that is thrown may make one start and raise a certain degree of interest, and even cause some amusement, but when a dozen or two have been lighted, and each has gone through the same course as the one before, nothing but annoyance is caused. There are those who say that Mr. Henry Kingsley once wrote a good novel. Though we can scarcely believe it, yet we are not prepared to deny it. There may perhaps have been some interest at first excited by the rapid and violent succession of scenes in which he so delights. There may have been those who were pleased at finding that each chapter of a noval, like each fold in the cracker, could go off with a bang of its own. Not a few people have so small a power of keeping their attention sustained, that they find it a great mental effort to follow the thread of the plot of a well-constructed novel. Now Mr. Henry Kingsley's novels have, we believe, some kind of plot. So far as we have been able to follow the plot of the one before us—and that is but very little indeed—it would seem that the children who are brought in at the end of the third volume are related to the wicked old man with whom the story opens in the first volume; distantly old man with whom the story opens in the first volume; distantly related however, for, if we mistake not, they are in the sixth or seventh generation from him. But though there is thus a certain kind of connexion, yet it does not appear to be in the least needful that any one should keep this connexion in memory. New chathat any one should keep this connexion in memory. New characters—nay, even new generations—are suddenly brought in, and with their doings fill each a chapter or so. The reader no more takes the trouble to study a new character than the railway-travaller takes the trouble to study the occupants of an adjoining carriage, when two trains going different ways are halting together in the same station. In each case they will be rapidly parted, though we have the converte approach to a new pallway aver on the foreign should be sorry to suppose that on any railway, even on the London and North-Western when the tourist trains are running, there is a chance of accidents at all equal to that incurred by

is a chance of accidents at all equal to that incurred by Mr. Kingsley's characters.

As Mr. Kingsley kills off his characters so rapidly, he is of course forced, as he does not seem to deal much in ghosts, constantly to bring in recruits. We might liken him not only to a general fighting a bloody campaign and always calling for fresh men, but also to a mistress of a household who is ever changing her footmen. She has a great succession of men, but as each one puts on the livery which the last had had to put off, there is no great difference to be seen among them. We have been introduced to many hundreds of Mr. Kingsley's characters, but, if it were not that they have different manes, we could not tell one from another. They are all equally extravelent, equally visions, and equally foolish. They all talk in short jerky sentences, and if they write they all write that jerky latters. Like

"Bushald Hetherein. By Henry Ringstey, Author of "Raven healthy Hamlyn," Sec. 19 wels: Common Bushay & Bons. 2872.

on they all are to each other, they are like nothing she we ever a There are in making a ninear get poisoned without one know they all are to each other, they are like mothing one we ever new, by come in audiently, estimator get polarized without one knowing reason wity, except that they help to fill up a chapter, and then y were no more heard of. If they do not go quite so far as either to a life or to lose it, they do something very startling, and show that they are not ready for either the executioner or the undertaker, by should at least be marched off to a lunatic asylum. Perhaps, if had had patience to read the story through and to take these notes, we might have found that at all events all the case that are committed lead on to the unfielding of the whot crimes that are committed lead up to the unfolding of the plot. But, as it is, we find that by the time we have been introduced by Mr. Kingsley in the next half-dozen pages to as many new characters, we have got hopeleasly bewildered about all whom he had described in the last half-dozen. There is, as we have said, nothing in his characters to distinguish them from each other except their an his characters to distinguish them from each other except their names, and who can remember the names of scores of people to whom he is utterly indifferent? Sometimes Mr. Kingsley makes his character male, sometimes female, sometimes old, sometimes young. They are all nevertheless one and the same, and their dulaces is of the same kind and the same weight. A dinner is given about the middle of the second volume, and we are suddenly introduced to "a very heartiful young lady of about slaver warm given about the middle of the second volume, and we are suddenly introduced to "a very beautiful young lady of about eleven years in age, and thirty in self-possession." There was, so far as we see, no need to introduce her at all, and no need to make her, when a child of eleven, talk as Mr. Kingeley would seem to think people of thirty talk. It would look odd, he must have supposed, and oddness is mistaken by some people for cleverness. The young lady introduces herself as Miss Hickson, the daughter of Captain Hickson, and the grandchild by adoption of the Duke and Duchess of St. Privat. We think we have heard the names before, and begin to consider who all these records are and what before, and begin to consider who all these people are, and what they have to do with the story. On looking back we find that a few chapters before, Captain Hickson and a Miss Murdoch had been married, and that this is their only daughter. and Duchess, we suspect, are the same people as the Prince and Princess d'Amandvilliers of the earlier part of the story. But as we considered, when we came to these people of exalted rank, that they were introduced merely to please those among Mr. Kingsley's reader who should happen to be milliners or shopboys, we did not trouble ourselves about them any further. Miss Murdoch had a wicked brother who is ever disguising himself, and trying to kill off his relations. On one occasion he invites the hero to dinner at the Bedford, and there offers him a glass of poisoned sherry and bitters before dinner. The horo insisted, however, on his host drinking

He pretended to put his lips to it, and with a curse threw it violently on the fire. The spirit in the wine fiashed up blue, and then a lambent, green flame began creeping about among the coals.

The hero thereupon writes to warn the poisoner's aunt, with whom "the murderous young vagabond" lived. The letter he sends and the answer he receives are so brief that we can easily afford space to quote them. The letter ran:

HESTER,
Have you made your will in favour of James?

The answer was:-

No. HENTER.

But we are forgetting the young lady of eleven whom we have left in the drawing-room. She filled the two old priests who were talking to her with "astonishment and admiration." When dinner talking to her with "astonishment and admiration." When dinner was amounced "she dashed downstairs, and was discovered, when the guests arrived at the dining-room, to be eating maccaroni as a preparation for a graud dinner of nine plats, of all of which she partook freely." And yet these two old priests, who admire a child of eleven when eating like a hog and talking with the impudence of an impudent woman, are meant by Mr. Kingsley to be men of the most perfect breeding. Presently there came news that her brother, in some examination, had come out "fourth on the list, and first prize for mathematics." But here we will let Mr. Kingsley speak for himself:—

By degrees the face flushed, the eyes grew more prominent and brilliant, and the bosom began to heave; then there was a movement very slight at the corners of the mouth, accompanied with a lowering of the cyclids, and a knitting of the brows, telling of emotion which would not long be suppressed, and then the child buried her face in her hands and burst

As a matter of taste we should have preferred a fresh attempt at poisoning to such a description as this. Presently there comes to dinner "the Greek merchant, Count Theodorides," who turns disner "the Greek murchant, Count Theodorides," who turns out to be no Greek, but some one or other in disguise. The old lady who signed her name Hester, when he was introduced to ber, "rose and gave him a sweeping curtsey, looking him straight in the face." She evidently had some knowledge of him, for the next morning "she went privately to the City, and sold out some Greek mining shares she had, with which Mr. Theodorides was connected." She had reason for so doing, for in a chapter or two further on one Mrs. Simpson is found dead by Theodorides in Rosherville Gardens. In her purse were found banknotes for a thousand pounds, besides a great deal of money. No doubt as she had goes to those gardens which are so well known as "the place where to spend a happy day," she had been careful not to run the risk of having her happiness marred by a want of purse. "She had died of heart disease, it appeared. It was a major," said the curous, "that the unhappy lady was found by Count Theodorides. She would have been a rich booty for any straggling thief."

When, however, Mr. Simps "from that moment he never spoke one word, good or had," and before that moment he never spoke one word, good or had," and before long "died, it was strongly suspected, by his even hand." Had the humanted Miss. Simpson been east in as harely mould, we should have at once come to the conclusion that she had taken that great sum of money with her to Rosherville in order that on hearing of some piece of good fortune she might thrust it all into the hands of the messenger, or soutter banknotes among the waiters. For it is one of the marks of heroic character, as drawn by Mr. Kinraley, to give summes to banknotes among the waiters. For it is one of the marks of beroic character, as drawn by Mr. Kingsley, to give guiness to waiters and postboys. An heroic general does indeed on emoccasion, after dining on a plate of beef, give only helf-aguines to awaiter, but then he had made up for it by thus addressing the man:—"I want sun. I also wunt forgetfulness of the peet, and guidanes for the future. How do you get these things in England, you people?" His friend, a post-captain, who has not perhaps the command of such fine language as the General, when he receives news from a pilot that he has a daughter born to him and that his wife is wall, hands over to the man his watch and chain that cost sixty guiness between them. Mr. Kingsley delights in that his wife is wall, hands over to the man his watch and chain that cost sixty guiness between them. Mr. Kingsley delights in sums of money, the bigger the better. He brings in a man called Thomas Morris, chiefly, so far as we can make out, in order to say that he gave 3504 for a horse. Reginald Hetharege, the here, a man who for a great part of his life was hard up for money, and was always being arrested, but who, while mable to pay his own delpis, was yet great in "theoretical finance," is in a very few chapters undo great in practical finance, and heavy mention the millionairs. mado greatin practical finance also, and becomes simost a millionaire. He buys a time estate, and goes down to take possession of it. He buys a time estate, and goes down to take possession of it. An old housekeeper shows him over the bouse, and introduces to him "a very old bloothound and her puppy, the puppy nearly as big as its mother. The old dog smelt Heginald, and then sent up a long, sonorous howl. The puppy idiotically got inside the fender, and threw itself down to sleep, as if the preliminary to this action was to break every bone in its body." Old dogs do not send up long, sonorous howls without reason. Reginald after supper goes round the house. "At the end of the great drawing-room the candle suddenly burnt into the socket, went out, and he was left darkling." He could not find his way back, and so he sat down to neas the night: pass the night :-

A door opened at the end of the room, and a very beautiful young lady, in a white dressing-gown, came in. She carried a light, and she pears about; she went towards a writing-table where them were pens, ink, and paper. There she sat down and wrote a note, which she closed, and laft on the table. She then exited, and all this time the foolish dogs had taken no notice at all.

Reginald had eigar-lights, and, striking one, lighted the taper that stood on the table. Why he had not done this before is not made clear. He looked at the letter. It was directed to himself. At this moment both the bloodhounds went mad with sudden, savage fury ":-

savage fury ":—

"Quiet, you fools," said Raginald, opening the letter. Almost as he said so three things happened together. There was an explosion outside the window; a crinkling smash of glass followed, and a bullet buried itself in the table before him. He put out the light, holding the letter in his hand. Then he ran to the window, keeping behind the mullion, and opened it. The hounds leapt out. There were two sharp shots in the shrubbery, and one smothered sound, half soh, half yell. The puppy came back through the window, cowed and whining; the old bitch did not come back at all. She had tried to do her lost, poor thing. In her stupid brain she had made out that Reyinald was her new master, and she had did for him: she could do no more. "Poor dumb thing!" said Reginald to himself. "This is the only hone she has ever known, and she has done the best for its master."

If our readers delight in scenes scarcely less exciting than this, they will find them scattered with a profuse hand throughout the book. For ourselves, so wearisome do we find Mr. Honry Kingsley book. For ourselves, so wearisome do we find Mr. Honry Kingsley that, as long as there exists a single volume of sermons that we have not read, so long shall we have a book that will afford as more lively reading than his last novel. We do not pretend to have read Reginald Hetherege through. We are but men, and sleep will weigh our eyelids down. There was a mystery in the story—a room that was shut up in the year 1780, and opened at the end of the third volume. The author has done his best to make his readers curious about this room. We for our part should have been well content to have had the third volume of Reginald Hetherege scaled up like the room for eighty years or so. In fact the story would have been quite as interesting, and scarcely less intelligible, if Mr. Kingsley had forgotten that it required a third volume to bring it to an end.

CHARLES HOWARD, EARL OF CABLISLE.

CHARLES HOWARD, the first Earl of Carlisle, so crested on the Restoration of Charles II., had come of age shortly after the execution of Charles II., had come of age shortly after the execution of Charles I.; he adhered to the public order of things which he found existing entored the things which he found existing, entered the army, and became attached to Oliver Cromwell, who much courted this wealthy sector of an ancient noble family of the North. Howard was great-grandson in the main line of Lord William Howard, the "Belted Will." He was the heir of great estates in Essex, Yorkshire, Cumberland, Westmoreland. Durham, and Northumberland. He fought, and,

A Relation of Three Embureles from his Sacred Majestic Churles II. to the Great Duke of Muscovic, the King of Sweden, and the King of Dismark; performed by the Right Hon, the Earl of Carlinle in the years and role. Written by an Astendant on the Embusies, and published with his Lardship's approbation. London: 1669.

as a young man, gained distinction under Cromwell at the battle of Worcester. Cromwell called him in 1653 to the Barebones Convention to represent the four Northern counties, and he took his seat in that assembly. He was made Captain of the Life Guard to the Protector. He was elected member for Cumberland in Cromwell's Parliaments of 1654 and 1656. He was one of Cromwell's major-generals; he was one of Cromwell's peers. He was not only made a member of Cromwell's Second House, and so one of his peers, but special titles of peerage were conferred on him by the Protector, who in all the days of his power created only two viscounts and one baron, and who made Charles Howard Baron Gilsland and Viscount Howard of Morpeth.

In a famous speech, violently attacking Cromwell and his House

In a famous speech, violently attacking Cromwell and his House of Peers, made by Sir Anthony Ashley Cooper, afterwards Earl of Shaftesbury, the following vituperative description of one of the peers is supposed to be intended for Charles Howard, no-worth peers is supposed to be intended for Charles Howard, no-worth being thought to be a pun on Naworth, one of his Northern possessions, still belonging to his descendant. Nathaniel Fiennes, son of Viscount Saye and Sele, having been first vituperated, then comes "the second, a person of as little sense as honesty, preferred for no other reason than his no-worth, his no-conscience, except cheating his father of all he had was thought a virtue by him who, by sad experience, we find, hath done as much for his mother his country." The particulars of this alleged unfiliat conduct, if the character applies to Howard, are not known. In the reign of Charles II. Shaftesbury and Carlisle were for several years close nolitical associates.

political associates.

After the death of Oliver Cromwell Howard was one of the zealous supporters and advisers of Richard, until power fell from him. He was foremost in counselling Richard to resist the Wallingford House officers, and undertook, if Richard would authorize him, to make them yield by force. Richard declined the advice, Howard was now deprived of his regiment. He eagerly and fell. Howard was now deprived of his regiment. He eagerly joined Monk in bringing about the Restoration, and was soon conspicuously rewarded. He was a member of the Convention Parliament which restored Charles; he was made a Privy Councillor; he was appointed one of the Special Commissioners the trial of the regicides. He was created, on the occasion of the Coronation, in scornful confirmation of Crouwell's previous creations, Baron Dacre of Gilsland, and Viscount Howard of Morpoth, with the addition of the higher title of Farl of Carlisle. The devoted servant of the Cromwells had suddenly become the enthusiastic follower of Charles II.; his wealth and position made him important for the restored Monarchy as before for Cromwell; and ongaging personal qualities and easy manners position made him important for the restored Monarchy as belove for Cromwell; and engaging personal qualities and easy manners probably disarmed in his case, as in that of Admiral Montagu, now created Earl of Sandwich, the criticism and abuse which have been so freely lavished on Monk and on Ashley Cooper.

Bishop Burnet, who in one passage says that he learnt much

been so freely lavished on Monk and on Ashley Cooper.

Bishop Burnet, who in one passage says that he learnt much about Oromwell from Lord Carlisle, and says in another that he had declined his overtures for acquaintance, speaks of him disparagingly, and describes him as having in Cromwell's time "run into a high profession of religion, to the pitch of praying and preaching in their meetings; but after the Restoration he shook that off and ran into a course of vice" (Own Time, i. 491). He was selected by the King in 1663 to proceed on special embassies to Muscovy, Sweden, and Donmark. These were combassies of complinent in return for embassies of compliment in return for embassies of complete for embass and Denmark; and in the case of the Ozar of Muscovy, the Ambassador was charged with the special business of obtaining the renewal of the privilege of the English Company of Merchants at Archangel of trading there without payment of any duty. This ancient privilege had been taken away by the present Ozar to punish the English merchants for sympathy with the rebellion and execution of Charles I. The Russian Embassy to London in the previous year had been received with great power and executions. The Earl of Carlisle carried with great pomp and ceremony. The Earl of Carlisle carried with him a great train and expensive equipage, thus described in an account of his embassics published by one of his attendants:—

His train consisted of near fourscore persons, amongst which he had ten gentlemen, six pages, two trumpets, and twelve footmen. He had also a chaplain, soveral interpreters, a chirurgeon, six musicians, besides many tradesmen that were very necessary in Muscovy. And forasmuch as his Excallence was to begin that way the circle of his embassies (to the end he might come back by Liedland into Sweden, by Sweden into Denmark, and from thence come into England), before his departure he provided himself of all such necessary things as Russia could scarce afford. So that, besides the liveries which were made at London, he was also forced to provide himself of beds and chairs, and even of all kitchen movables, only the chimney excepted, and that would have been, too, most serviceable in several places.

Lord Carlisle was accompanied by his Countess, and also by his eldest son, Viscount Morpeth, about seventeen years old. The Countess gave birth to a son at Copenhagen, while Lord Carlisle was discharging there the last of his embassies, and the King and Queen of Denmark and the Prince Royal were sponsors at the baptism. The famous Andrew Marvell, member for Hull and the friend of Milton, was taken by Lord Carlisle as secretary of his embassies, and he obtained leave from his constituents to accept the post. The Rev. Mr. Grosart, the last editor and biographer of Marvell, has erroneously assumed that Marvell was author of the minute and interesting account published of Lord Carlisle's embassies; there is conclusive internal evidence to the contrary (pp. 6 and 23). The author signs himself G. M. Mr. Grosart, speaking as if Marvell's authorship were a certainty, says, "From first to last the impress of Marvell is on all." The author is a culti-Lord Carlisle was accompanied by his Countess, and also by his

vated man and a scholar; but from first to last there is no sign of Marvell's vivacity and wit. The volume contains only one incident of interest in connexion with Marvell's biography. On one occasion, in Swedish territory, Marvell, finding a difficulty with one of his waggoners, put a pistol to his head, which roused a mob against him and endangered the party, and required the ambassador's pacific interference (p. 430). Marvell's Latin scholarship was probably the reason of his selection to be secretary, Lord Carlisle's notes to the Muscovite Government being invariably translated into Latin. Lord Macaulay has made the mistake of referring to a French translation of the account of Lord Carlisle's Embassics, published at Amsterdam in 1672, as the original work, and calling the English original, published in 1669, a translation and calling the English original, published in 1669, a translation from the French.

Beyond a reception at Moscow of barbaric splendour, intended Beyond a reception at Moscow of barbaric splendour, intended for Muscovite display more than for respect to the King of England, Lord Carlisle was treated with much indignity in Russia, and failed to obtain whatever he asked. In Sweden and Denmark he was honourably treated. The Czar of Muscovy sent quickly after him, when he left Moscow, an envoy to the Court of London to complain of his conduct; but the barbaric cunning, arrogance, and mendacity were well understood by Charles II., who entirely approved of Lord Carlisle's proceedings. Carlisle was sent again to Sweden on a special embassy in 1669, to carry the Garter to the

Lord Carlisle's wealth doubtless made him specially useful for Lord Carliale's wealth doubtless made him specially useful for these expensive embassies of State, and, though an eager politician, he probably had more pleasure in diplomatic employment than in regular political service at home. He joined, as a peer of Parliament, in the opposition to Clarendon which determined that Chancellor's fall, and he was afterwards prominent in endeavours, led by Buckingham, who succeeded as Prime Minister, to break the power of the Duke of York, Clarendon's father-in-law. One of Buckingham's schemes was to divorce the King from his Queen on account of her barrenness, and so imperil the Duke of York's succession. Another more sure way of attaining this last object Succession. Another more sure way of attaining this last object was to induce the King to declare a marriage with the Duke of Monmouth's mother. Carlisle and Ashley, afterwards Earl of Shaftesbury, are said to have been the first to propose to the King, as early as 1663, this legitimization of Monmouth. Carlisle offered to bring forward the matter in the House of Lords (Burnet's Original Persons, 1964, Bublic, 2007). Times, i. 261, Macpherson's Original Papers, i. 46, Dublin edition, 1775). This was in 1668. The King refused the advice, but it was thought to be not disagreeable to him. Carlisle and Shaftesbury renewed the advice in 1673, when the King met them with a bury fenewed the advice in 1673, when the King met them with a more stern refusal. But they are said then to have told the King that, would be but say he was married to Monmouth's mother, they would find plenty of witnesses to swear it (Life of James II., 1490, Macpherson's Original Papers, i. 72). Opposition to the Duke of York seems to have been Carlisle's ruling idea. After the break-up of the Cabal Ministry, and Shaftesbury's dismissal from the Chancellorship, Carlisle was prominent in organizing in the House of Lords a Parliamentary Opposition to the King's Government. Shaftesbury, Hollos, Halifax, Salisbury, and Falcon-Shaftesbury, Holles, Halifax, Salisbury, and Falcon-Government. Shaftesbury, Holles, Halifax, Salisbury, and Falconbridge were his principal associates. They met for some time at Holles's house (Ruvigny, March 6, 1674, in Archives of French Foreign Office, Letters to Williamson, February 28, 1674). Popery was now inextricably associated with the Duke of York's succession; he was a declared Roman Catholic, and had just married for second wife, amid national indignation, a Roman Catholic princess. The Parliamentary session of January 1674 opened with vigorous efforts in the House of Lords against the spread of Popery in the Royal Family and the nation. Lord Salisbury moved that the Duke of York's children should be educated in the religion of the Church of England, and Lord Carlisle seconded this motion. Government. Duke of York's children should be educated in the religion of the Church of England, and Lord Carlisle seconded this motion. Lord Carlisle further moved for a Bill to prevent the King and other members of the Royal Family from marrying without the consent of Parliament. In the discussion of this Bill Lords Carlisle and Halifax proposed that the penalty of disobedience should be exclusion from the succession; the Earl of Peterborough declared this a "horrid notion," and Shaftesbury replied that "it was not so horrid," and declared that he supported it, "not as a thing he desired should look backward but forward, and for which there had been precedents" (Macpherson's Original Papers, i. 73, 4). Parliament was prorogued on February 24, and did not meeting addressed a letter to the Earl of Carlisle, which was printed, and served as a political manifesto of the Opposition. Shaftesbury complained in this letter of the King's unwillingness to meet Parliament, and counselled that a new Parliament should be demanded. He angrily commented on rumours liament should be demanded. He angrily commented on rumours busily spread that he intended to return to office:—

I am ashamed [he wrote] I was thought so easy a fool by those who should know me better; but I assure your lordship there is no place or condition will invite me to Court during this Parliament, nor until I see the King thinks frequent Parliaments as much his interest as they are the people's rights; for until then I can neither serve the King as I would, nor think a great place safe enough for a second advanture.

Shafterbury desired Lord Carlisle to communicate his sentiments to Lord Mordaunt, the Earl of Salisbury, Lord Falcorbridge, and Lord Holles. At this time he distrusted Halifax, who he thought was fidding for office. But in the subsequent Session, when Lord Danby endeavoured to carry through Parliament a Bill imposing a non-resisting test on the mation, and Shaftesbury led a visitions and brilliant Opposition. Halifant with all his keepness

and ability was at his side, and Cartisle and Falconbridge did not appear. Shaftesbury then accused Carlisle of being entired away

By Spansion:

If you sak after the Earl of Carilele, the Lord Viscount Falconberg, and the Lord Berbeley of Berkeley Castle, because you find them not mentioned amongst all their old friends, all I have to say is that the Earl of Carilele stepped saids to receive his pension, the Lord Berkeley to dine with the Lord Treasurer; but the Lord Viscount Falconberg, like the nobleman in the Gospel, went away sorrowful, for he had a great office at Court. But I despair not of giving you a better account of them next session; for it is not possible, when they consider that Cromwell's major-general, son-in-law, and friend should think to find their account amongst men that set up on such a bottom.—("Letter from a Person of Quality to his Friend in the Country," wrongly attributed to Locke, but written under Shafteebury's dictation.)

Money there is no measure for authorizing that Carliele needed

Money there is no reason for supposing that Carlisle needed or cared for, but he was not insensible to the King's favour, and he liked foreign travel and a distinguished position abroad. Bishop Burnet says of him that "he loved to be popular, and yet to keep up an interest at Court, and so was apt to go forward and backward in public affairs." He was appointed in 1678 Governor of Jamaica, in succession to Lord Vaughan. He was thus absent from England during the early days of the Popish Plot and consequent commotion. But he returned from Jamaica in September 1680, shortly before the trial of his kinsman. William Howard. quent commotion. But he returned from Jamaica in September 1680, shortly before the trial of his kinaman, William Howard, Viscount Stafford, a victim of the Popish Plot fury. Carliele aided with his old political allies, and was one of four Howards, kinamen of Stafford, in the House of Lords, who voted in the majority for his condemnation. He afterwards, with his brother-in-law, Thomas Lord Howard of Eserick, vainly endeavoured to procure a commutation of the sentence from death to banishment. procure a commutation of the sentence from death to banishment for life. This proposal being rejected by the House of Lords, Carlisle and Howard of Escrick obtained permission to visit Lord Stafford in the Tower, in the presence of a warder. Bishop Burnet was with Stafford when Carlisle entered. It was Stafford hope that he might yet obtain a pardon by making revelations to the House of Lords, and he desired Lord Carlisle to carry a message to the House that whenever they would send for him he would discover all he knew. He was immediately sent for, and he accused Shaftesbury of having early in the reign encouraged the Roman Catholics to hope for a toleration. It need not be said that toleration is one thing and anytim another. Staffind any that toleration is one thing and empire another. Stafford was sent back to the Tower, and he was executed. The Duke of York regarded Carlisle's intervention as an endeayour to obtain from regarded Carlisle's intervention as an endeavour to obtain from Stafford accusations of himself, and he also accused Burnet of having the same object. It appears that Stafford had made overtures to leading opponents of the Roman Catholics, to the Earl of Essex, Lord Russell, and Sir William Jones, encouraging them to expect that he would seriously compromise the Duke of York. Burnet got also into bad odour with Shaftesbury (Burnet's Oun Time, i. 493-4, Life of James II., i., 639).

Lord Carlisle died in 1684, at the age of fifty-six. A daughter, Lady Mary Fenwick, raised a monument to his memory in York

Lady Mary Fenwick, raised a monument to his memory in York Minster; on which she affectionately recorded that "he was not more distinguished by the nobility and antiquity of his family than he was by the sweetness and affability of a natural charming temper, which being improved by the peculiar ornament of solid greatness courage, justice, generosity, and a public spirit, made him a great blessing to the age and nation wherein he lived; in business he was sagacious and diligent, and in war circumspect, steady, and intropid; in council wise and penetrating; and though his character may secure him a place in the annals of fame, yet the filial piety of a daughter may be allowed to dedicate this menumental pillar to his memory." He had not been a commanding statesman, but he had exercised the influence of his wealth and rank for the principles of librate and had discharged with honour the duties of foreign of liberty, and had discharged with honour the duties of foreign and colonial employments. The title has continued in unbroken and colorinate employments. The distinctions of the Earls of Carliale culminated in the last Earl, the seventh of the line, who was Lord Lieutenant of Ireland after a long and consistent political career, and whose public life was adorned and illustrated by scholarship, literature, and exemplary virtue.

GUARDS AND LINE.

GUARDS AND LINE.*

WE have before us examples of two entirely different methods of treating the same subject. It is desirable that a record should exist of the services of every regiment in the army, and that, if possible, that record should be compiled by some present or past member of the corps. But although nowadays every man, woman, and, we had almost said, child, is ready to write a book, there is an infinite variety of ways of writing, and nothing is more rare than the talent which can hit the happy mean between the brief and barren summary and the heavy undigested mass of details. These remarks are suggested by a comparison between the historical record of the 35th Regiment and that of the Grenadier Guards, which have both been lately published. In our view, the first of these books is too short and the second

too long. But at the same time we must admit that a book which is not a good history in itself may be valuable as material from which history may be written; and if means can be found to pay for a sumptuous publication, let the Guards profit by this example of their undeniable superiority in command of money over the Line. over the Line.

over the Line.

The Origin and History of the First or Grenedier Guards, however written, must be deeply interesting, nor is it any reproach to Lieut.-General Sir F. W. Hamilton to say that he has applied himself with laborious industry to every accessible source of information. This regiment has almost the longost record of any in the service, only yielding, we believe, to the 1st Royals, which represent the Scottish Guard of the Kings of France, and to the 3rd Buffs, which were originally raised for the service of the States-General of Holland; and it has necessarily shared in all the great military events of English history during the last two centuries. It fought at Strenkirk and Landen under King William III., at Hlenheim, Ramillies, Ondenarde, and Malplaquet, under Marifought at Steenkirk and Landen under King William III., at Blenheim, Ramillies, Oudenarde, and Malplaquet, under Marlborough, and at Fontenoy, Waterloo, and Inkermann. It numbers among its colonels Marlborough and Wallington. In the soldiers' battles, as they may equally be called, of Fontenoy and Inkermann, it bore a distinguished part, and on both occasions it helped to win from French generals the admission that British infantry had done what their own could not do. There is some similarity also in the lessons that may be drawn from these two campaigns: campaigns :-

The evils of divided counsels had been so apparent in the last campaign, that the allied Powers concurred in the necessity of having one head, and all agreed in the selection of the Duke of Camberland as captain-general of the forces in Flanders [in 1745]. He was young—only twenty-four—brave, energetic, and honest; and, although a strict disciplinarian, was popular both with officers and men.

Ilis military espacity was adequate to that which soldiers weary of trench-work desired at Sebastopol, "to have a go in at the d—d place, and be done with it." A bad general, provided he be resolute, is better than two good ones, and if the Duke of Cumberland had been supported by his whole army as he was by the British infantry, he would probably have won the battle against superior numbers, and in defiance of all rules of art. But it was a pity that were former about a proposed to the second of the such fine soldiers should not have been more skilfully commanded. In 1742 died Lieut.-Colonel Lettler of the 1st Guards. He was one of five private soldiers who swam to cut the drawbridge-chain at the siege of Lille, under Marlborough and Eugene, three of whom were killed. He survived and was promoted, and remained in the regiment thirty-four years, as a memorial of a time when it was fortunate as well as brave.

About the same time a corps of Highlanders recently raised was brought to London, and on a rumour that they were to be sent abroad one hundred and fifty of them mutinied, took arms, and marched off towards Scotland. They were pursued and compelled to surrender in Northamptonshire, and the ringlesslers were conducted under an escort of Guards to the Tower, and afterwards executed. The greater number rejoined their battalion and went with it under Lord Semple to Flanders, where it served with great distinction at Fonteney and elsewhere, and became known as the 42nd Regiment. If it could only have been explained to these hardy mutineers that the Duke of Cumberland would lead them to battle as often as that the Puke of Cumperiand would refut them to battle as often as they chose to follow, they might have preferred to die at Fontenoy instead of on Tower Hill. The simple tactics of the Luke are well described as follows:—"The failure of the attack upon the Fort d'Eu, as well as the second one upon Fontenoy, and the loss of the Dutch against the right of the French lines, had roused the anger of the Duke, who swore that he would carry the position cost what it might." The attacks upon the flanks were regarded at the outset as essential preliminaries to the attack upon the centre, but these attacks having failed, the general was all the more determined that the attack upon the centre should be made. One is reminded of Capaneus in the play boasting that if the Gods willed he would take Thebes, and if the Gods did not will he would take it all the same. Unfortunately, however, Gods willed he would take Thebes, and if the Gods did not will he would take it all the same. Unfortunately, however, the Gods, with the help of Marshal Saxe, were too much for the British Capaneus. The Duke of course had been in the hottest fire, but while his gallantry was applauded, his judgment was condemned, "for the attack had been conducted in the rashest manner, and in opposition to all the rules of war." Yet from a regimental point of view the defeat of Fontency may be regarded as equal to a victory.

A remarkable exploit was performed by the Guards in 1793, when they were again serving on nearly the same ground, under another Prince of the same House, prolific rather in soldiers the line of Vork. In tifty years the dress than in generals, the Duke of York. In fifty years the dress of the Guards had not improved. The loose cost and flapped waistcoat of 1745 please the modern eye much more than the tight-fitting garments of 1793, and it appears that dress may be typical of discipline, which in the latter half of the eighteenth mass of details. These remarks are suggested by a comparison between the historical record of the 35th Regiment and that of the Gremadier Guards, which have both been lately published. In our view, the first of these books is too short and the second

The Origin and History of the First or Gresadier Guards, from Documents in the State Paper Office, War Office, Horse Guards, Contemporary Mistory, Regimental Henords, to. By Lieut. General Sir F. W. Hamilton, A. Historical Memoir of the 35th Regim Sumar Regiment of Foot. Company, Michael Trimen, late Captain 35th Foot. Regiments of Foot. Company, Michael Trimen, late Captain 35th Foot. Regiments of Foot. Company, Michael Trimen, late Captain 35th Foot. Regiments of Company, Indian Newspaper and Printing and Publishing Company, Indian 1873.

in London who committed certain irregularities in dress should an account who committeed certain erregularities in dress should receive 100 lashes. But, on the other hand, these soldiers enjoyed certain privileges, now abolished, among which was that of working in plain clothes for hire in the coal trade. In Flanders their superiority to other troops in trench-work was ascribed to this experience, to which also they owed the name of "coal-heaven". They did in London warm of the duties of " this experience, to which also they owed the name of "coal-heavers," They did in London many of the duties of police, and their forbearance and discretion in dealing with the mob are repeatedly commended. At Lincelles, where three bettalions of Guards defeated twelve battalions of newly-raised French troops in 1793, the soldiers, instead of killing their opponents when they got into the redoubt, rather treated them as a mob in London, striking them with their fists, and calling out, "Let him alone; the little animal can't do much harm." The Duke of York was as well served as the Duke of Cumberland had been by his country's troops, but he failed equally in evoking and directing the energy of confederate armies. The highest civil and military ability was needed to make one of these campaigns successful. King William III. had the former, but not the latter. The Dukes of Cumberland and York had not much of either. Marlborough and Wellington were fully endowed with either. Marlborough and Wellington were fully endowed with both. Yet under all these leaders the Guards and the British troops generally did their duty. They were equal to either fortune; they showed the way to victory and prevented defeat from becoming ruin. Immediately after the affair at Lincelles the allies laid siege to Dunkirk, and an officer of the First Guards was wounded on the same ground as that occupied by the Royal Regiment of Guards in 1658 at the battle of the Downs. This Royal Regiment of Guards was formed by King Charles II. in Flanders before his restoration, and it fought for Spain against France, which had the support of Cromwell. It was afterwards amalgament with a regiment raised in England at the Restoration and thus the with a regiment raised in England at the Restoration, and thus the First or Gronadier Regiment of Guards was formed. The Coldstreams were General Monks regiment, and the Fusiliers were Scotch regiment of Guards. It would be impossible, however, in a single article, to do justice to the long and varied services of the First Guards, and we propose therefore to return to them

The Historical Memoir of the 35th Royal Sussex Regiment of Foot is contained in one small unpretending volume which contrasts strongly with the three bulky and handsome volumes which record the services of the Grenadier Guards. The editor pertinently asks why "Quebec" should not be seen on the colours of the nently asks why "Quebec" should not be seen on the colours of the regiments that fought there; and, indeed, he and the historians of other regiments may well complain that their great deeds have become, with the lapse of time and the accumulation of newer glories, more than half-forgotten things. Yet one memory is common to the 35th Regiment and to the Grenadier Guards; they both shared the defeat and captivity which an English force, companded by the French Ford of Colors income at Alexander both shared the defeat and captivity which an English force, commanded by the French Earl of Galway, incurred at Almanza at the hands of the English Duke of Berwick, commanding a Franco-Spanish army. It is strange that from the same family of Churchill should have sprung both Marlborough and one of the ablest leaders of the side opposed to him. An English officer who was among the many prisoners taken at Almanza told his captors, "If you will change generals, we will fight you over again." This may be compared with the story of a Bavarian telling the Crown Prince that if they had him for leader they could vasily beat those that if they had him for leader they could easily beat those rascally Prussians. At the battle of Quebec the 35th Regiment won the white plume for its gallentry in charging the Roussillon Regiment of Grenadiers. This white plume it wore until it ceased to wear hats in 1800, and now there is nothing to commemorate its there in Wolfe's nomentary victory. This is here, when we to wear hats in 1800, and now there is nothing to commemorate its share in Wolfe's momentous victory. This is hard, when we observe that the First Guards are called Grenadiers in memory of their defeat of the French Imperial Guard at Waterloo. The 35th was one of the first regiments sent to America in 1775, and it showed its bravery and discipline in "the bloody battle which gained nothing" at Bunker's Hill. The light company baving lost all its officers and non-commissioned officers, an old soldier, whose name, as was too common in those times, has not been preserved, stepped out and took command. The Greuadier commany had only first men left autouched. The previousnt hore a company had only five men left untouched. The regiment bore a distinguished part under the Duke of York in the fruitless battles of Bergen and Egmont, and some of its officers were rewarded for their conduct at Bergen by removal to the First Guards, by whose their conduct at Bergen by removal to the First Guards, by whose side they had valiantly fought and painfully retreated. A part of the regiment shared in the battle of Maida, which, coming immediately after Austerlitz and Jens, surprised and reassured Europe by showing that French infantry were not invincible. It may not perhaps be presumptuous to remark that in this, which was a restrictory, the British troops had no allies. In 1807, almost exactly one hundred years after the regiment was cut to pieces at Almanza, it suffered heavy loss in the unfortunate expedition to Alexandria. One of its companies was surrounded and destroyed by Turkish cavalry at El Hamet. The men had been asked whether they would retreat, but they answered they would sooner fight it out than abandon their wounded comrades. The regiment lost hulf its strength by the Walcheren fever, and it was employed in the daring but unsuccessful attempt to surprise Bergen-op-Zoom, where many of the First Guards were taken prisoners. On the day of Waterloo the 2nd battadion of the regiment was in the 4th division at Hal, on the extreme right of regiment was in the 4th division at Hal, on the extreme right of the Hithish army, where it sustained no loss, although occupying a post essential to the security of Brussels. This battaion afterwards marched into Paris. The regiment was in Indiaduring the mutiny, and by curious ill luck shared in an ill-conducted and disastrous

affair near Areah which here a strong manufilance to that of El. Hamet in 1807. This maineant might apply to itself the backneyed saying that it deserved, although it could not command, excess. It has shared largely in services where the valour of the soldier contended hopelessly sgainst the coldness of allies and the stupidity of Ministers and generals. Its fortune was to be present at the defeats, but absent from the victories, of the Guards. But not the less do its short and simple annals deserve a place by the side of the long and splendid record with which we have classed it.

(To be continued.)

MY MOTHER AND I.*

WHATEVER other quality the author of John Halifax, WHATEVER other quality the author of John Halifax, Gentleman, may possess, no one can deny her supremacy in sentimentalism. She is to ledy novelists what Dr. George Macdonald is to the men who follow that calling which Mr. Henry Kingsley calls the "quaint trade"; and it would be impossible to find snything more utterly unreal than the world resulting from the labours of each. That sickly strain of moral self-consciousness which penetrates the whole structure of the heroes and become in wood in an much the literature because the structure of the heroes and the structure of the heroes and the structure of the heroes and structure in wood in an much the literature because the structure of the structure of the heroes and structure of the heroes are structured to the structure of the heroes and structure of the heroes and structure of the heroes are structured to the structure of the heroes and structured to the structure of the structured dry-rot in wood is as much the literary characteristic of the one as of the other; and the posturing for simplicity, characteristic of a certain class of girls who say doubtful things maïvely and then look out of the corners of their eyes askance to see the effect thay look out of the carners of their eyes askance to see the effect they have produced, is also part of the play. In My Mother and I the heroine, Elma Picardy, surpasses her predecessors in this moral self-consciousness, this artificial simplicity. She is a poetic version of that famous little Tommy Tucker, when he put in his thumb and pulled out a plum, and said, "What a good boy am I!" "What a good girl am I! what a pretty girl! what an innocent, faithful, loving, high-minded girl! what a delightful daughter I was, so childish and kittenish, yet so obedient and dutiful withal; and what a charming wife I would have made, kneeling at my husband's feet, and worshipping him all the days of my life!" This is the litany of self-praise which runs on as an undertone while Elma lisps over the facts of her life's history; and those must be very dense-witted who do not hear it. All through the book there is a visible effort to make the reader accept this overstrained sentimentalism as nobleness of feeling, this stilted impossibility of morality as the natural outcome of a beautiful and sublime soul. We scarcely think that Mrs. Craik has succeeded sublime soul. We scarcely think that Mrs. Craik has succeeded in her endeavour. To our mind, and we think we may speak for all who take a masculine and common-sense view of things, she has signally failed to produce anything lovesble or valuable, because she has failed to produce anything really human. For all this we make no doubt there will be a large following of schoolgirls and milliners' apprentices to whom Elma Picardy will be the pink of perfection, and her manner of being the most exquisite kind of thing possible to frail humanity, with principles too often shaky and earth-stained.

The story is simple in the extreme, and the plot is not much more substantial than a floating shred of gossamer. It is nigh to invisible, being merely the record of how a beautiful young girl of seventeen falls in love, unasked, with a comparatively colderly cousin; how, in the beginning of this love, and before she is fully conscious of her own feelings, she refuses the addresses of a highly eligible aspirant, but one whose character is so slightly sketched as to be practically a nullity; how, when Cousin Counad pleads for this friend of his, she becomes aware that she loves him, the said cousin, and him only, and, changing one of her rings to the third tinger, marries herself to him so firmly that she is able to say. "Now nobody need attempt to marry me any more." The story is simple in the extreme, and the plot is not mu is able to say, "Now nobody need attempt to marry me any more"; the sequel being that she remains true to her solitary spousals to her life's end when he is dead, never able to wake from a girl's dream to a woman's reality, and holding as unanswerable the argument, "If, long ago, murely because I loved him, I had felt as if already married, how much more so now, when nothing could ever happen to change this feeling, or make my love for him a sin?

To be sure she finds out by her cousin's will, when too late and all is over, that "he had always loved her," which gives some slight justification for her craze; though men do not in general record in their wills the amorous declaration which they had forborne to make by honest speech while yet there was time, and though so a vague expression of affection as this might mean only the new fraternal, or rather puternal, feeling on the part of Cousin Cousin fraternal, or rather paternal, feeling on the part of Coussin Coussel. For, indeed, our hero seems to be rather mourning for his own lost love, one Agnes, than warming to a new object at any time. We may accept it as certain, because the author so intends us to accept it, that he does love Elma, but he shows this love only in the shadowy way consistent with the general tone of kind height pervading this book, which, we venture to think, is a height unsatisfactory way. Take the scene among the rains when the two come the nearest to an understanding that were when the two where, if she had said anything in any the follow, and where, if she had said anything in any the follow, and where, if she had said anything in any the challenges of the compared with you, Elma I would have been to tell him that "those was the compared with you, Elma I would have been to tell him that "those was the compared with you, Elma I would have been had it have an head to me, and would be the young men in the

Hallax, Gentleman." Louden: Jellen 1988

excessed of Clausia Commits Seventaling are confined to his putting his liend lightly for a moment on Elma's shoulder, and tailing her to stand there with her profile turned away, because then she "looks so very like her—so like Agnes." Would any other author but the one who has written a small library-full of impossible sentimentalities, dating from John Halifur, Gentleman, have imagined such a method of love-making? It is about the most luguisious and immatural that we have ever read of; certainly we never heard of such a style of wooing in real life; and any other girl than Elma would have resented the spectral comparison of her fresh and fervid life to the mere memory of the dead, and have thought herealf worth more in her own personality than as a simple reminder of another. The mother, Mrs. Picardy, who had naturally hoped for more tangible results than this from the suggestive tite-à-tete which she had halped to procure for her love-sick daughter, "looks down and sighs" when the two come back as they went, and she sees that no decisive measures have been taken. It was the last chance, the forlorn hope; for Cousin Conrad is off to India for a further service of when the two come back as they went, and she sees that no decrease measures have been taken. It was the last chance, the forlorn hope; for Cousin Conrad is off to India for a further service of three years, and they part to-night. How that parting is managed Etima Picardy, or rather the author, shall tell us in her own words. They have returned home, "rather silently," no wonder, from the coup manages of the rains, and Mrs. Picardy is urging Cousin Courad "to avoid the risk of a cold night ride," and set off for

"We must say good-bye at last, and perhaps it is best after all to say it quickly," I heard her tell him, in an undertone. Her voice trembled, the same stood in her eyes. For me, I never stirred or wept. I was as still as

a stone.

"You are right," answered he, rising. "Good-bye, and God bless you.
That is all one needs to say." Taking her hand, he kneed it. Then glancing
at me, he asked her—my mother only—"May I?"
She bent her head in assent. Crossing the room, he came and kissed me,
once on my forehead, and once—oh, thank God, just that once!—on my
mouth. Where I keep it—that kies of his—till I can give it back to bim
a Paradian mouth. Where I keep it—that kies of his—till I can gi in Paradise. For in this world I never saw my Cousin Conrad mora

So far as we can guess at what is never distinctly stated, it sems that the reasons for Cousin Courad's reticence are, in the first place, a sense of his own comparative age, and in the second, a wish to give Elma time to know her own mind, and soe more of the world than she has done. If he goes back to India now for three years, when he returns Elma will be one-and-twenty; at which age it is assumed that she will come into possession of this same knowledge of her own mind as well as that other knowledge. this same knowledge of her own mind, as well as that other, knowledge of the world, as part of the inheritance due on her majority. But why any sane man in love with a pretty girl, and seeing her evident love for him, should not take the goods the gods have provided for him, make her and himself happy—pace the shade of Agnes—protect har from painful contingencies, give her mother a comfortable home, and do well for her mind and life generally, is a mystery of Quixotism known only to Elma and her author. If re are, as we know there are, dangers for beautiful young won in the gay world, and if even fine natures are sometimes warped by temptation and led into dubious ways by bad examples, it was surely almost a duty in Cousin Conrad to ensure the safety and sweet continuance of Elma's gracious virtues while he had the time and opportunity, and not to sacrifice the reality for a dream, the practical and valuable for so much moonshine. There was not the slightest necessity for his subjecting her to this probation, and had he even been obliged to go abroad, he might have made sure of the future before he went. His whole conduct is as absurd as Elma's; and though we welcome with pleasure any manifestation on the part of lady authors that men and women have more in them than passions, vices, or weak-nesses, that life has duties as well as pleasures, and that sacrifice is nobler than self-indulgence, still we like to have our virtuous people drawn as fairly human, and not as impossible monsters of perfection, and we own to a preference for a certain admixture of plain common sense as ballast in the boat. Such people as Cousin Conrad and Elma Picardy are as little after the manner of live human creatures as wax dolls which shut their eyes and squeak when they are pinched in the middle are after the manner of flesh-and-blood babies.

ses of writers with whom we have no sympathy; those who make life hideous and unnatural by the crimes, he basenesses, the villanies they depict; and those who make it ickly by the sentimental sweetness and strained moralities which the basenesses, the villames they depict; and those who make it sickly by the sentimental sweetness and strained moralities which they offer as the only mode of virtuous living. Between them the strong, clear, masculine philosophy of righteousness and truth and self-respect, and the wholesomeness of self-sacrifice—all under the regulation of the intellect—gets lost to the left in a quagmire, to the right in a fog, and we are left to make our choice between mastiness and folly. We object to both, and prefer the third way of rationality and virtue, the absence of hysterics, and ligh falutin' at a discount. There is no emotion, no virtue even, which has not to be kept in due subordination. By excess that which is sweetest and leveliest in life becomes hurtful and ugly, and lollipops may produce a surfeit all the same as beef, which is food, or gentian, which is medicine. Mrs. Craik and her school deal in lollipops, and the surfeit they produce is undeniable. Let us think for a meaning with the rule ordering that childhood, takes a fancy for a man which also chooses to call the same as if she had been accept to the first place and betrothed.

in the second. What kind of girl would that he who should give herealf so freely, so indissolubly, in these "applicate of one"? The very charm of maidenhood is its difficulty. The one moment of a woman's life when she is supreme is in these early spring time of shoice when she has to select and not seek, to bestow on besselling, not to fling herself at the head of the first man she cost, whether sought or not. Does any girl of spirit and self-respect give herealf away masked as Elina Picardy is made to give herealf away masked as Elina Picardy is made to give herealf away masked as Elina Picardy is made to give herealf away? All that is modest, sensitive, retiring, ashemed in a young soul would have revolted against that silly self-exponent. It was impossible for a good and pure-minded girl, to whom "matriage" is far, very far in the distance when the first young lave is in the foreground; and Elina is not meant to be knowing and wifes awake. Let any one reason out the girl's mind and position at that moment, and then let him dany, if he can, that the author, by excess of sentimentality, has fallen into the opposite snare of moral pruriency, and that, in making her heroins unnaturally poetic, she has made her just as unnaturally unnaidealy. What kind of girl would that be who should give y, so indissolubly, in these " supplish of one "? The unidenhood is its difficulty. The one moment of a

moral pruriency, and that, in making her heroine unnaturally poetic, she has made her just as unnaturally unnaidenly.

This being the kernel of the book, such as it is, we have dwalt on it, leaving ourselves no room to speak of the sickliness of tone that disfigures the love between "My Mother and Me" in Elma's autobiography; or of General Picardy, who is, like all the rest, terribly weak about the knees, with a roar, as feeble as a dove's coo and an individuality that shades off into nothing. Mrs. Craik has let all her other powers go to seed in favour of this one plant of sentimentalism. And this sentimentalism is just the bane of her books, and plays the very mischief with har thoughts as a philosopher (?) and her work as an artist.

GERMAN LITEBATURE.

UCREZIA BORGIA," * says her latest historian, " in the most sinister female tigure of modern history." Taking this as an unquestionable fact, he states the purpose of his work to be to determine whether she be really the most guilty of her sex or only the most calumniated. This is in some measure to strike a false note at the very commencement. We are not aware that Lucrezia has ever been unreservedly condemned by any careful Lucrezia has ever ocen unreservedly condemned by any careful historian. All that could hitherto be asserted with safety was the existence and general currency of scandalous reports respecting her. The universal love of scandal has unfortunately prevented people from seeing that the burden of proof lay not upon Lucrezia's advocates, but upon her accusers. Her character has rather been treated as an over question which has late to the character has return to the character has treated as an open question, which has left it free for those have approached it from the point of view of dramatic effect to construe it in determine partem. It is undoubtedly true that public opinion has been much less influenced by history than by Hugo and Ponizetti, and in this sense Herr Gregorovius may have felt justified in assuming that its weight lay against its herome. We cannot but think that his book would have been even better had he made but think that his book would have been even better had he made up his mind to treat poets and romancers with the disregard which they deserve outside their own sphere. He seems trammelled by the groundless fear of undertaking an unpopular cause; he writes like one who hardly hopes to convince his readers, although the evidence he adduces is perfectly astisfactory to himself. For our own part we do not believe the world to be either so prejudiced or so obstinate in error. It will surely be satisfactory to most neonless to learn that an accomplished and assess satisfactory to most people to learn that an accomplished and agacious writer, well versed in the history of the times, and even unreasonably severe in his judgment of Lucrezia's kindred, has thoroughly ransacked all accessible Italian archives for documentary evidence bearing on her character, and, while bringing much new and curious matter to light, has discovered nothing much new and curious matter to light, has discovered nothing calculated to fix upon her the least imputation of any king. It is true that, from this point of view, Lucrexia's personality loses much in picturesqueness, and this circumstance may possibly have operated to chill the chivalrous warmth naturally expected in the biographer of a beautiful and injured woman. The conspicuous position which she occupies in history was evidently rather the result of circumstance than of the constance of th character. She was no contemptable person; discreet, dignitied, bountiful, accomplished, she secured framed by nature to till the part of a great lady; but there is certainly a lack of those striking traits which cannot be refused to her father and brother. (dregorovius shows an inclination to modify the disparaging judgmen he has previously passed upon Alexander VI. a abilities, and even to view his disposition in a more favourable light. There can be no doubt that the Pope was constitutionally amiable and in-dulgent, and that, the low moral standard of his age considered, his public conduct affords little matter of represent until he sucrea, ms public conduct anords inthe matter of represent until he fell under the influence of Oscar Borgia. Everything relating to the Pope and his son, and the general politics of their time, is treated with great spirit; it is only when Lucrezia's conduct is discussed that we have to complain of a hesitating manner which is perhaps favourable to her cause in so far as her present historian cannot like Raccan be accounted of heirer had a them. which is perhaps intourable to her cause in so far as har present historian cannot, like Roscos, he accused of being led astray by gallantry or enthusiasm. In spite of this defect, the work is a faccinating contribution to modern history, and for the acks of our own literature we trust that the reservation of the right to translate it into English will not remain a dead letter. We must refrain at present from noticing the rich stores of docu-

Leurezia Borgia. Nagh Urhunden und Correspondensen ührer eigenen . Von F. Gregorevinn. a Bde. Stuttgart: Cotta. London: Trübner

mentary evidence which it contains, and confine ourselves to re-marking that these are printed in an appendix at full length, and in the original languages.

The fourth and concluding volume of the late Dr. Reuchlin's History of Italy treats of the period of the completion of national unity from 1860 to 1870. In one point of view it is necessarily premature to attempt a history standing in such need of elucidation from State papers and correspondence not likely to see the light for many years. So far, however, as the author's materials have admitted, his work has been admirably performed, with no display of brilliant qualities, but with diligence, exactness. with no display of brilliant qualities, but with diligence, exactness, and sobriety. He writes as a warm friend of Italian unity, and an and sobriety. enlightened advocate of an Italo-German alliance.

The second volume of Moritz Ritter's † History of Germany during the last fourteen years of the reign of the Emperor Rudolph II. is distinguished by historical qualities which make us regret the comparative unattractiveness of the period selected by the writer. It was nevertheless a time of much importance, as in it the seeds of the Thirty Years' War began to germinate. The blame of this disastrous conflict, so far as it can be justly ascribed to any one man, falls principally upon Rudolph, who, without sufficient energy of character to be a tyrant, had imbibed maxims of despotic government but too much in harmony with the interests of the cuergy of character to be a tyrant, had imbibed maxims of despotic government but too much in harmony with the interests of the Catholic priesthood. The pressure thus put upon the Protestant members of the Empire, alike in things temporal and spiritual, drove them (1608) into the establishment of a league for their mutual protection, with which ominous step the present volume concludes. conclude

Whatever differences of opinion may prevail respecting Strauss's† merits as a theologian, there can be none as to his perspicuity, symmetry, and felicity as a biographer. His own biographer has paid him the compliment of imitation, and his elegant and unpaid him the compliment of imitation, and his elegant and unassuming little work is not unworthy of the models he has evidently had before him. Dr. Zeller, celebrated as the historian of philosophy and a leader of the Tübingen school, is qualified for his task by the intimacy of friendship and frequent epistolary intercourse, as well as by a general intellectual sympathy, not extending, however, to Strauss's ultimate repudiation of theology in any shape. Strauss's early years have already been partially described by himself in his touching memoir of his mother, and Zeller's acquaintance with him dates from a period not far subsequent. The interance with him dates from a period not far subsequent. The inter-mediate years of University life have been sketched in some degree in Strauss's own memoir of his friend and classmate Märklin, and Dr. Zeller is able to fill up the canvas from other sources. The most curious episode of this portion of Strauss's life is the sudden fit of mysticism which seized him, and led to a serious endeavour to apprehend spiritual phenomena through the medium of a somnambulist. The ensuing reaction no doubt exerted a powerful, though unapparent, influence on the course of Strauss's thought, and the clear practical conclusions suggested by this experience and the clear practical conclusions suggested by this experience were more in harmony with his intellectual nature than the subtleties of the Hegelian philosophy, the next important influence to which he was subjected, and of which for a long time he imagined himself a disciple. Nothing is clearer, however, than his total lack of faculty for abstract speculations. When he had once come to recognize his true intellectual position, the special pleading of his Glaubenslehre can have given him but little satisfaction, and the repulsion may probably have carried him further than he meant to go. The case might possibly have been different than he meant to go. The case might possibly have been different had he been enabled to rotain the professorship conferred upon him at Zürich; but if his exclusion from the academical career condemned him to a restless, wandering life, it at all events prevented him from petrifying into a mere formal lecturer, and enabled him to discover that his proper career was neither that of a theologian nor a philosopher, but of a man of letters. More profound minds will always look upon his celebrity with a certain impatience; yet it is not the less true that his masculine commondone much to rescue them from the possession of exclusive castes and guilds, and to redeem German literature from the charge of Nor was it knowledge that he wanted, but originality. instention to this defect, not so much on his own part as on that of others, accounts in great measure for the less pleasing traits of his literary and personal character. Amid the sensation excited by his first Leben Jesu it was not immediately perceived that the leading idea of the book was not original, or at least that the originality solely consisted in the transplantation of a particular method from one field of research to another. Thus credited with method from one field of research to another. This credited with originality of discovery instead of application, Strauss felt himself bound to keep up the character, and we subsequently find him outbidding Renan, appropriating Baur, suppressing Schenkel, comporting himself in fact as if the whole field of inquiry belonged to him, and displaying withal a jealousy and irritability unworthy of one whose method of investigation affected a judicial calmness. This vanity and self-assertion comprise nearly all that can be one whose method of investigation affected a junicus common. This vanity and self-assertion comprise nearly all that can be urged against his character, which, if not calculated to kindle enthusiastic attachment, appears in Zeller's pages as one entitled to

sincere respect. A good parent, neighbour, and friend, chescul, and vivacious in private society, independent and disinterested as a citizen, he passed through life with the esteem of all who know him, and met death with tranquil fortitude, rejoicing that the medical care he was receiving from his son should have strengthened the sympathy between them. His last written words related to the ecclesiastical crisis in Germany, "one of those momentous things," he said, "which leave us no room for our private sorrows." His last illness was solaced, as indeed his whole life had been, by the composition of several pleasing occarional poems, of which Dr. Zeller has given a few specimens.

The character of another of the most prominent figures in

sional poems, of which Dr. Zeller has given a few specimens.

The character of another of the most prominent figures in modern German theology—Richard Rothe —presents in many respects a marked contrast to that of Strauss. Strauss, a born man so of letters, was only a theologian by accident; it is his especial distinction, and the secret of his power, to have set theological questions in a new light by discussing them in a perfectly unprofessional spirit. Rothe was not only a born theologian, but a born mystical theologian, who lived and breathed and moved throughout his life in an atmosphere of tender religious feeling. With this was combined a large share of the critical faculty, and an uncommon power of keeping the spheres of instinct and reason totally apart. In the first part of his life the former seemed to predominate, in the second the latter; but the intimate effusions of his religious feelings are just the same while fighting in his old predominate, in the second the latter; but the intimate effusions of his religious feelings are just the same while fighting in his old age the battle of the party of free inquiry at Baden as while undergoing the painful spiritual conflicts of his early years. This double attitude naturally exposed him to much misconstruction, increased, as his biographer points out, by the apparent suddenness of his appearance on the arena of theological controversy. The truth was that his seven years' seclusion from all but academical duties by severe domestic affliction had permitted the formation of most erroneous estimates both of his character and opinious. The disappointment of the party which had expected his support was intense, and found vent in bitter reproaches. It is an error of Dr. Nippold's to assume his readers to be as well acquainted with the history of the religious struggle in the Church of Baden as he is himself. Nothing like a comprehensive review of the situation is presented; we are left to form the best idea of it we can by copious extracts from Rothe's private correspondence and the biographer's own running fire of protest against the aspersions cast upon his hero's consistency. The principle that a biographer should remain in the background, and leave his hero to speak for himself as far as possible, is no doubt a sound one in the abstract, but may be carried too far. A fuller account of the public transactions in which Rothe took part might have advantageously replaced some of the letters which treat merely of private matters, interesting as they are as testimonies to the excellence of the writer's heart. This volume comprises his life from cellence of the writer's heart. Ins volume comprises his his from his return from Italy, in 1828, to his death, in 1867. During this period he was successively professor at Wittenberg, Heidelberg, Bonn, and again at Heidelberg. The latter half of the second Heidelberg period was by far the most important, but, as is natural in old age, and after the loss of so many friends, the correspondence relating to it is comparatively meagre. Among his most impor-tant correspondents were Bunsen, Umbreit, Ullmann, and Schen-kel, whose letters, if preserved, will some day form a valuable contribution to the history of German theology.

Caspar Bruschius + was one of the minor agents who helped caspar Irischius 7 was one of the minor agents who nappear to prepare the way for the Reformation. Not a very ardent reformer himself, his lively pen and biting satire contributed indirectly to this great revolution; he was well acquainted with the leading men of his period, and the interest of his writings in connexion with the revival of literature justifies the pains which Herry Horawitz has bestowed upon his biography.

The two excellent series of pamphlets on subjects of general interest published by Luderitz I continue their course with unsubted success. Among those belonging to the scientific series edited by Virchow and Holzendorff may be especially noticed Virchow's own sketch of the primitive ethnology of Europe; a parallel between Burns and Hebel by A. Corrodi; and an essay on the Church of the Holy Sepulchre and the Mosque of Omar by F. Adler, in which Mr. Fergusson's conclusions with respect to the Christian origin of the latter editice are rejected as the result of a minute personal investigation.

The leading idea of R. Meyer's interesting little work § on the The leading idea of R. Meyer's interesting little work § on the Socialist movement in Germany is one with which we are pretty familiar here—namely, that of an alliance between the artisans and the Conservative party, to which the writer himself belongs. There is this amount of plausibility in the scheme, that the Liberal party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most part wedded to the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party with the lateral party in Germany are for the most party in Germany are for the m

employed cannot in these days be pastiarched, to bring over the Socialists to their side. He takes however, little notice of the new and progressive Idheral school which is siming at the same end by the encouragement of combination among workpeople; and it is not easy to see how Socialists with whom the abolition of inheritance is a size gud non—and these appear to be largely in the majority in Germany—could be conciliated by any concessions which a party founded on the hereditary principle could offer them. Their alliance could at most only last until it had accomplished the elimination of the great capitalists—an end which Herr Meyer proposes to attain by the obsolete device of stringent laws against namy. It is interesting to observe how the incessant interference of Continental Governments with every department of life has prepared men's minds for legislation which would be inconceivable in England. Like the newest school of Conservatism here, Herr Meyer is by no means averse to universal suffrage, and chuckles over the symptoms of reaction observable in the Liberal camp. The temporary success at the polls of a coalition of Catholics, over the symptoms of reaction observable in the Liberal camp. The temporary success at the polls of a coalition of Catholics, Conservatives, Socialists, and the discontented nationalities, is indeed no impossible event, though it is not probable that a party thus heterogeneously constituted would act together very long.

An excellent translation of Sir J. Lubbock's Prehistoric Times is accompanied with a recommendatory proface by Professor Virchow, who describes the work as a pattern of cautious and temperate research, and as filling a gap in the literature of Germany, where the fruits of prehistoric research are not as yet to be found in a collective form.

Dr. J. H. Schmick's t work on tidal phenomena, considered

be found in a collective form.

Dr. J. H. Schwick's † work on tidal phenomena, considered with reference to the theory of a regularly recurring oscillation of the sea-level, is a continuation of previous works of the author on the subject. It is accompanied with copious tables of observations on the tides, principally made in the Southern hemisphere.

Herr Bernoulli's archeological essay on the representation of Aphrodite in Greek art † produces something of the effect of the classical enthusiasm of the retired citizen in "Crotchet Castle" who filled his house with Venuses of every imaginable variety of attitude and attribute, "from Venus with the apple of Paris to Venus with the armour of Mars." If, however, Herr Bernoulli's exhaustiveness of detail affects the general reader with a sensation of satiety, his work is not the less valuable for archeological purposes. It comprises a classified critical account of all the known representation, of Aphrodite, on gems and coins as well as in

of satiety, his work is not the less valuable for archæological purposes. It comprises a classified critical account of all the known representation, of Aphrodite, on gems and coins as well as in sculpture, and is designed to elucidate the various modifications introduced into the type of the goddess, more especially the delicate point how and when she came to lay aside her drapery.

Ludwig Nohl \$, so well known for his musical biographies, has collected a series of essays written at various times illustrative of the musical tendencies of the age, especially as represented by the three composers whom he esteems the Coryphæi of the art, Heethoven, Liszt, and Wagner. He is an enthusiastic champion of "the music of the future," and his manner of enforcing his views is sufficiently dictatorial. All his sarcasm—a heavy artillery—is directed against those who withhold support from Wagner's projected theatre at Bayreuth. We have nothing to say against the design on its own merits, but cannot refrain from hoping that it may be no part of the programme of the future that every composer should henceforth have a theatre entirely to himself. The most entertaining part of the book consists of new material towards the biography of Beethoven, partly derived from an account of a visit paid him by Carl von Bursy, a young Courlander, partly from the note-books which became indispensable to those who visited the composer in his latter years. These Beethoven called his conversation-books, each person writing down the remark which he wished to make. Some of them were rescued who visited the composer in his latter years. These Beethoven called his conversation-books, each person writing down the remark which he wished to make. Some of them were rescued by Schindler from the waste-paper basket to which Beethoven had consigned them; and, although the contents are in general trivial, they have nevertheless afforded the present writer some

trivial, they have nevertheless afforded the present writer some entertaining matter.

Julius Meyer's translations of lyrical poems from seventeen languages f attest not merely the polyglottic, but also the poetic, capacities of the author. The specimens selected range down from Anacreon to the Esthonian "Souaksin ma soan surra," which is by interpretation "The Warrior's Death." The greatest curiosities perhaps are some renderings of Hans Breitmann's burlesque American-German into orthodox literary diction. The loss in humour and spirit, though perceptible enough, is less so than might have been expected.

might have been expected.

MINISTERS AT THE MANSION HOUSE.

R. DISRAELI and some of his colleagues dined with the LORD MAYOR on Wednesday, to the great satisfaction of both parties. The LORD MAYOR had just been made a baronet, Mr. DISEARLI having judiciously kept back till the morning of the banquet the announcement that this consummation of the happiness of a Lord Mayor had been bestowed on Mr. Lusk. In proposing the health of his host Mr. Diseaself found many pleasant things to say. The Logo Mayor gives princely entertainments, has a remarkably genial face, has signalized his mayoralty by the harvest theorets of giring a special divines to records of happy thought of giving a special dinner to persons of distinction in literature and art, and is, for the week at least, the newest of all new baronets. In return the Lord MAYOR could state with confidence that Mr. DISRAELI is a mayor could state with connected that Mr. Disparily is a most remarkable man, that there never was a cleverer Cabinet than the present Cabinet, and that the country is delighted to see the LORD MAYOR and his political friends in a minority, and this constellation of first-rate stars shining in place of Mr. Gladstone and his colleagues But these personal matters were naturally only the garnish to the main dish. The control point in the extention of the state of the stat to the main dish. The central point in the entertainment was the speech in which Mr. DISRAELI described the action and aims of his Ministry. Some recollection of his morning's work seemed to hang over Mr. DISRAELI'S mind. He was in that peculiar state of finding an excitement in making small things grand which becomes a man who has just made one more baronet. He took in succession each of the more prominent deeds or intentions of his Ministry and made a baronet of it. He invested it with a mild halo of mysterious dignity. He made the most of it by giving it a title the exact value of which no one can appreciate. of what the exact value of which no one can appreciate. Of what the Ministry is going to do it was no doubt easy to speak in this way. Mr. DISRAELI is always dreamy, poetical, grandiloquent when he deals with the future. But it was in the description of what the Ministry has done that the real baronet-making element shone forth. The humble measures which Mr. DISRAELI selected for glorification were the poor little Licensing Bill and the Factory Bill adopted from Mr. MUNDELLA. These were quite twiced in their way. If we may speak of measures as of typical in their way. If we may speak of measures as of men, we may say of these Bills that they are of the sort which come to London with half-a-crown in their pockets which come to London with half-a-crown in their pockets and begin by sweeping out the shop. And now they are all of a sudden turned into Lord Mayors and baronets. The title given to the Licensing Bill was that of "a redressing of "the grisvances of a class that had suffered under previous "legislation." Mr. Cross, who was present, must of all people have most keenly enjoyed this idealization of a Bill allowing public-houses in the metropolis to be kept open half an hour, or, as he says, practically twenty minutes, later. Mr. Mundman's Bill was raised to rank and fame under the designation of "a great measure which completes later. Mr. MUNDELLA'S Bill was raised to rank and fame under the designation of "a great measure which completes "the factory legislation of this country." This glowing language showed the extraordinary fartility of resource which distinguishes Mr. Dissauri in the department of distributing honours. Every one who heard Mr. Dissauri speak must like that a Prime Minister who would talk like that

the fait that a Prime Minister who could talk like that he equal to making a haronat of anybody. The Ministry, as Mr. Dissaud remarked, does not insult to be an idle Ministry, and next Seating it will produce energies more original and on a larger scale for the purches of improving the condition of the parallel. But Mr. primites was he too predent to the interface, and his manuface was he too predent to the interface, and his manuface mechably quite metables with the manuface that had give the thirty millions of our house regulation in

his eye, and was not without some thoughts of extending the British Empire. He reserved himself for topics of greater if vaguer interest. He described, if description is the right term to use, the ecolesiastical and foreign policy of his Cabinet, and if we gather nothing else from his statement, we at any rate gather that it is a very grand policy indeed. The contest between the spiritual and temporal powers which in other days has raged so fleroely is now on the eve of breaking out in a new form. The foregs, he tells us, on both sides are not unequal; but to be forte-warned is to be forearmed, and the Ministry, which sees the important issue in all its bearings, feels itself not unequal to the task. By the course which the Ministry will recommend Parliament to follow, and by the measures which it will be instrumental in carrying, the Ministry trust that it will remove such ovils as exist, and such dangers as are to be feared. If this great battle of Armageddon is coming off, every honest Englishman will of course be glad to have a long-sighted Ministry to take care of us all, and a statesman at the head of affairs not incompetent to arrest the progress of spiritual domination. But if these great forces are really gathering up their strength for a supreme struggle, and if the strength which each can command is so nearly equal, it is puzzling to think how apparently slender and mapt are the means by which the issue can be decided in favour of good government and wholesome liberty. The two measures on which Mr. wholesome liberty. DISRAELI relies are the Scotch Patronage Bill and the Public Worship Regulation Bill. With these weapons in his hand Mr. DISEARLI can meet his spiritual foes. these are the only weapons he needs, he is at least like the chosen shepherd going out against a giant with nothing but a sling and a few smooth stones out of a brook. If the Goliath of spiritual tyranny disappears before the blow of the Scotch Patronage Bill, he cannot be such a very dreadful sort of giant. It seems not only such a mere pebble, but a pebble of the wrong sort to pelt him with. Its object is to take patronage out of the hands of educated laymen and give it to congregations under the guidance of spiritual courts; and it would have seemed as if this was rather an encouragement to the giant than a blow to him. As to Public Worship Bill Mr. Dispand informed his hearest to the Winisters t the Ministers that mysterious iderable period ountry." This, ism in a very Bill, Mr. DISRAELI informed his hearer have felt it to be their duty to "grapple" that mysterious "disturbance which has now for no diderable period "perplexed and annoyed the people of country." This, it must be allowed, is to describe the firm in a very handsome way, and the Ministry may be supposed to have been not indisposed to make their antagonist as big as possible in order to gain credit by demolishing him. Mr. possible in order to gain credit by demolishing him. Mr. HARDY as he listened must have felt that the duty of grappling with a mysterious disturbance was one to which he had but very recently been alive. Strange to say, it appeared to outsiders as if it was not any perception of the recurrence of a new Armageddon that determined him. DISHAELI to support the Bill of a private mamber for grappling with this disturbance, but simply the discovery that the House of Commons cared more about the matter hat the House of Commons cared more about the matter than the Government thought probable. So different are than the Government thought probable. So different are the external actions of was men from their inner counsels that the first conclusion of aninetracted judges us to the two great measures of the Cabinet for compating spiritual typinny would have naturally been that the first rather told the wrong way, and that the second was taken up almost by change, and under a gentle pressure.

When hir, Dunante was describing his ecclesiastical policy there was at any acts some clue to his meaning.

By a mysterious disturbance he meant the Ritualists, by grappling with it he meant the speeches of Mr. Hardy and other members of the Cabinet on Mr. Gurney's Bill. But when he came to describe the foreign policy of the Ministry we are lost altogether. The Cabinet is going to do some-thing, and we feel from the words used that it is something unusual and oreditable; but what it is, and when it is to be done, there is nothing to give even the tiniest suggestion. There must be things going on in Europe, if Mr. DISRAELI is right, of which no one outside the Foreign Office and the Cabinet has an idea. And yet with provoking irony he spoke as if he was only saying what every one knew. He took it for granted that his audience was perfectly aware that some of the most favoured regions of Europe, nations that have done most for the world, are in a state of anarchy, or bordering on anarchy. The only country to which the language would have seemed in any way applicable is Spain, which has been going downhill steadily for about three centuries. Spain is certainly in a state of which it is a compliment to say that it is bordering on anarchy. But where else is there anarchy? By a great stretch of language the term might perhaps be applied to France and Turkey. If so, it is interesting to know what the Government is going to do. Fortunately Mr. DISRAELI was able to state that all these anarchical countries, whatever they may be, especially love, admire, and respect England, and the Ministry is somehow going to take advantage of this for their benefit. It is, as Mr. DISRAELI expressly said, going to do more than offer empty words. It is going to exercise the influence of England to preserve peace, and to assist by sympathy and counsel several distracted and distressed States. Spain is torn with a civil war. France, though perfectly tranquil, is unable to fix definitely on a form of government. Turkey just keeps itself alive by homoging your than it can pay. Which of these offer any borrowing more than it can pay. Which of these offer any very promising field for proffers of sympathy and counsel? It would be very sound advice to the Spanish Government to make military arrangements that would prevent a town within eighty miles of the capital being captured by the enemy. A wise friend might suggest to the French Government that the sooner the Assembly was brought into harmony with the nation the better. A prudent financier might whisper to Turkey that loans raised at a ruinous rate of interest in order to cover deficits produced by extravagance and maladministration cannot last for ever. Words of wisdom might, no doubt, be spoken in all these quarters, but they would be words, it is to be feared, as empty as words could be. The Spanish Government would reply that it did not want advice, it wanted an army the generals of which did not go careering all over the country in pursuit of their private ends, and the soldiers of which were fit to fight. The French Government would reply that, if people in Paris have not the slightest notion what to make of the Septemate, people in Sightest notion what to make of the Septemate, London are not likely to be better informed. The Turkish Government would reply, with the Claimant, that it is for fools to find money and for wise men to spend it. If Mr. DISRAELI'S utterances were to be taken in anything approaching to their literal sense, we should seem to be on the eve of a new reign of meddling and muddling. But there is not the slightest read danger of this. We have heard of the spirited foreign policy of the Conservatives, and we now hear of their means nothing but Lord Derry at the Foreign Office.

THE RUSSIAN GOVERNMENT AND THE RULES OF WAR.

To would probably be unjust, as well as discourteous, to doubt the good faith of the Russian Government in proposing an International Conference at Brussels. Prince GOSTCHAROFF'S claborate project, though it seems to have been originally connected with a philanthropic scheme for improving the condition of prisoners of war, has the wider scope of a code which, if it were adopted, would regulate on all points the practice of belligerents. The proposed body of rules consists for the most part of declaratory enactments giving a formal and permanent sanction to usages which have been virtually established in the practice of civilized nations. It may be doubted whether the embodiment in a statute of the unvertiten common law would tend to mitigate the hardships of war, but the contention of the Russian Government that the rights and duties of belligarents should be strictly defined in intelligence.

gible and plausible. The objection to a diplomatic treatment of the entire subject is founded on the probability that the States which might take part in the discussion would be actuated by a regard to their own special interests as well as to the alleviation of human misery. There is a certain oddity in the phrases with which Prince Gobtomamory introduces his project of a coda. According to his statement the community of feeling and interest which tends to unite nations as members of one family renders it necessary to make elaborate provision for the conduct of their quarrels with one another. All men, or all Enropsems, are brothers, and therefore it is expedient to regulate the conditions of mutual fratricide. No great Continental State can be accused of negligence in the material provision which it has to make for reciprocal slaughter. The Russian Government has within two or three years established an elaborate system of universal military service which will enable it to place more than a million of men in the field. Gormany, Austria, France, and Italy, with the minor Powers, will make up the roll of armed brethren to not less than four millions. As all these fraternal armaments can have no object except that the several disciplined multitudes should in certain contingencies put one another to death, it is perhaps natural to arrange that the most internecine conflicts shall be conducted with all possible regard to the general convenience. It is undoubtedly well that modern wars are for the most part not conducted after the fashion of Wallenstein's campaigns in the Empire, or of Louis XIV's invasion of the Palatinate. General Sherman's march through Georgia is the latest example of a military operation directed chiefly against the property of the non-combatant population.

There is no novelty in the prohibition of the use of poison, which indeed is only employed by savages, or by those who, like the backwoodsmen in some parts of the United States, have adopted the belligerent ethics of the savages who are their habitual enemies. Prince Gorrena Koff has not thought it necessary to forbid the taking of the savages which is prestined on both sides in the border war. scalps, which is practised on both sides in the border war-fare of the Far West. The use of projectiles filled with powdered glass and of explosive balls of less than a certain weight had been already prohibited by agreement. The exceptions to the general rule of burning, killing, and destroying are dictated by an anomalous benevolence; but there is no objection to new rules of the game of war which discourage unnecessary torture, and which in some instances give the adversary a kind of sportsmanlike fair play. There is no rule against starving 100,000 people to death in a besieged town or against burning them out with red-hot balls. It is not lawful to make use of the enemy's flag, of his uniform, or of his military insignia for purposes of deception; but nearly every other kind of warlike stratagem is legitimate and laudable, though Sir Garner Wolselet sternly censured the poor King of ASHANTES for pretending peacoful designs when he was really preparing for battle. Spics are liable to be shot, though their occupation may bettle. Spiesare latile to be shot, indugitation occupation may be meritorious and honourable; but an ancient exemption protects officers who run the risk of collecting information within the enemy's lines without putting off their uniform. Travellers in balloons, employed in keeping up communication between different portions of the hostile army, are entitled to be treated as prisoners of war. On these and many other points Prince Gortcharoff's code is merely a digest of the existing rules of war. It is possible that regulations founded on general consent might be useful in restraining the violence of obstinate and passionate officers who may be entrusted with commands. The neutrality of hospitals and ambulances has been recently instituted, and it is not likely to be disregarded by civilized armies. project properly provides that the neutrality should not be compromised because hospitals may be protected by pickets or sentinels who, if captured, would of course become prisoners of war.

The novel and questionable principle of limited limiting in war is not likely to be established in the face of Lord Duner's judicious protest. The members of a Lond Company in recent times are not liable for the debts of the association beyond the amount of their annualled capital. The condition has full warning of the artest of responsibility of the absorbed to resort for a member of being companied to resort for a member of the demand on the comparate fund. It can appear the destroy of the absorbed that the subjects of a belligrance like a manual the comparate fund. The manual that the subjects of a belligrance like a manual that the subjects of a belligrance like a manual that the subjects of a belligrance like a manual that the subjects of a belligrance like the subjects of the subject of the

The formation of the first the mode of the state of the s

Mr. Lunier, the British Minister at Brussels, has been informed that he is to take no part in the Conference, and that England will be represented, if at all, by a military officer who will in all cases refer to the Foreign Office for instructions. The promotors of the scheme will perhaps answer objections to their proposal that war should be conducted exclusively by the armed forces on either side by referring to later clauses which modify the sweeping character of the original exemption. An army of occupation is of course entitled to levy from a conquered district the taxes due to the hostile Government; and it might be plausibly contended that, as legitimate administrators of the sovereign authority, they may also levy additional taxes. The army may also take possession of "provision, clothing, boots, &c."; but it is recommended that the generals should either pay for the articles which they require or go through the decent ceremony of "giving "the oustomary receipts." The enemy may further, without either payment or signature of receipts, levy money contributions on the population, either in case of necessity or by way of penalty, but "care must "be taken to avoid ruining the population." Sourr and Davouer would probably have alleged necessity in excuse for the boundless sums which they exterted from the Prussians, both for their private use and for the service of their military chests. That they stopped short of finally and totally ruining the population may perhaps be shown by the present flourishing condition of North Germany. If the Emperor of Russia thinks it worth while to prosecute his philanthropic enterprise, he will probably be able to secure assent to the greater part of his proposals. The principal Governments seem likely to follow the example of fingland in allowing themselves to be represented at Brussels by military officers. The absence of professed diplomatists will deprive the transaction of political significance, and the Empero. The principal contents fails, nearly all the rules suggeste

THE ENDOWED SCHOOLS BILL.

IN securing the consent of the House of Commons to the clauses abelishing the Endowed Schools Commissioners, Mr. Distants has consent only a subordinate part of the measure which was consented by his party, and which his Government structured. The clauses which have been postponed relate to a very serious and important

question. As regards the recounty for some unditi the Endowed Schools Aut, the testimony of the Commissioners appointed under 16, Mr. Ross, is toler conclusive. "I think," he mays, " that Clause rybeaves an immense number of endowments which, according "any ordinary rules, must be considered to belong to the "Church of England." The general tendency of Mr. Robr's opinions, as expounded before the Select Committee of last year, adds to the force of this admission. He throught that it would be "comparatively unobjectionable" to provide for instruction in the doctrines of the Church of lingland in schools founded since 1700, but he himself earnestly desired that the requirement for religious teaching should point not to "matters of theology," but to "life and practice." In another place, he says that in his judgment the requirement should be for "instruction in the Hely Scriptures." These passages and others like them may help to explain the disinclination of Government to renew the powers of the Commissioners. The views expounded by Mr. Rom were generally provalent in the Commission, and the result was that its proceedings came to be regarded with distrust and dislike. It may be that the Commissioners personally deserve all that their friends have lately said of them; but it may also be that their corporate action was influenced by minds stronger and less scrupulous than their own. The effect of the combined action of the Commissioners and the Education Department was adverse to the Church, and as the powers of the Commission were originally granted for three, or at most four years, there is nothing unreasonable in the refusal of Ministers to renew them. The "Con-"servative reaction" of which we hear so much was largely produced by distaste for the views as to religious teaching which Mr. Ross and his colleagues applied to grammar schools. Four years of their proceedings is thought to be enough, and it is idle to make a grievance of the non-renewal of their powers. It must be remembered that the Report of last year contains a mode-rately worded consure of the Commissions which was rately worded consure of the Commissioners, which was moved by Mr. GATHORNE HARDY, and adopted almost without opposition by the Committee of which Mr. W. E. FORSTER was Chairman :—"It is to be regretted that "some of the changes proposed by the Commissioners, "especially in the cases of certain good schools, should "have been such as to hinder the hearty co-operation of "those who had heretofore worked to render them effi-It would have been easy for Mr. HARDY to have made out from the evidence before the Committee a case for even a stronger censure. Sir Michael Hicks Beach proposed a draft Roport declaring that "a more judicious course of action" by the Commissioners would have led to much greater results than had actually been achieved by them. There is, to say the least, considerable support for this opinion, and it is natural that the Government should give effect to it.

The necessity of some amendment of the 19th Section of the Act was proclaimed, as we have seen, by Mr. HOBY, and a recommendation for such amendment was inserted in the draft Report proposed by Mr. FORSTER. An amendment to Mr. Forster's proposal was moved by Sir Michael Highs Beach, and, on a division, the voting was 9 to 9, and Mr. FORSTER, as Chairman, gave his casting vote for his own proposal. Now the principal question which arises on the present Bill is identical with that which was decided in the Select Committee by the Chairman's casting vote alone as lately as the 17th of June, 1873; and yet it is pretended that this question has been settled finally, and ought not to be reopened. The question is, whether certain tests of Denominationalism should be applied only to schools founded after the Toleration Act, as was proposed by Mr. Forstes, or to all schools, as was proposed by Sir Michael Hicks Beach. It is conceded by both parties that this question was open until the 5th of August last, when the Amendment Act was passed, and it is contended by one party that this question is not open now. We must remember that towards the end of last Session it was strongly asserted that the House of Commons did not represent the country, and subsequent events have shown that this assertion was well founded. It would thus appear that a question of high importance which one party in the House alleges to have been finally settled was settled without having been submitted to the judgment of the country at all.

It was foreshy chanced by Mr. Fawcerr that there is something in the case of educational institutions which money cannot purchase. It The wealth of the wealthiest could not

"suddenly call into existence a Trinity, a Christchurch, or "a Balliol," and the same remark applies to the ancient "a Balliol," and the same remark applies to the ancient and famous schools which are affected by this Bill. They are in fact places where the religious teaching of the Church of England is now afforded, and you cannot obliterate that feature without impairing the character of the institution. As was well said by Sir STAPPORD NORTH-COTE, the object of the Bill was to preserve that feature. "What the Government did intend was that religious "instruction should be given in these schools, and that that religious instruction should be in accordance with "what appeared to be the intention of the founder." It must be remembered that many of these schools have chapels which, by an express provision of the Endowed Schools Act, are reserved to the Church of England. Under that Act, as worked by the Commissioners, the absurd result might have been attained of a secularized school with a chapel belonging to the Establishment. The truth is that on this question facts are too strong for When the Commissioners were brought face to face with facts they were constrained to admit their stringency. We have already quoted the opinion of Mr. Roby as to the 19th Section of the Act. Lord LYTTELTON stated to the Select Committee that the result of that section had been "nothing less than an absurdity." The Commissioners, he said, had been led to apply the section to a disposition made by founder A because he happened to use words which came plainly within its terms, and to refuse to do so in the case of founder B because he did not happen to do so, "while all the time no human being could doubt "that A and B meant the same thing." The third Commissioner, Canon ROBINSON, said that "unquestionably many foundations fall outside the section, though the "founders took especial precautions to stamp on them a "distinctive Denominational character." If the facts of these cases be considered in a judicial spirit, it will be improved the state of the stat possible to avoid arriving at nearly the same conclusions as were reached by the Court of Chancery before the passing of the Act. Lord Selborne, being Attorney-General in 1866, stated before the Schools Inquiry Commission that, if a school had been founded to bring up children in secular and religious learning, the founder being a Churchman, that would show that religion was part of the object of the school, "and the presumption is that religion means religion according to the Established Church." It is for the opponents of the Bill to displace this presumption if they can. There has been some talk lately about a difference between the "National Church" and the "Church of "the Nation," and it is, as we understand, suggested that the existing Establishment is the former, but not the latter. But, if so, what then? Until the "Church of the Nation" be forthcoming, the presumption must continue in favour The schools founded by King Edward VI. out of the dissolved chantries, and so forth, almost all of them con-"tained indications of an intended connexion with the "Church of England, or with religion, which, though I " believe for the most part there is no express direction as "to religious instruction, yet have been held in many cases to be sufficient proof that they were to be Church of England schools." This passage would apply to the case of Birmingham School, which has been so much discussed. We quote it not for the purpose of justifying all the provisions of the Bill, but in order to show that some such Bill was necessary. We believe that no judicial mind could apply itself to the facts without arriving at the conclusion which that passage expresses. But, be that as it may if the Charity Commissioners consider the questions which come before them, as they are capable of doing, in a judicial spirit, the result is likely to be satisfactory. There is also a point which cannot be overlooked, and the Bill properly proposed to advert to it. We mean the usage since the foundation of the schools. Upon this subject the Report of the Schools Inquiry Commission ought to be conclusive:—"In all but a "very few of these schools religious instruction has been regularly given since their first foundation; that is, in some cases, for upwards of three hundred years, and to "exclude it now would be a very different thing, and would have a very different effect, from not introducing "it for the first time." It is only necessary to add that the religious instruction here mentioned is that of the Church of England; and it would seem reasonable to provide, as the Bill did, that the usage of Church teaching shall be preserved for the benefit of scholars belonging to the Church.

Religious partisanship has a wonderful effect in disabling even clear-headed man from reasoning. Mr. Forestan was the author of the Act of 1369, which provides that a school shall be a Church school if the instrument of foundation requires the scholars to be instructed according to the doctrines or formularies of the Church. The present Bill provides that, if the instrument of foundation requires the scholars to go to church, it shall be held to require them to be instructed according to the doctrines or formularies of the Church, and Mr. Forester considers this a "dangerous assumption." It has been decided by the Commissioners that a requirement to "learn the "Catechism" makes a Church school under the Act of 1869; but Mr. Forster contends that a requirement to go to Church ought not to make a Church school. Mr. Forster seems to suggest that there is danger to the Church from possible claims of other denominations. But our legislation is quite sufficiently unintelligible without deliberately refusing to allow to words their ordinary meaning. Let Parliament first endeavour to construct some rational definition of a Church school, and then let it proceed to settle fairly the position and rights of Dissenters in such school. It is rather hard to accuse the Church of intolerance and the Parliamentary majority of tyranny, when all that the Bill did was to ascribe to language its necessary sense. It is not the stronger party which has been supra grammaticam in this debate. All those protests against converting an exception into a

rule were directed against fact, law, and reason.

Under these circumstances, it is unfortunate that the Government should not have had the courage to insist upon the securities with regard to religious teaching which they originally proposed. There is no reason to doubt the sincerity of the pledge which has been given, that the clauses now withdrawn will be presented next year in a revised form; but a large class throughout the country will look anxiously for its fulfilment. Mr. DISRAELI cannot fail to perceive that the reunited Conservative party of 1874 cannot be kept together without adequate respect being shown to the religious element which so conspicuously contributed to

the results of the general election.

THE FIJI ISLANDS.

A LTHOUGH the proposed cession of the Fiji Islands has not been finally accepted, it may be assumed that the Government has determined on annexation. On the same day on which Lord Carnarvon made a statement on the subject Mr. DISRAELI disputed the accuracy of Mr. M'ARTHUR'S assertion that the acceptance of the cession had been communicated to the House of Lords. He probably intended only to guard himself against any admission which might compromise future freedom of action. It is not to be supposed that the PRIME MINISTER intended to repudiate the declarations of the COLONIAL SECRETARY. At the Mansion House on Wednesday last Mr. DISRAELI perhaps caused some surprise by the declaration that his Government would not only maintain the existing Empire, but perhaps enlarge its boundaries. As there is assuredly no question of extension of territory in Europe, Asia, Africa, or America, Mr. DISRAELI can only have referred to the South Pacific region, and specifically to the Fiji Islands. There is some force in the objections which are raised to the annexation, inasmuch as it will probably not directly pay its expenses, while it will involve a certain amount of trouble and responsibility; but the preponderance of opinion among those who are competent to judge seems to be in favour of the proposed measure, and the Australian colonies unanimously approve of the policy of the Government. It is even stated that New South Wales is willing to contribute to the cost of the operation, and Lord CARMAEVOM not unnaturally expressed a feeling of gratified surprise on bearing of the possibility that any colony should take a share, however small, of a burden incurred for its benefit by the United Kingdom. It would not be safe to rely too confidently on the rumoured liberality of New Bouth Wales. The revenues of the Fiji Islands will, according to an official estimate, meet the expenses of government, and at the worst the cost of a small Crown colony may be borne for a time without serious inconvenience. It is worth while to incur a moderate liability for the sales of putting an and to an anomalous and embarranting relation. The islands are already to a great extent under the countries of English subjects, and the naval officer assumenting on

the station has occasionally found it mechanics to interfere for the maintenance of order and of purce.

In accordance with established precedent, the English Government is compelled to exercise superintendence over the emigration of labourers which constantly tends to degenerate into a kind of alave trade. As long as the harboure of the islands belong to an independent authority the necessary supervision is imperfect and troublesome. It is said that some of the ports will be useful for the accommodation of vessels trading between the Australian colonies and the western coast of America. As the greater part of the shipping employed is English, some jurisdiction must be exercised over the seamen and adventurers who are likely to frequent the islands. The Commissioners who were directed to report on the state of Fiji suggest the necessity of establishing a Consular Court if the Government declines to accept the sovereignty of the country. The general administration of justice in the name of the Queen will be more efficient, and perhaps it may not be more expensive. One main reason for including the islands within the limits of English dominion is the possibility that some other Power might sooner or later have established itself in the country. The French have at different times been disposed to extend their influence in the South Pacific, and some of the settlers in Fiji have already invited the American Government to take possession of the territory. Although it has hitherto not suited the purpose of the United States to acquire outlying possessions, some American politicians, including the actual President, have stronuously advocated a more aggressive policy. It is not impossible that the Sandwich Islands may within a short time be annexed to the United States, and if a colonial system is once instituted, it will admit of rapid expansion. The objection to the acquisition of the islands by a foreign Power is founded, not on idle jealousy, but on the risk of jealousies and possible collisions which might at any time compromise friendly relations. Thirty years ago a quarrel between an English Consul and some French

The Report of Mr. LAYARD, who is Consul at Fiji, and of Commodore Goodenough, commanding on the station, is an interesting document. There are nearly two hundred is an interesting document. There are nearly two hundred islands of different sizes, of which about eighty are inhabited. The climate and soil appear to be healthy for English settlers, whose children thrive, although they are not so robust as at home. Nearly all zymotic and pulmonary diseases are at present unknown; and the debilitating effects of heat are principally shown by the approximation of the inhabitants to the American or Australian type of settlers of European descent. It would appear that the natives have, at least in the present generation, been maligned by common report. With the exception of a few thousands of mountaineers, belonging probably to a more primitive race, the islanders have entirely discontinued the practice of cannibalism, and, to the great credit of the missionaries, they have, with few exceptions, become Christians. It is stated that an enumeration which has been made by the missionaries of the number of attendants at churches and chapels constitutes almost a complete census of the population. The men never omit to come to church; and the women are in the habit of bringing their infants and other children. The schools are well conducted and adapted to their purpose, and the Commissioners recommend that the Government should encourage the establishment of a Training College which has been projected for the sons of chiefs. The failure of has been projected for the sons of chiefs. The failure of missionary efforts in some parts of the world has been so frequently noticed that the perfect success which has been achieved in the Fiji Islands ought not to be overlooked. If the islanders should by some strange good fortune escape the consequences which have elsewhere resulted for the contact of inferior wasse with the Engagence that from the contact of inferior races with the Europeans, the merit of their progress in civilisation will belong far more to their disinterested religious teachers than to the most realons and beneficent of civil administrators. Christianity is most easily and most effectively propagated among tribes which still retain something of the simplicity and decility of children. As might be expected, a large admix-ture of former Paganism qualifies for the present the perfect orthodoxy of the converts. One of the most valued privileges of members of the same wibe is that they have a right to cores one another, or rather to came the fathers,

the grandfathers, and the gods of those with whom they may happen to quarrel. It is not consistent with etiquette, or purhaps with the maintenance of peaceful relations, to execute the ancestors of strangers.

The white settlers some years since elevated a native chief of the name of CAROBAU to the rank of constitutional King, with some of themselves as his Ministers. The Commissioners believe that a chief of another group of islands is equal in power to the titular Kins; but lackly MAAFU concurs in the proposal that the islands should be ceded to the English Government. The actual Minister, Mr. Thurstoy, attaches, in the name of the King, an elaborate system of conditions to the cession of sovereignty. Lord Carrarvon has properly declined to accept any but an unconditional surrender of power; but there is no doubt that the King and other holders of vested interests will be justly and liberally treated. The islands will be formed into a Crown colony in which all real power will belong to the Governor, though, as nead, there will be a Legislative the Governor, though, as usual, there will be a Legislative Council, in which some of the chiefs will have seats. The tonure of land is, as in all primitive communities, widely different from that which prevails in England or in Enrope. The Commissioners think that in one sense all landed property belongs to the chief, subject to the rights of the members of his tribe, who owe him certain services on account of their holdings. Since the arrival of white settlers, the possession of land in fee simple has been introduced, but it would seem that the system is still unintelligible to the natives. In some instances a chief whose rights are rather those of lord of the manor than of freeholder has assumed the right of selling the property which belonged in part to the actual occupier. Questions of this kind have been widely studied of late years, and a judicious Government will not be disposed to disregard native habits or modes of thought. The Commissioners recommend that the quasifeudal position of the chiefs should be recognized, to be afterwards gradually abolished or altered. It is not expected that Lord Carnarvon's refusal to entertain the plan of a conditional transfer of sovereignty will imperil or delay the annexation. When it is accomplished, the first and most important duty of the Colonial Minister will be to select a Governor of intelligence and firmness. The class of retired Indian civilians forms the best school of colonial administration, and some of them, still in the vigour of life, might be glad to exchange compulsory idleness for a suitable field of action.

MARSHAL MACMAHON AND THE REPUBLIC.

MARSHAL MACMAHON has had great opportunities and has greatly missed them. Circumstances have given him an extraordinary influence over the course of events in France, and certain honest absence of ambition has saved him from using that influence in the interests of his own aggrandizement. But though this latter quality has kept the Marshal an honest man, it has not been able to make him anything but a very narrow-minded one. It might have been a worse misfortune if he had wished to found a dynasty, but it is a very great misfortune that he should have wished to found nothing. For the political pilot statesmanship is as essential as bonesty; it takes something more than good intentions to keep a ship off the rocks. In the first instance it was not necessary that Marshal MacMahon should be himself a statesman; all would have gone well if he could have recognized the gift in others. When the secret history of the overthrow of M. THIERS by a Parliamentary vote comes to be made public, it will probably be discovered that Marshal MacManor was the pivot of the negotiations which gave the victory to the Right. If he had taken no part in them, still more if he had let it be known that he was on the side of M. THIEBS, it is doubtful whether the Duke of BROGLE would have been able to command a majority, and still more doubtful whether a majority, if obtained, would have done him any real good. Among the Conservative deputies there was a good deal of alarm at the prospect of a Republic, but it was an alarm which could scarcely have borne practical fruit had it not been shared or favoured by Marshal MacManos. Supposing that M. Thiers after his defeat on the 24th of May, 1873, had pursued a similar policy to that which the Marshal is pursuing now, the nostile majority would speedily have melted away. He might have refused to accept the resignation of his Ministers, or he might have replaced

them by others equally devoted to himself. He might then have hursied on the partial elections, and relying on the evidence afforded by them that he possessed the confidence of the country, he might simply have waited until the consciousness of their own weakness brought the Conservatives to see that their best policy was to make friends with the President, and to accept a Conservative Republic. To the carrying out of this policy one thing was wanting. An Executive may rightly resist a Legislature, provided that it has the country at its back, if only it can resist successfully. But it cannot resist successfully unless it has unity in itself, and with Marshal MacMahos at the head of the army the French Executive would not have had unity in itself. If M. Thiers had offered a passive resistance to the vote before which he retired, the Duke of Brogue would probably have followed it up with a vote of deposition; and if M. Thiers had disregarded this vote and refused to retire until after the electors had been appealed to, Marshal MacMahon, judging from his subsequent conduct, would have executed the decree of the Assembly against the President. Against this certainty it would have been useloss for M. Thiers to struggle. With the constituencies to fall back on he might have fought a Parliamentary majority, but the constituencies would have served him nothing when the Parliamentary majority had in its service the master of the legions.

Marshal MacManon had a second opportunity when he became President. It is conceivable that many timid Conservatives may have distrusted M. THIERS'S power to give the Republic that Conservative hue which he maintained it ought to wear. They may have bethought them of former Radical excesses, and asked themselves why the Giroudin of 1873 should look to be more fortunate, either as regards his own head or those of his friends, than the Girondins of 1793. But a movement which had on its side a Conservative army under the virtual command of a Conservative President could afford to take a Republican direction, and after the collapse of the Legitimists last October, it ought to have been clear even to men of ordinary political capacity that this was the only direction in which movement was possible. If Marshal MacManon had had the wisdom to reject the dangerous counsels of the Duke of BROOLE, and to insist on regarding himself as President of the Republic for the first seven years of its existence, a working Ministerial majority might by this time have been formed in the Chamber which would have been so far in accord with the Republican majority out of doors as to be sure of obtaining a complete ratification of its acts whenever the day of a general election should arrive. The Duke of Records and arrive arrival arrive. Brognie could not have resisted an alliance between Marshal MacManon and the Left Centre. He would simply have resigned office some month carlier than he did resign it. The Conservatives in the Assembly would have regretted their leader, but they would not have espoused his cause after the Chief of the State had disowned it. Instead of this the Marshal became as much an admirer of the personal Soptemate as the Duke of Broque himself. His own position could be no greater nuder a Provisional Government than under a settled Government; either way the first place was secured to him for seven years. But the Marshal had porsuaded himself that, after an interval spent under his rule, Frenchmen would, by some unexplained process, be better qualified to decide upon their own political future than they are now, and in this conviction he supported the efforts of the Right Centre to found a personal Septennate.

Still fortune was kind, and the Marshal had again an opportunity of learning the late wisdom that sometimes comes by sheer experience of folly. He had pledged himself to the Conservative majority, and the Conservatives kindly released him from all obligations to them by ceasing to be a majority. The Right of the Assembly is now agreed upon nothing but negatives. Each of its sections lates the others only less cordially than it lates all the sections of the Left. The Left, if it had the support, or could even scoure the abstention, of Marshal MacManon, would be in a position to establish the Republic. The Right, even with the support of the Marshal, can establish nothing. Yet to this impracticable combination of impracticable opinions the Marshal so far adheres that he will not hear of the only expedient which could give it meal Parliamentary support. If on Thursday General on Classer had accepted

the Casterz Piazas proposal an effective majority was at once have been executed. The Marshal would not 4 at once have been contained. The Marshal would not have lost a single element either of power or diguity which he now possesses; on the container, his position as the inevitable and indispensable ruler during the early years of the Republic would have been more assured than Three-fourths of these who would have voted with M. Casimir Périer would have done so with an unexpressed admission that it was the presence of the Marshal at the head of affairs, and the securities for order involved in his presence there, that made the establishment of the Republic possible. Marshal MacManon has rejected this source of strength, and has chosen to regard himself as invested with an anomalous authority which no one can either label or define. General DE CLESET'S declaration comes to this, that the one thing needful for France is Marshal MacMahon. Other politicians have gone as far as to hold that Marshal MacMahon is a necessity for France, but the only creed that satisfies the PRESIDENT of the Republic is one which goes on to say that nothing else is necessary. "The Government," says General DE CISSEY, "do not think the true remedy for the "sufferings of the country would be the actual prools"mation of the Republic. . . . The country wants you
"to give the existing power the necessary strength to
"defend and protect itself." By what means General DE
CISSEY has agriculate this interpretation of the means CISSEY has arrived at this interpretation of the wants of the country it is impossible to say; but we may be allowed to suspect that to his soldierly mind the country and his superior officer are identical terms. That the necessary strength to defend and protect himself is what Marshal MACMAHON wants is evident. He has advanced a good deal nearer a dictatorship since he first took office, and even since the coth of November. Or neckars it and even since the 20th of November. Or perhaps it may only be that, now that he no longer represents a homogeneous party in the Assembly, the real absolutism of his position is more clearly seen. It would not be fair to say that the Marshal was prepared to disregard the decision of the Assembly, supposing that it had gone in favour of the Casimir Perior proposal, but he must have an extraordinary amount of moral conservatism if he can retain a virtual dictatorship without contracting that contempt for representative bodies which is the characteristic sentiment of dictators, and for which the action of the present Assembly gives so much room. It is probable, however, that this particular temptation will for some time be spared him by the Assembly continuing to reject any proposal to which the Marshal expresses dislike.

ELECTION PETITIONS.

THE disposition to bribe and treat electors is so firmly implanted in the minds of many candidates and their friends that the one question which, as it appears, presents itself to those who are in the midst of a contest is too often how the law may be evaded. That bribery and treating are now very risky things is well known. The days of a Man in the Moon and bags of gold in a dirty public-house are over. Open public-houses with unlimited beer and joints for all comers are things of the past. But, short of these overt violations of the law, there are an infinity of small attempts to see what can be done safely; and it is accepted as indisputable that anything that can be done safely may be done properly. Of course there are numerous constituencies in which there is no bribory or treating, and if there is intimidation, wis of that quiet sort arising from the influence of wealth and mak on humble neighbours which it is very difficult to prevent, and which sometimes is not unconnected with feel that practically do much to bind society together. In other constituencies there is a real political issue raised, and even if there were a disposition to bribe or treat, it would he recognized that such means would be useless, and the contact would really be decided by the opinions. passions of the electors. When, again, men of high sufficient position stand, they are determined on dispositional every form of corruption, and even their most feelish sup. perfere upe aware that it is better for such many beas an election than to win it by means of a doublish hand. But in a manufactuable number of constituents who only real issue is whether a man who has tried to make himself locally agreeable or formidish, and then is known to like money, shall mounts.

of a most in Parlies in Parliament, or whicher an to which of two private persons is to have and the combitants, or those who are working for the every advantage that the law allows. They ring a game, the rules of which they are willing to for not to observe them is to win in vain; but they set themselves to think very closely what the rules of ame are, and will beard something in the hope that y parhaps come within the rules. They have a proadversaries are doing exactly the same thing, and it would be to confess a humiliating inferiority in ounning if they re to be beaten simply because they had been outwitted. Then comes the petition, and the Election Judge arrives. He examines into what has been done, and stops up the little hole which it was hoped the law had left open. He unseats the member, and one more point in election law is decided. Gradually the limits in which candidates and sir friends can work with safety are narrowed, and if the constituencies will only be good enough to furnish a sufficient number of leading cases, the law will ultimately be so settled that honesty will actually be discovered to be the best policy.

Some recent decisions have done much to contract the liberty in which knowing election eerers thought themselves entitled to move. The instance of Boston is perhaps scarcely worth referring to, as an electioneering agent must be a baby if he thinks that he can give sacks of coals to six or seven hundred electors with impunity. But the instances of Strond and Kidderminster are worth studying. The Conservative member for Stroud was unscated because his friends had taken far too wide a view The Conservative member for Stroud was of what might be done by a judicious payment of travelling expenses. The payment of these expenses is not illegal, and if it is necessary that this should be so, all that can be said is that the necessity is an unfortunate one. But it is illegal to pay the expenses as a condition of voting in favour of the person paying, and it is still more obviously illegal to pay more than the actual expenses, and so give the voter a bonus. At Strond both these mistakes were committed; but it was hoped that the payment of the excess might be safely covered and concealed if payment was made in postage-stamps. They seem to come from nobody, no order for payment is given, the recipient gets them in the quietost and most comfortable way, and can dispose of them by driblets. The elector has paid five shillings for his railway fare, and he gets a sovereign's worth of stamps, and he does not know exactly how the account has been made out, or to whom he ought to return the balance. Nothing could be more ingenious, or seem a better stroke of local genius, until the Klection Judge arrived, and then the little device was made to seem unspeaks ly silly, and the member was unscated. At Kidderminster, Mr. GRANT set himself avowedly to work to see what he could do to please and conciliate the electors without infringing the law. He conceived that a tea and fireworks, with a procession of supporters wearing appropriate rosettes, and decorated with a modal that should stamp the image of their triumphant member on their minds for ever, would be the right thing; only the feast must be delayed. not only until the election was well over, but until the time for petitioning was past. He was elected after having held out hopes to the electors of this splendid recognition of their services in getting him into Parliament. He then set to work to fulfil his promise, and sent down considerable sams of money for the preliminary preparations. Subsequently, however, he seems to have been awars that there was more risk in carrying out his scheme than he had supposed; and the great feast was never held, and the resettes and medals were never exhibited to the gaping and admiring crowds of Kidderminster. But he had already done too much. Down came the Election Judge, and investigated with unpleasant minuteness all that had happened. Mr. Grant did his utmost to oppose his ensuries. His solicitors and agents would not acknowlise enemies. His solicators want agents would not nonnew-ledge to having any documents connected with the election, and Mr. Gaser forbore to go into the witness-box to explain the parity of his intentions. The Judge does not explain the parity of his intentions. appear to have bed much difficulty in serior consistion. There were the facts, that price elections a great first had been promised an ring at a subsequently to the election morning had down to pay for the preparations. So Mr. Classes sent just us the electors had lost their tes suff medals.

and a general cloud of disappointment lowered over a borough which, if things had been a little better managed, might have been so happy—might have had Mr. Grant for its member, and might have had thousands of pounds' worth of rockets, and tea, and ribbons, and metallic images of its worthy representative.

Not to give hundreds of sacks of coals away, not to send nostage stamps for housand beyond travalling expenses.

postage-stamps for bonuses beyond travelling expenses, and not to promise gorgeous teas are lessons that future candidates and their agents are now bound to take to heart; and it cannot be said that there is much difficulty in learning them. But it must be said, in justice to those who have taken part in contests at recent elections, that election law is not formed solely through decisions on cases where clever people have tried to see whether they could not find a loophole through the meshes of the law. In several cases the Judge has had to unseat a member who had done, or whose friends had done for him, something which they honestly thought there was no harm in doing. At Launceston Colonel DRAKIN was unseated because on the eve of the election he had given permission to his tenants to kill the rabbits on his estate. The Judge held that this was bribery, but he took care to add in his report that it was bribery of a sort that reflected no discredit on the briber. It was, in fact, nothing but the effervescence of good nature in a landlord who likes to see people happy around him. It was totally unnecessary for Colonel Deakin to notice such miserable little creatures as rabbits. As he had informed Mr. LOPES, the former member, he had become the owner of Werrington, and he claimed as the representative of Launceston the immemorial appanage of his purchase. He was quite right. The people of Launceston are, as a matter of fact, deservedly attached to the proprietor of Werrington, whoever he may be, and the consequence of the decision about the rabbits was simply that Colonel DEAKIN ceased to sit for Launceston, and his son was elected in his stead. At Stroud, a short time ago, the Liberal member was unseated because some of his friends had given an early breakfast of a modest kind in a Nonconformist schoolroom. To offer such a meal, at such an hour, in such a place, is of course treating in the legal sense, for a Judge has held it to be so; but it hardly comes within the popular sense of what a treat means, and the givers of that ill-fated hospitality might be quite believed when they protested that they had not the slightest notion that they were doing wrong. In a more recent case at Strond the Judge had to decide whether there was bribery under the following circumstances: -- At the February election certain millowners who were agents of a candidate gave a holiday to their men on the polling-day, and nevertheless, contrary to the usual practice of the mills, paid them for the day, though they did not work on it. This was repeated at the May election, and it was contended that the establishment of the new practice in February was in effect a promise that this practice should be followed on the next election, and that this promise had been fulfilled. The Judge hold that no such promise could be inferred, and he also held apparently that what the millowners had done did not come within the language of the Act as to bribery. But in dealing with an election petition the Judge acts at once as judge and jury, and it is one of the privileges of a jury to be able to say "Not guilty, but don't do it again." This is precisely what Baron Bramwell said at Strond. The millowners were not guilty of bribery, but he strongly recommended them not again to pay their men for a holiday on politing-day. As he pleasantly remarked, if they are so fond of giving holidays, why should they select polling-days at election-time for the sole occasions of their bounty? If they did but select some other day, the men would equally have a treat, and the masters would be sure that they could not be suspected of bribery. This is one of the most useful ways in which the new system of election decisions works. The Judges are gradually teaching the law to the public, and are inspiring prudence as to what looks like a breach of the law among those who do not wish to win by any practices that can be blamed. If purity is to be established in electioneering, it is quite as important that honest people should be made careful as that elever people should find that their devices for just beaping within the law, while infringing its spirit, only end in disseter.

THE LORDS' COMMITTEE ON CHURCH PATRONAGE THE Bishop of Peterbobough's Committee on Church Patronage has made a very sensible Report, which may be summed up in the proposition that it is prudent to let well alone. The alterations proposed in the existing law are trifling, and for the most part unobjectionable. It would perhaps be expedient to extend the bishops' power of refusing institution in cases where bodily infirmity disqualified the patron's nominee from discharging his duty. It is a scandal that a decrepit old man should be appointed It is a scandal that a decrept old man should be appointed to a living for the mere purpose of increasing its saleable value by the probability of his early death. There is also no objection to the suggestion that the presentee of a living should produce a certificate of character from three incumbents in the diocese which he last served, countersigned, if necessary, by the bishop. It was hardly worth while to appoint a Committee of the House of Lords to consider reforms so trifling. Some of the witnesses or supposed expects who were consulted of the witnesses or supposed experts who were consulted proposed various schemes for checking the existing traffic in livings. On the suggestion that advowsons should be made inseparable from landed estates, the Committee justly remark that such a rule might vest unalienable patronage in a pauper, a minor, or a notoriously unfit person. was also proposed that a living sold separately from the land should be offered to the Ecclesiastical Commissioners or the Trustees of Queen Anne's Bounty; but it is a preliminary question whether it is desirable to diminish the amount of private patronage. Only a few years ago Lord Westsury passed, with general approval, a Bill for enabling landowners to purchase the advowsons of small livings in the gift of the Chancellor. The purchase money was in all cases to be added to the endowment; but it must be assumed that Parliament would not have facilitated the transfer except on the supposition that private patrons would exercise their power for the good of the Church. No notice is taken in the Report of an intermediate kind of patronage which has been invented for the purpose of propagating certain doctrines. Mr. Simeon, who was fifty years ago a leader of the Evangelical party, left a considerable sum in trust for the purchase of livings, which were to be presented to disciples and partisans of his own.

If such devises were to become common, it would perhaps be right to prevent by law the diversion of occlesiastical revenues from their proper purpose for the benefit of any particular sect. A private patron may be expected to prefer his friend or his kinsman, and bishops must, for the purpose of the argument, be supposed to take merit into consideration. A trustee for the encourage-

If private patronage had been hitherto unknown, it would certainly not now be deliberately introduced; but the same may be said with equal truth of many of the best English institutions. The House of Lords, or perhaps the Crown itself, would not be created for the first time if the community had to provide itself with a Legislature and a Government, and yet more than one country in Europe is at present vainly striving to provide itself with an Executive and a Second Chamber. In early times nothing seemed more natural than that the owner of an estate should have the right of appointing the priest of the parish. The incumbent in his turn possessed a freehold, burdened with the discharge of certain duties in person or by deputy, but otherwise pos-sessing all the attributes of property, except that it could not be transmitted to his heirs. As long as it was held that the distinctive function of a parish priest was to administer the sacraments, his personal merits may perhaps have sometimes been regarded as of secondary importance; yet Chauche's Parson is still the most perfect model of a parochial clergyman. The modern result of lay patronage had never been foreseen. The system has tended to raise or maintain the social level of the clergy, and it has simultaneously or consequently introduced into and it has simultaneously or consequently introduced into their ranks a preportion of men of sense and men of the world. A pear or the squire of a parish who happens not to possess strong colesisatical propensities, prefers a nominee whom he likes or respects often in a large degree on secular grounds. It by no means follows that a clergyman will be less pions because he is not exclusively selected on account of his piety; and in all other respects the qualities which lit men for temporal employment are of the highest value in

ment of doctrines which may at any time become obsolete

occupies an anomalous position.

the discharge of spiritual functions. the discharge of spiritual functions. The brother or the nephew of a patron may perhaps not always be an eloquent preacher; but in the majority of cases he is a gentleman. The clergy in those parts of the country where advowment are commonly attached to landed estates are at least as popular as those in the same or other districts who owe their preferment to bishops. The sale of livings which shocks some agreeities Charabanas and a mark least a shocks some sensitive Churchmen and a much larger number of Dissenters who take a speculative interest in the subber of Dissenters who take a speculative interest in the subject is an almost necessary incident of private patronage. It would be extremely difficult to prevent the transfer for valuable consideration of any kind of incorporeal hereditament which possesses a money value. The columns of ecclesisstical newspapers which are devoted to lists of livings on sale have perhaps a not thoroughly edifying appearance, but the worst part of the process ends with the advertisement. The man who buys a living for his son or even for himself gives a certain security that the son or even for himself gives a certain security that the future incumbent will be inclined to submit to the restraints of a clerical life, and to perform the duties of his office. The mode of appointment is not perfect, but it is incomparably preferable to popular election, and it adds a wholesome variety to episcopal patronage. The House of Lords Committee fully appreciates the numerous advantages of the Committee fully appreciates the numerous advantages of the

system.

The Bishop of Peterborough will, in a future Session, easily carry in the House of Lords, and perhaps in the House of Commons, a Bill for providing the moderate securities against improper appointments which have been devised by his Committee. A resident patron is for the most part strongly interested in the selection of a creditable nominee; but there are undoubtedly cases in which the right of patronage is abused. The Committee were restrained from going further in their recommendations by the obvious risk of collision with proprietary rights. The evil, whatever may be its extent, is largely reduced since the abolition of pluralities. The character of a rector who was destined to be a permanent absentee was not likely to be strictly scrutinized. The Church is becoming less and the remuneration which it offers is soldow anticipated to terrate a condition to less a refuge for idlers; and the remuneration which it offers is seldom sufficient to tempt a candidate who is grossly unfit. A large part of the endowment of the clergy practically consists of their own private means; and probably the incumbents who have been presented by private patrons contribute more than their share to the general fund. One of the many reasons against disestablishment consists in the probability that forfeiture of the corporate property of the Church would be followed by the loss of the supplementary revenues would be followed by the loss of the supplementary revenues derived from birth or from marriage. The strong interest which the upper classes of the community feel in the welfare of the Establishment is to a great extent founded on sympathy with friends and equals, and on the absence of any suspicion that the clergy as a body are disloyal to society. The anomalies which offended the Bishop of PETERBOROUGH The anomalies which offended the Bishop of PETREBOROUGH when he moved for the Committee on private patronage perhaps appeared to him on closer investigation to be intimately connected with other parts of the fabric of the Establishment. The majority of the Committee consisted of bishops and of laymen who take a strong interest in all matters relating to the Church. Their bias would probably be in favour of enjaconal nomination if they had not been be in favour of episcopal nomination, if they had not been strongly impressed with the advantage of a more varied kind of patrouage. The minute provisions which they recommend for adoption are perfectly compatible with the maintenance of the present system. The actual declaration as to simony is absurdly obscure and indefinite, and it would, as the Committee suggest, be more convenient to enumerate in the form of declaration the offences of which the presentee is to profess himself guiltless. It is difficult to prevent the sale of next presentations, because any laws on the subject would in many cases be evaded by the purchase of the advovson and by a subsequent re-sale. The rule which prohibits the sale of a vacant living is in itself reasonable, and purhaps its provisions might be made more stringent. If the more its provisions might be made more stringent. If the more object of the distribution of patronage were to exist and reward the seal of candidates for preferment, a practice which in the majority of cases tends to an appointment made on private grounds would not be definable. The advocates of lay patronage must real their defence on the working of the system, which are which is not unantisfactory. It is well that there are Biologic south entire to parasive the danger of removing any all buildening which halp to support the distributions.

PURISO OPINION AND THE INDIAN FAMINE. Tris to be hoped that public opinion in England will not fall into the mistake which has overtaken public opinion in India. A letter in the Pall Mall Gasette of June 17 describes certain charges brought by Indian newspapers against the Government as amounting to "an imputation that the Bengal officials have, either "from ignorance or from an anxiety to make the facts "correspond with their Estimates, misrepresented the famine." One paper in particular, the Times of India, is said to have asserted that superior officers "have "matilated the too-outspoken reports of their subordinates, " have snubbed them for writing unpleasant truths, and have warned them against the consequence of un" pleasantly accurate statements." We confess to enterpleasantly accurate statements." "We confess to enter-taining a general disbelief in charges of this type. It is exceedingly easy to bring them against public men, and exceedingly difficult for public men to disprove them. Even if every subordinate officer were to deny that his report had been "mutilated," or he himself "snubbed" or "warned," only the form of the accusation would be changed. It would then be said that strong pressure had been brought to bear upon subordinate officers by their superiors, and that under this pressure they had consented to deny what they knew to be true. In cases of this kind the decision must, after all, turn upon the characters of the accused persons. If their previous careers have not led Englishmen to put more trust in the accuracy and the straight-forwardness of Sir George Campbell and Sir RICHARD TEMPLE than in the accuracy and straightforwardness of the anonymous informants of Indian newspapers, no evidence as to the facts is likely to have much weight with them. It may be useful, however, to point out once more that the temptation to mutilate outspoken reports and to snub their too accurate writers cannot extend beyond the Bengal Government. The disposition of the Government of India would be all the other way. Lord NOBTHBROOK is in the position of a man who has been ordered to take precautions which he himself thought somewhat exaggerated, and the best proof that he could give the Home Government that he was right in his estimate and that they were wrong would be to send home impartial testimony to the fact that the famine had fallen short of English fears. So far as Lord NORTHBEOOK is concerned, his reputation could not be injured if it were shown that the stores of grain provided to meut the wants of the distressed districts have been immensely in excess of the real need. From a very early period in the history of the famine the decision to what extent it should be met was virtually taken out of his hands. He was blamed in many quarters for refusing to prohibit the exportation of rice, and the only defence which was listened to was the plea that he was buying grain enough to feed the whole population that might possibly become faminestricken, irrespective of any exports whatever. It would have been useless for him to say that he did not believe that more than such and such a fraction of the population would need relief, and that he proposed to make provision for this contingency only; he would at once have been told that in matters of this kind nothing less than certainty can be accepted. So long as it was possible that the outside estimate of the number of persons who could under any circumstances be thrown upon the hands of the Government might prove true, the Vicegor would not have been allowed to take any estimate short of that. To be prepared for the worst was the direction originally sent from the India Office to the Government of India, and when Lord Salis-BURY succeeded to the Duke of ARCYLL there was a general expression of satisfaction at the supposed superior energy of the new Minister, and the consequent probability that this policy would be pressed home yet more firmly. Almost the first act of the new SECRETARY OF STATE WAS Almost the first set of the new Scoretary of State was to direct the purchase of more grain, and it was only on receiving a distinct assurance from the Vergeor that all that could be required had been got, and that if, contrary to all expectation, it should prove insufficient, as much more as was wanted could be had, that Lord Samerers consented to enspend his order. There can be no reason therefore, why the Government of India should wish to represent the famine as real when it is in truth imminary; and swift it has famine as real when it is in truth imminary; and swift it has famine as real when it is in truth imminary; and swift it has famine as real when it is in truth imminary; and swift it has famine as real when it is in truth imminary; the lighter manufactor and would not present some indicate that the distributions are invalided in the doubts which are

now being thrown upon the magnitude of the scarcity in Bengal. Is the food provided in excess of reasonable calculations P and is any one to blame for mistakes in the original estimate P At present there is some inclination even in England to say "Yes" in answer to the first question, and "The Indian authorities" in answer to the second. There is, in point of fact, no ground for either reply. It is impossible in dealing with a scarcity affecting many millions of persons to provide enough for the highest imaginable requirement without running the risk of providing for requirements which may never be reduced to fact. No one will pretend that the Government of India, were in a position last November to say within some tens. or even hundreds, of thousands how many persons would be depending on them for food eight months later. No one will pretend that the Government of India were in a position last November to say within some weeks, or even months, for how long a time the persons depending on them would remain dependent. Supposing that they could not feel sure whether they would have to feed three millions for nice months, or two and a half millions for six months, a large margin of uncertainty is thus created. A population of half a million cannot be kept alive for thirteen weeks without a very large expenditure and so far as this expenditure has to be incurred in advance, there is no avoiding the risk of wasts so long as it is unknown whether this half-million will have to be supported after all. If therefore it could be proved that the Government supply of grain is very much in excess of what is now seen to be the probable need, it would not necessarily reflect blame upon those who are suspensible for ordering it. Of course excess over actual requirements is primd facie evidence of former excess over reasonable calculations, but it is nothing more. The famine could only be met on the scale and with the certainty demanded by the English public by taking an outside estimate, and out-side estimates are unavoidably open to be falsified by subsequent events. As yot, however, it would be exceedingly rash to say that the Government provision is appreciably in excess of the need. In the last fortnightly narrative Sir Richard Temple says of Tirhoot, "Looking to the "applies of Governmental grain in situ or in reserve, I "am still hopeful that there is enough for such emergencies "and requirements as may be reasonably expected at pro-But I have not met any responsible officer of any grade who thinks that we have more than enough." The population of Tirhoot will have no fresh rice to eat until December. Those who reason as though the famine were already over seem to forget that the food which is to supersede the Government supply is not yet in the ground.

Whether the proportions of the famine as compared with previous famines have not been exaggerated is another question. In former famines the State did not attempt to keep the whole population alive, and consequently it is quite possible that a famine which, when set side by side with the famine of 1866, is a more scarcity, will cost the Government ten times the sum expended in the earlier year. But this only shows that the standard of Government aid has been different in the two cases. It may be fair matter for argument whether the State has been well or ill advised in taking this tremendous burden upon itself; but there is no doubt that on this occasion it did take it upon itself, and that if it had hesitated about doing so, it would have been driven on by an irresistible public sentiment. When the need is past it will be well to consider calmly, and with all the instruction afforded by the experience of 1874, whether in future famines are to be left to take their course, or are to be dealt with by precautionary measures on a large scale, or are to be fought, as this time, in the open field. But after having deliberately resolved to meet the present famine in this last mentioned way, it is not our business to begin, before the famine is over, to censure the Indian authorities for having done what we told them to do, and to do thoroughly, on pain of something like impeachment and donatestion. This of something like impeachment and degravistion. This kind of criticism is unjust even in Indian newspapers, though they at least never urge the measures. It would be inconsistent as well as unjust in journals which six months ago were never weary of urging level Normanoux to apend without stint and almost ridge thought.

COLLECTIONS

THE love of making collections is often early developed. A school boy has a rare assortment of mathles or butterflies before his purse allows him to indulge in stamps or photographs. A now celebrated surgeon is said to have made his first money by a collection of neatly mounted skeletons of mice. The proceeds were applied to the purchase of a series of microscopic slides. Many a fine collection of coins has hed its hegipping when a child has perceived the of neatly mounted skeletons of mice. The proceeds were applied to the purchase of a series of microscopic slides. Many a fine collection of coins has had its beginning when a child has perceived the difference between a son and a halfpenny, and has put the foreign money by as a curiosity. To a real collector, the catalogue of a coming sale in his own particular department is more interesting than a new novel or a change of Ministry. A day at Christie's is more to him than the Derby or the Ascot week. Even the misfortunes of his friends are not without aspects of consolation if their collections come into the market. And many who are not collectors read the list of prices in the Times, and take much pleasure from the perusal. Some regret may be expressed, perhaps even felt, when the accumulations of centuries in an old family are dispersed. It seems a pity, though it may be useful. But our sorrow is alleviated if we make collections ourselves. The rare Sevres mark for which we have so long pined is now within our reach. The scarce Aldine or the unique Wynkyn, for which we have sighed in vain, may now perhaps be ours. The Reynolds portraits which have long been admired on the wall of another may now perhaps be transferred to our own, and become as much our property as our great-grandmother herself. Thus we contrive to bear up when others come to grief, and can even see that a hencefit is conferred upon mankind by the appendity who our property as our great-grandmother herself. Thus we contrive to bear up when others come to grief, and can even see that a benefit is conferred upon mankind by the spendthrift who ruins his own family. He would be adjudged a lunatic or an idiot but for his skill in handicapping, and there are compensating advantages to those who deplore his headlong course and reprehend his extravagance. They at least are wise if he is foolish, and, sternly repressing their feelings, they attend his sale, and lay up treasures which their descendants will probably disperse in turn.

On the whole, collecting judiciously is a safe and profitable method of investment. The collector, especially if he has made his own money, is easily convinced that putting it by is the worst way of saving it. If he lays it out in books and plate and pictures, he finds he may both spend it and also have it, or at least leave it to his heirs. If Mr. Gillett had put his money to chasing pictures; and the pleasure he derived from making his gallery should go for something besides. The mere gratification to be found in looking at the collection, in adding to it carefully, in arranging and weeding out, in criticizing and comparing, is worth a yearly rent to a man who can afford it. If he gives five hundred or a thousand guineas for a painting, it is easy to calculate what it has cost him at the ond of ten or fifteen years; and allowing besides for what has turned out badly, it is not very hard to make a simple sum of profit and loss. We should be greatly surprised to find that Mr. Gillott's heirs did not clear both principal and interest on every picture, as well as a handsome percentage by way of profit. And all this without counting the enjoyment of possession, which, by a man of taste, will be valued very highly.

But judicious collecting is not to be learnt in a day. It is a

science, and not an easy one. The true collector must not buy what is now the fashion. He must leave that to coalowners and cotton-spinners. He must look forward. When Mr. Barker first bought the early Italian masters they were little known or admired. When Mr. Oorser bought his English poets few people had heard of Wither or Giles Fletcher. "Britain's Second Remembrancer" was forgotten, and Mr. Grosart had not edited "The Triumph in Heaven and Earth over and after Death." Sometimes Sometimes a public event, sometimes a gradual turn in the tide of popular taste, influences the collector's market. A biography or a battle brings a man or a place into prominence. A novel or a law suit illuminates the industry of some obscure corner. A post is quoted in a Promier's speech. But without the aid of any such fortuitous concurrences, the wise collector, who buys in one direction, and who perhaps makes and prints a catalogue, is certain soon or late to find his trouble rewarded. This is the case with almost all the arts, and literature as well. The collector comes first; the cataloguer comes next; and then the public, having something on which to form their opinion and some guide in forming it, bring the ware, or the school, or the book into fashion.

The various directions in which a man may collect are among the curiosities of the subject. Flint arrow-heads, tobacco-pipes, the curiosities of the subject. Flint arrow-heads, tobacco-pipes, finger-rings, glass heads, jugs, woodcuts, nielles, and many strange and uninteresting things are gathered, as well as pictures, prints, or books, and the other greater divisions of the arts. One gentleman buys every piece of old unusic he can find. Another forms a library all of Bibl. A third has every book on the Pance of Desth. Bones and fossile, and all the endless range of soological specimens, form the objects of a large class. In the arts alone, embroidery, lace, watches, furniture, are pursued as much by a limited number of hunters as pictures or china by the general callactor. It is by explorers who first enter on a new pursuit that the country must be surveyed and mapped, so that when ordinary travellers come they may easily know their way. The Harleian Collection, the Doues Collection, the Slade Collection, and many more, have the been subjected and company of subjects of subjects of subjects of subjects and formed. It is not until a collector tries to find duplicates that he knows what is rare. He may buy at the very first setting off an adition or an impression which afterwards turns out to be absolutely unique. Some men have capabilities for this kind of pionsering

which are denied to others. They seem instinctively to know which are denied to others. They seem instinctively to know when a thing is coarse, and every day adds experience to their natural powers. Such men are born collectors, and are always collecting. The late Mr. Bernell was such a one. Mr. Barker was another. A gentleman now living has successively made the best collections known of Sarum service books, ivories, and silver plates. But it is not always possible to collect more than one kind of thing at the same time. Most collectors can only employ their lessure at the sale-rooms, and use their pursuit mersly as a relaxation. It is generally an aussteur of this kind who does the most valuable work, for he concentrates his pleasure upon what he gathers. It is the dealer, on the other hand, who follows his track, and is the first to profit by his information. Hardly had the first list of potters' marks been made before the cottages and farmhouses of Somersetshire and Wiltshire were swept by professional men who emulated the pretended uncle of Aladdin in exchanging new and beautiful china and stoneware for the broken parnet or the odd match-pot which had so long stood unappreciated on the chimney-piace.

It can never pay the judicious collector to give sporting prices, except perhaps as an advertisement for his collection. A curious example of this rule was afforded by Mr. Barker's five blue Sèvres vases. It is said that he originally gave two thousand guineas apiece for three of the jars, and that he was long aware that the two which made up the set belonged to an eminent French financier and Minister. One day something went wrong in Rentes, and the pair came into the market. Mr. Barker was on the elect. They were his for five thousand guiness. This made the price for the five eleven thousand guiness, or two thousand two hundred each. No doubt they were a great addition to the collection, a feature of first-rate importance. But such a price was beyond their value, and in the recent sale the whole five only fetched a few hundreds more than Mr. Barker had given for one of them.

This is a very instructive example.

Another point to which the judicious collector attends is genuineness. Here again Mr. Barker's collection was unsatisfactory. Some of his Boulo, for example, was imitated. No one could tell the true from the false, and both suffered. For though a modern imitation of such merit as to be indistinguishable from the a modern mutation of such merit as to be indistinguishable from the original ought, in theory, to be as valuable, yet for a collector's purpose it is not worth nearly so much. There are copies of Direr's prints quite equal to the engravings he made himself; but as specimens of his art they are useless. The judicious collector of books, too, will never have fac-simile titles or missing pages supplied. His collection, if he is wise, is above suspicion. lector of books, too, will never have a supplied. His collection, if he is wise, is above suspicion. There is often a great temptation to make up an imperfect book or "restore" a mutilated picture. But experience proves it to be a mistake. Modern pictures in this respect have an advantage over old ones. It is the same with china. It must be genuine. It cannot be mended, once broken or cracked. In this fact lies the reason of the high prices often given for examples. It requires the smallest amount of judgment on the part of the buyer. He can ece at a glance if it is what it pretends to be, and can know in a see at a glance if it is what it presents to so, and amount moment whether it is perfect or not. But bronzes are easily forged, and so are all kinds of palmolithic remains, arrow-heads, calts, deer's-horn, and the rest. It speaks well for the quality of an art that it is difficult to imitate. When the cost of a reproduction that it is difficult to imitate. When the cost of a reproduction is likely to be greater than that of an original example, it is not worth while to make the reproduction. A curious example of this kind is in the recollection of those who visited the first and best of the present abortive series of Exhibitions at Kensington Gore. An ingenious French manufacturer exhibited a pair of enamel jars made exactly like those which come from Japan. But the cost was more than five times as great. Enamels therefore are seldom or never forged. On the other hand, books are particularly obnoxious to the efforts of the imitator. Even illuminated manunoxions to the enterts of the initiator. Even intuminated maintenancing the property of the property of the upon a way which only the utmost knowledge and experience can detect. Photography and its branches have probably been of great assistance to the professors of these arts. When a library is perfectly free from such deceptions, the effect on its market value is enormous. This it was which caused the great and unique of the Box length of ceptional prices of the Perkins' books dispersed last year. Many of them were spotted with damp, and others were very imperfect, but they were absolutely genuine, free from facsimiles, but they were absolutely genuine, free from facsimiles, and unmended. Sir William Tite's library, which has just been sold, was by no means so immaculate. Much sassicion attached to many of the older printed books, and the whole collection suffered in consequence. The young collector finds it very hard not to "make-up." With the most honest in-

disting annually brings under the homose by fir the larger number of the eliginic whose prices we see in the morning papers. After a near line laboured fir years in husting out from all quarters the elections of whose artinot manufacture, or the paintings of one subject, or the prints of one paried or country, he is existed with the most ardent with the disperse them again. If the things he has grathered are rare, and if he has made a good extalogue, and noted discumstances about them previously unknown, he cannot do better, either for himself or the world at large, than submit them to the ordeal of a public sale. It is by the notice thus attracted that fresh classes of art are brought into fashion. The sale five or alr years ago of an extensive selection of early German and Italian arguerings turned attention to Martin Schängauer and Marc Antenio Rainspall. And within the last few months as much as seven hundred guinness were given for a single print by one of me hundred, guiness were given for a single print by one of a masters, and a few days since four hundred for another. The many years since their value was not the same number these masters, and a few days since four hundred for another. It is not many years since their value was not the same number of shillings. Thus high prices, however, are perilous to the larger. He cannot count on obtaining the same again. His own competition removed, they would probably not fetch anything life the money. For the buyer in an ordinary sale competes with two sets of opponents, namely, the owners and the bidders. But when it comes to paying such an enormous sum as ten thousand guiness for three pieces of porcelain, which was done a few weeks ago, the ordinary bidder's competition is removed. The vendor alone keeps up the price. He must do it with more or less risk of boying in. If these costly examples come under the hammer again—if they should be sold, for example, by excentors who are obliged to realise, and who perhaps cannot buy in—the old price will not be approached. But this kind of collecting is structural. It disturbs the natural order of events, and is not to be calculated upon. It is essentially unhealthy, and bears a close relation to plunging on the Turf.

There is no reason that collecting should be thus perverted. On

There is no reason that collecting should be thus perverted. On the contrary, there can hardly be a greater eafeguard to a young man entering life than the possession of a taste, especially a taste for art. Since the days of Ovid it has been commended, and considering how many boys learn it with their early rules of grammar, it is surprising how few afterwards apply it. About forty years ago a young gentleman, with a moderate allowance from his father, took a fancy to some china at a shop in Hanway Street. He mortgaged balf his quarter's income to buy it. His father and his friends, who would not have been the least put out if he had lost twice as much in a bet, looked aghast at the purchase. It was downright madness, wanton extravagance, to give fifty pounds for a comple of trumpery jars. But the same pair was sold at Christie's lately for a sum which paid principal, interest at twenty per cent. for the forty years, and something over. The possession of know-ledge is the first requisite in forming a collection, and the habit requisite stars required to be described. Noticing iring even useless knowledge is not to be despised. Nothing can have a better effect on the growing mind than a conviction, however impressed, that knowledge is money. The judicious collector must know something, if it is only about china pugs or snuff-boxes. And though a little knowledge in an important matter is dangerous, a profound knowledge of what is compara-tively unimportant may lead on to fortune. Few men who have distinguished themselves have been without a collection or at least distinguished themselves have been without a collection or at least a taste. John Selden formed a library. The Duke of Wellington loved music. One of the greatest of living stateamen is a judge of china. The first financier in Europe collects enamels. The busy man finds his greatest relaxation in such pursuits. Without being frivolous they afford a relief from serious cares. Walpole and Richatien formed galleries as refuges from affairs of State. It man received sormed galleries as refuges from affaits of State. It may be a question how far education neglects this subject. The easily development of a turn for collecting, which was noticed in our opening sentence, is perhaps worth more consideration from those who bring up children than has yet been given to it. Monograms and postage-stamps may, in this way, be among the civilizing agents of our time.

THE MAN AND DOG FIGHT.

WRITER whose various excursions in search of the horrible and disgusting are tolerably well known to our readers has made a new discovery. The practice of dog-fighting being not sufficiently exciting, the ingunious variation has been invented of a fight between a man and a dog. We cannot say that there is anything very surprising in this statement, though undoubtedly there is something enceedingly disgusting. It is not many years since prisefighting had a more or has respectable social standing. Up to a very secent period carl-fighting was carried on at curtain places with asserely an affectation of concessment; and though handled the come mason not very sety to define, in a still more WRITER whose various excursions in standing. Up to a very most period each sighting was carried on at curiain places with season and very many to define, in a attill more resolving practice, every one who has walked through some districts must have seen dogs whose looks are anought to hetery their profession. Indeed it is only a few years alone a light hat ween the changes of England and America took plane; in the House of Commons, said that he had reason to believe that the account was substantially correct. We should be changed described with great vividness in one of managements of the free no means of satisfying our curiously. The adjustment of such appears in profession in the Fourse of Commons, and that he had reason to believe that the account was substantially correct. We should be gled to know what were the grounds of this standard. The profession in the flows in the flows no means of satisfying our curiously. The adjustment of the flows in the flows on their the flows in the flows of the flows of the flows of the flows of the flowers, and the same than the same

pensition, any asternishment at more creative to the britis creation would be entirely out of place. A brickmaker at Manchester lately knocked down a woman in presence of a crowd and them set a dog to worry her. The state of public ordinion indicated by such a revolting story is certainly not unitarourable to the existence of dog-fighting. And therefore we cannot share the surgries expressed by some of our contemporaries, though we fully share their indignation at the facts which Mr. James Greenwood has brought to votice. has brought to notice. That a man who sets a dog at his wife, and the crowd which sees him do it without interference, should like and the crowd which sees him do it without interference, should have to see a dwarf fighting a buildog is surely not a very wonderful circumstance. Nothing, we should say, is more natural. There is a kind of grotesque horrer about the latter performance, indeed, which makes it in some sense more significant than the other more commonplace cruelty. The atrocity of such crimes is not to be measured simply by the amount of suffering inflicted. The eccentricity of the performance indicates a thoroughly morbid nature which takes pleasure in deliberately inventing refinements of cruelty. A man who kicks a woman to death is a detectable blackquard; but he exhibits, so to anaak, merely the straightforward manifestabut he exhibits, so to apeak, merely the straightforward manifesta-tion of brutal passion. The men who can deliberately concept such a spectacle as a man and dog fight must have sunk a stage further; because they must have learnt to consoct in cold blood eccentric modes of gratifying the most debasing instincts. Nobody can doubt that such practices, if they exist, should be exposed and put down with a strong hand as soon as possible. This new symptom of a danperous atate of feeling requires energetic treatment; and, so far as Mr. Greenwood has contributed to that desirable and, he has done good survice.

We do not know, however, that there is any great object in insisting at length upon a view in which all decent persons are agreed. If the man and the dog could be hanged at each end of the gallows to-morrow, there would be many dry eyes especially so far as the man was concerned. But we have something else to say in regard to Mr. Greenwood. It is his self-imposed task to inregard to Mr. tyreenwood. It is his sen-iniposed task to investigate the outlying corners of society, and to describe the result of his investigations in graphic language. Now, as we have had occasion to point out, the duty is one which requires some delicacy for its satisfactory discharge. It is desirable that horror of this kind should be described with sufficient power to force while attention and at the same time that their thought public attention, and at the same time that they should not be described so as to gratify a morbid taste for the horrible. Assuming that Mr. Greenwood acted in perfectly good faith and from the best of motives, let us inquire how far his mode of action was calculated to secure his ends. Two long letters to the Duly Telegraph, described as "By Our Own Commissionar," give full details of the scene which he witnessed. The first letter tells us how Mr. Groenwood fell into conversation with the owner of a buildog, drank with him at a public-house, beard some hideous secrets as to the mode of training tighting-dogs, and made an appointment to see a fight on the next night. He also has a passing glimpse of a dwarf called Brunnay, who might have passed for the original of Dickens's Quilp. The next night Mr. Greenwood mests his friend by appointment, and goes with him to a low house. He would not have gone, he explains, to see an ordinary dog-fight, but he thought that there was some mystery faith and from the best of motives, let us inquire how fa to a low house. He would not have gone, he explains, to see an ordinary dog-fight, but he thought that there was some mystery about the affair. This suspicion was amply justified, inasmuch as he witnessed a fight between Brummy and the buildog. The dwarf at last knocks the dog out of time by a blow under the chin; and Mr. Greenwood concludes by saying, "I shall have gone through that horrid spectacle to little purpose if any such tournaments are in future waged at Hanloy." We quite agree with him, and it is certainly a question whether he will not have done more harm than good. His graphic description has made a sensation, and been read all over the country: it has supplied thrilling illusand been read all over the country; it has supplied thrilling illustrations for a journal which enjoys a certain popularity amounts the students of police reports, and we can have no doubt that the details of the brutality have been carefully perused in countless public-houses with the same sort of interest which in the good old days was excited by the records of prizehghts. We are afraid that a morbid curiosity forms no inconsiderable element of this interest, and we may even doubt whether the readers who most enjoy such accounts are not more likely to find a hint of a possible source of amusement than to be simply disgusted by the revolution. We very much doubt, in abort, the moral tandency of graphic reports of murders, executions, dog-lights, and he whole class of literature to which they belong. The very proper expression of disgust which closes the narrative does not by any means hinder its application to different purposes. It is mora likely to act as a salve to the conscience of the writer than to determine the view which he will take of the transaction. We may, at any rate, safely assume that such descriptions are justifiable only so far as they contribute to the suppression of the horrors described. Let us see, then, how Mr. Greenwood tried to further the epds of justice. a morbid curiosity forms no inconsiderable element of this interest.

last, however, he was persuaded to accompany Mr. Colam to Hanley, in order to point out the scene of the outrage, under the condition that the visit should be incognito. After some perplexity, he fixed upon a certain street as that in which the fight took place. According to Mr. Colam, the arrangement of the houses was such that none of them could have been the scene of the fight; and, as he says, "Mr. Greenwood has therefore made a mistake in his identification." He was much vexed at his failure, and did his best to help the officer; and he explained that, having been taken by a roundabout way, in a dark night, and in a state of excitement, he had failed to notice any distinguishing feature of the place. This is unlucky; Mr. Greenwood has evidently not the presence of mind of the midwife in the legend of Wild Dayrell, who cut a piece out of the curtain of the bed to mark the scene of murder. As his object was at the time to bring about the suppression of these atrocities, we must regret that he was not more careful to keep his wits about him. Besides, at the hour mentioned in his letter, it is not usually dark on a summer evening. Other facts which might have led to the identification. summer evening. Other facts which might have led to the identification were equally missed. Mr. Greenwood explains that, as tification were equally missed. Mr. Greenwood explains that, as he gave the dog a fictitious name, no inquiries after such a name could lead to its discovery. It is not quite easy to reconcile this statement with the mode in which the name of the dog was first mentioned. At any rate, Mr. Greenwood might have revealed its real name, unless, indeed, the noble animal was not thought worthy of a name at all. We might also have supposed that Mr. Greenwood might have identified the man, with whom he had a long talk in broad daylight, whose house he visited, who adjourned with him "to the nearest ale-house," and whom he met by appointment the next night to go to the scene of action. He says nothing, however, of this gentleman, and perhaps the description was partly poetical. We infer the possibility of this because Mr. Greenwood admits as much in regard to the dwarf Brummy, whom he describes so vividly. In his letters the dwarf is described with an accuracy which should set any detective on his traces. He has a "head with the nose almost flat to the face, and squinting eyes and an enormously wide any detective on his traces. He has a "head with the nose almost flat to the face, and squinting eyes and an enormously wide mouth." The is afterwards described as "a man of at least middle age, judging from his grizzled grey hair and the enormous size of his head and ears" (Mr. Greenwood seems to think that men's heads and ears grow with their age), "but certainly not more than four feet and a half in height, yet with tremendous hands and feet and bandy legs." Mr. Greenwood explains that he "slightly elaborated" in this description, and now quietly allows him a possible six inches more in height. He further explains that he never said or thought that Brummy was "a resident in the place"; though, in the first letter, the dwarf looks familiarly in at the publichever said or thought that Brummy was "a resident in the place"; though, in the first letter, the dwarf looks familiarly in at the public-house and is recognized by the bulldog. He must plainly have been a temporary resident; and it is rather old that so conspicuous a figure should not have been remarked. We should also like to know whether "Brummy" is a fictitious name or that by which the dwarf—we call him so without prejudice to the doubt about his height—actually passed. However this may be, Mr. Colam has to tell us that no clue can be found, that the forty local policemen

to tell us that no clue can be found, that the forty local policemen have searched in vain, that the reward offered by the Corporation has produced no result, and that, unless the Home Secretary will divulge the sources of his information, no hope remains of a discovery. And thus, for the present, we must be content with a very lame and impotent conclusion.

It would be affectation to ignore the fact that some people will infer that the whole story was marked by something more than a "slight elaboration," and that the dwarf and the dog belong to the same category as the Daily Telegraph's other famous curiosity, the "old savage." Mr. Greenwood, however, positively asserts its truth, and it is possible that the narrative has been "elaborated" from some element of fact. We have admitted that there is no antecedent improbability in the story; and the enly wonder which remains, and which is not without parallel, is that, assuming his accuracy, we must suppose that the roughs of Hanley are capable of keeping a secret exceedingly well. But we have still a remark to make upon Mr. Greenwood's conduct. If, instead of writing graphic letters to the Daily Telegraph's of the story is a secret exceedingly well. well. But we have still a remark to make upon Mr. Greenwood's conduct. If, instead of writing graphic letters to the Daily Telegraph, he had taken pains to identify the place; if, especially, he had noticed the house to which he went by day and the man with whom he carried on a long conversation; if he had then given information to the Hanley authorities, they would surely have been able next day to discover a sufficient clue to the evil-doers. True, able next day to discover a sufficient clue to the evil-doers. True, Mr. Greenwood would then have appeared at once in the rather unpleasant character of spy, and yet as his object was, as he tells us, the suppression of such performances, it is plain that that was his true character, and he need not have shrunk from acting it effectually. He wishes, however, to be a spy without the inconveniences of the position, and to retain only the glory of a graphic exposer of social evils in the interests of morality. It is not wonderful that between these two stools he comes to the ground. He falls as an amateur detective because. the glory of a graphic exposer of social evils in the interests of morality. It is not wonderful that between these two stools he comes to the ground. He fails as an amateur detective because, when he has got his information, he keeps back the necessary details as long as possible from the officials who could act upon them. It is letter only gratifies a morbid curiosity without tending to any really serviceable exposure. And thus he affords another illustration of the fact that pupular writing of this kind, though it enables its author to take a high moral tone, is not possessed by conductive to the suppression of the evils issuited. It hould also be observed that the sort of "elaboration" to which it. Green wood confesses is only one of the natural results conducted in the state of the natural results conducted in the sort of the natural results.

composed by Special Correspondents whose only object is to make a sensation. The conductors of these journals are apparently in different to the degree of truth which is contained in the thrilling narratives which they publish, as long as they are sufficiently highly-coloured and exciting. It is scarcely necessary to point out what must score or later be the effect of the constant practice of this art upon these who are removed in it. practice of this art upon those who are engaged in it.

TWO MORE DAYS ON THE BERKSHIRE DOWNS.

WE spoke about a year ago of that most interesting district, the downs of Berkshire, and the part which they play in some of the most stirring scenes of our early history. The main points which, following the careful local researches of Mr. James Parker, we tried to set forth were that the site of Alfred's victory on Æscesdún had been wholly mistaken—that Æscesdún is the name, not of any particular place, the modern Ashdown Park or any other, but of the whole range of hills—that the actual scene of the battle was not near the White Horse and Uffington Castle, but a good way to the east, on the part of the hills lying nearer to of the battle was not near the White Horse and Uffington Castle, but a good way to the east, on the part of the hills lying nearer to Wallingford and to Reading. This, we think, will be the view taken by any one who carefully compares the site with the contemporary authorities, without troubling himself with what are called traditions, that is the guesses of a century or two back. A further ramble on the downs, and a minuter examination of what was most likely the actual field of battle, have made us feel still more certain about the matter. The whole range has the great advantage that it is easy of access from several points on the Great Western Railway. That it should be approached from Wantage Road seems fitting enough; it may seem more surprising that the best way of getting to the scene of Alfred's victory should be from so unromantic a station as Didcot. Of course any one who wishes to go over the ground of all the battles should begin, as the actual combatants did, at Reading. But for the site of the third battle, the battle fought on Æscesdún itself, Didcot forms a good starting-point. Those who do not care to walk the whole way may do well to drive as far as Blewbury, through Hagbourne, where the

the battle fought on Æscesdún itself, Didcot forms a good starting-point. Those who do not care to walk the whole way may do well to drive as far as Blewbury, through Hagbourne, where the church will be found worth looking at, and thence to begin making their way up "Mons fraxini."

It will be remembered that the campaign began with the English victory at Englefield—a name which in itself suggests the memory of earlier victories in days when Englishmen were the invaders and not the invaded—a victory which was followed by the second fight at Reading itself, in which the Danes had the victory and Ealdorman Æthelwulf was killed. The object of the Danes then naturally was to get possession of the range of Æscesdún, and thereby to command the whole country for many miles on both sides. The Chronicle merely records that the fight happened four days after the death of Æthelwulf, and was fought on "Æscesdune." The minuter description of the site comes from Asser, who also days after the death of Æthelwulf, and was fought on "Æscesdune." The minuter description of the site comes from Asser, who also amplifies the narrative which the Chronicler gives of the battle. He was not an eye-witness, but it is almost more pleasing to find that his interest in the exploits of his master and friend had led him to visit the spot. After mentioning the solitary thorn-tree, he adds, "quam nos ipsi nostris propriis oculis vidimus." It seems clear from Asser's account that the victorious Danes set out first on their march up the hill, and that the English under Æthelred and Alfred followed them. He does not say so in so many words, but his narrative takes it for granted. And at the eastern end of the hill there is a kind of fork affording two ways by which the hill might be climbed. He distinctly mentions that the Danes held the higher ground and the English the lower, which would almost of itself imply that the Danes had the start in the march. And the use of the word prescurpture and shows that in any case they had the start in the actual battle, and were able to get possession of the more advantageous ground. This were able to get possession of the more advantageous ground. This ground can hardly fail to have been the high point of the hill called Lowbury, where the faint traces of a square camp may be made out. Those works however must not be attributed to the Danes, though they may very well have made use of them. The form and the abundance of cyster shells to be found there make it must be clear that these entranchments are of Roman week. The Danes, though they may very well have made use of them. The form and the abundance of oyster shells to be found there make it pretty clear that these entrenchments are of Roman work. Just below this point, on ground which must be crossed in marching to Lowbury up the north-eastern fork of the hill, lies a piece of ground which exactly answers to the phrase of Asser, "campestris Æsceedun latitude," a wide piece of level ground on the top of the hill. This, it can hardly be doubted, was the scene of the actual fighting, and, if so, the place where Æthelred's tent was pitched cannot be very far from the point now known as the King's Standing-ground, though it is far more likely that the name is due to some much more modern King. Here, it will be recombered, the pious King insisted on hearing the full service of the mass to the end before he came to the help of his brother Alfred, who was already engaged with the heathen Earls, against whose division of the army he was to lead his own, while the West-Baxon King was to lead his against the Danisk Kings. The site can landly be mistaken; the fight was on Æsceddin; the words of the Danos marchial along Æsceddin to Cwichelinesities, which the Danos marchial along Æsceddin to Cwichelinesities, when the Danos marchial along Æsceddin to Cwichelinesities, when the Danos marchial along Æsceddin to Cwichelinesities, which is spot which exactly answers the description of the marchial along Æsceddin to Cwichelinesities, which is spot which exactly answers the description of the marchial along Æsceddin to Cwichelinesities, which is spot which exactly answers the description of the marchial along Æsceddin to Cwichelinesities, which is spot which exactly answers the description of the marchial along Æsceddin to Cwichelinesities, which is spot which exactly answers the description of the marchial along Æsceddin to Cwichelinesities, which is spot which exactly answers the description of the marchial along along the marchial along the marchial along the marchial along the marchial al

who had heard the encount of the bettle from those who had been in it, and had himself afterwards gone to examine the ground. For the particular solitary thorn-tree of which Asser speaks we should of course now look in vain. But such solitary thorn-trees still from a marked flature in the scenary of the hill, and so help to confirm the accuracy of Asser's observations. In this battle, which comes as a gleam between dark times of defeat, both before and after, the Danes were statively defeated, their flying troops were scattered and chased over and down the hill, the English following them as far as their "arx" or citadel, by which nothing can be meant except their fortified post at Reading from which they had set out. In the two contemporary narratives, the shorter one in the Chronicle and the longer one in Asser, there is nothing to tempt any one to connect the scene of the battle with the White Horne and with Uffington Castle; there is everything to connect it with Lowbury. Of the later writers, William of Malmesbury and Henry of Huntingdon do little more than translate the Chronicle. Florence copies Asser at length. This is a little disappointing, as Plorence copies Asser at length. This is a little disappointing, as there are phrases in Asser's account which almost sound as if they were translations of a contemporary English ballad; and as Henry of Huntingdon so largely used materials of that kind at points of were translations of a contemporary English ballad; and as accounts of Huntingdon so largely used materials of that kind at points of his history both earlier and later than this, we might have hoped to find some more fragments of the old English song imbedded in his Latin, just as we find in his accounts of Anderida on the one hand and of Stamford bridge on the other. He does however keep the true name of the hill, Æscesdún, which William of Maimesbury has corrupted into Æscesdun. There was of course a natural tendency to confound this name with Assandun in Essentials. Florence gives the proper translation of the name of the Esse-Sexon hill, the humble "Mons asini." But, just as William of Malmesbury has here turned Æscesdún into Æscendun, so, East-Sexon hill, the humble "Mons asini," But, just as William of Mahmesbury has here turned Æscesdun into Æscendun, so, when they get to Assandun, Henry of Huntingdon turns it into Escendun, while the Encomiast of the Lady Emma places the fight in "Æsceneduno loco, quod nos Latini montem fraxinoram possimus interpretari." There too, just as in Berkshire, the site of the battle has been by some modern writers moved from its real place at the modern Ashington to another Ashdown in that

The whole region on which the eye looks down from these hills is full of interest. A prominent object in the view from the eastern part of the range is the long nave and massive tower of the church of Cholsey, one of the places ravaged by the Danes just eastern part of the range is the long nave and massive tower of the church of Cholsey, one of the places ravaged by the Danes just before their hill march in 1006. The present building, a thorough minster in its character, though a minster of the very smallest type, a worthy fellow to Leonard Stanley and Llanbadarn, was doubtless built when the church was given by Henry the First, along with the distant Leominster, as a cell to his newly founded abbey of Reading. It is then spoken of as a ruined monastery, "dirutum monasterium," having most likely stood so since the time of the Danish inroad. At no great distance lies the more famous place which the Danes ravaged the day before their visit to famous place which the Danes ravaged the day before their visit to Cholsey, the frontier town and fortress of Wallingford. The name, coupled with its neighbour Englefield, points to the progress of the first English conquerors in this region. There were already English estilements on the northern side of the hill, while the Welsh coupled with its neighbour Englefield, points to the progress of the first English conquerors in this region. There were already English settlements on the northern side of the hill, while the Welsh still kept possession of the most important passage of the Thames. The entrenchments at Wallingford have much in common with their doomed neighbours at Dorchester, fast vanishing, but still not wholly vanished, beneath the hand of the merciless destroyer and of the Parliament which refuses to giep in and stay his hand. The earthworks at Wallingford isnoe in three sides of a rectangular space, of which the fourth side is formed by the river. As to the origin of the works at Dorchester no man can doubt. They are the original castra from which the Roman invader, perhaps Aulus Plautius himself, besieged the British entrenchment on the opposite hill. But Wallingford is act, like its neighbour, a Roman chester: it bears no Roman name; it has no Roman remains or traditions of any kind; yet any one would at first sight set down this rectangular intrenchment as a Roman work. It is the suggestion of one of the first living suthorities on these matters that this work, at once Roman and not Roman, is really, like the legionary eagle at Silchester, a Roman work wought after the Romans were gone, a work raised by Britons who had not forgotten file military lessons of their manters as a defence against the English inveder. Such an origin of the earthworks perfectly falls in with the name of the place. The "ford of the sons of the Welsh" was doubtless a great point of English attack, and its conquered and his military lessons work the internalment stands the great-Saxon victory. Close within the laterachment stands the great seaters which, after this son the John crossed from Mauriting for the Foreign King against the medical stands of the son of th

ground. Dorchester marks the strife of the Roman with the Briton; Wallingford marks the strife of the Briton with the Englishman, of the Englishman first with the Dane and then with the Norman. The neighbouring Bensington preserves the records of a less famous strife, but a strife of no small importance in early English history, the process by which the Saxons were driven from the conquests beyond the Thames by the Angles pressing from the north, the process by which the great river was fixed as the boundary between the two great divisions of the Teutonic conquerons of Britain, a change which had no doubt the effect of driving the West-English arms to the further west, and hindered the sayvival of such a separate British land to the west of Wessex as still remains to the west of Marcia. The conquests of the Mercian on the Thames decided the fate of distant Cornwall. The race who were beaten back by their Teutonic kinsfolk from Bensington and the Oxfordshire Somerton found their recompense in the process by one stage of which the Briton was driven from Exeter, and by another all Cornwall was, as it appears in Domesday, mapped out among English owners. English owners.

e Berkshire Downs then and the lands which lie at their feet are thus among those parts of England on which the succe stages of our early history have been most clearly written, well that their minute examination has fallen into the hands of a local inquirer who knows what evidence is, and who is not led away from the clear witness of charters and chronicles by such a will-o-'the-wisp as those modern guesses which so unfairly take to themselves the venerable name of tradition.

"BLOODY GARDINER."

If there is any truth in the proverb, "Throw plenty of mud, and some will stick," it no doubt applies especially to cases where the odium theologicum comes in to clench thich harge. There are no lies that die so hard as lies that have a common from portance. The whole history of "the B. Reformation," from whatever side it is told, is a conspicuous illustration of this; but it is only with the Explaint Reformation and with one distinguished. whatever side it is told is a conspicuous illustration of this; but it is only with the English Reformation, and with one distinguished personage whose name is mixed up in the contest, that we are immediately concerned here. Everybody of course is familiar with the name of "Bonner, whom all generations shall call bloody," or, as Foxe with questionable wit delights to call him, "that bloody bitcheep." But it was something new to us to find the "fixed withth" which Fuller and Foxe have succeeded in attaching as Foxe with questionable wit delignes to call min, "blast moresy bitceleep." But it was something new to us to find the "fixed epithet" which Fuller and Foxe have succeeded in attaching to Honner, like Honner's "rosy-fingered morn," quietly extended, with hardly a word of explanation or evidence, to Gardiner. We had occasion the other day to comment on some of the startling historical revelations propounded in Sir William Harcourt's speech on the Public Worship Bill, and there is a good deal in a letter of his since published in the Times which might tampt us to resume our criticism. It would be interesting for tempt us to resume our criticism. It would be interesting for instance to learn how a Communion which remains "spiritually" the same can yet be "ecclesiastically" different, or how the "image of the national will" was stamped on a liturgy which its "image of the national will "was stamped on a liturgy which its authors never ventured generally to enforce. But we forbear. Our readers have probably heard enough of Sir William's legal and historical paradoxes for the present. When however he proceeds by a side wind to sweep "the black and bloody tardiner" out of his path, he is but rehearsing in more explicit terms a kind of ri toric which is common enough among ordinary sciolists, but which sounds rather strangely in the mouth of a man of assumed learning and high position some thirty years after the appearance of Dr. Maitland's Essays on the Reformation. There may be some primations ground—though it is really nothing more—for speaking of "the bloody Bonner"; but there is not even any plausible pretext for affixing such an epithet to Gardiner. That he has been defor affixing such an epithet to Gardiner. That he has been de-nounced by historians like Hume, and in our days by Mr. Froude-as a persecutor is true enough; with what amount of reason will appear presently. But to justify such a description as "black and bloody" something more is required than to show that a high official took part in the legal punishment of heretics in an age when the very notion of toleration was scouted by all sides alike, certainly not least by the Protestant leaders. That there are persecutors of the sixteenth century fairly open to the charge of cruelty is true; no impartial student of history can doubt that norther Gardiner nor even Bonner is among them. And it is only fair to re-member that Gardiner, unlike some of his contemporaries, did not k to impose upon others a faith to which he was himself indifferent. seek to impose upon others a lattit to which he was himself indifferent. His position was rather a peculiar one, and Mr. Frude, who has a keen eye for theological distinctions, is not altogether wrong in calling him the "inventor of Anglicanism." He was firmly attached to those Catholic doctrines which continued to form part of the established religion to the close of Henry's religion, both before and after the hersels with Rome and he well-invalencement. of the established religion to the close of Henry's rein, both before and after the breach with Rome, and he suffered imprisonment throughout the reign of his accessor rather than abundon them. But while he consistently adhered in minst to last to the whole cycle of beliefs which it is no dear ashien to stigmatize ander the name of "accessorablem"—and that may perhaps help to explain his W. Hencourt's peculiar hitterness against him—he cannot without a great abuse of terms he called a Romanizer or hough he may have thought, after six years appearance of his. I Protestant policy, that it was the smaller of two seeds. But this was seldom or mover the critical question in the

Marian persentions. "Of the three hundred or so of victims—the precise number we believe is 277—put to death for heresy fluring her reign, secreely any suffered for rejecting the Pope's supremacy. Their trial almost always titred on the dental of dectrines about which neither Ronner nor Cardiner had ever wavered—most often on the Real Presence. There is no evidence whatever that either of these prelates was harsh or bloodthirsty in enforcing the law on that matter, and there is much evidence to the contrary; and this is especially true of Gardiner.

this is especially true of Gardiner.

Let us first take the testimony of an impartial historian of the last generation, whose sympathies are strongly Protestant, and who had not the means which now exist of correcting popular misconceptions of history. To the common assumption, repeated by Sir W. Harcourt—on which we shall have a word to say presently—that Gardiner had a hand in the "Six Bloody Articles," or was their main author, Sir James Mackintosh does not even allude. He does indeed assert that Gardiner was "at least in the beginning"s chief author of the Marian persecutions, but only on the wholly inadequate ground that his great abilities, commanding character, and high station do not allow us to doubt it; but he adds that the Chancellor probably did not intend the persecution to extend beyond the Protestant ringlesders, and that, when disappointed by their resistance, he withdrew from a share in vain bloodshed. That Gardiner did his best to confine the executions for heresy within these limits is perfectly true, and we may gather even from Foxe's one-sided narrative a similar inference as to Bonner. If there was to be persecution at all—and that neither of them could have prevented, had he at all—and that neither of them could have prevented, had he desired it—this was obviously the wisest as well as the most merciful policy. Sir James Mackintosh goes on to say that many of the prelates are recorded by Protestant writers to have exercised an effectual and perhaps hazardous humanity, and that their violent language was often a cloak for more effectually screening the accused. He observes that of fourteen dioceses they altogether prevented bloodshed in nine, and reduced it within limits in the remaining five properties to Gardiner requires it to be mentioned that his diocese was of the bloodless class." And although he quotes with approval Fuller's libellous description of Bonner—Dr. Maitland had not then exposed its absurdity—he feels bound to point out that Fuller's charge against the Bishop of London of burning about one-half the martyrs in the kingdom really proves nothing, inasmuch as they were sent to the capital from all parts of England for the purpose. We may add that many of Foxe's most ill-natured stories, when they come to be sifted, prove just an effectual and perhaps hazardous humanity, and that their violent most ill-natured stories, when they come to be sifted, prove just as little, even assuming their accuracy to be beyond dispute, and that is not often the case. Thus, for instance, the well-known story—illustrated by a large woodcut in the old editions of Foxe's martyrology—of Bonner's holding the hand of Thomas Torrights the greener over a lighted taper "to try his con-Tomkins, the weaver, over a lighted taper "to try his constancy," after exhausting all his powers of persuasion to induce him to recant, simply proves, if true, his persistent desire to save the prisoner from a punishment which it was not within it discretion to remit. As Maitland justly remarks, "Whether it was wisely done, people may dispute; but that it was kindly meant no person of common sense can doubt." And it is worth noting that, in all similar tales about Bonner's cruelty, he is never alleged to have done these things in order to extort confession of guilt or names of accomplices by torture, but always with a view of inducing convicted heretics to adopt the only available means of saving themselves from further punishment. And he often, on Foxe's own showing, kept them in confinement for weeks or months, notwithstanding their refusal to listen to his persuasions, in the hope of their eventual submission. This hardly corresponds with the language of Foxe's elegant couplet:—

This cannibal, in three years' space, three hundred martyrs alew,
They were his food; he loved so blood; he spared none he knew.

But we have no time to follow Foxe through the details of his nanseous indictment, and must refer our readers to Maitland's Essays for a minute exposure of his wholesale mendacity.

If we turn back from Mackintosh to Hume, we shall find him taking the ordinary Protestant view of Gardiner's character, and implicitly crediting him with the Act of the Six Articles, but without alleging any evidence whatever for this charge, or for saddling him with the graver responsibility of the Marian persecutions, while he mentions one fact which looks entirely the other way. After Mary's accession, Peter Martyr, anticipating a persecution, was anxious to leave the country, but some sealous Catholics moved for his commitment to prison. Gardiner not only opposed this, urging that he had come over by invitation of the Government, but supplied him with the means for his journey home. Mr. Froude, as might be expected, is both more explicit and much more hitter than Hume. His way of dealing with the case is highly characteristic. He talk us in his third volume that the cruel nature of the Act of Six Articles was attributed "by sound suthority" to the influence of Gardiner, but the only authority he gives, besides Foxes—which he admits not us believed his heart the cruel nature of Melasachthous's "Ch cussed hishers! character in his death, the indictment magnetic worth mounts achieved he his heart allegations of crushey against the high abilities and nervices to the State Mr. France of comme of

feels constrained to specify with respect. Lingard may perhaps by put aside as a prejudiced without, yet his History is generally colourless enough, and he had no particular reason for alimining a prelate who, if in one sense an orthodox Catholic, was a very unsatisfactory Papiet. His mentions Gardiner's being on the Committee named for drawing up the Act of Six Articles—as was also Cranmer—but mentions further that, as there is extant a Bill' nearly similar in Henry's own handwriting, there is good reason for believing the King hunself to be its real author. And he emphasise cally denies that there is any authoric document to support the charge made against Gardiner by Reformed writers of being responsible for the Marian persecutions, while the whole tenor of his conduct contradicts it.

As regards the Six Articles Act, however, there is a more to be said. Lingard naturally enough calls it "a severe and backgrous statute," and so it was, judged by any modern standard of beleavantion. But the Act was framed in a severe and backgrous again and the offences against which it was in fact mainly discussed was of a nature that would not be tolerated in any civilized was of a nature that would not be tolerated in any civilized was of a nature that would not be tolerated in any civilized was of a nature that would not be tolerated in any civilized was proposed according to the letter. It caused several of the more violent partisans of the Reformation to quit the country, and made those who stayed at home more quiet and peaceable. At the causide, according to Koxe's list, which is not likely to be defective, only twenty-eight persons suffered death under the Act during the eight years it continued in force. But the sort of "ribalds" against whom it was chiefly put in use were for the time effectually suppressed. It may sound strange to our ears to hear of persons being arraigned and punished for "reading the Bible in Paule" or "depraving the sacrament"; but when we find that the first charge meant collecting a multitude of people and making a tumult in the Cathedral, while the second includes such practices as maintaining boys to sing songs against the sacrament of the altar in public and interrupting the solemnities of divine service with studied mockery of what was still, be it remembered, the religious belief of the immense majority of the nation, we can hardly wonder that the Government should have thought it time to interfere. Nor is there any proof that the Bishops carried out the Act in a violent manner, but the reverse. On one occasion, for instance, when two hundred persons had been presented to Gardiner for turnultuous proceedings of this kind, he was "content that one should be bound for another," and on this easy belief of the first foar persons condemned to death under its provisions one was

LIFE ASSURANCE.

In England. The same question, with every variety of circumstance, has been presented to the Judges of the Court of Chancery, and to the arbitrators appointed to wind up the Albert and Emposes Assurance Companies. The question areas out of thome amalgamations of Companies where had been three amconstitutions amalgamations of Companies where names we must take the liberty of shortaning. The Householdem' transferred its business to the Haglish and Irish Church, and that to the Reitish Nation, and that again to the European. There is probably more to be gett from the Rouseholdem' than from the European, and therefore is policy-holder naturally endeavours to make out that he never military of the Rouseholdem' in which he outginily incomed. But Lord Romilly held that there had have "naturally endeavours to make out that he never military and consequently that no claim could be included the liability of the Company is which he outginily incomed. But Lord Romilly held that there had have "naturally inconsiderable experience, he should have thought that make the constant like the make the case before as. But there have hear assure that he make a different circumstances against "novelless," and when the case before as. But there have hear assure decided the mountainty of the last. In an analysis the case before as. But there have hear assure decided the mountainty of the last. In an analysis the constant of the constant of

prefilm a point from the Alient. It was not excepted the Albert as his debtor sile. In anisher early case there had the Times Company, which afterwards as to the Albert. At the time of this e in the Mi not to the conved, informing him an appears were cent to the annied, informing him Albert would be responsible on the policy, and requesting by future premiums to the Albert, and to send his policy limit to be endoysed. He never sent his policy to be ensut to just his premiums to the Albert and accepted a The Albert having become inselvent shortly after the the annual his representative almined to be additional. The Albert having become inselvent shortly after the thorf the assured, his representative element to be a creditor of Times. But it was half that the assured had accepted the test so his debtor in place of the Times. Other cases followed quick succession, and the insenuity of commentators was exercited extended in the decisions of different judges, or even of the many indige, with one another. Then the Albert Company was sided ever to Land Chimes as arbitrator; and afterwards the Europe of the company was accommitted to Lond Westbury. Attempts to its lightly upon the shareholders of absorbed Companies succeed to be defined were found to be still existing for the pass of establing loss, although not for yielding profit. Policy-dems and assuritants suffered sain, which was but alightly dessend by inflicting ruin upon shareholders. In India and attails, these names "Albert" and "European" were of risi import. Business which might be safe and profitable had a constanted modelessly or dishonestly, and at length the state sound making or dishonestly, and at length the state means so intolerable that a remady was attempted by rable that a remady was attompted by at. By an Act of 1870 returns were required from Life a Companies which would supply considerable means of a the security afforded by them. Some persons would be judging of the security afforded by them. Some persons would be suited by able to form spinions for themselves, and others would be guided by them, until gradually a clear distinction would come to be drawn between esteams masse Companies. It is difficult to explain on what the set sand meets Companies. It is difficult to explain on what principle intending assurers proceeded in selecting a Company before this Act was passed. Agents were stimulated by liberal commissions to press new Companies in every way, and perhaps the real reason for the selection of a particular Company was often no more than this, that the agent was an agreeable man. The most recent Companies assumed grand and sonorous names, and when several Companies were amalgamated, acombination of names was made so as to produce one name too long to be either spoken or remembered. Many people did and do make their choice simply by following the lead of some friend in whose prudence they had faith, and perhaps it is better to do this than to puzzla over figures. There are several offices mainly supported by the clergy, and others of which the trustees and directors are selected from the best known men in both branches of the profession of the law. If two or three ex-Chancellors and Judges, with a dozen Queen's Counsel and leading solicollors and Judges, with a dozen Queen's Connecl and leading solicitors, cannot keep an Assurance Company straight, the business of such Companies must have a strange capacity for entanglement. The wonder is that, when it is so easy to go right, many Companies have gone wrong. It has been said that the competition in The wonder is that, when it is so easy to go right, many Companies have gone wrong. It has been said that the competition in business has caused it to be undertaken on disadvantageous terms; but in one sense competition, canvassing, or, call it, if you will, touting, is maritorious. The principle of life assurance cannot be too widely advocated, and perhaps some remedy might be found for the thoughtless, self-indulgent habits of the wage-receiving class by unging on them the duty of providing by life assurance for their wives and children. Perhaps it would be more effectual to targe the wife to make this provision herself by the application of weekly savings.

It is of course desirable to Insure on the most advantageous

It is of course desirable to insure on the most advantageous terms, but it is more desirable to insure beyond the possibility of doubt. Hatbands and fathers are chiefly anxious upon this point, and how are they to feel certain on it? They can only do this by essertaining what funds the office has in hand, how these funds are invested, and what relation these funds bear to the liabilities the Company. The returns made under the Act of 1870 supply this information, and we are time enabled to apply a test to all Companies, and we should either avoid sitogether those which do not satisfactorily, answer it, or at any rate only resort to not under particular reasons for confidence in the management. them under particular reasons for confidence in the management. Everything must have a beginning, and we cannot expect a new Company to possess the accumulated capital of a Company that has done a large and usually business for forty years. But persons without appeal impossing or commercious will do well to select come Company that attained the following test. Experience shows that the premiums received amountly may be recknowed at three per cent on the same mented. Then, if we office has outstanding policies for a million starting, its manual from premiums will be gracoid, a year. If it mans process, the manual has outstanding policies will be for a million. Supposing that manual has outstanding policies to this amount, what amount of manual, the contracting malicies to this amount, what amount of manual, through in indis-

parar need not apply a rule which only a few offi and the rule which would hill biguylar cont

the manner need not apply a rule which only a few offices sould extent, and the rule which would bid high the sentent with eight times the annual premiums is, we believe, quite sufficient times the annual premiums is, we believe, quite sufficients the annual premiums is, we believe, quite sufficients the sum which supply these particulars have been leftly published in rather a bulke blue-book, of which the principal pertion has been reprinted and published at the than half the price of the official volume. This published at the than half the price of the official volume. This published at the promite in which the accumulated fand is invested on mortgage of land, so much in railway debuntums and debunture stock, so much in East Indian or Colonial Government securities, and so on. It would be invidious to mention annual, but we will take the page at which the book opens, and we find that the premiums amount to rather less than 170,000. and the accumulated fund is just over 2,000,000. This fund is stated to be invested as follows:—Mortgages on freshold estates, 1,100,000.; British Government securities, 37,000.; Railway debuntures and debenture stock, 70,000.; Clablight and Colo Companies mortgage bonds, 112,000.; on security of percential and other rates under Act of Parliament, 433,000., and to make these annual returns, the Act requires every Company once in either five or ten years to dause an investigation to be made into its financial condition by an actuary, and to muse an abstract of that actuary's report to be made and returned for publication. This investigation would of course leaves an abstract of the accurities in which the accountlated fund is invested. As regards many of the items, if we are told their exact nature, we can value them for ourselves. But in general we is invested. As regards many of the items, if we are told their is invested. As regards many of the items, if we are told their exact nature, we can value them for ourselves. But in general we find only, for example, "railway debentures," without specifying of what Companies. Most of the large Companies have at least 1,000,000l. invested on mortgage, and if a Board of Directors were dishonest, it might be difficult to prevent their leading on so-called securities which are practically worthless. But the investigation which must come within ten years ought, if thoroughly made, to expose such fraud. A mortgage ought of course is be accompanied by a valuation of the property comprised in it, and it would be difficult and dangerous to fabricate documents of that character. In the interest of the assured we might desire the Act character. In the interest of the assured we might desire the Act to be more stringent, but any proposal of that nature would probably be resisted by the Companies. Happily the competition for business induces the publication of even fuller details than are required by the Act, and even if there be still same room for death there is at least a process for insuralize the tending with doubt, there is at least no reason for incurring the terrible risks which are exemplified in the history of the Albert and European and their associated Companies. As long as these cases as to "novation" crop up in the law reports, the remembrance of past folly and blindness will be preserved for future warning. Let us hepe that that warning will be effectual. The publicity now enforced, if it be helped by public intelligence, ought to kill unseund offices before they are able to do any great mischief.

BATTONAL LAW-MAKING.

A MONG the recommendations contained in the recently pub-lished Report of the Select Committee on Public Departments is one to the effect that the Statutes of the Realm should in future be printed in a form which will admit of the volume comprising the year's legislation being sold at about five shillings. mittee thinks that the issue of Acts of Parliament in a cheep form is a matter of great public importance, since it would furnish to all classes an opportunity of informing themselves upon the laws which they are expected to obey. As the recommendation stands, the discrepancy between the end proposed and the means suggested for its attainment is very considerable. The publication of the statutes at the rate of five shillings a volume might be valuable as an indication of the disposition of the Government to make its subjects acquainted with the laws under which they live, but this is about all that can be said in its favour. Very few persons is about all that can be said in its favour. Very few persons would care to pick out the provisions which specially affect them from the penderous volume which contains the annual results of Parliamentary wisdom. The mere table of contents would throw most unlearned readers into hopeless confusion; and if any person more persevering than the rest succeeded in getting hold of the stamore persevering than the rest succeeded in getting hold of the statute he was in search of, he would eventually be confounded by the technical language and the frequent references to other Asts not contained in the same volume. It may be questioned whether the authors of this recommendation are themselves in the habit of studying the laws which they assist in passing. At the same time the object which the Committee has in view is one of real importance. In England commitment is in the many cases the unincipal many interesting. mittee has in view is one of real importance. It. England semisfement is in too many cases the principal magninum for diffusing a knowledge of law. Certain acts are forbidden, and coming a complete them acts are enjoyed, but a great part of the community only discovers what these acts according to by suffering, or seeing others suffer, for delay or not doing them. The oriminal class, indeed, leaves to distinguish between the offences which imprisonment; but them to minimal leaves which lives in almost total ignorance of the form which are suffered by our manual formulation and proposed to govern its conduct, and by consequent formulation many unintentional recruits to the criminal elect.

There must be a considerable number of offences which would

never have, been committed if the offender had clearly takin in beforehand that he was bringing himself within the grasp of the law. If even he we persons can be kept from breaking the law by heing made more lamiliar with its provisions it will clearly be a cheaper process thap fiving them an experimental acquaintance with the penalties which they incur by their ignorance. Besides this, a bester knowledge of what the law commands or forbids might sometimes save people from making hunders which, as regards results, may be not less disastrous than actual crimes. There is a good deal of ignorant wrong-dealing—with trust property for example—which is not fraudulent, but yet produces as much mility as though it were fraudulent. If the principles of the laws affecting trustees were better known most of this might be exoided, and they would be better known if the laws themselves could be had in a cheaper and more intelligible shape. Trustees would then contract a habit of looking at the law before dealing with the funds under their care, and the existence of greater facilities for ever have been committed if the offender had clearly takin in funds under their care, and the existence of greater facilities for gaining a knowledge of a trustee's duties might induce many cautions men to accept the office who are now deterred by the cautions men to accept the office who are now deterred by the sense of their own ignorance and of the risks which that ignorance involves. A further gain would be found in the removal of one cause of the impunity which offenders against the law too often enjoy. Those who are injured by breaches of the law do not know what means of redress have been provided for them, and they consequently sit down patiently under wrongs for which they would otherwise seek compensation. It would be rash to say that the diffusion of this knowledge would always benefit its possessor, inasmuch as even a successful sunt is usually a costly gratification. But it would benefit the community at a costly gratification. But it would benefit the community at large, since it would make many wrongdoers hesitate before incurring penalties which they now disregard because they feel assured that the law will not be put in force against them. What is really wanted for this purpose is cheap and convenient editions of separate Acts or groups of Acts, especially of those which affect the less educated classes. Some acquaintance with law is desirable for every one, but it is most of all desirable for those who from various bircumstances are least likely to possess it if it is not designedly brought within their reach. Something more would be needed, however, than the bare text of the Act of Parliament. Such editions as we have in view should be accompanied with a plaine and untechnical statement of what the Act purports to do. The best drawn statute needs to be supplemented in this way before it can be adapted for popular use. It would be further desirable that to each Act, or group of Acts, there should be prefixed a concise explanation of a few elementary legal conceptions. It ought not to be impossible to give reasons why laws ought to be obeyed, or why contracts should be enforced, which would secure a more intelligent acquiescence than can be extorted by that vague dread of the police or of a "lawyer's letter" which at present constitutes to a large part of the population the sole sanction in civil and criminal matters. If these editions were thoroughly well prepared and were published at a sufficiently low price, contemporary statute law would not remain the sealed book which it is to the vast majority of Englishmen.

it is to the vast majority of Englishmen.

A more remote advantage following upon the adoption of this plan would be seen in the preparation of the Acts thus popularized. In proportion as it became recognized that laws are meant to be understood, and understood by those to whom they are addressed, as well as by the experts who expound them, Parliament would be forced to give up passing laws which are unintelligible. The mystery and confusion of many Acts are due not so much to the inherent difficulty of the subject matter, as to the carelessness of those who make them. It is a constant complaint of the judges who have to interpret Acts of Parliament that they have been passed in a shape which will not Parliament that they have been passed in a shape which will not allow of any uniform and consistent sense being put upon all parts The judge has to pick out what seems to be the meaning of the principal provisions and to neglect, or put a gloss upon, other provisions which conflict with thus. If a statute had to be explained as soon as passed, it would be necessary to create a com petent legal staff for this express purpose, and, after this staff had reported several times that such and such a new Act was so obscurely worded that, until the opinion of the judges could be taken upon it, it would have to be issued without the customary explanation, it would probably be found convenient to consult the legal department as to the effect of a Bill before it had been read a third time. By this means amendments in Committee would come to bear their true character—that of instructions to the draftamen as to the purpose of the modifications to be introduced into the original Bill. At present, however intelligible a Bill may be when it is first introduced, there is no security that it will not become utter nonsense by the time that it has got through A number of contradictory amendments are propos some of which are adopted in part, others altogether, some in the form in which they are first conceived, others after they have form in which they are first conceived, others after they have been amended in their turn. It is nobody's susiness to see that these changes are properly devetailed into the Bill, still less that they harmonise with the unamended parts of it, or with one another. It is quite possible that every clause of a large measure may have been altered during its passage through Committee, and that, in order to make it again what has now become its object, the whole structure of the Bill ought to be recast. The existence of a Parliamentary legal department would make this moreous comparatively simple. Instead of members undertaking to alter the wording of each separate clause, they would propose their

amendments upon each section, and the original words, the with the thange treated to be introduced instead of them, we go back to the legal department to be put into proper from. By slightly extending the functions of this department the of the House of Commons might be very much economised, present nothing is known of the contents of a Bill upon its first troduction except what can be outhered from the statement of present nothing is known of the contents of a Bill upon its first introduction except what can be gathered from the statement of the member who asks leave to bring it in; and when, as not unfrequently happens, leave is given without anything more than the title of the Bill being read, there is no opportunity of explaining its provisions until the debate on the second reading. If every Bill were printed before leave was asked to bring it in, and further, if every Bill were prefaced by a statement of the objects which it proposed to effect, and the means by which this object was to be attained, members would know beforehand whether these objects were such as they desired to see achieved, and whether the means proposed seemed calculated to achieve them. If the majority of the House were satisfied that the objects set forth in the Bill were inexpedient, the discussion would naturally be taken on the motion for leave, and, unless the mover could change the opinion of the House upon the merits of his Bill as set change the opinion of the House upon the merits of his Bill as set out in the preliminary statement, it would be rejected at that stage instead of taking up valuable time some weeks later. In the case of Bills the objects of which were prima facis good such an explanation would make it easier to distinguish between means and the state of the case of between means the state of the case of and ends, and thus tend to check that confusion between what ought to be said in the debate on the Second Reading and what ought to be reserved for the discussion in Committee. In the case ought to be reserved for the discussion in Committee. In the case of Bills which became law, the preliminary statement modified by the changes introduced during the progress of the measure would supply the foundation of the explanation to be prefixed to the Act of Parliament. Under the present system, Bills the drift of which is imperfectly understood are allowed to pass into laws the received of which is processorily obscure. Under such a system as meaning of which is necessarily obscure. Under such a system as has just been sketched, the meaning of the original Bill, of the amendments on it, and of the Act growing out of them, would be alike intelligible.

PROSECUTION OF THE JOCKEY CLUB.

T is difficult to argue satisfactorily against the liability of the Jockey Club to the prosecution which has been commenced against it. Common knowledge will supply a sufficient description of the betting-ring as it exists at Epsom, Ascot, Newmarket, and other racecourses, and there must necessarily be at all these places an owner or occupier who knowingly permits the ring to be used by other persons for the purpose of betting with those who resort thereto. If we want to back a horse we go to the ring and find some one to lay the odds against him, and if we are mere occasional betters we deposit our money when the bet is booked. occasional betters we deposit our money when the bet is booked. These transactions take place on every race at every meeting, and most of the persons with whom we deal carry on a regular business, and are found in the ring of every racecourse. There is at Newmarket a public ring which may be entered by any one who buys a ticket, and an enclosure to which only members of Tattersall's are admitted. We perhaps see the horses addled for a race, make up our minds to back one of them, and hasten to the ring to put on our money before the start. It may be conceded that the weight put on our money before the start. It may be conceded that the primary object of the Act was to put down the betting-houses which had been opened in London and other large towns, and it probably did not enter into the minds of the authors of the Act that it would inter-fere with betting on a racecourse. The betting-houses were a new thing at the time of passing the Act, whereas there had always been betting on racecourses, although not so extensive and systematic as it has now become. The Act recites that a kind of gaming has of late sprung up tending to the injury and demoralization of improvident persons by the opening of places called bettinghouses or offices, and the receiving of money in advance by the owners or occupiers thereof on their promises to pay money on events of horse-races; and it is enacted that no house, office, room, events of horse-races; and it is enacted that no house, office, roun, or other place shall be opened, kept, or used for the purpose of the owner, occupier, or keeper thereof, or any person using the same, betting with persons resorting thereto. It may be contended that to satisfy this enactment there must be a "place" capable, as a house, office, or room would be, of exclusive occupation, and it will be found that the decided cases have, until recently, gone upon the supposed satisfaction of this requirement. Thus, in a case decided in 1868, a temporary wooden structure was placed on a strip of land outside the enclosure at Doncaster, and a person occupying this structure transacted the business of betting with all comers. This, said the Court, was clearly a place and an office opened, kept, and used for the purpose of carrying on the business of which comers. This, said the Court, was clearly a place and an office opened, kapt, and used for the purpose of carrying on the business of which the appellant had the management. "It is no matter whether there is a roof or none, or whether the structure is moveable or flationed to the earth; it is clearly an office within the manning of the Act." In a case which occurred this year at Chester flux defindant stood on a stool, over which was a large unshedle, fixed in the ground by a spike. On the unbrella the defindant's name was painted; and a card was affixed stating that all held would be paid that 'past' the post. The defendant sailed was officing to make both, and he was seen to make beth, and the which he gave before. The Chest half that the stool and unbrella constituted a "place," within the limit that the stool and unbrella constituted a "place," within the limit the stool and unbrella constituted a "place," within the limit the secretarion by the magistrates was affigured.

Time for the Courts seem to have recognized the principle that there must be a "place," which, like an "office," is capable of semical veneration. It appears probable that this is the correct principle of countraction, because the next fiction of the Act declares that every home, round, office, or place opined, heps, or used for the purposes aforemid, shall be deemed to be a common gaming-house is a house, within the meaning of the Act to amend the law concerning Games and Wagges. Now a common gaming-house is a house, room, or place kept by an individual, or it may be a partnership or company, to which idle and evil-disposed persons are caused and procured to frequent and come to play at some unlawful game, such as rouletts. The next section of the Act against Betting-houses enacts that any person who, being the owner or occupier of any house, room, office, or other place, shall knowingly and wilfully permit the same to be section of the Act against Betting-houses enacts that any person who, being the owner or occupier of any house, room, office, or other place, shall knowingly and wilfully permit the same to be opened, kept, or used by any other person for the purposes aforesaid, shall be liable to a penalty of root. This is the section under which the Stewards of the Jockey Club have been prosecuted. It may be argued, however, that the owner cannot be liable for permitting the use, unless the person using would be liable. If an office or place be opened, kept, or used for the purpose of betting with persons resorting thereto, that is, to the office or place, then the person using and the owner permitting user would both be liable to penalties. But if there be no user there can be no permission, and if user means exclusive user, there was none in the Newmarket Ring. The decisions to which reference has been made Newmarket Ring. The decisions to which reference has been made all assume the necessity of satisfying this requirement of an office or place capable, at least temporarily, of exclusive user. Even the umbrella and stool would satisfy, although not exuberantly, this requirement. The construction which is now suggested derives support from the words which next follow in the section. "Any support having the care or management of or in any management of the capacity of the capa erson having the care or management of, or in any manner assistperson having the care or management of, or in any manner assisting in conducting the business of any house, office, room, or place, opened, kept, or used for the purposes aforesaid," shall also be liable to a penalty. Here there must clearly be a "place" capable of exclusive occupation, and it seems reasonable that this word should have the same meaning throughout the section.

This construction is, however, opposed to the most recent case on the subject in which the occupier of an enclosed ground, called the Borough Park Ground, was convicted under the Act for permitting such place to be used by other persons for the purpose of betting on a pigeon-shooting match. The public were admitted to these grounds on payment of money, and betting-men were seen there plying their vocation. After the pigeon-shouting there was a foot-race, on which also bots were made in the same manner. Two Judges of the Queen's Bench held that this conviction was right, or, in other words, that a place—namely, Borough Park Ground—was used for the purpose of betting with persons resorting thereto, and that the occupier permitted this use. If this decision be right, it will have extensive effect. There are many enclosed grounds where foot-races and other athletic contests take place in the presence of large numbers of persons who pay for admission, and among whom betting goes on. If the occupier can be reasonably supposed to know that botting does go on, he will be liable to a penalty for permitting the ground to be used for the purpose of betting with persons resorting thereto. It is stated that at Borough Park Ground to be the called and this is bookmakers were present who shouted out the odds, and this is a usual feature of all such assemblies. We do not think, however, that anything turns upon the calling out of the odds or on the fact that the persons calling out were, or were supposed to be, bookmakers. If the Judges relied on these facts as showing that betting was carried on as a business, then we think there ought to be something in the on as a business, then we think there ought to be something in the nature of an "office" where this business could be transacted. It is not only foot-races and such comparatively obscure "events" that would be affected by this decision. There is usually some betting upon a cricket-match at Lord's, and it might be argued that that is a "place" which the occupier permits to be used for

that that is a "place" which the occupier permits to be used for the purpose of betting with persons resorting thereto.

The recent case before the Edgeware bench of magistrates ap-pears, when explained, to be in harmony with those decisions of the Superior Courts which we have treated as unquestionable law. Mr. Serjeant Cox, Chairman of the Bench, states in a letter to the Standard that the defendant in this case was lesses of Kingsbury Racecourse, upon part of which betting-stalls were placed, which were occupied by well-known betting-men who affixed their names and lists, and transacted business in the usual way. Upon these facts the conviction of the lesses of the usual way. Upon these facts the conviction of the lessee of the resecurse who permitted the user of the stalls was inevitable. But Mr. Serjeant Cox points out that the decision does not interfere with betting between persons who come together casually, but only the "trade of betting," for the carrying on of which there must be a place at which the trader can be found and the business.

Thus we come back to the question whether the ring must be a place at which the trader can be found and the business transacted. Thus we come back to the question whether the ring at Newmarket is a "place" within the Act, and we incline to think that it is not. Betting is not unlawful, and if a number of persons who take pleasure in betting on horse-races select a convenient spot near a racecourse to meet and bet with one smother, this is a ring. But that which is lawful for two or three does not become unlawful when done by a hundred. Nor can it make any difference that some of the assembly bet for pleasure and others as matter of business, or that should of three to one, bar one," are heard proceeding from an excited second. The magistrates in the Newmarket was refused to converted the magistrates in the Newmarket was refused to converted the magistrates in the Newmarket was refused to converted the magistrates in the Newmarket was refused to converted the question will ensure its being themselves and the importance of the question will ensure its being themselves.

Sugar

Without disrespect to the judges, who are to decide what we may venture to say what we think the law ought to thing that may fairly be described as a betting office ought down; but the law could not stop betting if it would not prescribed to prescribe the which cannot be prevented.

THE ITALIAN OPERAS.

A BOUT the Royal Italian Opera, Covent Garden, which aloded its doors last Saturday, there is nothing mercito record, and it only remains for us to fulfil our promise of giving a brief summary of what, since our last notice, has been done at the theatre over the way. The Director of Her Majany's Gibra has vouchasfed to his supporters a new Italian adaptation of French lyric comedy known in England for some thirty years, and an original ("posthumous") work by a native-born musician. Otherwise, in the production of novelty Mr. Mapleson has not been more enterprising than Mr. Gye. The old time-worn operas presented over and over again, however intrinsically good, however well performed, begin to pall upon the ear. Among them, for example, were Semiramide, the Trovatore, the Sonngabula, Fidelio (always welcome with Mile. Tietjens as Leonora), Regolette, Norma, the Favorita, Finest, the Huguenots, Martha, the Travista, Caterina (Lee Diamans de la Couronne), the Nozze di Figaro, Lucresia Borgia, Lucia di Lamnermoor, the Flauto Magico, the Talismano, and lastly Don Gioranni—eighteen in all. A new description of any of the best known among these would not meroly be a tax upon our own invention, but a still severer one upon the patience of our readers. What has been already said in reference to Covent Garden would apply with equal truth to Drury Lane. We have already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season extending as far as the debut already given a history of the season ex Garden would apply with equal truth to Drury Lane. We have already given a history of the season extending as far as the début of Mr. Mapleson's most attractive new prima donna, Mile. of Mr. Mapleson's most attractive new prima doma, Mile. Louise Singelli (born Singelée), the return of Mms. Christine Nilsson, and the production of Il Talesmano. The "posthumous" work of our compatriot, Michael W. Balfe, has probably done more than anything else this year to keep up the prestige of Her Majesty's Opera. That it was ever produced at all is due to the good will and zealous exertions of a distinguished foreigner; and those who believe that such a thing as English dramatic purely in a country where before Handle was known and those who believe that such a thing as English dramatic music is possible in a country where, before Handel was known among us, Henry Purcell lived and wrote, are deeply indebted to Mine. Christine Nilsson. She not only volunteered to study, Edith Plantagenet, but studied to such purpose as to make hereoff perfect mistress of the part. Further than this, Mme. Nilsson persisted in showing that the interest she felt in Balfe was genuine. Il Talismano has had no fewer than nine performances—something unprecedented for a work composed by an Englishman and produced in an Italian Oners-house. Edith Englishman and produced in an Italian Opera-house. Edith Plantagenet is now a familiar object in the public eye; and Walter Scott himself might have recognized his own creation in Walter Scott himself might have recognized his own creation in the personality of the gifted Swedish lady. We should like to be able to say that the other characters in Il Talismano were equally well sustained, but to do so would be to violate truth. Mille, Marie Roze, upon whom devolved the part of Queen Berengaria, is alone a worthy associate for such an Edith as Mine. Nilsson. The Cour de Lion of Signor Rota is tame and insipid, nor can any other epithets be fairly bestowed upon Signor Campanini's Knight of the Leopard. The Nectabanus of Signor Catalini is at the best a caricature. No one could be deceived by such grotesque buffoonery—least likely of all a cavalier so brave and self-controlled as the Knight of the Leopard. The performance of Il Talismano, as regards ensemble, is highly creditable to the orchestra, the chorus, and their practised chief, Sir Michael Costa, who appears to have taken more than usual interest in its pro-Costa, who appears to have taken more than usual interest in its production. Costa and Balfe (who also should have been Sir Michael) were old and intimate associates, nor was their friendship ever disturbed by the fact of their being in some sort rivals, Balfe succeeding Costs as director of the music at Her Majesty's Theatre, under Mr. Lumley, while Costs exercised despotic sway at the opposition establishment in Covent Garden—now the Royal Italian Opera. establishment in Covent Garden—now the Royal Italian Opera. No care, or expense, has been grudged by the management in affording the best chances of success to Il Taliamano. Mr. W. Beverley still holding the post of "scenic artist," as the term is, has, it need scarcely be added, played a part of more or less importance in the general "getting up." To conclude—the public like Il Taliamano, and more than like the charming representative of Edith Plantagenet. The opera is now pretty sure of keeping its place in the repertory. To affirm that it is the best thing of the kind which Balie has produced would be to overestimate its worth; but to say that it exhibits most of those engaging qualities to which he was indebted for the universal popularity he enjoyed is to state the simple truth. An analysis engaging qualities to which he was indebted for the universal popularity he enjoyed is to state the simple truth. An analysis of one of Balfe's operas is superfluous. There is nothing to analyse. Like the fixed stars, they are self-luminous; and probably if, by the aid of scientific appliances, we got nearer to them, we should not like them so much. At all events, we them, we should not like them so much. At all events, we might detect spots, the discovery of which, in no way benefiting either art or science, would answer no desirable purpose. Enough that the Talianono charms, after Bulle's usual way of charming, and like all he bequeathed to the world, is on that account alone acceptable. Her Majesty's Opera closed on Manday night, the work selected being Don Charming given (grob pades) for the first time this season. The occasion was the "Sensett" of Mr. Mapleson—an

expression not easy to define, seeing that he is he manager. The performance, if not altegether what might have been desired, offered several features calling for unreserved enlargy. Some of the drawbacks necursed practically where the greatest efficiency is looked for. Den Growson without a hero, but for the unceasing tunefulness and charm of Mozart's incomparable music, would be scarcely tolerable. Here was a case in point. Not many lyric comedians of our time have brought so few qualifications many lyric comedians of our time have brought so few qualifications to the adequate embodiment of this most trying of all operatic parts as Signor Di Reschi. Of the vis dramatica he has little; of the vis comica he has less; nor does his singing by any means atome for the absence of histrionic ability. Signor Di Reschi's Don Giovanni was, indeed, a faithire—and no weater. Then, the Laporello of Herr Bichrens is deficient in himour; nor dees his singing males up for what in other respects is wanting. The Don Ottavio of Signer Gillandi, despite a graceful stage-bearing and psepossessing appearance—occasionally, as in the case of Signor Nicolini, at the other house, reminding us of Mario—is, at the best, medicore. Nothing can be less estisfactory than his plarasing in "I mio tesoro," the most prominent vocal display awarded to the lacksdaisical hero, always threatening to do something and ending with doing nothing in particular. Signor Gillandi is scarcely more to be admired in "Dalla sua pace," though he deserves praise for retaining that most expressive and Sagnor Gillandi is scarcely more to be admired in "Palla sus pace," though he deserves praise for retaining that most expressive and melodious sir, which some of our Ottavios persistently emit. True, like the great scana of Elvira, "Dalla sus pace" does not belong to the original score, being one of the "appendix" pieces written expressly for Vienus, after the opera had been already produced at Prague; but it is so judiciously interpolated by the composer that to disconnect it now from the general plan becomes no easy matter. The three women are far better represented at Drury Lane than the three men. About so familiar a performance as the Denna than the three men. About so familiar a performance as the Donna Anna of Mile. Tietjens it is needless to speak. She sings the music, as we all know, perfectly; and her acting is equal to her singing, which involves a compliment both ways. The Zerlina of Mile. Singelli is one of the most simple and unaffected portraitures of that too frequently overdrawn character we have seen. of so exquisitely refined and artificially coquettish a Zerlina as that which Kepe. Adelina l'atti presents being attached to a stupid boor like Masetto is proposterous. Mile. Singelli takes mother, and we cannot but think more natural, view. She looks and acts just as much like a remaint as Monath Limited. as much like a peasant as Masetto himself. That she does not sing with such marvellous address as Mmo. Patti is true. Nevertheless she sings well enough to entitle her to add one more to the theless she sings well enough to entitle her to add one more to the laurels previously won in Oaterina, Lady Enrichetta, and the "Queen of the Night." No newcomer for some years past has been more welcome than this very engaging and unobtrusive artist, to whose reappearance at Her Majesty's Opera next season every amateur will anxiously look forward. Side by side with the Donna Anna of Mile. Tietjens was the Donna Elvira of Mine. Nilsson. The fair Seandinavian must surely have read Hoffmann's ideal Don Juan. If not, she has thought out the character for herself; and that says even more. We cannot imagine Don Giovanni's discarded wife more perfectly represented. Mme. Nilsson never seems to forget that she is the Elvira of the drama, or ever to think that she is Mme. Nilsson. One of the rarest qualities possessed by a dramatic singer is that of the art of listening, and being moved while some one else enjoys the exclusive right of speech. Mme. Nilsson exhibits this to the highest perfection in the scene where Leporello, in that wonderful air, "Madamina," discloses to Elvira the many infidelities of her inconstant spouse. No one required to be told that she was an actress. She had already proved so much in her delineations of Lucia, Desdemona, and Mignon, and this year still more emphatically asserted her claim to rank among the lyric tragedians of the day by her performances in the *Trovatore* and the *Heguenots*: for although she only played Leonora once, and Valentine once, nothing more was required to settle the question in the minds of connectsours. After Mme. Nilseon's Donna Elvira further discussion as to her histrionic ability would be superfluors. In Germany, the country of Mozart, where Don Juan first saw the light, Elvira has always been regarded as the most important, no less than the most interesting, female character. Misse Nilsson, on Monday night, completely justified this view. How she sings the munic may easily be understood. It is worth sings the sings the nume may easily be understood. It is worth noting that at the performance of *Don Giovanni*, as at the last of Fisher (in which Mile. Tietjans was never more superb), the so-termed "normal diapason" was abandoned for the old and higher pitch. It now becomes a question which of the two is henceforth to be used, because to coquet between them would be absurd. Our opinion has been long ago stated, and it is not necessary to re-state it. We may, however, just add that the high pitch makes the orchestra sound more brilliant, while the low pitch is so convenient

two for the Duke (Rigolette), Signors Naction and for Lionello (Martha), Signors Ramini and Campa Assur (Semiramide), Signors Aguesi and Rota— these Mine. Trebelli-Bestini, MHe. Bauermeister, M Signor Perkins, with others who have been samed are too many to name, and it will be readily admits Manleson possesses a company with which homight bave in deal more than he has actually done. That the sesson, these resources, brought forth very little to remember more dispute. The prospectus was musually modest in tone, and actual results were in proportion. What became of Management, Fra Diardo, Wello, and Ermani—all promised—a Mr. Mapleson, or Sir Michael Costa, con inform us.

REVIEWS.

PERSIA, ANCIENT AND MODERN.

THAT the visit of the Shah of Persia should have st lated researches in regard to the past and present condition of that country was exactly what might have been expected. While some journalists expected on the advantages likely to result from the concession to Baron Reuter, and ethers were busied in detecting Russian aggression thinly welled by diplomacy, Mr. Clements Markham employed his leisure in compressing an immense amount of information into a thick volume, which we recently reviewed. Fortunately an information of the content of the conten which we recently reviewed. Fortunately or unfortunately, Special Correspondents have not yet invaded or parcelled out the Shah's dominions. The famine of 1870 was not described by a graphic pen, and no one has told us, with suitable pomp of language, what effect was produced on the minds of the natives by the cutting of the first sod of the line from Reshed to Tabreez. Pending therefore the remote time when the districts round Teheran or Shiraz shall become a legitimate part of an autumnal tour, or shall be as well known as the bazaurs of Tirhoot or Chumparun, Mr. Piggot has endeavoured both to create a desire for accurate information about an ancient kingdom, and to supply it. And we are bound to say that in little more than three hundred pages he has succeeded in his aim of giving us "a fair general view of ancient and modern Persian history, supplemented by chapters on the religion, literature, commerce, arts, sciences, army, education, language, sport, &c., of the country." We do not make out that the author is anything of an Orientalist, or that he has ever even got as far as Titlis on his way to Teheran. But he has read up to the level of his subject; old and new authorities have been explored and digested; the style is clear and unambitions; and his compilation is well planned and is not too long. We observe that while he has consulted Sir William Jones, he makes no mention of an excellent grammar and dialogues published by the late Mirza Mohammed I brahim, though he says correctly enough that the Mirza translated the Book of Isaiah into choice Persian and was attached to the old East India College at Haileybury. must still be several persons living who well recollect the appearance of the Mirza in Landon society some thirty years ago; his piercing eyes, his aquiline nose, his wonderful mastery over the English language, his amusing way of contrasting Persian life and English language, his amusing way of contrasting Persian life and manners with English, and the power of polite and effective repartee so characteristic of his lineage and nation. We observe also that the author repeats what we cannot but consider as the error of Mr. Mounesy in deriving the word Paringi from the Varangians or colony of Englishmen and Danes who field to the Byzantine Court from the tyranny of the Norman Conquest. Gibbon, who mentions the fact with the pithy remark that "pilgrimage and piracy had approximated the countries of the earth," says nothing of the kind: nor does Scott allude to any such derivation in Count Robert kind; nor does Scott allude to any such derivation in Count Robert The belief of most Orientalists is that Feringi or Farangi is nothing more than Frank writ large, and Farangistan or Europe, with the vagueness of Arab or Persian writers, is simply the pl with the vacueness of Arab or Persian writers, is simply the place or country of the Franks. One other and more incontestable error on the author's part we are bound to notice. Writing of the celebrated diamond, the Koh-i-nur, now placed with other regalis in the Tower, he says that this jewel came into the "pessession of Nadir Shah by the exercise of a very clever trick"; and he then goes on to say that, when re-establishing the fallen moment of India on the throne of Delhi, Nadir compelled his protégé to enchange turbans in token of amity, and so got possessed of the "Mountain of Light." Mr. Pirgot has ascribed to the rathless conquence who sacked Delhi the stratagem really executed by the astate old Sikh, Rusject Sing, in 1812. The Lion of Lahore wanted to buy the who sacked Delhi the stratagem really executed by the last at all Sikh, Runject Sing, in 1812. The Lion of Lahore wanted to buy the gem for about 5,000% of our money, and, failing this, induced Shuh Shoojah by vain promises of jaghirs and assistance to exchange turbans as a pledge of eternal friendship. The stary may be found in any ordinary History of India, and is well told at length in the sixth chapter of Sir John Kaye's well-known History of the War in Afghanistan, to say nothing of Mr. Eastwick, to whom Mr. Pigget refers. Nadir Shah, we may observe, when he gave the order for the sack of Delhi from a little mosaure which is still shown to inquiring tourists at that city, had no need windsover to resert to artifice. He had the Mogal capital, its King, primes, and merchante literally at his feet. Elekinstens, who aligneted the best artifice, says that Nadir took possession. orchestra sound more brilliant, while the low pitch is so convenient to singers that few of them object.

We have already named and commented upon most of the artists newly presented to the public by Mr. Mapleson, and merely recours to the subject with a view of pointing out how pleatiful were his recourses. To specify a few instances—for the Huguenote he had three tenors, Fancelli, Achard, and Campanini, competent to play, and who did play, Raoul; he had also two representatives of Lady Engineers (Marter), Miles. Valleria and Simpelli; two for Gilda (Marter), Miles. Valleria and Simpelli; two for Gilda (Marter), Miles. Valleria and Marie Rom; three for Manuscat (Marter), Miles. We have see seculty reviewed the salient points of Persian history, while dealing with Mr. Matham's trustworthy and useful compilation, that we purpose to restrict ourselves in this paper to two main topics. The Persian King is known to be the possessor of magnificent jewels; and Persia itself is said by some to be a perfect mine of unpreductive or unexplored wealth. Let us see what can be made of the kingdom under these two aspects, not only from Mr. Figgot's pages, but from the travellers and authors whom he has year and pertinently quotes.

Sir John Malcolm, Mr. Fastwick, and Mr. Mounsey, all three campleved at various epochs in our diplomatic service at Teheran, have described the crewn jewels of Persia at some length. Mr. Eastwick, who also enjoys the rather perilous distinction of being one of the few Europeans, and probably the only Englishman, who has penetrated to the shrine of Imam Reza at Meshed, has given as full a description of the imper chamber of valuables as the

has penetrated to the shrine of Imam Reza at ruesness, need given as full a description of the inner chamber of valuables as the shortness of his visit and the dazzling nature of the materials would allow. The star of the collection is the "Darya-i-nur," or "Sea of Light," twin sister to the "Mountain of Light" to which the allowed Itals difficult to assign a precise or even a we have just alluded. It is difficult to assign a precise or even a probable value to a diamond one inch and a half long, one inch broad, and three-eighths of an inch thick. But there seems no reason to doubt that it has a history of its own reaching back into what Wordsworth terms "the mists of fabling time," and that its marit lies, not in its brilliancy, but in its smoothness, extent, and thickness. A lesser diamond, called similarly the Daryn-i-nur from its similarity of shape, fell into our possession at the final conquest at the Punjab, and, after some years of uneventful repose, was sold to a Mohammedan gentleman of wealth, influence, and undoubted loyalty, resident at Dacca, the capital of Eastern Bongal. The loyalty, resident at Dacca, the capital of Eastern Rongal. The price paid, if we remember rightly, was the not very exorbitant sum of 6,000l. Another splendid specimen in the Shah's treasure-house is the Taj-i-Huma, or "diadem of the Phenix." A third is known as the famous Pitt diamond, brought from Madras by Gevernor-Pitt, who was, we beg to observe, grandfather of the Grant Commoner, and not great-grandfather, as Mr. Pigott states. This jewel went from the Pitt family to the Duke of Orleans, the Regent; from the Duke to Napoleon I., from Napoleon to Talleyrand; thence, after some vicissitudes, to George IV.; and from this councisseur in dress and haberdashery, by the hands of Sir Harford Jones, to Futteh Ali Shah. It is now admirably set in a ring. A fourth is colebrated as the "Crown of the Moon." Besides the above, the Shah possesses an emerald as big as a walnut, an uncut ruby like a hen's egg, and the finest turquoise in the world, without a flaw, and three or four inches long. Jewels ruby like a hen's egg, and the finest turquoise in the world, without a flaw, and three or four inches long. Jewels and stones of smaller size and value seem to baffle description. Swords and drinking bowls, aigrettes and epaulettes, flash their rays on the amazed visitor, while trays of pearls, and . like silver apphires and rubies not much bigger than nuts or marble in the days of Solomon, seem of no account at all. These treasures are conjectured to be worth six or seven millions of our money, and they are most fittingly entrusted to a high Persian dignitary, rich, bigoted, and reserved, who keeps them shut up in a small room, twenty feet by fourteen, at the top of a stair uncomfortably steep. The obvious reflections to be drawn from the by no means exaggerated accounts of these regalia are, that the possest country in the world, looking to its extent, history, and associations, possesses the most splendid aggregate of useless or unfruitful capital. It seems a shocking anomaly that a sovereign with an annual revenue of only two millions of our money, should possess diamonds estimated at three times that amount, and this possess diamonds estimated at three times that amount, and this in a country where there is not a decent mile of road, where agriculture is stationary, where transit is insecure, where compasses does not advance, where, during the last three years, populous villages and tracts have been desolated by disease and famine, without the least effort on the part of the ruling power to stem or

Which is an epitome of the raids, conquests, spoliations, and changes that make up the history of Persia, to the natural resources of the country, the prospect is even more dispiriting, diamal, and barren. Buts and tracks instead of highways, caravanserais in mins, the noble causeways of Shah Abbas impracticable for horsemen, embankments in decay, watercourses silted up, huge tracts entirely destitute of vegetation, others where the timber is cut down and wastefully converted to charcoal, while veins of coal remain manufacted, capitals with a disminishing population numerically anogual to that of a third-act Continental town—these are changes the state of a third-act Continental town—these are changes the state of a third-act of continental town—these are changes the state of a third-act of continental town—these are changes of a Persian revival. But urdent enthusiants to despite the country is which, in spite of suppressions in maderial assemble we turn from the contemplation of wealth, nearly every item of Not there are no doubt parts of the ry in which, in write of misgovernmenter and a reasonable amount of his rt, a mode water and a repo of agricultural rotar The state of driven away nia of mos tions for labour and by countries noter villages, buried in the said Mr. Binning, who had a con-and considerable latting expans for labour m rt of fruit and

legils, vatches as one wild liquid the wild liquid the wild liquid the wild liquid to the alternate with the wild liquidite and the camela thom. Larly Shell writes antiquistically of the same which at Teberar come in towards the close of April, baret into full bloom at case, and are all ever by the middle of May. In the wiley of Glimogan, in Central Persia, grain has been so absorbed as to have a more nominal market value; and its melou fields extend, it is credibly asserted, to half a mile in breadth and three or four miles in length. It is perhaps a reser native exaggration to say that some of the melons, when full ripe, burst open at the sound made by a fast-trotting house over a hard piece of clay or rock. Great pains are expended on the production of tobacco. It is sown in ridges in ground impregnated with saltpetre, covered with bushes and rubbish, watered at intervals, and next planted out into other ridges which have been carefully ploughed and manured. There is also a considerable production of silk. Rice is soaked previously to sewing; and indeed sodry is the Persian climate that this process appears necessary for all food grains before and immediately after they are put in the ground. In most of the rice-growing tracts of India the soil will retain the moisture of a tropical shower for several days, and the Ryot is often as apprehensive lest the seed should rot, or the young Ryot is often as apprehensive lest the seed should rot, or the young shoots be drowned by successive downfalls when they are no longer wanted, as he is of an inopportune failure of rain. No one travelling in the northern part of the Persian Empire can form a just idea of the climate or of natural and animal productions of the central and southern provinces, or can accurately estimate the obstacles in the way of commercial and agricultural development. In Mazenderan and Giljan the hills are beautifully volopment. In Mazenderan and Giljan the hills are beautifully wooded. The jungles swarm with tigors, deer, or hogs. The valleys are rice-fields or swamps, and waterfowl of all kinds, with valley are rice-fields. fevers, miasma, and mosquitoes, remind the traveller of parts of the plains of Bengal.

Whatever may be the varieties of climate and produce in Persia, the modes of collecting the Government revenue, though varying, appear to be uniformly and perversely bad. The land tax, immensorial in Persia as in India and Egypt, is collected or given away before collection, by barats—i.e. assignments made to the creditors of Government. These assignments are constantly quoted, if such a mercantile term can be applied to Bussia, at fifty er cent. discount. Other lands belong to the King as part of his privy purse, and are let out to cultivators, in the most primitive fashion, for one-half the produce. Another portion is alienated to priests and Moollahs. No one cognizant of Oriental ways will be surprised to hear of additional, irregular, and voxatious imposts. Presents must be made to officials at the New Year. Governors, taking charge of a province or district, expect a similar compliment at such times, and any emergency of births, deaths, or marriages, is made the excuse for "bonevolences," which are dexterously shifted from each class in succession, till they fall on the cultivating or the lower classes. It is ridiculous, as we have the cultivating or the lower classes. It is ridiculous, as we have already pointed out, to expect that those practices, backed by unlimited power and the precedents of thirty centuries, will be abandoned, and that Persian nature will be reformed, simply because an active speculator has surprised the Shah into an impracticable concession. It could not be worked without arousing that spirit of obstinate resistance or forcible demonstration which is the last resource of the oppressed working-man of the Past. In America, it has been pertinently remarked, railroads may precede and need not follow civilization. The prairie is traversed, and a city with post-offices and telegraphs, saw-mills and counting-houses, springs up at the terminus of the new line. But the Hiyats and the sandy deserts are not so easily new line. But the Itiyats and the sandy deserts are not so easily disposed of as the Red Indians and the hunting-grounds. Nor is it fair to expect that India, with its rich soil, its splendid rainfall, and the strict and searching system of its paternal bureaucracy, will afford the smallest criterion of the probable success of railroads and telegraphs in the land of the Shah. We do not of course imagine that this potentate will ever comprehend that his inherited palatial splendours are in hideous contrast to the poverty of his provinces; that he is like an ancient dowager who flaunts her diamonds when she cannot pay her butcher's bill; that he had far better have a reduced army, a rough but impartial administration of justice, a system of highways, and a moderate national debt, than boast an avalanche of brilliants, or a hailstorm of precious stones. The first object of our foreign policy should be to keep Persia independent; the second, to teach the Shah and his Ministers the common radiments of progressive civilizations. and his Ministers the common rudillents of progressive civiliza-tion. But it is idle to imagine, as some writers have done, that the presence of a few engineers in the Northern provinces, or the arrival of a dozen additional steamers at the Southern ports of Bushire or Bunder Abbas, will remove evils which date, at least, from the domination of Chenghiz or Timur.

FROUDE'S ENGLISH IN TRELAND .- VOL. III."

IT is in Mr. Froude's third volume that the charges which we A have brought against his present work reach their climax. It is here that we see in all its fulness that perversion of the moral sense which is the main characteristic of the whole book. Mr. Froude's later and graver errors spring neturally out of the

in English an Industry the Eighteenth Contury. By James Anthony a, M.A. In Three Thames. Vol. BL London: Longmans & Co.

lighter faults of his earlier writings. The habit of playing with right and wrong in cases where right and wrong are perhaps not so clearly marked as in some others—the habit of playing with evidence, of putting out of sight the inconvenient facts which tell against a favourite theory—the general recklessness natural to one who takes up history not as the serious work of a life, but as something to fill up the hours which he feels hang heavy—all this now brings forth its natural fruit. We readily believe that, even in the volume before us, Mr. Froude is not guilty of conscious falsehood, of conscious misrepresentation of evidence. He may have reached the point at which it is no longer by any conscious act, but by the common process of what has become to him a second nature, that he looks lightly on crimes done on his own side, while he keeps the full perception, or perhaps more than The habit of playing with own side, while he keeps the full perception, or perhaps more than the full perception, of crimes done on the other side. It may not be by any conscious act that, when he has to deal with an evil deed done by an Irish rebel, the picture is drawn in minute detail, and wrought up with every aggravation that can be thought of; but that when the like deeds are done by soldiers, magistrates, noblemen, engaged in putting down Irish rebels, then there is no word of condemnation to be found in Mr. Froude's copious vocabulary. Instead of condemnation all that we get is a laugh, a sneer, a merry rubbing of the hands, sometimes an evident delight in the record of wrong and suffering, sometimes an insinuation of guilt in the sufferer or of falsehood in the narrator, when no proof of guilt or falsehood is even attempted. All this may, in Mr. Froude's the sufferor or of falsehood in the narrator, when no proof of guilt or falsehood is even attempted. All this may, in Mr. Froude present temper, come so naturally to him that he hardly knows that he is sinning against the first laws of historic truth, against the first laws of common morality. We can only say that, if this be so, here is indeed a warning against trilling with truth in the smallest matter. In dealing with such a volume as this all purely literary criticism is out of place. We have now no mind to dwell on sentences which sin against the first rules of grammar, on dates which contradict themselves on the same of grammar, on dates which contradict themselves on the same page, on statements of law so wild that one doubts for a moment whether they must not have some groundwork. All these things we are used to in Mr. Froude's writings, and any careful reader may mark them for himself. We need not dwell here on the solonn denunciations of principles on which civilized nations are agreed, on such solemn sayings as "how to live well is the most difficult of arts"—an art perhaps so difficult that only Henry the Eighth and Lord Chare have perfectly mastered it. We may pass by chatter about democracies being "proverbially shortlived," as pardonable in one who has doubtless never given a moment of serious thought to the history of any democracy, accient or modern. Those principles of public morality on which all honest men, all civilized nations are agreed, will not seriously suffer, though Mr. Froude chooses to sneer will not seriously suffer, though Mr. Froude chooses to sneer at them as the "flatulent"—most things are now "flatulent" with Mr. Froude, as they used to be "hysterical"—"conceit of liberalism." In dealing with this book we have to deal with liberalism." In dealing with this book we have to deal with graver matters; we have to deal with a writer who stands forward as the apologist of oppression, torture, and murder, with a writer who runs cheerily and gleefully through the illegal deeds of Lord Carhampton and the fouler atrocities of "Flogging Fitzgerald," and who can dismiss with a sneer and an insinuation so black a deed of blood as the execution of Sir Edward Crosbie. As we read through the exulting pages in which Mr. Froude records these horrors, we are tempted to think at every step of the girl in the Last Days of Pompeii, who looks forward to the "merry, merry show" when each wild beast will have its human prey, and who bursts forth into glee when a victim is found for the tiger as well bursts forth into glee when a victim is found for the tiger as well as for the lion.

Such a comparison as this may suggest a distinction which may not unfairly be drawn between what we may fairly call the heroes—though to be sure the exploits of one of them are somewhat unfairly summed up in a single page—of Mr. Froude's present volume. The history of the Irish Rebellion of 1798 teaches us one lesson as to the proper way of putting down such movements. Nothing but Mr. Froude's talk could ever lead any man to doubt for a moment that it was the duty of the Government to put down that rebellion with all vigour. But it is perfectly plain that for such work none but disciplined soldiers can be trusted; such work is their business, and they lie under no particular temptation to do anything beyond the received usages of war. Lord Cornwallis and Sir Ralph Abercromby, military men of high reputation, and whom we never before heard spoken of without respect, behaved with humanity, and are of course sneared at by Mr. Froude for so doing. The chief doers of evil were those who were not making war simply as a matter of ordinary duty, but who were pouring forth the stores of long-standing hatred against their countrymen of another race and faith. When the native Papists rose and the Protestant yeomanry were let loose upon them, the strife was like the strife between oligarchs and democrats at Corcyra. And, according to the sound old doctrine that "corruptio optimi est pessima," when the civil magistrate forsakes his proper duties and makes himself the instrument of partisan vengeance, his deeds are the worst of all. Let us look through some of the more remarkable cases in which these different classes of people appear in Mr. Froude's story. We may point out by the way Mr. Froude's unfair fashion of speaking as if the United Irishmen, which had hitherto pursued lawful objects, by lawful means, at this time changed its character; and, from being a public body, with an changed its character; and, from being a public body, with an

avowed policy, became a secret association, whose souncils were not divulged." We do not defend any illegal action on either side, but in the state of Ireland then it was really nothing wonderful if men who failed to gain lawful ebjects by lawful means. Looking at the matter from one point of view, the men who sought for French help against the established Government of the country naturally seem, not mere rebels, but traitors. But from their point of view, France was no more foreign than England. England was an enemy, while France bade fair to be a friend. The justifiableness of the rebellion is one of those points which it is simply idle to discuss. Whether right or wrong in abstract morality, it was what, according to the common laws of human nature, could not fail to happen whenever there was a chance for it. The Government, on the other hand, did only the duty of a Government in putting down the rebellion. The only question is as to the particular acts of both sides. On the crimes of the rebels we need not enlarge; Mr. Froude has done that already. But we must again say that crimes done by an ignorant and down-trodden peasantry are not to be judged by the same standard as crimes done by men who by their position ought to know better—gentlemen, noblemen, civil officers of high rank. We will now give a specimen of the ingenious way in which Mr. Froude knows how to deal with history to serve his own purposes. He gives a section in this oracufar fashion:—

purposes. He begins a section in this oracidar fashion:—
Students of later Irish history are familiar with the ferocious cruelties inflicted by General Lake's army on the Irish peasantry in the spring of 1798,
the free quarters, the burnt villages, the pitch-caps, the triangle, and the
lash. To these outrages it has pleased the Irish to attribute the insurrection.
England, ever stern in extremities, ever penitent when the danger is over,
and inclined to shift the blame upon her instruments, has allowed the legislo
like so many others, to pass unrefuted, and has permitted one more flusion
to swell the volume of Ireland's imaginary wrongs. An attention to dates
would have sufficed to reduce the charge to modest dimensions. Lake did
not take the command-in-chief till the 23rd of April. On the 24th of May
the rebellion burst. The atrovities which are supposed to have caused it
were therefore limited to a single month.

A month then of atrocities of this kind is in Mr. Froude's eyes a very small matter, something, it would seem, which a mere Irish l'apist ought to receive with feelings of thankfulness that he has got only a small part of his due. But what fair man would dwell on the deeds done in 1798 by one side only? Mr. Froude goes on to say how much longer the evil deeds on the one side had been going on, how "for seven years an invisible authority ruled over the four provinces with a code of laws enforced by dagger, pike, pistol, and houghing-knife." We do not at all deny it; we are no apologists of the rebels; we only ask that it should be remembered that for a good many years before 1798 an authority which was by no means invisible had been ruling over the four provinces, and had for its code whatever seemed good to the Luttrells and Fitzgeralds of Mr. Froude's admiration, and enforced by whatever instruments of torture they might think good to use. In 1795 a certain General Luttrell, Lord Carhampton, known in English history as the Colonel Luttrell whom the electors of Middlesex did not prefer to Wilkes, was let loose on the province of Connaught. Over his doings Mr. Froude chuckles with the delight which a breach of law usually awakens in him:—

Carhampton was able to arrest many of the Connaught leaders; and legal trials being from the nature of the case impossible, he trusted to Parhament for an Act of Indennity, and sent them by scores to serve in the fleet. Thus, amidst the shricks of patriots and threats of prosecution, he succeeded in restoring some outward show of order.

An Act of Indemnity he did get, and that Act of Indemnity, as quoted by Mr. Froude himself, recounted how "magistrates and other officers have apprehended and sent suspected persons out of the kingdom, have seized arms and entered houses, and done divers acts not justifiable according to law." Mr. Massey tells us a little more than it was convenient to Mr. Froude to tell us of these unjustifiable doings:—

Bands of marauders traversed the country, plundering and destroying houses and property. The Government, instead of repressing these outrages with firmness and moderation, aided the savage policy of retailation, to which the exasperated Protestants were too willing to resort. Lord Carhampton, the general commanding the troops in the disturbed districts, let loose his troops upon the wretched peasantry. It was enough for a magistrate, a squireen, or even a farmer, to point out any person as suspected, to have his habitation burnt down, his family turned adrift, and himself either who to r transported, without trial, without warrant, without enquiry. An Act of Indemnity was passed, by the Irish Parliament, in the Session of 1796, to protect these enormities; and the Insurrection Act gave them, for the future, the sanction of law. The suspension of the Habeas Corpus completed this barbarous code, which, in effect, outlawed the whole people of Ireland.

Mr. Massey goes on to tell us a little more of the doinge of the Protestant yeomanry, the Orangemen, among whom was, according to Mr. Froude, to be found all that was best and noblest in Ireland. The acts which to Mr. Froude are the materials for a triumphant scoff are pronounced by the calmer judgment of Mr. Massey to have "differed only in degree from the worst enormities of the French Revolution":—

Under the authority to search for concealed arms, any purson whom any rufflan, calling himself a Protestant or a loyalist, and either with or without a military uniform, chose to suspect or to pretand to suspect, was liable to be seized sortured, and put to death. Hundreds of machining stoppe, and people who were guilty of no other offence than profissing the creek of their inthers, or of letting fall a word of discontent, were beinged until their was internally, or made to stand upon one foot on a pointed status. These were the most endinary mishanents. Remediant him was half hanged, or the so-ip was large from the head large plants and

Mr. Manny goes on to describe the horrors of free quarters, and dwells equally on one point on which Mr. Froude does not find it convenient to any a word. This is the brutality everywhere shown to the women. "It was boasted by officers of rank that within certain large districts no home had been left undefied." And it is affected at all hands that the rebels of 1798, in their worst moments, did not retaliate in kind. All this Mr. Froude And it is allowed at all hands that the rebels of 1798, in their worst moments, did not retaliate in kind. All this Mr. Froude leaves out, but he takes care to sneer at Sir Ralph Abercromby for trying to bring the wretches whom he was sent to command into some kind of order. Abercromby is charged with putting out, in the interests of humanity, a general order superseding the harsher orders of Lord Camden. For this Mr. Froude hurls some pages of censure at his head. He was "insubordinate," "utterly wrong and headstrong," because he thought justice and mercy higher than the hidding of a Lord-Lieutenant. Carhampton had trampled right and law under foot; that was only a good joke. On the other hand, when Abercromby had been driven from his post by the men whom he so justly spoke of as "formidable to everybody but the enemy," but when his humane policy had actually been adopted, when Lord Castlereagh had written to General Lake to stop the practice of free quarters, a certain Sir James Stewart took stop the practice of free quarters, a certain Sir James Stewart took upon himself to put out an order which Mr. Massey rightly calls "of the most violent and absurd character":—

It denounced a practice which had been adopted in some of the proscribed districts of subscribing to provide forage and accommodation for the
soldiers quartered upon them, for the purpose of evading the burden and
punishment intended to be inflicted on the inhabitants individually. It
dealared that whenever such a practice was adopted the troops at free
quarters should be increased double, treble, and fourfold; and that the
tricts should not be relieved from the presence of those troops until all arms
were surrendered and tranquillity perfectly restored, and until it was reported
to the general officers, by the gentlemen holding landed property, and
those who were employed in collecting the public revenues and tithes, that
all rents, taxes, and tithes were completely paid up.

Surely, if there can be such a thing as insubordination in a military officer, here is a specimen of it. But while Abercromby's "insubordination" in the cause of humanity becomes the object of Mr. Froude's revilings, Stewart's insubordination in the cause of cruelty is passed by altogether, and his name is not found in Mr. Froude's History.

A word must be given to the case of Sir Edward Crosbie, to which we referred in our first article. Before the attack of the rebels on Oarlow they had gathered by night in Sir Edward's park.

rebels on Carlow they had gathered by night in Sir Edward's park, near the town. But no proof was brought that he in any way favoured them or had any dealings with them. His only crime ams to have been that he was, as Mr. Massey says, " a friend of Parliamentary Reform, and hostile to the oppression of the tenantry by their landlords." He was brought before a so-called court-martial, of which it is said that "the President was an illiterate fellow who could not spell." The witnesses against him were prisoners turned into witnesses by torture and promises of pardon. Loyalists who were anxious to give evidence in his favour were driven back at the point of the bayonet. After this kind of trial, Crosbie was condemned and at once hanged, and it is added that "his remains were abused in a manner shocking to humanity." For all this, Mr. Massey refers to Gordon's History of Ireland. Mr. Froude refers to Gordon also, but in his own peculiar style of inverted commas, by which he makes Gordon crosts himself. quote himself:-

'Crosbie was tried and executed as an accomplice—Mr. Gordon says unjustly; the extent of his fault being that he was 'an advanced theoretic politician.'—History of the Rebellion, p. 92. The distinction, probably, was more apparent than real. The insurgents were only endeavouring to take what the politicians told them England had no right to withhold.

Now it is plain that, when Mr. Froude wrote this note, he had these particulars before him. He either believed them or disbelieved them. If he disbelieved them, he should have given us his reasons for so doing. If he believed them, and wrote as he has written, we simply leave him to the judgment of every honest man.

And now, to wind up, for the famous case of "Flogging Fitzgerald." Ab ut him Mr. Froude is in such a specially sneering fit that every one who knows his manner feels sure that he has

gerald." Ab ut him Mr. Froude is in such a specially sneering fit that every one who knows his manner feels sure that he has some ugly truth to keep out of sight. He has just before been doing his best to excuse the barbarity of the pitched-caps, and he does go so far as to pronounce a faltering disapproval; "Such things ought not to have been," but—this, that, and the other. Then we read, "Among the gentlemen"—it must always be borne in mind that we are dealing on one side with the crimes of gentlemen, on the other with the crimes of ignorant peasants—"whom history has been pleased to gibbet for his share in these transactions was Mr. Thomas Judkin Fitzgerald, the High Shariff of Tipperary." So he is ushered in, and he is thus diamiased on the next page. "Fitzgerald has been rewarded with a black name in Irish legend and with the scorn of foolish historians." We venture again to quote one of the foolish historians. We wish we had space to quote the whole legend from the particularly foolish historian whom we have already more than once compared with Mr. Froude. But the doings which Mr. Froude slurs over in a little more than one page, the foul acts of Fitzgerald's injustice, cruelly, and falsehood, the successful action brought against him, the debates in Parliament on his conduct, the Act of Indennity passed to be recently and falsehood, the successful action brought against him, the debates in Parliament on his conduct, the Act of Indennity passed to be recently and falsehood, the successful action brought against him, the debates in Parliament on his conduct, the Act of Indennity passed to be recently and the new law manner pages of Mr. Froude's if they hid this the other was a successful.

among Fitzgerald's many orimes which Mr. Frouds picks out for excuss. Mr. Frouds says:—

excesse. Mr. Froude says:—

This gentleman did, by declaive measures, efflorizedly, break the insurgant organisation in Tipperary, so that when the reballion dame the shoot dangerous county in Ireland lay motionless. They were not gentle measures. He used the whip freely, and he made one missake which was not forgotten. A man nessed Wright, at Clonnel, was supported of connection with the United Frishmen. The suspicion in all Rickilhood was well founded. On searching him a letter was found in his pocket, in French. Fitzgerald did not understand the language, but his mind, like that of everyone cless; was full of the expected French invasion. The letter, though utterly innocent, was treated as an evidence of guilt, and Wright was severely forguel. He prosecuted the High liheriff afterwards, and recovered 500l. as damages.

Now let us hear Mr. Massay

Now let us hear Mr. Massey :-

Now let us hear Mr. Massey:—

Wright, hearing that he was suspected, and knowing the fearful consequences of suspicion, hastened to deliver himself up, in the hope that he might thus save his; character and life. But Fitzgawid was not to be disappointed of his victim. He received Mr. Wright with a torrent of abuse, and ordered him to fall on his kneet to receive his sentence. "You are a rebel," said he, "and a principal in this rebellion. You are to receive five hundred lashes, and then to be shot." The poor man begged for time, and was so rash as to ask for a trial. This aroused Fitzgeraid to fury; he railed at his prisoner for daring to open his mouth after he was condemned. Wright was hurried to the flogging laiders, which were creeted in the main street, and expecting immediate death, had placed his hat before his face while he muttered a prayer. Fitzgerald, with his own hand, tors away the hat, trampled on it, dragged his fainting victim by the hair, kloked him, and finally slashed him with a sword, drawing blood. Wright was these fastened to the ladder. Fifty lashes had been inflicted, when a Major Riall came up, and asked what Wright had done? The sheriff answered by flinging Riall a note, taken from the person of Wright, as a justification of the punishment to which he was subjected. The note was in French [Wright was a teacher of languages], a language of which Fitzgerald was wholly ignorant, and contained two lines excusing the writer for having failed in a visiting engagement. Riall assured Fitzgerald that the note was perfectly harmless; nevertheless the lash continued to descend, until the quivering entrails were visible through the flayed fiesh. The hanguage was then ordered to apply his thongs to a part of the body which had not yet been torn, while the sheriff himself went to the general in command of the district for an order to put his prisoner to death. This order, however, was not granted, and Wright was ultimately set at liberty.

All this, it must be remembered, was proved in court, and Fi

All this, it must be remembered, was proved in court, and Fitz-gerald defended himself by saying "that he was justified in taking any measures he thought fit to extort confessions from persons whom he suspected, and that if every other method failed, he had a right to cut off their heads." Of the trustworthiness of Mr. Massey's account, for which he refers throughout to public document there are no kind of doubt word does Mr. Franches ments, there seems to be no kind of doubt, nor does Mr. Froude undertake to deny a single detail. He tells us that the English Government "so far acknowledged Fitzgerald's merit that they paid his fine and created him a baronet." Here then we have a distinct and and created him a baronet. Here then we have a distinct statement of Fitzgerald's atrocities, which Mr. Froude does not deny, but for which his hardest words are that "he made one mistake." If then at any time Mr. Froude should speak of a severe flogging, we shall know what it means, and we also know the kind of morit which Mr. Froude, if he had the power, would be the power, we have the statement of the power of the statement of the statem

reward with baronetcies, and seemingly with honours higher still.

We have now done. We trust that we have shown what is the character of the book with which we have been dealing. Mr. Froude's case is different from that of the most violent and most unfair party writer. We make some excuse for Irish Papists and Irish Protestants speaking of one another. But here is a writer who, with no temptation, no interest in the matter, without the poor excuse of national or religious rancour, puts himself forward in cold blood to defend the evil deeds of one side and to blacken those of the other. What may be Mr. Froude's motives we cannot guess; the only practical result of his labours can be to make old memories and present disputes bitterer than they need be. If Mr. Froude wished to stir up another Irish robellion, to find new victims for new torturers, he could not take better means to compass his end. He stands alone in modern English historical literature as having habitually applied no small natural powers to a pur-nose which we can only pronounce immoral. The downas having habitually applied no small natural powers to a purpose which we can only pronounce immoral. The downward course is easy; the panegyrist of Henry the Eighth has sunk into the panegyrist of "Flogging Fitzgerald." If writings so flimsy and inaccurate as those of Mr. Froude live to be remembered in another age, it is something to think that they will carry their own moral condemnation with them. If the man who can jeer over the gibbet of Whiting in one age and the gibbet of Crosbie in another is to find any lasting place in men's memories, it is something to think that the character in which he will be remembered will not be as the defender of this or that doubtful historical or political theory, but in the character which he has chosen for himself, as the champion of evil, the apologist of wrong. wroda.

RENDU ON GLACIERS.

THE publication of M. Rendu's work in an English dress will be specially welcomed, apart from its intrinsic intract as a contribution to our knowledge of glaciers, by those who desire to form a clear and impartial judgment upon the priority of claim asserted on his behalf against Principal Forbes in respect to the fundamental theory of glacier formation. Such has been the progress

^{*} Theory of the Glavier, of Sasoy. By M is Chanoine Rendu. Trans-ted by Alfret Wills, Q.C., into President of the Alpine Club. Edited, with striductory Remarks, by George Forbest, B.A., Professor of Natural Philo-phy is the Andersonian University, Glasgow. London: Macmillan

of observation and scientific reasoning during the interval since the Bishop's book first appeared that its value at the present hour must be estimated by an historical rather than a philosophical standard. Still, if no longer new, or even in full keeping with what may be considered the most advanced or authoritative doctrine of glacialists in general, the work speaks well for the natural suggesty and close observation of the uniter; and it may well excite surprise that one with so little scientific training, and working in apparent independence of the ordinary adjuncts to obexcite surprise that one with se little scientific training, and working in apparent independence of the ordinary adjuncts to observation, should have gained so deep an insight into the phenomena of glacial structure and action, and should have anticipated on so many points the conclusions now adopted by the most competent inquirers. Since the Bishop's death a question has been raised as to the degree in which the facts or speculations originally belonging to him have been made use of by others. It is now more than thirty years since certain allegations of plagiarism or of undue schnowledgment of Rendu's labours were more or less vaguely mooted in scientific circles, the results announced by Principal Forbes having been held by some to have been anticipated by the Bishop, and not to have had justice done to them in the Travels in which Forbes put forth his theory in 1843. We need hardly now revive the early history of the controversy which grew out of this allegation, complicated as the controversy which grew out of this allegation, complicated as it was with the further charge that the labours of Agassis had in like manner been unduly appropriated by Forbes as far back as the year 1841. The leading points at iasue were summarily touched upon by us in our notice of the Life and Letters of Forbes. Within the twelvemonth that has since elapsed the charge has been taken up anew by Professor Tyndall and rebutted on the side of the late Principal by his son as well as by more than one of his joint biographers. A degree of heat has thus been thrown into the joint biographers.

joint hiographers. A degree of heat has thus been thrown into the controversy which is on every ground to be deprecated.

The observations of Rendu, for which he had prepared himself by studying all that physicists, naturalists, and travellers had written on the subject, extended over many years, and were carried on at the Glacier des Bois, upon the Mer de Glace of Mont Blanc, at the Glacier des Bois, upon the Mer de Glace of Mont Blanc, at the Glacier des Bois, upon the Mer de Glace of Mont Blanc, at the Glacier des Bossona, and at that of Argentière. Two years after the completion of his essay, when he had almost laid aside the idea of publishing it, he was induced to give it to the world, imperfect as he felt it to be, by seeing the work of M. Ch. Godefroi, the errors of which he held himself bound to point out. Rendu's Théores des Glaciers appeared in Vol. X. of the Mêmoires de l'Académie de Saucie, 1841. From his earliest journey abroad, in 1826, Forbes had become familiar with the aspect of abraiers, and could hardly have helped forming some idea of their glaciers, and could hardly have helped forming some idea of their structure and origin before entering upon a course of observations in the company of Agassiz upon the Grimsel on the 8th of August, 1841. It was among the group of scientific men there assembled, as Forbes has since stated and proved by means of letters and other evidence, that he first heard Rendu's work talked of, and that with anothing but respect evidence, that he first heard Rendu's work talked of, and that with anything but respect. After leaving the glaciers the same year he mentions having seen the Théorie cursorily in the hands of a Swiss friend, when he thought it by no means worthy of the ridicule which he had heard applied to it. Writing to Professor Jameson, on August 22 in the following year, from Zermatt, and expounding the leading features of his theory, he speaks of not having yet been able to procure Rendu's work. It was not till February 1843 that a copy of the book actually reached him from the Bishop himself, to whom after many futile attempts to procure one he had made application by letter.

Strictly speaking then, Professor Tyndall was not incorrect in saying in 1860, and repeating in 1872, that Forbes when he began his observations with Agassiz was acquainted with the labours of Rendu, but he also acknowledged that Forbes needed no such inspiration and would doubtless in any case have grasped the idea of

spiration and would doubtless in any case have grasped the idea of viscosity, executing his measurements and applying his knowledge to maintain it. The Scottish Professor, if he had not been exceptionally jealous where matters touching honour or veracity were concerned, and tenacious of every jot and tittle of professional fame, need hardly have taken such dire offence at words like these. He could have afforded to let the world judge between the crude ideas of Rendu, which he had time to incorporate into the history of preparatory discoveries whilst preparing his own book for the press, and the finished theory worked out by himself and fortified with the varied learning of a trained intellect. He had done ample justice to the Bishop's statement of his views and observations. He spoke of Rendu as the only writer who had insisted on the plasticity of the ice, shown by moulding itself to the endlessly varying form and section of its bed, and as also opposed to his leading contemporaries in his conjecture that the centre of the ice-stream would be found to move fastest. At the same time he quoted the Bishop's candid admission that the manner or cause of motion is utterly unknown ("le mode est entièrement inconnu "Peut-être avec de longues observations, des expériences bien faites sur la glace et la neige, viendra-t-on à bout de le saisir; mais ces promiers eléments nous manquent encore." Such words ere a sufficient justification of Forbes's statement that the writings of Rendu are as silent as those of Agassis, Godefroi, and Char-pentier as to the real mode and nature of glacier motion. That Rendu was acquainted with the veined or ribboned, or what is now known as the lamellar, structure of glacier ice is a further inference which Forbes in his rejoinder was enabled to repal, showing that what the Bishop's language applied to wen the true stratification of the new, not the thin and delicate lands of blue or blaish white traversing the ice in a mention discountry, which he himself, as he says in a latter from the spot to Exchange.

Jameson, was the first to notice. He made the observation during his first walk with Agassis, August 9, 1841, and he says he was supposed to find that pillosopher declare he had not distinctly motival factors or at least had considered it as a superficial phenomenan which we engaged upon the issue between Forces and Agassis as rival discoveres, we should may this passage, we should may this passage. coverers, we should urge this passage, written at the moment and under the spell of the enthusiasm with which he threw himself under the tuition of Agassiz, as strongly convincing of the priority and independence of a discovery which has been no less to Rendy. to Rendu.

It is rather curious, considering the way in which the mannes of Agassiz and Rendu have been coupled together in the course of this controversy, to find that on the occasion referred to by Forbes, when Rendu's work was talked of among the party assembled upon the glacier of the Aar in August 1841, it was spoken of by Agassiz or his friends as that of a visionary. It is acceptly less strange that it should have met with nothing him the course; the course of the plasticity or quasi-fluidity of glacier masses. sity or attention abroad which has attached to it in this country. Rendu's theory of the plasticity or quasi-fluidity of glacier masses, which he compares to a soft paste, seems to have found little favour among foreign glacialists or physical philosophers. So far was it from resting on a basis solid or firm enough for their countries in on its truth, that it could be quoted with approbation by Charpentier, a zealous supporter of the rival theory of diletation. Now that we have Rendu's essay before us in full we can form a more definite estimate of the significance and value of his speculations. Giving him credit for great saracity in many of his conjectures. definite estimate of the significance and value of his speculations. Giving him credit for great sugacity in many of his conjectures, and for many a happy suggestion in advance of his predecessors to contemporaries, we cannot shut our eyes to the fact that these qualities fall far short of those of the trained philosopher or man of science. As an amateur, or in the application of a shrewin native judgment and keen powers of observation to the phenomena of nature, Rendu is entitled to much praise. To be raised on high among discoverers of the first class is about the last thing the good Bishop would have sought for himself. This is indeed shown by the terms of his own letter to Forbes, August 17, 1844, in which, so far from betraying the least suspicion that any of his laurels had been appropriated, he writes, "Votre théorie de la marche des glaciers finira par être la seule admise, parcequ'elle est, selon moi, la seule vraie." It would have been easy to set off against Rendu's merits as the originator of much ingenious and well founded speculation the instances of faulty observation or baseless hypothesis which were to be found in faulty observation or baseless hypothesis which were to be found in This Forbes has in no case allowed himself to do beyond his easay. This Forbes has in no case allowed himself to do beyond what he felt to be necessary towards repelling such claims as seemed to him clearly unwarrantable, or such citations as were partially the control force. That Randy was the made or strained beyond their actual force. That Rendu was the first to make many observations of great value to glacialists is as much beyond doubt as that he left the determinate proof and ultimate working out of what he observed to reasoners of failer powers and more scientific training. That the central portions of glaciers move faster than those nearer the sides of their bed seems to have struck no one before him, and he was led by this fact to the idea of their ductility in moulding and adapting themselves to their bed like paste or flowing lava. That the theory had yet by no means taken firm or definite hold of his mind is shown by the remark he made at the same time, that the rigidity of a mass of remark he made at the same time, that the rigidity of a mass of ice when struck is in direct opposition to his conception, though experiments made on larger masses might, he thought, give other results. The measures of glacier movement given by Renda are by himself admitted to be but vague and in the highest degree conflicting, being based for the most part upon the dubious reports of guides. One solitary measurement is described as taken by himself upon the Glacier des Bois, where one of two blocks, the position of which he had fixed in 1838, had by the year following advanced four hundred feet, the other having disappeared from sight. His easiness in admitting the loose estimates of guides is shown in his conceiving the central velocity at the Montanvert to be ten times that of the lateral velocity of the ice. In his comparison of the movement of a glacier with that of a river, ingenious as it unquestionably is and glacier with that of a river, ingenious as it unquestionably is and expressive of much truth, he had been anticipated by Captain Besil Hall, nor must we forget that what he relies upon for his conviction of this river-like motion is the fallacious notion that the crevasses of a glacier stretch acrose it in curves convex towards the valley below. What was really wanting was not theory, but proof, nor is it to be gainsaid that before the problem was taken in hand by Forbes no precise or quantitative estimate had been applied to glacier motion, nor had the lamellar structure of the ice on the one hand or its analogy with viscous substances on the other been definitely described or aven pointed out. It must be remembered that it is by analogy only, and consequently only so far as the analogy holds good, that a substance like ice, crystalline and brittle, can be compared with viscous or tenacious substances such as wax, which was Forber's analogue, tenacle, or glue, which Mr. Ruskin pusiess in the trenchant extract from Fore Clauseers which winds up the publication before us, or the "soft pasts" of M. Bendu himself. As her Ruskin pithily puts it, a cartload of father-cought bendure is liquid, though a single herring is not; and so may the man of glacker the be at once viscous or semi-finid, though an individual piece of ice is brittle and readily with these, while setting before the soft the mode of glacker sections, assume the soft the mode of glacker sections. structure of the ice on the one hand or its analogy with

emissions a pulsament to some higher law, whether the mode of emission is proposed by Finnitia and emission in Transition as proposed by Finnitia and emission in the final proposed by alternate least and sold as mean recently proposed by Mr. Croft, whom Mr. James Geikie is inclined to follow. From the final proof wrought by the joint forces of genius and mission is of measured wrought by the joint forces of genius and mission is of measured wrought by the joint forces of genius and mission is of measurity an interval more or less vague, and it can hardly be pessible for the marite of each worker to be measured with a degree of precision in which all will agree. It is, however, the interest of all that candour and good sense should control the judgment, and that an even and kindly temper should be maintained theorem be no gain from procecuting any farther the controversy we have had under our notice, and we would fain see it brought to an end by a friendly shaking of hands between the partitions of Forbes and Remdu.

LOUNG RROWN.

TT is purhaps somewhat surprising that the sensational novel has not long times died a natural death. The improbability of incident, the amnatural dialogue, the ludicrous mistakes as to the practices of society, the unter ignorance of legal and other professional knowledge which mark the vulgar type of these productions have been repeatedly exposed. But, apart altogether from critical condemnation, it might have been supposed that the competition in absurdity and extravagence in which this school of fiction indulges would of itself lead in time to a process of exhaustion. The pace seemed to be too severe to last. Every new novel in this style was bound to be more thrilling than its premaor, and there was consequently the prospect that a point it seems day be reached beyond which fantastic nonsense could farther go. If this climan has not been reached before, it has has reached now. Whether Young Brown is meant seriously or has reached now. as a joke, it is certainly the wildest and most preposterous picture of life which has yet been produced. So much so, indeed, is this the case that we can hardly help thinking that its purpose uns une case that we can hardly help thinking that its purpose must really be satirical; and, as an enemy of the sensational novel, we are therefore disposed to welcome in the author of Young Brown an ally in a new and unexpected form. The idea of holding up novelists to ridicule by caricaturing their wilder passages is not indeed wholly original. Readers of Thackeray in the parallel surface and other nonzer writers of lifting years given who had attach and appears. popular writers of fifteen years since, who had struck out special lines of their own; and Bret Harte's rougher American humour has lately been turned into a similar channel. But the authors whom these humourists have amused us by caricuturing were at least mon of some real gifts and power. It has been reserved for the author of Young Brown to apply his satirical faculty to the ordinary back manufacturers of three-volume novels, and especially those who cater for the lovers of pure sensationalism. It is certainly the simplest explanation of his extraordinary plot that it is, from first to last, a burlesque of a well-known class of novels. No one seriously intending to write a story would select such incidents as are here strong together as the framework of the wildest romance. Seduction, bigamy, violence, the unpleasant juxtaposition of characters who are closely related, but without their knowledge—these are too common elements in the ordinary sensations. romance to strike one as extraordinary here but for the special touches of exaggeration which make this story the actire which we have assumed it to be. Peers doing the meanest and most felonious actions with the most courtly of airs, and gaining thereby the smallest possible advantages at the highest conceivable risks—these are staple articles of the stock-in-trade of writers in three these are simple articles of the stock-in-trade of writers in three volumes. But caricature must go beyond this, and our author achieves his object by making his villanous nobles more rescally, and their esiminalities meaner and more felonious, than any novelist has hitherto dared. He takes care also to keep as far as possible in the highest ranks of the peerage; and generally his other improbabilities and blunders are a shade more glaring and outrageous than those of the class of writers whom he has undertaken to outde on their own ground.

The chief character of the novel is a Duke, who always goes about with a double title so firmly fastened to him as not to be dropped for a moment; so that, if he visits his mistrees daily, the three footman in situadance bawl out, each in his separate sphere on stairs

The chief character of the novel is a Duke, who slways goes about with a double title so firmly fastened to him as not to be dropped for a moment; at that, if he visite his mistrees daily, the three footman is attendance bawl out, each in his separate sphere on stairs or landing, "His Grace the Duke of Courthope and Revel." Real dukes, as the author no doubt well knows, are not thus burdened in real life; but this fact is hid from the knowledge of the average assestional novelist, who probably takes his view of the persage direct from a shifting handhook, and makes other curious fitunders in consequence, such as supposing that our amient persage have James's favorants title of barenest tacked on the them, a mistake which our assistant handly holds up to special notice by repeating it in his pages in many that one passage. This Duke, helsted from the hunt, has to page hight as a village land. Handle meets with a pages in hand a hight as a village land. Handle meets with a pages in his translation maid, the month of the heaty marriage with a thing to distinguished clows of a

The second secon

Nous Brown of the story. He suspicion in minimizing the wantilly hundred mind, though his instinct of judices; he saw assistant when round that he would have dilled her on the discovery, more than twenty years afterwards, of a temperature given her by her schoor, but for the interestion of a herograph of cleryyman, the Deas at measing of the mounton. There are many striking circumstances connected with this brief dual, with the most important being that the mother of Young Howevens in reality the legitimate daughter of the former Dulm; as umplement circumstance in any case, but not so painful as it at first seems, for we afterwards learn that this decreased peer was not mally the late Duchess from his birth to save the honour of a sistua-in-lear. The private history of our parage no doubt, at least as represented in modern novels, abounds with such incidents; but we do not remember any special justification for the singular mystery in which our author has enveloped this part of his past, and which compels him to caphain in a long-winded probact, for the baself of his rackers, that Margaret Brown was set, as some have wrongly supposed from his text as it appeared in a magazine, her seducer's inlifester. The substitution of the Dulm for a son proper of his father handly necessarities as misfortune, but it also obviously defrands the rightle late of the dakedom, Lord George Wyldwyl, of his rights. House no doubt the second name given to the romance. This true noblessan of nature, who is represented theoremance. This true noblessan of the family honour, and thenceforward spends his life as a soldier in India, on pay, as we are told, of seldom less than about ten thousand a year. This arrangement enables the author, as we shall presently see, to deal as happily with that country and the writers an it as with the novelists whom he is laughing at in his fashonable English scores. The Duke's later career tills more of the work than Young Brown's, and the characteristic way in which anch a personage is sure to be treate

trembles at his superior mecality.

Meanwhile Young Brown starts for India as a private of Iancers, and the author commences a series of rhapsodies on our misgovernment of that country, which even those novelists whom he is evidently mecling would hardly havedared to heap into a single chapter. Indeed, though they may have made serious errors, it is hard to find a fair precedent among them for such a statement as that "twenty-six thousand persons were massacred at Cabul in 1841 with the sanction of the Foreign Office and Board of Control the sart time the Sepoys showed their tacth"—the previous occasion being the Mutiny at Vollore. It is generally thought that the brigade lost by us in Afghaniatan was in the main composed of Sepoys, and that they were killed by Afghans in open war. But then we must remember that we are here perhaps dealing with a satirist, and not with an ordinary novelist. Hence it is too, no doubt, that we are told that England never sent out a man of real note, who had a character and future at home, to govern our dependency. Your ordinary novelist would probably ignore Cornwallia, Wellesley, Bentinck, Dalhousie, and Canning; and his facetious imitator could do no less. Our readers will have guessed that Young Brown is to serve in the Mutiny, and such is indeed the course of the tale. Nor do Gulliver's Travels contain more remarkable episodes than this young gentleman gues through, though our author is hardly to be commared with Swift, except indeed in the singleness of his object. When we say that Young Brown's regiment sailed to relieve India in "an expedition" commanded by a general; that the ship touched at Aden for mules, thus anticipating by fifteen years or so M. Lessops's Canal project; that Nana Sahib prepared the mutiny at Meavut, whence the revolted cavalry rode straight to jorn him; that, to save the trouble of keeping prisoners in the campaign that followed, "thousands of these dusky-skinned Indians were sent daily and hourly into eternity without any fuse of our first had been

whose evidence might be inconvenient to his Grace.

whose svidence might be inconvenient to his Grace. Again, a police magistrate is made to take counsel privately in his own room with an attorney who is about to be called as a witness. Greatest of all, perhaps, is this writer in his love affairs; for does not the very Commander-in-Chief, whose Adjutant-General caused him to object officially to commissioning Sergeant Brown as "confounding the distinctions of rank," only a few months later throw his only daughter, a lovely creature, the true heiress of the family mansion of the wicked Duke, at the head of Cornet or Captain Brown—whose various ranks in the last chapters are a little confused—when that fine young fellow is too modest to ask for her?

It is difficult to describe the general tone and spirit of the book, which is full of aneering and snarling from beginning to end, but perhaps "ill-conditioned" is the word that comes nearest to the mark. Everybody in authority is represented as either imbecile or corrupt, or more usually both, and rank and reputation as only a useful cover for debauchery and crime. We admit that there cannot be a more proper subject of satire than the state of mind which finds the whole world, or at least all the middle and upper classes of society, gangrened with vice, roguery, and humbug. It is possible that, besides the ordinary sensational novel, the author of Young Brown may also have had in view the sort of literature which was represented a year or two since by the scandalous Queen's Messenger, and more recently by the Chesterfield Letters. One of the chief themes of this work is the existence of a sort of Vehngericht of chief clerks of public offices, and there is something very curious in the writer's assumption of a sort of personal spite against the forms of criminal justice.

THE SEVEN AGES OF A VILLAGE PAUPER.

THIS little book is written in an excellent spirit and for a praiseworthy object. It may remind its readers in some ways of Ginx's Baby, but the differences are more prominent than the pseemblances. Mr. Bartley does not show much of the literary skill of his predecessor, and it is not to be expected that his book will make anything to be called a sensation. He gives the plain unvarnished facts of a poor man's life, and has no disposition to make the shades of the picture blacker than they naturally are. On the other hand, if the book is less startling, its moral is very superior. The readers of Ginx's Baby derived from its perusal a vague impression that society was somehow fundamentally wrong, and that somebody ought to be hanged if every Ginx in the land was not enabled to give comfortable portions to as many young Ginxes as he chose to bring into the world. Any reference to political economy was implicitly denounced as implying a hard heart and a cynical indifference to the wolfare of the poor. Mr. Bartley understands much better what he is about. He assigns a definite cause for the evils which he describes, and suggests a distinct remedy. Without asking whether the cause or the remedy is adequate, we may at least admit that he has made a useful contribution to a very important subject, and that a study of his book raises some definite issues. THIS little book is written in an excellent spirit and for a of his book raises some definite issues.

The plan of the book is simple. Mr. Bartley was accidentally led to take lodgings in a village within twenty-four miles of London, but lying in a specially out-of-the-way corner. The population of the parish is 1,456, and the inhabitants are almost exclusively engaged in agriculture. Mr. Bartley endeavours to describe as accurately as he can the general conditions of their lives, which may be taken as representing the average state of similarly situated districts. The house accommodation he accommodation he may be taken as representing the average state of similarly situated districts. The house accommodation, he says, is very superior to that of most London districts. Farm wages are from 12s. to 16s. per week, though they have lately risen. Mechanics earn a pound or 25s., and brickmakers receive 3cs. a week during summer. There is a church with a very good clergyman, a respectable school, and, what Mr. Bartley considers to be a great advantage, no charitable endowments. There is, however, one great evil which meets Mr. Bartley in all his inquiries, and which seems to him to lie at the root of almost all that is objectionable. This evil is not the public-house, though there are a good many more of them that is desire house, though there are a good many more of them than is desirable, but the parish. In short, Mr. Bartley thinks, and endeavours to able, but the parish. In short, Mr. Bartley thinks, and endeavours to prove by a number of minute details, that the Poor-law is the great demoralising influence of the country. In this doctrine of course there is nothing new. A hundred and fifty years ago De Foe explained it very forcibly in his Giving Alms No Charity; it has been expounded by any number of political economists since his time, and been embodied in a good deal of legislation. Mr. Bartley's peculiarity is merely that he endeavours to trace out minutely the precise mode by which the Poor-law discourages thrift; and that he has a remedy of his own to propose. According to him the number of persons relieved in the half-year to Lady-day 1873 amounted to 133, or rather more than one in eleven of the population; and he infers, with what accuracy we cannot say, that three-fourths of the whole number would expect to receive relief at one time or other. Moreover, Mr. Bartley holds that the pauperism which infects so large a proportion of the lowest class is gradually spreading upwards, and quotes in defence of his position the number of children of the middle classes who are now provided for by the various charitable institutions. Perhaps in this Mr. Bartley is rather travelling beyond his proper limits; he has quite enough to do in pointing out the cyli influence of the Poor-law without undertaking a Quixotic crusade

against the huge apparatus which is always at work for demo raising the people of England. If he were to take into account the innumerable influences which tend in one way or account diminish the spirit of self-reliance amongst different classes, he would have to compile a series of Blue-books instead of a single yolume. For the most part indeed he confirm himself. would have to compile a series of Blue-Books insect of a single volume. For the most part, indeed, he confines himself parts strictly to his point; and his point is that whereas, according to the proper theory of a Poor-law, none should be relieved but the destitute, the practical result is that all become destitute in order to obtain relief. This is the moral drawn in the chapter which describes the entrance of the pauper into the world. He gives us three typical cases. The doctor's fee for attendance on these occasions is a round which is a serious sum for a poor family. three typical cases. The doctor's fee for attendance on these occasions is a pound, which is a serious sum for a poor family. One woman who applies for relief upon the expected event is refused on the ground that she has only three children. Another is refused because her husband makes 30s, a week in the summer, though in the winter his wages are reduced to half that sum. The third, whose husband makes only 14s. a week, gets an order; the doctor and nurse are paid by the parish, and she gets whatever supplies may be necessary in the shape of food. The moral which is naturally deduced cessary in the shape of food. The moral which is naturally deduced from these facts by the poor is, in the first place, that they ought to have large families; secondly, that it is folly to save money in clubs, because the parish is bound to supply their wants in case of need; and, thirdly, that it is merely a point of good policy to make themselves out as poor as possible, and if by any accident they have saved any small sum of money, to conceal the fact as though it were a crime. The notion that there is anything disgraceful in receiving parish relief gradually goes out of fashion, and every kind of deception is regarded as pardonable when it is employed for the purpose of extorting money from that abstraction the parish. All manner of evil consequences follow. Mr. Bartley, for example, tells a story by way of illustrating the systematic trickery which is naturally encouraged. A lady was visiting a poor woman who declared that she had not been able to taste meet for a long time. At this moment the lady's dog smelling about the cottage pulled a large piece of meat out of a basket; and the woman looking a little awkward, explained that it had just been brought by the relieving-officer and that she had forgotten it. All the children, he says, were too well trained in deception not brought by the relieving-officer and that she had forgotten it. All the children, he says, were too well trained in deception not to fall in immediately with the fiction invented by their mother. He tells us again various stories equally significant, and unfortunately equally commonplace, of the calmness with which children who may happen to be well off refuse to help their parents because they feel that they would only be taking a burden off the parish, and of the universal expectation, even of the more industrious and independent poor, that they will have to be supported from the rates in their old age.

There is nothing about such anecdotes which is not perfectly familiar to any one who has the most superficial knowledge of the general state of the case. Mr. Bartley has simply brought them

familiar to any one who has the most superficial knowledge of the general state of the case. Mr. Bartley has simply brought them together with a view of calling attention to the necessity of some improved system. The obvious moral is that all Poor Law relief, and indeed all charity, must be more or less demoralizing. In so far as you help anybody in distress, you prevent him from helping himself or from making preparations beforehand. Mr. Bartley, however, admits, what indeed does not admit of dispute, that we have practically no choice as to giving such relief. We must retain the principle that nobody is to be allowed to starve. But, allowing this, is it possible to arrange a system which shall not be allowing this, is it possible to arrange a system which shall not be a positive discouragement to thrift? Mr. Bartley replies that it may be done by making thrift a condition of outdoor relief. We are not absolutely to decline to help the poor, but are to say that they must come into the workhouse unless they can show that they have in some way or other saved money. At present a poor man who has saved some way or other saved money. At present a poor man who has saved an annuity will have a deduction made in consequence from the sum allowed him by the parish, and it is therefore obviously his interest not to save. He is, in fact, not saving for himself, but saving the rates. Mr. Bartley would adopt the opposite policy, and add something to the savings of such a man by way of reward. The principle may very probably be a good one, and certainly deserves discussion. We have however some doubt whether that or any change can really strike at the root of sa deserve other legislative change can really strike at the root of so deeply-seated a mischief. We do not doubt that outdoor relief is liable seated a mischief. We do not doubt that outdoor relief is liable to great abuse, and that a more strict adherence to the workhouse test would be frequently most desirable. On the other hand, it test would be frequently most desirable. On the other hand, it has often been pointed out that to force poor people into the workhouse may frequently have a most demoralizing effect when some timely help might have enabled them to tide over a difficulty. There is a balance of evils upon which practical experience must decide, but the proposal that saving should give a man a right to stay outside the workhouse is one which doubtless deserves consideration. The further plan, which, if we rightly undestand it, is that a poor man's savings should be increased by the parish, strikes us as more doubtful. It is most desirable that the poor should have every facility for saving small sums, but the system of encouragement by bonus would lead to some complicated questions. If a man has saved enough to support himself in comfort, it can scarcely be saided that the perish should add to his means. Some very moderate amount of savings must in any case operate as a har to receiving money from the parish; and thus, if the parish does not discourage saving the objection, indeed, cannot be entirely avoided by any system of relief. According to Mr. Flartley's plant in order to metallish a facilitious saving, which the parish would then in smalled than to has often been pointed out that to force poor people into the work-

^{*} The Beren Ages of a Villege Pargres. By G. C. T. Burtley. London :

double. A door would be open for all manner of evasions and desceptions of a different kind from those now existing, but still mischievess. We do not say that it is impossible to devise a scheme which shall not be free from such objections; but it would minute a great deal of care and discussion. Indeed, greater indicated discretion seems to be more needed than any change upon paper, however ingenious. It is, however, desirable that such proposals should receive a fuller examination than we can now give them, and Mr. Bartley will do good service if he can force them upon public attention.

JOAN OF ARC AND THE TIMES OF CHARLES VIL.

TN her present work Mrs. Bray's aim has been to give a vivid and picturesque sketch of the reign of Charles VII. of France, with Joan of Arc, the most striking personage of the period, for the central figure. That "young and interesting female," as Lingard, with a singular want of perception of the ridiculous, styles the Maid of Orleans, still remains, despite all that has been written to elicidate her manualless except one of the most remainshale and masterious of arvellous career, one of the most remarkable and mysterious of historical phenomena. Our author does not profess to contribute any new facts to the biography, nor has she any new views upon the real or supposed mission of her heroine, the details of whose trial she is content to learn at second-hand from Berante and Martin. On the question of Joan's mission, indeed, Mrs. Bray seems not to have made up her mind, or rather to be in different minds at different times. In the beginning of her work, adopting a rationalistic interpretation, she holds that Joan, by dint of long a rationalistic interpretation, she holds that Joan, by dint of long religious ecstasies, worked herself into a state of enthusiasm which she took her fancies for realities, and that "she wished to be the woman to deliver France, till at last she believed that she was appointed by God to fulfil the prophecy which expressed His will." But by the time the author has conducted her heroine to triumph and to martyrdom she has waxed warmer in her baself and educated for her albeit strictly adjusted divine behalf, and advances for her, albeit timidly, claims to divine inspiration. "It is possible," says Mrs. Bray, whose former studies have made her familiar with strange forms of religious enthusiasm, "she might have been under the influence of that kind of hallucination which, since her day, has been so common in the Cevennes; but even if we allow this, it will not account for what she accomplished"; and after recapitulating the marvels of Joan's career, she concludes:—" If in some mysterious manner, beyond the power of reason, yet not contrary to it, God was pleased to make known His purpose to the simple and humble creature He chose to bring it to pass, who shall gainsay it ?" Either of these theories—that Joan was deluded, or that she was sent of God—is tenable, but hardly both at once. On the question of the supernatural, we will only both at once. On the question of the supernatural, we will only remark that the temptation to believe in the heroine's divine mission lies, we suspect, not so much in the wondrous things she performed—which, after all, may be explained by the almost boundless power of religious and patriotic fervour, working upon an impassioned and hysterical temperament, and the contagious nature alike of enthusiasm and panic—as in the natural reluctance of the contagious patriotic fervour and the contagious nature alike of enthusiasm and panic—as in the natural reluctance. to admit that so noble a work could have been the result of mental disease. It must be owned that Joan of Arc—must we consent to recorded visionaries the less tmorbid, the most vigorous and natural; displaying little or nothing of the restless self-consciousness and vanity that might be looked for in one who thought herself highly favoured by Heaven. "You may touch them yourself," she said, laughing, to her hostess Margaret La Touroulde, when women brought resaries to receive the holy touch of the Maid, "for they will be as good for your touching as for mine." When, as the same witness testifies, a belief was expressed that the heroine's familiary that the same witness testifies, a belief was expressed that the heroine's same witness testines, a belief was expressed that the heroine's fearlessness sprang from her certain knowledge that she could not be alain, the Maid replied that she had no greater security than the other men-at-arms. When questioned on her trial about the dead infant whom her prayers were said to have resuscitated to receive the rite of baptism, she tells the story with perfect simplicity; she joined the maidens of the town in praying for him; she does not give any opinion as to whether the event was miraculous or not, nor does she take the credit of it to herself.

she does not give any opinion as to whether the event was miraculous or not, nor does she take the credit of it to herself.

The peculiar combination in her of simplicity and shrewdness, of fire and gentleness, of the peasant-girl with the mystic and the saint, altogether so little like the character which a writer forming an inspired heroine out of his inner consciousness would probably portray, has often been remarked upon. In the girl who to his face threatened Dunois that she would have his head out off if he failed to inform her of the enemy's approach, who broke her sword over the shoulders of a courtezan, whose fearless speech in captivity and on trial is recorded to have provoked Lord Stafford to draw his dagger on her, and to have extorted from a more generous for the admiring exclamation. "Truly she is a good women—would that she were English!" who have how to put down a captious questioner with rough and mady repartee, as when Brother Seguin sained in his Linnuain patois, "In what dialect did the voice speak to you?" and got for an answer, "In a better dialect than yours"—in such stories as these we can trace something which might be exaggerated into

"James of Arc and the Thome of Chierles VII. Albert of France. By Mrs. Bong, Anthon of "The Good St. Lobb." "The Bondle of the Protestants of Corescent," "The Willia Mode," "Hearthink Security," IAA of Bondle, " Ball of Bondle," Ast. London; Golden to Phenon. 1876.

the temmagant screenes of English slander, the "famme très cruelle" of the Bourgeois of Paris, the "railing Hecate" of Shakipeane's Homy VI. Yet with all her martial energy, she shrank from taking life with her own hand, and there was no lack of tenderness or pity in her when in the hour of victory she mourned for the fees who had died unshriven, or when, as her page Louis de Contes records, she diamounted to succour the English prisoner whom she had seen savegely struck down by his French captor. Deep and enthusiastic as her religious feelings were, she was not of the commonplace saintly type, for her character was antagonistic to that "otherworldliness" which with hagiologists often passes as the supreme virtue. Her leading ides was to save her country and her King, not to win for hegself a high place in Paradise. She was pure and shetemious, and fasted on all proper occasions; but she made no boast of asceticism, and her enemies were able to repreach her with her gay and fashionable attire, such as, according to the act of accusation, "homines dissolutiasimi" alone would wear. Had she been the kind of saint that priests favour, she would have been a more useful tool, and might have made friends who would not have abandoned her in her need; but she would never have played so noble a part in the history of her land. Upon women she generally seems to have produced a favourable impression, and this in itself is high testimony to the truth of her character. Women would assuredly have been keen to mark and to criticize any weakness or hypocrisy in one who had thrown conventional rules of conduct so far aside. We see how quick Joan herself was in suspecting and denouncing her feeble rival or coadjutor, Katharine of La Rochelle. Mrs. Bray, in her brief mention of this curious incident, does justice to the "natural shrewdness" which led Joan to detect the hollowness of Katharine's claims to inspiration, and to the honesty which kept her from being a tool in the hands of Katharine's patron Brother Richard, who had evi

Mrs. Bray is inexact in her account of two of the incidents to which we have referred. She attributes to two different persons the inquiry about the dialect in which the voice spoke, and the succeeding question, "Si crederet in Doum," to which Joan answered with a similar retort, "Yes, better than you." They were both put by Seguin, who told the story himself in his deposition in the proceed of rehabilitation. In the account of what passed between Joan and Lord Stafford, the author makes the English Earl tell the captive that she was about to be put to ransom on condition of never taking up arms against the English party again—a statement which Joan received as a piece of mockery. In reality it was John of Luxemburg who made the offer of ransom, and the Maid's answer, "In the name of God, you mock me, for I know well that you have neither the will nor the power," may have conveyed a reproach to him for having sold her to the English. On his repetition of the offer she broke out into that flerce speech against "ces Angloys" which so exasperated Stafford that the Earl of Warwick had to prevent him from striking her. Mrs. Bray elsewhere styles this same Warwick "the Kingmaker," thus confounding Richard Beauchamp with his more famous son-in-law Richard Neville. The printer, we suppose, must be answerable for "Stephen Vignobles and that strange Gascon commonly called La Hire," as we can hardly doubt that the author knows Stephen de Vignolles and La Hire to be one and the same man. Again, on the subject of the trial of the Maid, Mrs. Bray is not accurate in saying that the University of Paris "addressed the Council of King Henry, begging that Bishop Cauchon might be compelled to make more haste in getting up the evidence and the preliminaries of the charges under his direction." To Henry they only complained generally of the delay in putting the woman into the hands of justice, without at all implying that Cauchon was to blame for it. The description of the actual trial seizes on the most striking and dramatic featur

The voice spoke to me three times yesterday; it speaks to me here in this court. It says, "Reply boldly; be not afraid. God will aid you." The voice speaks to me in my prison; if it did not comfort me there, I should not now be alive. Yet I cannot always hear what it says, for the noise of the prison and of the guards. Ah! I should hear it well if I were in some forest.

courtezan, corded to ser, and to clamation, Eaglish!"
The first two sentences are partly taken from Joan's answers on the 24th of February. The statement that she should be dead, were it not for the revelation which comforted her daily, was made on the 1st of March. Her complaint that she could not always understand what St. Katharine said to her—"propter turbationem carcerum et per turnultus custodum suorum"—was made on the 14th of the same month, when she was examined in prison. Her curious statement that "si ipse esset in uno nemore, bene audire' voces rementes ad eam," was made on the second day of her examination, February 22nd, when she gave her account of the first revelations voucheafed to her life. By Mrs. Statement of the mysterious sign given to Charles.

After Joan had at last answered with a strange story about an

angel and a crown, Cauchon, according to our author, appearing not to comprehend "poor Jeanne's allegory"—for which we think angel and a grown, Cauchon, according to our settion, appearing not to comprehend "poer Jeanne's allegory"—for which we think he might be excused—"gravely saked her "whether the angel who brought the crown was of heaven or of earth." The inquiry really was whether the angel "venoit de hault, on a'll venoit par terre"—whether he came down from heaven, or along the ground—and Jean, in her subsequent answers, accordingly described the

manner of his entry.

We note also an unjust accusation against the States-General which met at Chinon in 1428, at the time when the English were advancing upon Orleans. "The sum they voted," says Mrs. Hray, "was so small, that it showed an almost incredible indifference, both to the immainent danger of the time and to the necessities of the King." The sum, which she does not specify, was 400,000 livres, payable by classes usually exempt; and this was the contribution of a well-nigh ruined people, who had been long engaged in an almost desperate struggle. M. Picot, whose laborious work upon the States-General was reviewed some time back in these columns, remarks that scant justice has been done to the patriotism of those who voted and paid the taxes to support the cause of Charles VII. and voted and paid the taxes to support the cause of Charles VII. and of France; and it is certainly not to Mrs. Bray that they can look for their due meed of praise. On the other hand, she attributes to for their due meed of praise. On the other hand, she attributes to the leaders of the combined English and Burgundian force which won the battle of Crevant a chivalry for which we are not inclined to give them credit. Among the resolutions come to by the allied leaders at their conference in the Cathedral Church of Auxerre—not, as Mrs. Bray says, before their assembly there—was one prohibiting the making of prisoners until the battle was gained, under penalty of death to the captor, and also to the captive, if he resisted. The object of the prohibition, according to our author, was "to control the thirst for plundering the faller by the demand of unreasonable ransoms." In the first place, we doubt whether of unreasonable ransoms." In the first place, we doubt whether those who issued the orders were likely to concern themselves about the protection of the defeated against unreasonable demands; in the next place, although the order, if obeyed, would effectually deliver many men from any demands, reasonable or unreasonable, and indeed from all other troubles in this world, it would not prevent the most exorbitant ransoms being extorted from the prisoners who might be made at the end of the day. The real objects of the prohibition are plain enough. It would guard against a dangerous number of prisoners being accumulated while the issue of the fight was still uncertain. Every one knows how this was thought to be the case at Agincourt, and how Henry V. hastily gave the command for a general butchery:—

The French have reinfore'd their scatter'd men:—Then every soldier kill his prisoners; Give the word through.

Besides this, it would also prevent the soldiers from wasting their time in looking after their prisoners while the battle was still to be won. The minutes that Aucient Pistel—again to turn to Shakspears for an illustration—spent at Agincourt in threaten-ing and hectoring the frightened Monsieur Le Fer into the payment of "egregious ransom" might have served for the defeat and slaughter of a legion of Le Fers. The fact that the prisoner taken against orders was to be put to death shows how little his interests were considered in the matter; he was simply a valuable piece of property. Neither was it, as Mrs. Bray represents, commanded that "all who attended should, on pain of death, leave their horses half a league distant from the church." The order, as The order, as may be seen in Monstrelet, was that the men should dismount for reation, and that the horses should then be led half a league to the rear. Mrs. Bray, on the authority of England and France scalar the House of Lancaster, supposes that this was to keep the men from running away. It is not likely that the army started on its march to victory in such a "demoralized" state of mind. The provision was no doubt directed against the reluctance to fight on foot so often displayed by the Continental men-at-arms; and the possible refusals to dismount which the leaders contemplated would be dictated by a rebellious, not a cowardly, spirit.

In her preface Mrs. Bray informs us that the subject of her

"was suggested by the study of the French chroniclers of the fifteenth century," who, as she condescendingly observes, "are singularly rich in original matter." But, while admitting that the fifteenth-century men had good materials, she seems to be of opinion that they did not know how to dress them up, and so "their "quaint style, their obsolete harmage, and their tedious reco opinion that they did not know now to dress them up, and so "their "quaint style, their obsolete language, and their tedious repetitions, repel the modern reader, who requires to be allured and stimulated by composition of a more rapid and lively character." In this mind Mrs. Bray sets herself to supply the defects of "these old writers," and to provide the modern reader with something better suited to his tests. Accordingly this is the modern the setter and the modern reader with something better suited to his tests. thing better suited to his taste. Accordingly this is the way in which she tells the death of Charles VI, :-

The lingering light was fast declining, when the great belief Notro Dame was heard to

"Toll, toll through the silence of evening." Those who were in the streets stepped, inquired, and looked anxiously at each other. It was she soult oil, calling on all to pray for a departing spirit.

The bell of Notre Dame tolled but for the mighty dying, or the mighty dead. For whom then now? Soon a solemn strain arose within the walls of the sacred ediffee. It had a melancholy cadence—it was a regular dhant. Charles VI. was dead.

That unfortunate King was released from the hendage of mortality and all its afflictions, and from the sorrows of a darkened mind.

"Lord! in thine own good time Thou mad'st his darkness light." The trial of Gilles Laval de Retz affords an opportunity for \$ writing, of which the author does not fall to to and she describes the behaviour of the audience, and shudders, and husbes of expectation, and suspensions of and even the grating of the hinges of the prison door, manner of an historical novelist. These and similar, suggest the reduction that it would be well if Mrs. In acquired rather more of the sober style of the cki write she treats in such a patronizing fashion. She sime too at being pretty and picturesque, while she is often car construction and wanting in clearness. She sime too of

WALDFRIED."

TERR AUERBACH'S last book is likely to be a disappoint-ment to his admirers. They will find it difficult to agree with the opinion quoted from a German paper which has been published along with the advertisements of the book, that Waldywall is the best of this author's works, and, if our memory serves uright, "that it lays here the beauties of the poet's heart to the right, "that it lays bere the besuties of the poet's heart to the world." Allowing for the inevitable loss incurred by translation, which would seem to be unusually great in the case of Waldfried, the fact remains that this romance contains for less of the poetical faculty than one has a right to expect from the author of On the Heights. That was a romance of pure fiction which was remarkable for the beauty of the descriptions and the subtle analyses of varied character which items. notion which was remarkable for the beauty of the descriptions and the subtle analyses of varied character which it contained; the imagination which there found free play is narrowed by the prosaic reality of the events handled in Waldfried. Herein probably is to be found the explanation of the extraordant praise given to the book by the German paper already quoted. One can forgive a German critic for being biassed by protein in discussing a book subtle is described to the already patriotism in discussing a book which is devoted to the glorification of the United Patherland. And when such a book is produced by such a writer as Herr Auerbach, it is easy enough to lose sight of its faults. As a question of art, however, there is little doubt that a political novel is a dangerous experiment. The most successful experiments of these days in that direction have been made by Mr. Disraeli and the late Lord Lytton. There are some curious outward points of resemblance between the Parisins, Lord Lytton's latest work, and Waldfried. It would probably be difficult to point to two great novelists of the same period more utterly unlike, both in mind and manner, than Lord Lytton and Herr Auerbach. It is perhaps therefore the more interesting to compare the different ways in which they treat the same set of events. The France-Prussian War and the years preceding it occupy a large portion of both the novels which we have mentioned. Lord Lytton brings to bear upon the subject the keen perception, the brilliant satire, and the bright fancy which he possessed in so marked a degree. The German author approaches it with a soundness and a solidity which would be of great value in a treatise, such a writer as Herr Auerbach, it is easy enough to lose sight of soundness and a solidity which would be of great value in a treatise, but approach dangerously near to duluess in a novel. nent quality of the one work is imagination, of the other reflection. It is in accordance with the prevailing idea of German literature entertained in England that a certain heaviness of handling should be acceptable to German readers. That this estimate of the powers of German writers of romance is an unfair one can be proved reference to many of their works, and amongst others to Herr Auerbach's own earlier productions. On the other hand an exam-ination of the latter will disclose a latent capacity for dulness which seems to have been cultivated in Waldfried.

Another point of resemblance between this book and the Parisians lies in the vast number of characters contained in each. In the English novel, however, this multiplicity engendered no confusion; a due importance was assigned to each individual; there was a sense of dramatic fitness in the introduction and in the disappearance of every personage. The canvas never appeared to be overcrowded with figures. In Waldfried many of the persons who are described seem to demand some better reason than is given for their describtion. The family alone of Waldfried, the narrator of the book, spreads in so many directions, shoots into so many branches, that it would be impossible for a reader to preserve a clear notion of the identity of such one and its exact connexion with the others unless he had a genealogical tree at hand for the purpose of reference. The difficulty of retaining a precise recollection of all the characters who move through these three volumes is increased by the length of time over which the book extends. There are many characters unconnected by family ties with Waldfried himself whose existence has no influence upon the action of the narrative. It is true that the presence of superfluous and unimportant persons is frequent enough in real life; but this is an accident of real life which the novelist would do better to avoid. Herr Auerbach is a writer of sufficient strength to command at tion even to the dull passages of his books, and this makes their dulness the less easy to bear. He compels the reader to distribute over subordinate parts of the work the interest which should be concentrated upon important objects.

The writer h s drawn Waldfried, who is the most impor in the novel, as a man with whom it is not easy to sympatics a type of that soundness which is very admirable in character, but which is spt also to be very irritating.
to define exactly the quality of which we are
want of a histor term we have heard it distant

Waliffeld By Berthalf American, Austria

Agricu." Waldfield it suggravatingly good and reasonable upon all operations. The despect surrows, the most violent passions, do not ruffic his sespectable virtue. Whatever grief or misfortune sensils him, it finds him always ready to say and do the most correct and proper thing. If the world were to fall shattered on like, the rules would strike him not only "impavidum," but fully prepared to moralise upon the unexpected event. On one occasion, shortly after the death of his wife, overcome by grief, he wanders out and is caught in a storm :—

Like a child I began to count the number of seconds between the flathes of lightning and the claps of thunder. At first I counted thirty-two; at length the number had diminished to seven, after which I did not count any more. I saw houses all along the road. I knew the immates, and could have readily found shelter; but why should I go into anybody's house, wet through as I was already. I kept on over the rough stones in the middle of "the road; the rain had so swellen the streams that, as I crossed a little fieldige, I was setually wedling through the water. The storm-cloud had broken eight ever my head.

I could not help thinking what a happy fate it would be if the lightning should strike me dead. To die thus would be a blissful lot. But the thought of my children resalled me. "My children, my children," I whiselved, while the thunder drowned my cry. And then the lightning came so vividly and frequently that I was blinded, and able to see nothing. I shought of my eyes and clang firmly to a rock. Ever and again, as the tissues of the lightning quivered in uncessing glare, the thunder crashed and boomed with redoubled fury. As I stood thus alone, I thought of the many others who ware exposed like I was to the raging atorm; and at length I wept, for the first time since her death, I wapt. The hall best vehemently against my face, down which my tears were falling; but I was relieved. Never before had I realized what is life and what is death as in that one heat.

hear.

In the midst of the raging tumult I heard some one call my name. It was Rothfuss. Coming up to me, he said, "Thank God, there is a warm bed for you at home. Martella made me come and look for you."

He led me home. Everybody apprehended the most serious consequences from the shock I had sustained, but the result belied their fears. I slept soundly until the middle of the following day, and when I did awake, I felt that I was nerved with a new vigour.

The poetry which may be discerned here through the flatness and bad grammar of the translation is strangely marred by the introduction of the warm bed and the sound sleep obtained in it. Waldfried's morality and reflections are upt also to be a little trito. This is the more provoking because there are plenty of keen and valuable observations to be found in the book, but they are never to be found in the mouth of the estimable Waldfried. These, for instance, are some excellent remarks made by two of his sons upon the French character:—

"The French are industrious and temperate, and a people of whom it can asid, that it has a neble destiny awaiting it. They have a great desire to please, which makes them agreeable, and gives all their work the impress of good taste. They are fond of all that partakes of the decurative, whether it be a glittering phrase or a badge. If that which, from its very nature, rught to be general, could gain distinction for them—if there could be an aristocracy in republican virtue, I cannot help believing that Frenchmen would be unbending republicans."

"Yee," said Ludwig; "and they are humane also. The vain and concetted man is usually generous and communicative: he thinks he has so many advantages that he is glad to bestow a share on others, and is annoyed and almost angry if they do not care to accept his bounty; for he considers their declining it is a want of behef in his superiority, and is surprised to find that others do not hunger and thurst for the things that he regards as delioacies."

as delicario

There are some equally good observations made by a Baron von Arven upon the different qualities of the Prussians and the South

When I told him how repellant (sic) the angularity and coldness of the cussians had appeared to me, he said that this was just what he wanted to

Prinsians and appeared to me, he said that this was just what he wanted to talk to me about.

He had been exceedingly provoked at their cold-blooded manner. He had already determined to leave them; but after a while he had made up his mind that this sharpness, bitterness and decision were the forces that made them the men they were. Obedience is with them a habit that can made them the men they were. Obedience is with them a labit that can be depended on. We South-Germans are too soft and easy-going, and we sught to breathe some of the salt sea-sir that blows across that northern country. This want of attention towards others, this disregard of people's feelings, lay in the fact that they had no consideration for themselves. The French who, whatever they do, want to be observed and applauded, will be beaten by these men, whose whole power rests in their self-respect. We used to think the Frussians were braggarts; but now we found no trace of boastfulness, and, in spite of their constant victories, they took every precention as they advanced, and were prepared for defeat. Yes, orders describing the manner of retreat were issued before every battle.

The most interesting character in the book is Ernst, one of Waldfried's sons, whose wild disposition and unruly ways form an agreeable relief to his father's unwavering and uninteresting steadiness. Ernest distinguishes himself in the first place by betrothing himself to a girl named Martella, whom he finds living with an old woman in a hut in the forest; in the second by quitting his regiment at the beginning of the Austro-Prussian war, because he cannot bear to fight against his countrymen. In the characters of Ernst and Martella there is to be found much of the characters of imagination which was displayed in On the Heights, and characters of Ernst and Martella there is to be found much of the power of imagination which was displayed in On the Heights, and which in its wildest moods was always true to nature. There is much beauty in the description of Martella's untamed nature gradually yielding to the softening influences of home life when the is established with the Waldfried family. But Ernst dissense early from the story, only to resume a for a brief space, disting which he finds opportunity to fain a German regiment: the Franco-Prussian war, and to die on the battle-field martella's death follows hard upon his. It is difficult to take interest in the fortunes of the office persons of the story like with Martella not, only done his chief attraction of the thory disappear, but also what plot, passage accelled, exists in the book disappear, but also what plot, passage accelled, exists in the book disappear, but also what plot, passage accelled, exists in

a forester well known for his hatred of mankind, which is caused by the remembrance of early wrongs. Not a little of his bitterment at one time vented upon the folly of Waldfried in allowing his sen to be betrothed to so wild a creature as Martella, who in the sad is discovered to be Rautenkron's own daughter. This is a simple enough mystery, and there is nothing particularly new in it; but it is treated with a skill which makes the secret so exciting while it lasts, and its conclusion so unexpected, that the reader wishes for more of Martella and Ernst and less of Waldfried and his never-ending Diet. Herr Auerbach's last book may possibly be of great value as a series of political electches; but that is not precisely what one looks for in a romance. what one looks for in a romance.

There is now a singular paucity of talent for fiction in Ge whether in the form of drams, poem, or romance. Herr Freyteg, the only German novelist of the day who is at all well known in England besides Herr Auerbach, can hardly be called an imaginative writer. His most popular book, Sell and Haben, or as it was called in the English version, Debit and Credit, here unmistakeable traces of being modelled upon Dickens. Herr Reckländer displays at times a lively fancy, but neither he nor Herr Freytag deals with the more exalted regions of emotion. Herr American has done this, and there is proof that he could do so again in the passages of Waldfried. One is inclined to resent his having embedded these passages in a mass of political gossip, and secri-ficed his imaginative power to his love for detailing history.

BURBIDGE'S DOMESTIC FLORICULTURE.*

THE advance which has been made of late years in the floral adornment of our homes, whether in town or country, both externally and internally, is not easily measurable. But there are some evidences of it which it would be blindness to ignore. The sill of the prosaic such-window has been callvened by a box filled with of the process stein-window mas been surveyed by a lock made win a mixture of ferns, flowers, and succulent plants, whilst its sides are climbed by pretty trailers of infinitely varied colour and foliage. And whereas in other days there was little but ivy, Virginian creeper, jasmine, or an occasional rose to clothe the outer wall surface, and hide the stucco which so many householders have to endure and make the best of—though none in their sound senses would prefer make the best of—though none in their schud senses would prefer it to stone or brick had they to build again—such is the progress of floriculture as applied to domestic ornament, that how there is any number of climbing and creeping shrubs of diverse scent and blossom available for the disguise of uply or defective wall-spaces. Nor has the change been less within doors. The palms and agaves which decorate halls and corridors, the lvy screens and inner wall decorations, the arches, pyramids, spires, and festoons of fern and flower which grace the dimer-table, and restricted on the bouquets in the inver-places and the butture. and festoons of forn and flower which grace the diminer-table, to say nothing of the bouquets in the finger-glasses and the button-holes in the ceats, are as much a revolution as the March stands and the Wardian cases; and the time has come for an intelligent manual on these topics from a pen of experience. It is fortunate that Mr. Burbidge has taken up the subject, because his ruling principle is to inculcate that which is attainable by the many, and to discern grace and beauty in a simplicity which can be schieved with a moderate outlay. A study of his volume will furnish modest housekeepers with a number of hints for enhancing the charm of a refined home, and will provide the daughters of such charm of a refined home, and will provide the daughters of such homes with an occupation which may go some way to bandsh effectually the demon of ennui

Mr. Burbidge has divided his volume into three parts, of which the first relates to the culture of flowers and shrubs in or about the The window and the balcony, the hall and the sittingrooms, offer spaces for floriculture in frames, baskets, pots, bracksts, or glazed cases; and our author's first aim is to give counsels and cautions as to the propagation and nurture of plants suitable to each. The second part concerns the ornamental aspects of the subject, and the uses to which cut flowers, dried flowers, flowers in pots and vases, may be put in table or room decoration. The third contains a useful and methodized list of the plants most adapted for these purposes, with a brief account of the history, habitat, scientific and familiar nomenclature of each. Its value is akin to that of a glossary to a chronicle in the Rolls series; with the additional advantage that it can be studied in its

entirety, besides being used as an appendix of reference.

To survey the capabilities of Mr. Burbidge's subject by the light of this manual, assisted by independent observation of what the loving hands of many an English girl can achieve in her little "window nursery," is to verify the adage "where there's a will "window nursery," is to verify the adage "where there's a will there's a way." (liven the common sense to select plants that have had some hard-ning in pots out of doors, and to water them seasonably when selected, the window-box is as susceptible of its floral triumples as the shrubbery or the parterse. We are introduced in these pages to a mycologist whose area for experienced. duced in these pages to a mycologist whose area for experimental study of his fungi is a garden of 40 ft. by 30; a microscopist whose animal and vegetable world is a colony in a circular tank 8 ft. in diameter by 2 ft. in depth; and an artist whose designs in wood owe their graceful touches of vegetation to the tastefully filled "hanging basket, which is suspended beneath the skylight that lights his studio." Patience is as possible, if not as common, as inventiveness; and we are persuaded that it is in the power of all who will heed, as well as read, the divers plans detailed in this manual for propagating, charishing, and rearing window-flowers, to

**Domestic Florieniture, Window Gordening, and Floral Department. With 200 Engravisation on Wood. By E. W. Barbidge. Edinburgh and Landou: W. Blackwood & Sons. 2874.

ensure unfailing delights of vegetable form, shape, and colour with as much certainty as if they had the most roomy and sumptuous of conservatories. And if patience is lacking for the tedious process of taking and striking cuttings and so forth, we have but to resort to Mr. Peter Barr's ingenious invention of a heated propagating case, which has been so far tested as to prove its usefulness in striking cuttings, raising seedlings, and duly preserving tender and delicate plants. Those who prefer the less royal and compendious road will find help from the hints on manuring, sponging, fumigating, and watering their pets, which are given in detail in the first part; and they cannot lay too deeply to heart the sound advice of Mr. D. Thompson as to their treatment in winter, the gist of which is, "in wintering plants where fire heat cannot be applied, to keep them dry and give them rest in the latter part of autumn, and in winter; to cover them up loosely in frost, to uncover them gently and gradually in thaw; and to spare water except where it is actually essential to life" (pp. 64-6).

For the minute directions by following which the external window-box may be maintained "a thing of beauty and a joy" all the year round we must refer our readers to the book before us;

For the minute directions by following which the external window-box may be maintained "a thing of beauty and a joy" all the year round we must refer our readers to the book before us; but we may specially draw their attention to the woodcuts in pp. 90-1, which represent "a simple window-garden in winter," and "a winter balcony-garden." This is to regard the art at its most critical and difficult point. In spring and summer there are ways and means of perpetual variety and attraction, but here is grace attainable out of doors at a time and season when all nature might have been expected to be creeping into shelter. The following are the materials of the winter window-box:—

A plant of common ivy is planted at either end of the box and trained over a wire hoop; it forms a neat ornamental arch. The central part below is Retinospora ericoides, but any other tapering shrub, as Thuja surea, or T. Bonniana, may be used instead. The plants on either side are golden variegated Euonymus, which contrasts well with a blue juniper in the centre, or the fresh green lvy above. The surface of the box may be covered with any dwarf trailing plants, mossy Saxifrages, Arabia albida, or the variegated forms, Aubriatia purpurea, or the fresh green Sedum acre (common stone-crop), all of which are suitable. A few bulbs of crocus, snowdrup, scilla, hyacinth, aconite, may be inserted, as these will brighten up the box during the first sunny days of spring before it is time to plant summer flowers. In some cases the ivy arch may be left till summer, as it forms a fresh background for the canary creeper, or the Convolvulus major, besides contrasting well with the flowering plants below.

The winter balcony figured in p. 91 owes its charm to vases of the Yucca recurva as the central attraction, but surrounded by masses of fresh green ivy covering the front balustrades and springing from boxes of soil on the balcony itself. Either for the outside or the inside of a window there is no prettier or more effective adornment than the "hanging-basket," the larger the better, so far as proportion to the width of window or balcony will admit. Once suitably filled, one of these will last for years, with very occasional attention. For the exterior, the plants of the hanging-basket must be hardy, or half-hardy; for the interior, most of those tenderer subjects which do well in pots within doors are available. But even the former admits of ivies, Alpine strawberries, and spring flowering bulbs, with a substratum and surrounding of living mosses. Autumn is the best time for filling these baskets with spring-flowering bulbs; and the materials of which they may be composed are more various than one would at first conceive. Mr. Burbidge gives a choice of these, beginning with a cross-cut turnip or bestroot, and ending with a light wooden frame covered and ornamented by pine or fir cones.

But we must leave the department of culture to glance at the

But we must leave the department of culture to glance at the author's no less interesting hints as to floral ornament. These cover a wide field, and forcibly inculcate the need of taste, selection, and forbearance in the use of floral decoration. "Floral decorations," he writes, "are generally attractive when arranged by tasteful loving fingers at home, and if we grow our own flowers as well, we derive additional pleasure and enjoyment from their use as domestic adornments." There is indeed a world of meaning in the qualifying adverb "generally," for it is always needful to be able to distinguish a bouquet from a bow pot; and there are few diners-out who have not been outraged at one time or another by the crowding of opergree or centre-pieces with blossoms to the exclusion of foliage, or nice versa, or by the allotment of bouquets fitter for a jarvey of the old coaching days than for a guest in these modern days of delicacy in floriculture. Mr. Burbidge is full of valuable hints as to the mechanism of bouquets—a matter of not the less consequence because it does strike the uninitiated eye; he enlightens us as to the longer duration of the beautiful Eucharis, the Stephanotis, and the Gardenia, than that of the more popular and more widely affected Camellia. For foliage in bouquet, wreath, or training round the standards of the "March glasses" (March stands and March glasses are explained at pp. 135, 144), he recommends, in addition to myrtle shoots, the graceful feathery spray of the Asparagus scandens and Asparagus consunguines, or the glossy-leaved branches of the Boston vine (Myrsiphyllum, p. 122). This last is a notion from America, whence, too, our bridal parties might borrow is institution of a "Baidal Bell," which with our Transectatic cousins is "as in ispensable as the ceremony itself." Hung in front of the pier-glas, its framework "is of wire, and it is made up of camellias, subcroses, ca.nati ms, all pure white. The balls are made of the sun showers, and lave on them a mone gram in red, blue, or gree

flowers, to garnish each subject as far as possible with its own leaves. He also justly discourages the blending together of fruits and flowers in decoration, as being an inhospitable mode of tying the hands of your guests. In such a case it might be as well to have sham fruit. But we think he is too tolerant of the absurdance of illusion that the palms and cycads which adorn the festive board are growing out of the mahogany, which in point of fact has been removed to make way for a perforated deal substitute. We are gled to learn that the device is not yet generally adopted, for it is hard to see what objection there can be to the graceful and ornamental forms of earthenware now turned out by the potter. Even if, however, there be an objection to nude pots, it is very easy to make them presentable by the primitive and Adamical leaf-drapary, which is far better than gaudy paper, and infinitely superior to the silly table-dodge. We could have wished that some notice had been taken of the general tendency of the fashionable glass flower-vases for table use to be too thin-stemmed to admit of a due amount of internal washing; though it seems ill-natured to hunt for omissions when so much useful information is afforded. One of the happiest uses of glass stands on the table is to hold wild and cultivated grasses, and here we may see how taste can achieve triumphs of decoration at a very trifling outlay. A new and strange field is opened out in the mixture of skeletonized and dried foliage with grasses in bouquets and decorative vases. The processes of drying and skeletonizing which are here given have been borrowed, as the author states, from the pleasant pages of the Garden. To return for a moment to the living flowers, which most persons will prefer to see on the table, it is sound advice to prefer reds and whites to hues which are less effective by candle-light, such as blue, purple, lilac, or mauve.

most persons will prefer to see on the table, it is sound advice to prefer reds and whites to hues which are less effective by candle-light, such as blue, purple, lilac, or mauve.

We must briefly notice the practical description of plants which makes up the concluding part of Mr. Burbidge's volume. Alphabetical in form, this description might strike the reader as wearisome of perusal; but its use will be found whenever the student of floral decoration requires to inform himself (or more often perhaps herself) of the available representatives of a particular class of flowers. Say, for instance, that we are in search of hardy climbers to cover a trellis, a balustrade, or a window-side. Nothing that we know beats the Virginian creeper, but it may be that we want a variety or a contrast. For the first this list will give us Ampelopsis Veitchii tricuspidata, a creeper with three-lobed bright green foliage, changing in autumn to a purplish crimson, and for the second the bold, large-leafed, bright green Aristolochia Sipho, a climber which fully justifies its name. A wider search will furnish hardy climbers in the North American Adlumia purpurea, which may be grown from seed in spring, and in blossom is not unlike the Dielytras; the Akebia quinata, a five-lobed hardy climber with dark foliage and clusters of deep purple flowers. Less known perhaps is the tolerably hardy, quick-growing, and sweet-scented climber from the Andes, with fraggent greenish-white blossom and large heart-shaped foliage, named Boussingaultia Baseloides (p. 242); to which we might add the Cissus antarctica, the Oobeca scendens, and divers kinds of convolvulus, to say nothing of a very useful climber which has been long known to us, but has gone somewhat out of fashion, the hardy and much to be commended Ecremocarpus scaber. After all, however, it would be hard to oclipse the common white jasmine (Jasminum officinale), a plant of unmatched perfume which is less prized and planted than it

Reverting for a moment to the tenants of the window-box, we see that Mr. Burbidge recommends as such the scarcely yet appreciated Cape bulbs, Ixia, Sparaxis, Tritonia, &c. In a proper compost on a sandy bottom they will do well in the open air, and they appreciate a dry airy atmosphere. Any one who happened to see Messrs. Hoopers' stand of these at the Horticultural Society's first show at South Kensington last year will have had the amplest evidence "that a good collection of the flower spikes of these bulbs will hold its own as lovely flowers against all comers, orchids not excepted."

not excepted."

Mr. Burbidge's book is meritoriously free from fine writing. Though flowers and their culture sometimes engender sentimentalism, he very rarely gives vent to such fancies as the fitness of trailing say to wreathe "the portrait of a departed friend." At the same time he writes well and sensibly. Our only query is as to the authority for the epithet "short-lasted" (p. 237). The woodcuts are excellent and apposite, and, in short, the book is a valuable accession to the horticulturist's library.

AMERICAN LITERATURE.

VERY few American families retain for any length of time a high political position. If we were to seek the representatives of those who bore a chief part in the Revolution we might find them, no doubt, despite the breaking up of estates and the consequent rapid dissipation even of the largest fortunes, among the social aristocracy of the older States; but, except in the South, the very fact of their hereditary reputation tands to bar rather than to amount their way to a public carear. Of the great names belonging to the first generation of Federal statemen and soldiers in the Southern States, there is but one that has been constantly represented in the public life of America, or since because are at this moment known beyond their own section.

of one of his most distinguished Bentanara, was represented in the second struggle for independence by the figurest of the Virginian genery and the greatest of Confederate soldiers; while not a few of the best names in Georgia and the Carolinas figure equally in both the great wars in which their States have been engaged. But in New England the one family which has held a distinguished place in subtic life through three generations is that of Adams, refresented in former times by two of the most eminent, if not most popular, Presidenta, and more than one of the most respected ditizens of Massachusetts. This peculiar distinction, as well as his own political eminence and high personal reputation, lends an especial integest to the memoirs of the second Adama", edited as they are, or rather compiled, by the mincipal representative of the family in the third generation, the late Envoy of the United States at the Court of St. James's. John Quincy Adams was even a more and inspect of the more memorable circumstances in which the latter played a leading part; and he stands in many respects among the most remarkable figures in American history. The elder Adams was over-shadowed by several of the contemporaries with whom he was brought into et distinguished Neute o for Indonesia by several of the contemporaries with whom he was brought into closest relations; he was a civilian in a time when everything was staked on the issue of battle, and all eyes were fixed on the men of the sword—a diplomatist absent from his country during a critical part of her struggle for independence. It is rather to the fact that Massachusetts has been the chief historian of the war, and has had good reason for exaggerating and colouring her own part therein, than to his real eminence as an actor in the great drama, therein, than to his real eminence as an actor in the great drama, that he owes his present rank on the file of revolutionary heroes; while even as a Federalist politician he was less important than Hamilton, and, if the latter had lived to attain the Presidency, the former would have been reduced to an altogether secondary place in the early history of the Union. John Quincy Adams, on the other hand, by force of character and dignity of temper, won for himself a place quite apart among the public men of his time. After his retirement or rather ejection from the Presidency, he, alone among American Presidents, returned to a humbler but not less useful, and perhaps hardly less powerful, place in public life. He stooped to sit in the House of Representatives, and to wield there a moral authority even greater than Peel in his last years there a moral authority even greater than Peel in his last years held in our House of Commons, in many respects above party, yet on most questions espousing what was then the cause of the minority, and giving weight and dignity to that cause, too generally disgraced by the intemperance of Abolitionist demagogues, by the stern and determined stand he made, in the name of constitutional principles and public liberties, against the re-taliatory encroachments of the exasperated Democrats. No other President exercised any influence on public affairs after his resignation. Mr. Adams was, to the end of his life, a high authosignation. Mr. Adams was, to the end of his life, a high attino-rity on the great constitutional issues that were coming to the front in the struggle of factions, and one to whom, had serious peril threatened them while he lived, the whole nation would naturally have turned, not perhaps for unbiassed, but for wise and high-minded, counsel. He belonged moreover to the earlier and nobler class of American statesmen; those who were at once gentlemen by birth and education, acknowledged as equals and fit associates by the diplomatists of Europe, and competent judges of the popular needs and tendencies of a country ever inclining more and more to a pure social democracy. He was the last of the elder series of Fresidents who were selected exclusively from among this class of statesmen. From his fall dated the sively from among this class of statesmen. From his fall dated the ascendency of wirepullers, the doctrine that "to the victors belong the spoils," and the choice of Presidents either from among the rougher class of soldiers or the second-rate politicians "who had no record" that could offend any section of their possible supporters. The present volume deals only with the earlier part of Adams's life. It treats, first, of his boyhood, a great part of which was spent in accompanying his father on his European missions, and which was prematurely terminated by his introduction to the work of the Secretariate and to the filts of political society, to which even the ordinary subalterns of an political society, to which even the ordinary subalterns of an important embassy, and much more the son of its chief, always have access, and which was in those days brighter and more attention in a social point of view then at present. We have part attractive in a social point of view than at present. We have next his return to America, his preparation for the Bar, his participation in political controversies, especially those arising out of the con-duct of Genest, the first ambassador of the French Republic to in political controversies, especially those arising out of the conduct of Genest, the first ambassador of the French Republic to the United States, and the consequent notice of Washington, then President, which led to his selection of young Adams as American Minister to the United Provinces, at that time in the agony of a revolution enforced by foreign interposition, and his entrance by this road into a political career which he never quitted till his death. While in Holland Adams was deepatched on a special mission to London, which occupies a considerable space in the volume. For, on his original appointment, the young Minister began to been a regular and elaborate journal, a practice which he never discontinued, and which has furnished the greater portion of the present work; and his interest in England, in English politics, and in the society of Englishmen of both parties, led him to record at great length his social and personal experiences during his stay in London. His mind was evidently bitterly prejudiced, and it is obvious that his party helling for the French Republic led him yearly to overnite the power of the English Op-

position, which fall to pieces through internal discensions, and became contemptible and odious in the public eye as soon as it embraced the cause of the national enemy. But the diary of an American visitor to London in the days of Pitt and Fox, containing full accounts of important and intimate political conversations, as well as of the impression made on his mind by what he saw of English life, scenary, and society, cannot but be interesting to Englishmen; more so than the account of his mission to Portugal and Prussia, and the minute diary of his work in the Senate of Massachusetts, and subsequently in that of the United States, which occupy the remainder of these 550 large octavo pages, and bring us down to the year 1809.

bring us down to the year 1809.

Among the most important, but not certainly the most readable, works on our list is a collection of reports, maps, diagrams, sketches, and plans relating to the various routes proposed for the Canadian Pacific Railway*, and the country through which it has to pass. Beginning with Lake Nipissing, a comparatively small piece of water north of Lake Huron, which is taken as representing the terminus of the Canadian and Atlantic system of railway communication, the engineers employed have explored great part of the country lying between a line drawn from the southern extremity of Hudson's Bay to the Great Lakes and the Pacific Coast in the neighbourhood of Vancouver's Island, and have marked out, and neighbourhood of Vancouver's Island, and have marked out, and more or less completely surveyed in outline, six possible routes, not absolutely distinct in all parts, but affording a choice of all the most important points, and in the most difficult regions. They divide the country into three parts:—the woodland region immediately west of Ottawa, and north-west of Lake Superior, extending from Lake Nipissing and its neighbourhood on the one hand to Lake Winnepeg, the Red River, and Lakes Manitoba and Winneposess on the other. From these last the prairie region extends westward to the Rocky Mountain chain, which in these latitudes is subdivided, the main, but lower, chain following the general course of these mountains, and keeping at some distance inland, the Cascade chain lying in the immediate neighbourhood of the coast. Between these two chains there is a plateau, generally higher than the passes, by which apparently, if the maps may be trusted, a railway may be carried through the mountains themselves. The woodland region apparent a present to a strengthness that the second contract the second land region appears to present no extraordinary obstacles; the prairie region is rather easy than otherwise; and it does not seem that the passage of the Rocky Mountains or of the plateau or mountain region offers any difficulties which, considering what has been done in the Alps, and in the United States immediately to the southward of this line, ought to slarm engineers. We should judge that the main difficulties are in the ascent from the Pacific shore to the passes of the Cascade chain, which lie in some places almost close to the inlets of flords of that strange shore-line, not a little resembling the glacier-formed coast of Norway and of Groenland. To make the head of one of these deep and sheltered inlets the landing-place of ships and the starting-point of the line would obviously, if practicable, be convenient; but it is here that the explorers appear to recognize their chief difficulty, and to doubt, not exactly whether the thing can be done, but whether it can be done at a cost which the Government and Parliament of the Dominion will sanction. A more glance at the map suggests that it would be far easier to perfect the line of water communication, which seems to be broken only in one or two places, than to carry a railway right across some two thousand and seven hundred mile of territory almost entirely uninhabited, and much of which has never been traversed till now. But, to say nothing of the probability that the water routes may be entirely closed for six months out of twelve, the Canadian Government is bound by the terms of union with the Pacific colonies to complete a railway within a given and not very long period, and seems to be thoroughly de-sirous to accomplish its undertaking loyally and exactly. The sirous to accomplish its undertaking loyally and exactly. The report of the chief of the expedition contains some important facts respecting the resources of the country thus annexed to the Dominion, which the railway will knit effectually to the general system of the Empire. To say nothing of Columbian gold, Vancouver's Island contains coal and iron, lying together in quantities sufficient for the needs of a gigantic trade; and the flords of the neighbouring coast are such that our largest ironclads might sail inland eighty miles, right into the heart of the Cascade chain. The country generally offers greater attractions to settlers than many parts of the United States which have nevertheless been fully settled, and the water-routes of which we have spoken, if not fit substitutes for a railway, might be so far completed by light portage lines, and so forth, as to assist in promoting immigration shead and in advance of the railway, if once it was understood that the railway was coming.

coming.

A new edition of Professor Agassiz's Lectures on the Structure of Animal Life†, if here and there an argument may seem to be modified or rendered questionable by some new geological discovery, or to require alteration to meet new statements of the Darwinian theory, still retains all its original interest and value. Its purpose, we may venture to remind our readers, is to show that the geological order in which creatures appeared on the earth is inconsistent with

^{**} Canadian Pacific Railson. Sandford Florang, Engineer-in-Chief.

Report of Progress on the Explorations and Juryeys up to January 1874.

Ottawa: M'Lean, Roger, & No. 1. add 1: Trübner & Co.; Sampson Low

[&]amp; Co. 1874.

† The Structure of Lineal Life. In Lecture, delivered at the Brooklyn Academy of Music in January and February 186a. By Louis Agussic, late Director of the Museum of Comparative Zoology. New York: Scribner, Ariastropy, & Co. Louisia: Tribner & Co. 1874.

the theory of enecession by descent; the highest development of one class being followed in time by the lowest development of another—that is, by something not higher, but lower in the general scale of creation, than itself; in short, that creation moves, not in a direct line, but in a series of parallel lines. Possibly Mr. Darwin would admit nearly all of M. Agassi's statements without allowing that they weaken his case; but as the counter-statements of a naturalist equal in authority, they are certainly worth reading in connexion with Mr. Darwin's publications.

If we rightly understand the Ansesthetic Revelation, which is stated in terms better suited to the mysticism of mediseval alchemists than to the plain and painstaking lucidity of modern discoverers who really have something to relate; if we appreciate the "gia*-of philosophy" hidden somewhere or other in this thin volume armidst pages on pages of verbiage that can bear no relation to the gist of anything—we incline to fancy that the writer means to convey that his experience of chloroform has taught him that the intelligent Ego (not that he uses a word conveying so definite any idea) can be temporarily deprived of the consciousness which an idea) can be temporarily deprived of the consciousness which is its very essence; and that therefore there is no reason to believe in its immortality. There is nothing on this subject, however—nothing of argument or of fact, of physiology or metaphysics—which is not familiar to every one who has ever thought about the action of anesthetics at all; while there is a mass of irrelevant rubbish that will prevent any one but a critic from ever reaching the gist of the book at all, small as it is.

Another circle-squarer, ignorant as usual that the proportion of the circumference to the radius has been ascertained and shown to belong to the class of incommensurables and represented by an in-terminable decimal, sets to work to solve the old problem in four terminable decimal, sets to work to solve the old problem in four thin volumest, a supplement, and a series of plates, and indigrantly appeals to the public because the men of science will not listen to him. Generally, these crotchet mongers have hit on some very simple and easily disposable absurdity; but Mr. John Harris bewilders himself through a lengthy series of demonstrations equal in extent to a couple of books of Euclid; and if he fails to fix the attention of mathematicians the public at least are safe; the absurdity and the refutation will alike fly over their heads.

The same publisher mints what appears to be an official Report

The same publisher prints what appears to be an official Report on the Fossil Plants of the Lower Carboniferous Fornations of Canada 1, andressed by Dr. J. W. Dawson, F.R.S., to Mr. Selwyn, the Director of the Government Geological Survey of the Dominion.

Dr. Matthews, Professor of English Literature at Chicago University, publishes a collection of essays § rather above the average of those that appear in magazines under similar titles. which gives its name to the book is a misnomer, for several of the "great conversers" whose fame it records never joined in conversation at all, though willing and indeed eager to talk, and talking excellently, if nobody else presumed to claim a share of attention. "Epigrams," "Popular Fallacies," "Is Literature Ill-paid?" "The Battle of Waterloo," and so forth, are all good enough to while away half an hour in train or waiting-room, and good enough therefore for a magazine, but on not a single topic tracted in this values that the state of the good enough therefore for a magazine, but on not a single topic treated in this volume has the writer anything to say which he or any one elso could wish to remember. Why, then, take them from their native oblivion in order to collect and republish them as a book without cohorence, and without the original excuse which

the character of magazine literature affords?

The World on Wheels || is a lively but not very instructive sketch of different methods of modern locomotion—stage-coaches, horseback journeys, railways, ships, steamers, with the different scenory that belongs to each; a very slight and sketchy book, which we should have supposed to have been written for the sake of the illustrations, had the latter been worth publication on their

Messrs. Putnam's Handbook of the Statistics of the United States ¶ is rather an historical and political than a statistical work. Almost the only statistics it contains are those of receipts and expenditures. It is too meagre to be valuable as a book of referexpenditures. It is too meagre to be valuable as a book of account once; and it throws too little light on the kind of subjects on which the public wants information to be valuable as a hand-book. Saxe Holm's Stories ** belong to a class of books more numerous, and we think better, in America than here; collections of short

tales, often by authors of established repute, either moral, sentimontal, or simply illustrative of striking points of American life. Most of them are "ower gude for banning and ower bad for blessing"; but even so they are infinitely better than nine English novels in ten, and they have the invaluable merit of being much shorter. The present volume is a superior specimen of its class.

SPAIN.

THE partisans of either side in the Spanish Civil War have lately occupied with controversy an interval during which military operations seem to have been suspended. Foreign supporters of the Carlist cause have probably endeavoured to impress on their principals at the seat of war the inexpediency of bloodthirsty proclamations and of the execution of prisoners in cold blood. It is perhaps for the purpose of humouring vulgar prejudice that Dorregaray's menaces against the enemy are declared to be forgeries, and that the Republican prisoners who were condemned to death after the battle of Estella are found to demned to death after the battle of Estella are found to have been engaged in burning houses for the purpose of destroying their inmates. It may be admitted that the evidence of the atrocities attributed to the Carlists is not unimpeachable. Spanish journalists are in the habit of using strong language; and if facts damaging to enemies are not fortherming, it is not unlikely that they may be invented. The main presumption against the Carlists is derived from their traditions and from the equanimity with which they have allowed statements of their cruelty to be circulated and believed. It seems hopeless to ascertain the truth of the conflicting accounts of the latest events in the Civil War. Don Alfonso forced his way into Cuenca after a contest of two or three days with a scanty garrison, and it is asserted that his troops were deliberately allowed after their victory to sack the town. A force sufficient for the relief of Cuenca was within reach at the time when the disaster might have been prevented, but two officers of rank took the opportunity to quarrel as to their right to command, and quently no movement was made until the town had been taken. The captors made no attempt to hold the place; and on their retreat they were attacked and defeated by General Lorez Pinto, with the loss of all their prisoners and booty. Great alarm had been caused at Madrid by a Carlist victory obtained in the province of Valencia to the senth-east of the capital; but the flight and defeat of Don Alfonso indicate the weakness of a force which probably consists. only of undisciplined volunteers; and perhaps consists only of undisciplined volunteers; and perhaps little attention is paid to the assertions of the Carlist press, that no such victory had been obtained. One good result of the affair at Cuenca is the appointment to high com-mand of two of the best officers at the disposal of the Government. General Lopez Dominguez had the credit of reducing Carthagena; and it is supposed that, not withstanding his near relation to Serrano, he has since been kept in the background on account of his sympathies with the son of Queen Isabrila. General Pavia sternly repressed a series of local rebellions in the Southern cities of Spain at a time when the country had been reduced almost to utter anarchy by the blunderers and traitors who exercised power at Madrid between the abdication of Amadeo and the accession of Castelar to effice. Pavia is also the founder of the actual Provisional Government which, with all its faults, has for some months preserved order in the interior, and which has made some progress in the indispensable work of reorganising the army. Government. General Lorez Dominguez had the credit ing the arm

ing the army.

Content Pavia has, like military commanders in several continuous, turned a Legislature out of doors at the point of the hapenet, with the singular good fortune of neither incurring nor deserving any moral blame. The Republican Spanish Cortes, having been elected by a facility minority, proved itself utterly incompatible with the hatchlishment of a regular Gevernment. Outstall had been enabled patricially to restare objects.

nearly the whole term of his Administration, and, as soon as he imprudently allowed the Legislature to reassemble, he was left in a minority. General Pavia, as Captain-General of Madrid, seised the opportunity of saving the country from imminent ruin, and, having dismissed the Cortes, he refused to accept Ministerial office. At a later period he resigned his military post because the Chief of the Executive dismissed the Ministers who represented a coefficient of parties. There is reason to hope that sented a coalition of parties. There is reason to hope that General Pavia, when he is provided with the necessary force, will prosecute the campaign against the Carlists in earnest. If peace were once re-established, it would matter comparatively little whether the Provisional Government were maintained for a time, or the Bourgon Pretender were placed on the throne. For the present, at least, the country must necessarily by governed by the military chiefs who can insure the obedience of the army. As President of the Republic, or as Minister of a young and titular King, SERRANO or his successor will not allow themselves to be hampered by incapable and factious Assemblies, although for particular purposes they may occasionally summon a Cortes consisting of decile partisans. A real Republic has probably become, during the present generation, impossible, through the follows and crimes of the Republicans themselves; but the title which the Government may assume is comparatively unimportant. present Government appears to be impressed with the urgency of its primary duty. Orders have been issued for calling out reserves to the number of 125,000 men; and although experience has shown the inefficiency of raw recruits, the troops in the field must be gradually acquiring habits of discipline, and after an interval it may be found possible to overwhelm the Carlists by force of numbers

One crime which has been undoubtedly committed by the Carlists was at the same time a blunder. Their applogists loudly assert that Captain Schmidt, who was shot by judgment of a court-martial, was justly condemned because he was found within the Carlist lines. utterly incredible that a German officer of reputation, engaged as a newspaper Correspondent with the national army, should have acted as a spy. In the rapid retreat from Estella it was highly probable that a non-combatant might be unable to accompany the army to which he was attached; and that he might therefore be taken prisoner within the limits of the positions which had been reoccupied by the pursuing troops. It will be impossible to convince either his countrymen or impartial foreigners of other nations that Captain Schmidt was put to death for any other reason except that he was a German and a Protestant. There are fanatics in the Carlist army who probably believe that the German Government is the chief enemy of the orthodox Church, and to a Spaniard an alien is almost equivalent to an enemy. The murder of an officer who voluntarily exposed himself to the risk of war would not perhaps furnish a sufficient reason for reprisals or for intervention, but the German Government has a long arm, and it was rash to incur its just displeasure and resentment. To the present time the Government of Bertalina carefully abstained from participation in the domestic last of E. ain. A German les of L. ain. A German naval officer who took posses the hands of the tasurgents was promptly disavowed and recalled. The rumour that a German candidate for the Crown of Spain was again to be proposed originated in French ingenuity, and it found little credence even in Spain. It is now announced that a Gern μ squadson is again to crusse in Spanish waters, though the additional

statement that it will intercept the Carlist supplies is probably unfounded. Although there is no chance of military intervention, it is probable that the diplomatic influence of Germany will henceforth be used in support of the Government of Madrid. One measure which would add greatly to the strength of the national Government would consist in diplomatic recognition by the Great Powers; and if Germany were to propose such a measure, it is highly probable that other Governments would be ready to concur.

After the abdication of King AMADEO the prospects of the Republic were wholly uncertain; and as all the Governments of Europe agreed in withholding recognition, it may perhaps be assumed that they had sufficient reason for their common action. A nominal Republic has now lasted for a year and a half, and the Provisional Government of Ser-RANO for six or seven months. It is uncertain whether any definitive Constitution or form of government will be established for many years; and Marshal Skenano can produce the best of all credentials in the acquiescence of all parties outside the district occupied by the Carlists in his exercise of authority. If the Government of Madrid were formally recognized, the Carlists would be reduced to their true position as rebels; and although the policy of interference which prevailed thirty years ago has been wholly abandoned, only a few religious and political enthusiasts, except perhaps in France, fail to desire the early suppression of the insurrection. It is a sufficient reason for desiring the triumph of the national Government that the Carlists have no charge of complete and altimate the Carlists have no chance of complete and ultimate success. It is better that the wrong side should win than that civil war should be perpetual; and in this case the Government of Madrid is not on the wrong side. It may be hoped that there is no foundation for a rumour, not in itself improbable, that Marshal SERRANO has been advised by the English Government to facilitate recognition by convoking a Cortes to confirm his title. Constitutional principles recommend the reference of all important questions to representative Assemblies, but Spain is not in a condition to profit by constitutional principles, because, among other reasons, the Cortes which are successively elected represent little except the policy and interests of the party in power. The real reason for recognizing a Government is not that it is constitutional or free, but that it possesses a de facto existence. Lord Palmerston was justly blaned for the undue haste with which he recognized the Presidency of Prince Louis Natoleon after the expulsion of the National Assembly in December 1851; but, if he had waited for two or three months, the approval of the vast majority of the French nation would have rendered recognition both justifiable and necessary. Foreigners ought, while they acknowledge indisputable facts, to avoid all responsibility for the policy of Governments over which they have no control. If the Spaniards think fit to submit to a Government which was appointed by an officer who had just before turned his Cortes out of doors, it is not the business of Englishmen to question their discretion. If the German Government proposes the recognition of Marshal SERRANO'S Government, Lord DERBY and his colleagues ought to listen favourably to the suggestion. The consent of France, though much to be desired, is not absolutely indispensable.

PUBLIC WORKS IN INDIA.

THE debate in the House of Commons on Lord Salis-L BURY'S Bill for appointing a member of the Indian Council specially charged with the supervision of public works seemed on the point of being diverted into a side issue of very minor importance. Mr. FAWCETT wished the Bill to stand over until Parliament had been informed whether Lord Northdrook approved of it. If this meant that one more opinion was to be added to that of statesmen of Indian experience, the House was invited to delay a Government Bill for a very small object. If it meant that the opinion of the Governor-General was to be set against that of the Secretary of State, the House was invited to abandon such slight control over Indian affairs as Parliament possesses. As it happened, those who were in Lord NORTHBEOOK'S confidence were able to assert that he did

of STATE must judge for himself. Although, how-ever, the debate turned too much on the question of what Lord Noetherous's opinions might possibly be, yet sufficient attention was paid to the main issue to strengthen very considerably the case on which Lord Salisbury relies. On the amount expended on public works, and on the degree of wisdom with which that expenditure is directed, depends the security or insecurity of Indian finance, and a sound financial position is the key of Indian finance, and a sound financial position is the key to good government in India as everywhere else. The Secretary of State is responsible for the good government of India, and he has to see that the financial position of India is sound. But the expenditure on public works is continually deranging the financial position of India, and then, when the Secretary of State wants to see why things are going wrong, he finds that no one is responsible. There is no particular person on whom blame can be laid, or who can be instructed to persovere in one uniform policy when matters involving a vast variety of detail have to be dealt with. Perhaps Lord Salisbury scarcely insisted with sufficient strength on this aspect of the Bill when he spoke on the second reading. At any rate, Lord NAPIER in his letter to the Times failed to notice what was the real justification of the measure, and of the mode in which it has been introduced. It is really a measure for the protection and benefit of the SECRETARY of STATE, who requires a new piece of machinery created for him if he is to discharge with effect the duties of his position. It was not for him to be guided on such a point by his Council in England, or to be guided too completely by his Council in England, or to be guided too completely by the opinions of any one Governor-General. He appeals to Parliament to help him to discharge duties which Parliament has imposed on him, and the question lies between the body that imposed the responsibility and the Minister on whom it is laid. That Lord NAPIER should have written his letter at all, and especially that he should have written a letter to be printed just on the eve of the discussion in the Commons, seems to have been viewed with considerable displeasure in Ministerial circles. The proper place for a poer to tell the public what he has to say on a Bill is, no doubt, the House of Lords. But then, as Lord Napier explains, the hour was late when the Bill came on, and the House was perfectly empty. Peers would not bother themselves about going down at an hour when they are more pleasantly engaged to hear a dreary debate about India. Those who wish to speak are discouraged and disheartened at the gloomy silenge and length constitute that it before the gloomy silence and lonely emptiness that is before them; and they know that so little attention is paid to debates in the House of Lords when the House is empty and the the House of Lords when the House is empty and the hour late, that the reporters cut down all that is said into a few brief and almost unmeaning sentences. To speak in the House of Lords under such circumstances is the very worst way which a peer well acquainted with a special subject could choose for gaining the car of the public. To get a letter in large print into the Times is the very best. It is not unnatural, though it is not very decorous, if a peer prefers the course which Lord Napier adopted; and if blame is to be bestowed, it must not be bestowed on Lord Napier is to be bestowed, it must not be bestowed on Lord NAPIER alone, but the House of Lords must come in for a share, and a very large share, of it.

As Lord George Hamilton observed, the best justification of the Bill was to be found in Lord NAPIER'S description of the present system. A scheme for public works is conceived by the Local Department of Public Works and commended to the Local Government. The Local Government sanctions it, and the Local Executive officer prepares estimates, which are corrected by the Superintendent Engineer. The scheme is next sent to the Public Works Department of the province, and this department sends it on to the Council of the province. It is then submitted to the Supreme Government, and, if approved, is referred to the Consulting Engineer and Secretary, who are empowered to sanction it. As the Under-Secretary asked, if the scheme turns out to be a bad one, who of all these numerous authorities is to be held responsible? No doubt the Vicercy is in a sort of way responsible, but the responsibility at taching under such circumstances to a person like the Vicercy is merely nominal. He has no one who is responsible to him, and if the Government at home approves of his policy conceally it account to the conceal to the conceal to the conceal to the concean to the not wish to bias in any way the decision at which Parlia-ment might arrive. It may be conjectured that his own leaning was slightly against the measure, but that he felt how much was to be said on both sides, and he thought this peculiarly a case in which the Secretary

common piece of Indian history to which Lord Grores HAMILION referred. Some waterworks at Madras had proved a great failure, and the Duke of About thought he had hit on the right person to reprimand, and wrote a severe censure on the Executive Engineer. But the Madras Government wrote back that at the time when the Madras Waterworks project was brought forward there was no one whose special duty it was to examine its several bearings, and to take care that all requisite information was duly obtained and reviewed. The Duke of Aroul wrote back in unfeigned astonishment to say that he had been under the impression that the special duty referred to devolved in all cases not on one person only, but on a whole series of authorities. The Madras Government replied that this was exactly what it meant. The special duty did fall on a whole series of authorities, and so, if it was neglected, there was no one person to blame. The same thing happens from first to last; there is a whole series of authorities to blame, so no one is to be blamed, or cares in the least whether a scheme turns out ill or well. What Lord Salisbury insists on is that there shall be some one to blame, above all some one who is placed high enough to perceive the intimate connexion between Indian finance and Indian public works. It is quite true; that in India the most carefully-prepared estimates often prove erroneous, either through the convulsions of nature or through changes in the price of labour. But, in the first place, a high official on whom real responsibility develved would be at liberty to show real responsibility devolved would be at liberty to show that causes had intervened which could not be foreseen, and that therefore no blame was to be attached to him or to any one else; and, in the next place, a member of Council who has before him the general scheme of Indian finance will be aware that he need not think of sanctioning an expenditure on public works without leaving himself a margin on which he may draw, if unforeseen causes of increased expenditure should unfortunately show them-

Lord NAPIER was much disgusted with the thought that the new member of Council and the Secretary of the Public Works Department might come into collision, and then he wanted to know what was to happen. It might be the case that if the member of Council was an engineer, tho Secretary might be the abler engineer of the two, and thus his superior competency would put to shame the inferior capacities of his chief; or, if the member of Council was a civilian, he would be at the mercy of his nominal subordinate. Something of the sort nappens constant, land. A new Minister is put at the head of a department has known nothing, and he has to deal with a permanent official who knows everything about his own office. If the Parliamentary chief is at all fit for his place, he listens to the permanent official, uses the information he gains from him, asks for his friendly co-operation, and then decides for himself. Exactly the same thing will happen in the Public Works Department of India if the right man is appointed to the new post. He will learn all he can from the Secretary, and yet keep the Secretary in his proper place. If of all men alive the Secretary is the best man to judge what should be the expenditure on public works, and in what way the money should be expended, he ought clearly to be the new member of Council. If there is a better man to be found, the Secretary must be content with his subordinate posi-tion. But it is not really the function of the new member of Gouncil to show a superiority in questions of engineering over every one else in India. His business is to see that Indian public works do not derange Indian to see that indian public works do not derange Indian finance. He can scarcely be too cautious. Every speaker in the House of Commons debate protested against extravagant expanditure on public works. It is now recognized that India is a very poor country in preportion to its population, and that the limits of possible taxation have been apparently reached for the moment. deen apparently reached for the moment. India cannot differed failures in gigantic engineering undertakings. Mr. Fawerr certainly went too far when he mid that it was as unjust to tax the whole of India to make up a deficit caused by improvident expenditure in any one part as it would be to tax the whole of Integer to make up a deficit caused by improvident depositions in Russia. When money has to be expended by the State, either for the general purposes of State, or in the construction of the railways on the North-West frontier, een apparently reached for the moment. India cannot

which are nothing but instruments of war, all India must pay just as all India pays for the army. When, again, money has to be laid out to avert calamities such as famine which the State alone can avert, all India must pay because every part partakes, or may need to partake, of the benefits of this species of insurance. But when a work is undertaken because it is supposed that it will add to the wealth of a particular locality and pay its own expenses, the locality that is benefited ought to make up any deficiency which may arise from an incorrect estimate of the probable return for the expenditure. If it is said, as in many cases it may be said truly, that there is no way of making the benefited locality pay in this case, then this is only an additional reason for taking care that money shall not be spent on works that are supposed to be likely to be reproductive until such evidence has been accumulated of their probable reproductiveness as will establish that, if a responsible official errs, he has only erred where the most prudent man acting on the amplest information might have made the mistake. What hard Salesbury wants is to have one definite person who will have to establish this if he is to escape censure; and if anything can save Indian finance from being deranged by Indian public works, the creation of such an official ought to do much to bring about a result which is so very desirable.

FRENCH FINANCE.

FOR many weeks it appeared as if there was a defice in the French Budget of the millions will be a deficed in T the French Budget of two millions sterling which it was impossible to fill up. M. MAGRE insisted that it must somehow be filled up, and the Assembly quite agreed with him. Every one concurred in the opinion that a deficit of two millions was not a thing that could be tolerated. But as to the mode in which it was to be filled up there was an infinite diversity of opinions. M. Maune racked his brains to invent new taxes or additions to old ones, but in vain. The difficulty was that the returns seemed to show that to augment the indirect taxes would be simply to check consumption. Consumers had only a certain amount of money to lay out, and if they were asked to pay more for each article, they would simply buy fower articles. M. Maune therefore conceived that to increase the direct taxes was the right method, or else to impose a new duty on something like salt which the poorest people must buy. The Assembly would not fall in with his schemes. It thought that the direct taxes were already exceedingly high in proportion to the indirect taxes, and it feared the inevitable unpopularity which would attach to those who increased the duty on salt. The objections to every tax proposed were sound and intelligible, but then the deficit remained uncovered. M. Maone professed himself utterly unable to answer the question how it was to be covered, and therefore the Assembly proceeded to answer it for him. It adopted a proposal made by M. Wolowski, that two millions should be procured by the easy method of not paying it. The State had undertaken to repay the Bank its advances during the war by yearly instalments of eight millions sterling. If the Bank had only six millions instead of eight, the two millions so long and painfully sought for would be found at once. The process seems so easy that many English critics have asked why, if two millions could be found in this way, six millions more should not be found in the same way, and thus the heavy burden of taxation lightened by a very sensible amount. What, it is asked, is the good of repaying the Bank at all? It does not, so far as its more immediate trading interests are concerned, care whether it is repaid or not. It lends its money at one per cent., but it enjoys the privilege of an enormously increased note circulation. Its financial position is exceedingly strong, as it has nearly fifty millions of bullion and coin in its vaults, and it can get on perfectly well even if the State does not think proper to make it any rambursements. The Assembly, however, did not go so far as this. It held to the doctrine that the Bank must be reimbursed, and reimbursed out of current proceeds of taxation. The only change it made was that it decided that, instead of sight millions being paid for six years, six millions should be paid for eight years. It was ready to pay all that could be paid; but it was of opinion that there was no increase of taxation that would be endurable to France, and that therefore it must be content with paying a smaller sum than had been at first agreed on.

This was a very different thing from spandening the rangement made by M. Tursus for the rainiburgment of a Bank law. It was no necessary departure from the the Bank loan. It was no necessary departure principles on which that arrangement had been only varied the period in which the object simed at by slightly. The difference between eight years and six is triffing in the history of a country, like France. And yet M. MAGNE, either them assent to the new arrangement, re-M. MACHE, either than assent to the new arrangement, recigned. He would not be minister any longer if eight years was substituted for six. It may be true that at the close of the struggle his authority was so much impaired by a direct vote against him that his position was made untenable. But he could, if he pleased, have saved himself by adopting a little earlier the suggestion which he knew would be mede and which he invest here here need aware would be made, and which he must have been well aware would receive a great amount of support. If the expedient of paying the Bank two millions less was so simple, so wise, so just, it seems strange that he did not fall in with it. He had every motive for doing so, as he had a considerable financial reputation to sustain, which would necessarily be impaired if he could not see what the rest of the world saw plainly, and if he was to leave office, he knew that he was issving it at a moment most inconvenient to his pelitical friends. M. Magne's obstinacy about these two millions has in fact proved ruinous to the Bonapartists for the moment, and it is scarcely likely therefore that he can have been obstinate except on what seemed to him most substantial grounds. A suggestion was made some little time ago that the whole scheme of repaying the Bank by instalments was a cunning device of M. Thiers, in order to prepare France for another war. The French would get into the habit of paying eight millions a year more than was absolutely necessary. For some time the money would go to the Bank, but after that it might be devoted quietly and persistently to accumulating materials of war and laying by a reserve for a new campaign. This containly would have been a very deep design, but those who believe that M. Theres ever entertained it mast have a low opinion of his powers. It seems a pucrile method of getting ready for war to pay away sixty millions namecessarily, merely that a nation may get so used to taxation that it will not mind giving or paying when the money is applied to military purposes. Even if M. Thiers money is applied to military purposes. Even if M. THIERS ever had this remote object, and M. MAGNE was a partner in his designs, it would have been much wiser to get the nation into the habit of paying six millions a year without grumbling or noticing it than to have got into the habit of paying eight millions with groans and lamentations. There must have been some reason for M. MAGNE's insisting in spite of his political interests that the bargain with the Bank should be strictly carried out. This reason, it can scarely be doubted, was that M. MAGRE foresaw that the question would be asked, if six millions will do instead of eight, why will not four millions do instead of six, or two instead of four, or in short why repay the Bank at all?

The explanation of the pertinacity with which M. Theres and M. Magne have stack to the repayment of the Bank is to be found perhaps not in the general doctrines of political economy so much as in the peculiar history of French finance. Frenchmen know the consequences of an unlimited issue of inconvertible paper, they know the enormous pains that have been taken to make the Bank of France a safe and solid institution, and they see how easily any party in power can make the Bank accommodate itself to designs that may be full of danger for the future. It is, therefore, not unintelligible that some of the more cautious of French financiars should strive to make the process of bonsowing from the Bank in a critical moment against a bonsowing from the Bank in a critical moment against a bonsowing from the Bank in a critical moment against a bonsowing from the Bank in a critical moment against a bonsowing from the Bank in a critical moment against a bonsowing from the Bank in a critical moment against a bonsowing in the cament proceeds of taxation is to stamp the most impression manner. It is something like the constant and that is wanted. The object of this is, among other things, that these who make the war should be income to the financial financians may say that in france the constantly bonsom to them. In the same way French financians may say that in france the constantly bonsom to them. In the same way French financians may say that in france the constantly way that the constant way from the Bank should be bounded to the financian of an incomplete bonsom to them. In the same way French financians may say that in france the constants of an incomplete bonsom to them. In the same way French financians and the bonsom to them. In the same way French financians may say that in france the same and the same that th

hand, and the command of the control manifest in time, or that some attablished Government may be seen ment of impulse on folly, embark on such advances on the Mexican expedition and the German war considerable restraint on the evils which such advances of calamities produce if the expansion of an inconvention currency is looked on generally as a resource to which resort cannot be had without calling the country to misself to immediate and heavy burdens. M. Macro has parhaps seen enough of flagueing under different Governments to make him slive to the value of such a restraint. In the therefore, the conclusion to which the Assembly may have come may not be an unwise one. If M. Triuns had originally proper of to pay off the Banis advances in teny years instead of seven and a helf, no great objection would probably have been and a helf, no great objection would probably have been and a helf, no great objection would probably have been and a helf, no great objection would probably have been and a helf, no great objection would probably have been and a helf no great objection would probably have been and a helf no great objection would probably have been and a helf no great objection and the present financial year. To reduce the repayment now to six millions annually may be better than to invent taxes which are unproductive or palpably unfair. The Assembly has taken the easiest course, and it is difficult to say that it is not the wisest that could have been taken under the circumstances. And yet there may be something to be said for the views of an old financiar, who says that this is the first step in the fatal process of making things pleasant, and that rather than consent to this he will let

THE IRISH COERCION ACTS.

THE Irish Home Rule members may be congretulated on the discovery of a legitimate grievance. that they and their country are not more seriously injured by a Continuance Bill than by a separate and formal reenactment of the measures which are necessary to preserve life and property in Iteland; but there is an obvious inconsistency between the customary professions of Ministers of all parties and the practice which has been recently adopted. It has long been deemed proper to express the profoundest regret for necessary suspensions of constitutions. tional rights; and perhaps some Ministers may in good faith have confused their sorrow for the state of socials. which requires Coercion Bills with an imaginary repugnance to the application of the indispensable remedy. The late to the application of the indispensable remedy. Government had nevertheless introduced the practice of including Coercion Bills in the list of measures which are annually continued by an Act passed at the end of the Session. Lord Salisbury and Lord Carnaryon have formerly objected to the whole system of Continuance Hills as opposed to all true principles of legislation. The exemption of stock-in-trade from rating has been annually as enacted during several generations; and probably there are other perennial measures which in the same manner assume on the Statute-book an annual character. It may be reasonably contended that measures of a permanent nature ought not to be limited in duration, and, on the other hand, that Bills destined to last only for a year should be allowed to expire at the end of the term. It may be assumed that Continuates Bills are convenient, or that they save trouble; but they are certainly not applicable to matters of principle, and perhaps the pro-hibition of the use of firearms by Fenians cannot be considered wholly a matter of course. In answer to Mr. appeal, Mr. Disrabli acknowledged to some outjustice of his remonstrance, and it was arranged. Irish members should be allowed a day for the second In answer to Mr. Bury's of their patriotic indignation. It seems that the no arguest necessity for the continuous of the the more important measures will only explicate of the Socion of 1875. It occurred to the Expresors that the Seesion might make the Expresors that the Seesion might make the property interrupted with the result of maddition to the control of the control vi 40th Mr. Bong that a Mon of a fixed date the

last limit first first and narrowest circle of walls. He leaves delast limit first first and last limit for t

In the latter part of the legend we see a clear memory of the long siege of Fiesole recorded by Procopius, when the troops of Witiges held out against Belisarius's lieutenants Cyprian and Juntin, till they were starved out and saw no chance of help from Rawings. That Badagaises, Attila, Witiges, and Totila are all jumbled together is not very wonderful. How should we wonder at it when we have heard men of our own day, in Parliament and out of Parliament, chatter about "Goths, Huns, and Vandals" as it they were all much the same kind of people? And the whole story of Ostellino, wild as it is, is not wilder than many other tales which were current in the same age; it is hardly so wild as an incidental statement of Malespini himself that the church of St. Peter at Rome was founded by "Attaviano Cesare Augusto." But one would like to know whether, in the belief of Malespini, the Etruscan wall and the neighbouring theatre or amphitheatre were the original work of Atlas, slies Jupiter, or only of the second founder Attila. The wall, with its great stones, mainly quadrangular, but with the vacuut spaces filled up in various irregular ways, still stands on the neighbouring theatre or amphitheatre were the original work of Atlas, slies Jupiter, or only of the second founder Attila. The wall, with its great stones, mainly quadrangular, but with the vacuut spaces filled up in various irregular ways, still stands on the neighbouring should ever bear rule on the banks of the Arno. Its construction is minutely described and compared with other Etruscan sensitis by Mr. Dennis. The greater part of the extent of the fortifications must be taken on faith by any one who is not insuiring with the minuteness needed by one who is going to insuiring with the minuteness needed by one who is going to the first a topography of Fiesole; but this mighty fragment speaks filled of the Etruscan ews, though Mr. Dennis warns us that the triplet line of which a topography of the cathed and the rest of the city, marks the sound of the stones.

Must the two chief monuments of Fiesele, ancient and medimval, attend on a lower level. Just within the Etruscan wall men are, was least were lest November, digging out the remains of the famous thesites on which Niebuhr found so much to say, both as a witness to the greatness of ancient Figure 1, and as a witness to the high divelopment of the arts in dependent Etruria. Mr. Dithis however rules it to be only Roman work, and he hints however rules it to be only Roman work, and he hints however rules it to be only Roman work, and he hints have a must demur, but we will keep ourselves out of danger by lest venturing any judgment either way, for which the fact that the diggs are actually going on may supply a decent excuse. We will move to the surer ground of the Duomo. It is indeed amaxing, within sight of the great city below and of the mighty cupols of the m

words about it is passed

THERE was a New knowing it, and that it is not yet too late for thill do it any longer exempt withhen it is not the same this then it is not the sam are indeed beautiful and far wise not unsuited to Fairyle ether, for example, solid impalpable, consistent in singrexpected of it and always doing things in general in a good though quite unlike nature as 11 corresponding to nature as it la of being framed in a language being learned. When the darin the narrow three dimensions of a world in which parallels meet an of ordinary mathematics change a character of the higher geometry with a poet without mathematics cannot have an extreme case, but it is generally true to the higher visions of science, such as where a man cats a root he has vicked way can see the fairies, and becomes t

birds and beasts. Except in a paradoxic spontaneous fairy tales is past and gone. There has been a time, again, when peop seriously that fairy tales were in some ways fact. And, having about the same time discout the only things worth having, they took names for having even in their childhood put up with fairy tales, and set to work to do without these a while they brought up their own children on a and acceptation dialogues, with here and there at allegory. But somehow the benevolent giant is carried a kind of shallow hod on his back and agent in distributing the commerce of the work pitiful mouster whom Jack the Giant-Killer would no have looked at; and in spite of all their wisdom, puthe good old irrational stories of their fathers of human ingenuity could extract a moral. And present pouted and went to work the other way, partly to much of the old tales as they could find, partly fresh tales out of their own heads. In this way i stands at present. The public has made up its mind. tales are good for children, and for their elders too if and there is a steady demand for them accordingly. renown and excellence of the ancient stories seem to be any to the acceptance of new ones. Every winter the publishm loose a whole swarm of fairy books of various sorts and six parti-coloured and gilded as the water-flies of summer; and w the likeness does not always stop here, for they are often as on ephemeral. It may be regretted, but it cannot be concealed notwithstanding all our admiration for the world of enchant and all our efforts not to break with it, modern fairy tales are sulde worthy to be compared with the ancient models. not much to be wondered at; for whereas that part of the revive of fairy learning which consists in preserving the ancient literatus is esteemed worthy of the attention of scholars and philosophers, and is made much of by the names of Folk-lore and Comparative Mythology, the task, which ought to go hand in hand with it, of keeping the same spirit alive in the works of our own generation, is commonly thought a trifling matter. It is supposed that anybody can write fairy tales, and if a writer who is known by greater things chooses Now the truth is that it is very difficult to write a good fairy tale, and there are not many men who can do it. In such a work several qualities are required which the other kinds of writing most practised at this day do not tend to foster, and the absence of any, one of which is fatal. Imagination and consistency are not less necessary in this kind of fiction than in any other, and the conditions under which the imagination is to be exercised, and conditions under which the imagination is to be exercised, and conditions under which the imagination is to be exercised, and conditions under which the imagination is to be exercised, and conditions under which the imagination is to be exercised, and conditions under which the imagination is to be exercised. sistency preserved in the exercise of it, are more trying, writer of ordinary fiction has to make new combinations of elements given in the actual life of the present or of age, and the limits within which those combinate made are to be found by observation of the know human nature and human affairs. It is not so with ely in the trac fairy tales: unless he follows very thely in the cycle of catablished popular legend, which very two or the patience to do, his creatures must live and move in a made by himself and governed by laws of his own deviation imagination must therefore be not only construct creative; that is, he must be in some measure a post. Me this, he must have the simplicity and good faith of an boot, so that he can tell his story as if he believed every with and expected his hoppers to do the name. If he moral

allegorizes, or apologizes, he is lost. Again, the more romantic he is the better, but then his romance must be seasoned with humour, so that we may be dimly aware that he is all the while smiling with us at his own vision. Amerely sentimental fairy tale is intolerable. In this respect we may point to the writings of Mr. George Macdonald as a model. The exquisite beauty of his Phandastes is never cloying, because it is constantly relieved by subject grotesque touches which show that he knows the secret of the real laughter as well as of children's earnestness. Nothing can be more droll than the passage where his knight-errant encounters a crowd of lubberly wooden goblins, who lay about them with their arms and legs and give him much trouble, till he finds that the only way to quiet them is to turn them up and set them on their heads. The same happy mixture is to be found in Mr. Meredith's Shaving of Shagpat, which is more exuberant in all directions than anything of the same kind attempted by a modern English writer. In Mr. Kingsley's Water-Babies, again, we are kept hovering with a delightful uncertainty between rapture and laughter. Perhaps, however, the instance is not strictly in point, for we doubt whether his work comes within the clars we are considering. No doubt it contains a fairy tale, but there is something more large and Pantagruelie in its scope.

more large and Pantagruelie in its scope.

Another point to be observed by the modern storyteller, but too often neglected, is the proper adjustment of the relations of his fairy world to the world of reality. If he chooses to make any points of contact at all between the two, there must be a certain verisimilitude in the transition. This is a matter of artistic instinct and cannot be defined by rule; we can only mark how, on the one hand, true artists lead us delicately into the illusion, and, on the other hand, less skillful writers destroy it by staring incongruities. We cannot, for instance, believe in an enchanted cave which is definitely located in Scotland, and from which an Eton lifth-form boy of this present generation rescues his little sisters in the Midsummer holidays. The matter is made still worse when an illustratog presents us with the express image of the boy walking under the damage of the strange fish, tall hat and all. But we can accepted a mong the strange fish, tall hat and all. But we can accepted he perfect satisfaction the water-babies who keep out of the very of us land animals, except when an inexperienced one nearly gets caught by a Professor Pthilmuspris, as Mr. Kingsley tells us happened to Tom; though our faith may be a little shaken if they escape the nets and other acquisitive organs of the Challenger. Nor do we feel any difficulty about the dwarf princess of Goethe's story, whose lover carries about her palace shut up it a casket, nor about the creatures of Mr. Macdonald's fancy, wis float into a solitary man's room as shadows, or becken children out to them in the twilight. It will be found, we think, that in all the good examples the critical meeting-points between the real and the imaginary order of things are covered by a judicious isolation and mystery. There are infinite ways of doing this. One very obvious and safe device is a dream; and though this is the commonest of all, it is susceptible of much variation. Some excellently managed dreams are to be found in Hans Ander

The teller of fairy tales has still the task of making his fancies consistent with themselves. The dominion in which his fancy rules is to be governed by absurd laws; but they must be congruous in their absurdity. One of the great pleasures of fairyland is that you never know what is going to happen next; but that pleasure would be spoilt if you were not allowed to suppose that somebody else does know. There must be a uniformity of nonsense as well as of sonse, if only one could find it. It is easy enough to write mere disjointed nonsense; the art required in a fairy tale is to compose harmonious nonsense. We must again cite an example a little out of the proper range of fairy tale. Alice in Wonderland is a trimph in this way. It would be difficult to find a more sustained flight of absolute nonsense than the two volumes of that work; and yet somehow it is impressed on the reader all the way through that there is some point of yiew from which every word of the story would appear as necessary trath. As for the offences of modern fairy books against the canons we have mentioned, we spare ourselves the invidious task of selecting particular instances from the field, unhappily a large one, which is open to us. But so long as people permit themselves to write fairy tales as carelessly as they do novels, we cannot expect a high standard, and we must be content with an occasional brilliant exception.

WHAT THE RAILWAYS MIGHT DO.

IT is impossible to imagine anything more dismal and discouraging than the general tone of the letters which have been published in vindication of the Railway Companies. With scarcely an exception, the Chairmen who have undertaken to reply to the Circular of the Board of Trade appear to have fallen under the spell of a gloomy and hopeless fatalism. Everything, we are assured, that can possibly be done to prevent accidents has been done; all the recourses of causeless vigilance, untiring ingenuity, and unlimited expenditure have been exhausted; and the management of railways has now been carried to the height of human perfection. Consequently, if accidents continue to occur, and even if

they occur with increasing frequency, they must just be accepted as inevitable, or at least the Railway Companies must not be blamed for them. In 1872, under the perfection of railway management, at least—for the official figures are notoriously below the truth—1,145 persons were killed, and 3,038 persons injured; and during the year just closed the slaughter has been on a still more extensive scale. The reckoning of disaster and destruction may be made to look a little less horsible by dividing it among the Companies, and taking each separately; but there is no getting rid of the total. And it is necessary that the total should be bossion mind in connexion with the relentless declaration of the Railway Chairmen that, whether it increases or diminishes, they have made up their minds that it cannot be cured, and must therefore be endured.

All this, it must be confessed, is dreary reading; but one or two of the Chairmen have enlivened their functed spirites with a dash of humour. Undertakers are known to be a merry race, and even Railway Chairmen, in the midst of their daily butchery, cannot deny themselves the pleasure of a little joke. Or, perhaps, to be charitable, we may assume that the joke is thrown in as the only consolation that can be offered to the public. It is suggested that, if anybody is responsible for railway accidents, it is not the Directors and Managers, but the passangers. A romantic historian in an apology for Henry VIII. has remarked that he might have not on very well in a world without women; and the Railway Companies, it seems, would be invariably punctual and would never have any accidents if they could only be transferred to some sphere where they would be free from the disturbing influence of passengers. The Companies make the most beautiful and purfect arrangements imaginable, but the wicked passengers always come and put them out. In the North of England especially the machinations of the public against the railways are represented as almost diabolical. "Looking," says Mr. Dugdale, the Chairman of the Lancashire and Yorkshire Railway, "at the condition of the working classes in a pecuniary sense, and the aggerness with which they pursue their pleasure, any amusement suddenly got up, withoutany intimation to the Railway Company, will being hundreds of passengers to a particular train, causing much delay and inconvenience to the ordinary passengers." It is quite clear that if the working classes of Lancashire and Yorkshire had any manners they would send word a week or two beforehand to say they were coming, and then the railway would perhaps be ready for them; but it is probably rather deliberate malice than rudeness that prompts them to this persecution of the Company. Of course the Company has no possible means of knowing what amusements or public gatherings have been projected in its neighbourhood; and no doubt the

Some of the other Chairmen have also taken up the complaint that it is to a great extent the fault of the public that trains are we dangerously unpunctual. Passengers, it is said, habitually arrive late at the stations, and carry about with them an inordinate quantity of lugrage, the loading and unloading of which create indefinite delays. It must be admitted that there is a certain degree of truth in this complaint; but what measures, we must ask, do the Railway Companies take to secure the co-operation of the public in their efforts to keep time? So far from inviting this kind of co-operation, they appear to exercise all their ingessity in discouraging it. No rational being can pretend that a milway station is a pleasant place in which to spond any superfluous minutes. The booking-office is not opened for the issue of tickets until perhaps a quarter of an hour, or often only a few minutes, before the time fixed for the departure of the truin. By this ingenious contrivance, even with a comparatively small number of passengers, an irritating crush is produced; while, if there is a large body of passengers, as is the case at the principal stations, the crowding and jostling constitute a very severe and exhausting ordeal for any man not of strong frame and resolute temper, while it is simply torture for a woman. In order to keep up the penal character of the transaction, the wretched traveller—partly by his own struggles and partly by the propulsion of the throng behind him—is squeezed through an exceedingly narrow aperture between a hard wooden bar and the small hole in the wall on the other side of which sits the half-invisible ticket clerk, whose chief qualification appears to be an uncompromising misanthropy. It is difficult to resist the impression that if he could only get his head through the hole he would bite yeu. If the traveller has taken the precaution to get his measy ready and to hold it in his hand, there is every chance of its being snatched from him by one of the pickpockets who form a regular pa

commey, they could use for the purpose king-office window. are hit man; a more effectual process for the building amount in passing the booking-officials, for the uninitiated to understand why and so the purchase of a milway ticket should be the purchase of why such an should be conand into a severe muscular, and perhaps even pugifictic, contest, should enterly by possible to part a railway ticket within the definent and women without forcing them to fight for it as prize of valour and desperation. You it is the Chairmen perspectation and desperation. whose perverse stepidity condensus travellers to this wanton and supersonable emogrance who now turn round on the public, and complain that they do not come early enough to catch a train. Why on earth should any one go early? You can't get your shelest this just before the train starte; you are kept hanging about the ticket-office, or squeezed up in the crowd, till the mysterious moment arrives when the wicket is opened. Anything more minumble and depressing than an ordinary milway station as a place for lounging away an odd half-hour it is of course impossible to conceive. The dismal walls are placeded with gloomy proclamations which are apparently intended to terrify and intuidate all includes whose nerves are not of the strongest. The simply manufalling a journey a few miles by railway, you find yourself in all sorts of ways within the grasp of the criminal law. As the timid traveller reads on, the dreadful conviction steals over him that it will be little short of a miracle if he escapes without committing will be little short of a miracle if he escapes without committing veilers whose nerves are not of the strongest. By simply under at least one or two criminal offences, and possibly an unconscious felony. For everything the Railway Company has a summary remedy against its customers. If, mused by the voice of a hasty porter, a passenger tries to alight a fraction of of a hasty porter, a passenger tries to alight a fraction of a second too soon, or if, falling into an untoward doze, he does not wake up till a second too late and is carried on to a station beyond that for which he is booked, he is hable to be given into custody like a common thief. At every point the Company is samed against the public with a bristling array of criminal penalties. The huge boards on which by-laws are inscribed are pensaties. The huge boards on which by-laws are inscribed are supplemented by suggestive handbills giving instances of recent prosecutions and sentences; and after a brief study of these alarming phasards, our timid traveller is probably reduced to too halpless a state of mind to consider what remedies the public has against the Company. If, however, he entered on this inquiry, he would find that the Company repudiates every kind of responsibility, and claims the right to treat passengers just as it pleases to delay them for hours on their journey, or never to take them to to delay them for hours on their journey, or never to take them to the end of it, or to scald, rosst, or smash them with perfect impunity. It is true that this repudiation of responsibility is to a t extent a false and impudent bravado, but it imposes on simple-minded people, and in any case it is only a rich man who can fight a bay Company through successive courts of law.

We have here a very good test of the willingness of the Railway Companies to do what they can to cusure punctuality. The laying down of additional lines of rail, the enlargement of stations and sidings, the improvement of points and signals, is necessarily an onerous undertaking, and cannot be very quickly accomplished. But here is a thing which the Companies might do to-morrow if they chose, and the doing of which would add greatly not only to the comfort of travellers, but to the safety of their journeys. Why should tickets be obtainable only within a few minutes of the time of starting? In the principal towns of the United States railway tickets can be purchased at the stations at any hour of the day, and they are also to be had at the chief hotels and at bookingoffices in different parts of each town. In Scotland a partial attempt has been made to imitate this system. Tickets for certain stations on the North British Railway can, we believe, be purchased at various shops and offices in Edinburgh and Glargow. It is difficult to see why this system should not become universal. It is obviously the interest of a Ranway Company that as many tickets as possible should be sold, and in every other branch of trade it is supposed that facilities for purchase encourage purchasers. It can hardly be doubted that a great many more tickets would and if people were tempted to buy them by finding them on sale at all sorts of places. There would then be an inducement to lay in a stock of tickets at once so as to save future trouble, and possibly some of these would be lost or never used. This would of course be to the advantage of the Company, which would also have the bounds of representation. rhich would also have the benefit of payments. The whole system of railway tickets appears to repany, which would also have quire revision. There are far too many different tickets and too great a variety of fares. It would surely be worth while for the Companies to simplify these matters and to lump distances a little, instead of attempting to measure off fractions of mileage with arithmetical precision. While extending facilities for getting tickets beforehand, the Railway Companies might also, for the encouragement of punctual and the discouragement of unpanetual people, shut the booking-office at the station five minutes before the departure of the train, and insist upon luggage intended for the goods van heing on the spot at least ten minutes before the time. The Railway Chairman all profess the most tender regard for the convenience of the public and the greatest reluctance to subject it to any restrictions; but there can be no doubt that it would be for the interest of the general hedy of the travelling public that the minority of unpanetual people, who are always late and who rush in at the last moments with heige of travellers carry war little huggage, and are usually puriously and it is very hard. quire revision. There are far too many different tickets and too

that they should be made to suffer for the sales of queels wise do not deserve the alightest consideration. By a few simple satisfiant ments of this kind the Railway Companies might without delay secure the co-operation of the public in their effects to chasers punctuality. Nothing demoralises the staff of a relively so much as the irregularity in the working of the lines which now prevails. It produces a loose, scrambling, happy go-lacky mode of dring business, which is full of danger. If trains were more punctual, there would be less necessity for sending expresses dashing at fifty or sixty miles an hour over shaky points through overgrowded junctions.

A NEW BATCH OF CARDINALS.

IF it is difficult to understand why the Sacred College of Cardinals should have been suffered by the present Fentiff gradually to dwindle down from the mystical seventy to forty-two, his reasons are hardly more obvious for filling up some of the vacancies after so long a delay. A Pope who knows that his ewn reign must be drawing to a close—and the average of Papal reigns is short as compared with those of temporal severeigns—may naturally feel some anxiety about the appointment of his successor. And such a feeling is likely to be all the stronger after so long and And such a teeling as likely to be all the stronger after so long and revolutionary a pontificate as that of Pius IX., who, to say nothing of the grave political changes which have occurred, has displayed a passion for the fabrication of new dogmas-which, begging Dr. Manning's pardon, are very far from being "purely declaratory"—wholly unprecedented in the annals of the Papacy. But there is only one way in which a l'ope can, indirectly, exercise a posthu-mous influence on the fortunes of his Sec. He cannot nominate a successor, and he has no guarantee that any informal expression of successor, and he has no gunrantee that any informat expression of his wishes will be respected when he is gone. Hildebrand indeed virtually mained his next three successors, but times are changed since then, and, moreover, Hildebrand towers, whitey pre-emmence over the long line of Roman Pontiffs.

The Pope can do is to choose those with whom the choice whis successor will lie, and here of course quite exceptional opportunities secree to the first Pope who has seen the years of Peter. But this means of influence is at best very precarious. Gregory AVI, left behind him a conclave mainly of his own creation, and it elected precisely that cardinal whom he would, to judge from his known and recorded sayings, have least wished to see occupying his place.

Nearly all the members of the present College are nonfines of Pius IX., many vacant seats he has filled up twice over. And he perhaps relies on the permanent influence of his mind and will over those who have during so many years been brought into such close and constant personal contact with houself. At all events he has for several years reframed from making any new Cardinals, notwithstanding the various rumours current on the subject both before and after the Vatican Council. And hence it was not un-reasonably surmised that he had either resolved on bequeathing to dimmrshed, and, as he might suppose, pecul ally safe and picked, Conclave the election of the next Pope, or that, as he had innovated on so many procedents already, he was contemplating some important innovation in the manner of supplying the numerous vacancies in the electoral body. Several names of distinguished foreign ecclesiastics—incanning by foreign non-Italian—had been freely mentioned, and there was a provalent idea in many quarters that the extreme disproportion which has for centuries casted between the Italian and other members of the Sacred College was intended now to be redressed. The reasons for a more equal distribution of red hats among those who are the official electors and advisors of the head of a world-wide Church are obvious enough, and it did not seem at all inconceivable that a iresh gush, so to say, of those liberal sentiments - for his liberalism was always of the sentimental type—which marked the fast years of the present Pontincate, and which are sometimes thought to have been rather overland than extinguished in the secret soul of Pio Nono, might break out in his old age. In one respect at least he has never faltered in his allegiance to the principles of modern liberalism. In spite of his reiterated non positions, no precedent, or tradition, or eliquette, of the Papal Court has ever is en suffered for a moment to stand in the way of his arbitrary will when he had some purpose to achieve. The repudintion and disgrace of Rosmini, after the formal promise of the cardinalate, and the illegal violence shown in the treatment of Cardinal Andrea, are well-known mataness of this. However, any expectations which may have been formed of the adoption of a broader and bolder policy in the selection of candidates for the purple will be dispelled by the first glance at the new list of names of those whom the Pope delighteth to honour. Whether we regard the quantity or the quality of these last additions to the Sacred College, the names included in the catalogue or those which are conspicuous by their absence, there is the same unnustakeable evidence of hesitation and timidity, if not of divided counsels. There is something, perhaps, to gratify the ambition of the Josuits and papalini; there is nothing to makeure those who are looking with hope or anxiety to the future of the See of Rome.

The first remark suggested by the announcement of these new promotions is that there are only twelve. It might have been supposed that, if any change was to be made after so long an interval, the Sacred College would be restored to something like its proper complement of seventy, but it is only raised from forty-two to fifty-four. Plus IX. appears still to have a nervous dread of entrusting the franchise to too mamerous body of electors,

though unable altogether to resist the pressure put upon him for the bestowal on hungry courtiers of some of the many prises at his disposal. Nor has he ventured to disturb the existing proportion, or rather disproportion, of Italian and foreign cardinals; of the little fraction thus tardily added to their number, no less than half—six out of twelve—belong to the favoured nation, or, as the Civiltà Cattolica designates it, the chosen people of the New Law. Of the rest, if we except Simor, the Primate of Hungary, who purchased his hat by his notorious tergiversation at the Vatican Council, and the Archbishop of Salzburg, all belong to the Romanca family of nations. Not a single German, or Englishman, or American figures in the list, although many had been spoken of before, and both England and America are wholly unrepresented at present in the Sacred College. We may add that among those selected there is not one name of real eminence; while it is only among the Italian nominees that we can recognize even the sort of doubtful distinction which has been usually held to confer a qualification for the purple. Nobody, of course, who knows anything of the present ways of Rome would dream of witnessing Dr. Newman's elevation, although, or rather because, his is incomparably the greatest mind she has attracted to her service for centuries. But Dr. Manning, though immeasurably his inferior, is a greater man, both morally and intellectually, than any of the favoured twelve, and he has manifested an unreserved, not to say unscrupulous, devotion to Papal interests, as now understood, which certainly deserved some recompense. But for his any of the favoured twelve, and he has manifested an unreserved, not to say unscrupulous, devotion to Papal interests, as now understood, which certainly deserved some recompense. But for his untiring efforts, it is very doubtful if the Pope and his Jesuit advisers would have succeeded in pushing the obnoxious dogma through the Vatican Council. It has been always usual to have an English Cardinal, and one might have supposed that in any fresh creation the very first name suggested alike by preference and policy to the mind of Pius IX. would have been that of the Archbishop of Westminster; nor would such an appointment have been at all ill received by his Protestant fellow-county from However, Archbishop Manning has been passed over well-authenticated reports may be trusted, very reluctantly passed over, in consequence of the jealous and resolute hostility of the Sacred College and the Propaganda. And, if he was to be excluded, no other Englishman could be chosen. The absence of any American name from the new promotions is less easily accounted for, except on the narrowest red-tapist principles. And it seems strange, in the present temper of the Vatican, that not one of the mettleeome prelates who are lighting its battles so valiantly in Presents should have received this bitchest work of Enrel annowal. the mettlesome prelates who are fighting its battles so valiantly in Prussia should have received this highest mark of Papal approval. Are we to suppose, after all, that Rome is meditating a retreat from the contest she has so gratuitously provoked? To be sure, the Archbishops of Cologne and Posen and Bishop Ketteler were all at one time ranged on the anti-Roman side, and Rome has a shrewd distrust of turncoats, while ready to utilize their services. But the German prelates have atoned pretty heavily by this time for their former anti-infallibilist proclivities, and it seems hard they should lose their reward. Perhaps the Curia shrinks instinctively from doing anything that might increase, even by a shadow of a shade, the very remote chances of the election of a German

The new list of cardinals, as we have already implied, is more remarkable for what it omits than for what it contains. But a few words may be said of the more notable among the personages who have just received their red stockings. There is nothing to call for remark in the appointment of the Archbishops of Lisbon and Valencia, which falls under the ordinary routine. The Archbishop of Salzburg is known as an extreme Ultramontane; and Mgr. Simor, Primate of Hungary, qualified himself for a promise of the purple by suddenly rating—if such a term may be applied to so high a dignitary—at the Vatican Synod, where he deliberately threw overboard all his suffragans, whom he had at first led in their united opposition to the new dogma. The repeated requests of the French Government for a hat for Mgr. Dupanloup, whose tardy submission to the dogma has by no means wiped out the offence of his vigorous protests, may help to explain the innovation, now first ventured upon, of dispensing altogether with the sanction, and therefore of course with the salary, formerly obtained from Catholic rulers. Why the Archbishop of Cambray has been selected we hardly know: but Mgr. Guibert has abundantly purchased his promotion by a steady reversal of the policy of his illustrious predecessor in the See of Paris. One of his first acts was to condemn the Parisian "use," with its reformed lectionary and beautiful hymns, which Rome has long been vainly seeking to abolish, in accordance with her inveterate habit for some centuries past of confounding uniformity with unity. If we turn from the foreign to the Italian Cardinals, we come on the wholly unknown names of the Augustinian Pather Martini and the Jesuit Father Tarquini, one of the writers in the Civiltà Cattolica, formerly clerk in a lawyer's office, who are made Cardinals, and the Founder of the Order expressly forbade his spiritual subjects to seek or accept any dignity unless positively commanded to do so by the Pope. But the services of the Caviltà Cattolica required recognition, t

only forty-five, has a reputation for diplomatic talent, which is sufficient to be marred by his impostnosity of temper; he is the Muncio at Lisbon. Mgr. Franchi, born in 1819, is said to be not easy a strikingly handsome, but "a most polite and witty geneleman," very foud of society, and a particular avoidite with the ladies; he is also something of a politicism. Until 1868 he was Nuncio at Madrid, and he still represents the interests of Queen Isabella and the Prince of the Asturias, at Rome. The last of the batch, Mgr. Chiqi, Papal Nuncio at Paris, now aged sixty-four, is probably the most, widely known. He was originally an officer in the Guardie Nabile, but was persuaded by the Pope, who had taken a fancy to him, the embrace the ecclesiastical career; and after holding the post of first secretary to the Nuncio at Madrid, and afterwards assisting as Papal Legate at the coronation of the Emperor-Alexandra at fit. Petersburg, he obtained the Paris nunciature. We may add that of the twelve new members of the Sacred College, ten are made Cardinal Priests and two Cardinal Deacons. No appointment has been made to any of the six Cardinal Bishoprics, two or three of which, including Cardinal Andreas, are, we believe, vacant. There is indeed a rumour of fresh appointments at Easter, but so many previous reports of a similar kind have been falsified by the event, that we can only take it for what it may be worth. Nor is there anything in the previous appointments of the present pontificate to encourage the expectation that a further numerical addition to the body of cardinals would add any fresh elements to the composition of the Conclave.

FLORIN OR HALF-CROWN?

QUESTION has just been asked by the Master of the Mint which will probably give rise to a good deal of social as well economical controversy. He has addressed a Circular to the bankers asking them whether they would prefer in future to have only florins, or only half-crowns, or both florins and half-crowns together as at present. It is of course reasonable enough that the bankers should in the first instance be requested to give their opinion on a question on which they must be supposed to have a good deal of practical experience; but it is obvious that the question affects all classes of the community, and that everybody has a right to be heard on it. To many people it may seem a trivial matter, but in some of its aspects it touches society very deeply. The florin, it is true, is only a mushroom, upstart coin, which was never heard of till some twenty years back; still it has its group of supporters. There is no disputing about taste, and we believe that there are really people who think that a florin is a pleasing and handsome coin, and there are others who, a sthetics apart, find that there is a handiness in the sum which it represents. The half-crown comes of an old and highly connected family. Its abolition would be almost a break in the historical continuity of England; and it, too, has troops of friends who admire it for its beauty or convenience. We may therefore expect a keen social contest on this subject, for which perhaps the Master of the Mint is hardly prepared. It is to be hoped that in answering his questions the bankers will not give too narrow a meaning to the words "public convenience." He requests that they will be good enough to weigh and reply to the following inquiries:—"Will it be more conducive to the public convenience that the present arrangements should continue, under which florins only are coined, and half-crowns gradually withdrawn from circulation; or do you consider experience to have shown that half-crowns only should be coined and issued, with a view to the eventual withdrawal

The last of the Master of the Mint's interrogatories may be readily answered. There may perhaps be room for argument as to whether it would be better to keep the half-crown or the florin; but almost everybody, we imagine, will agree that the two together are an insufferable nuisance. There are a great many hasty, careless people in the world; and there is probably no subject on which disputes more frequently arise than as to whether a florin or half-crown has been passed from one person to another. It may be incidentally remarked, as an interesting psychological fact, that in any case of doubt the person who pays is almost invariably confident that he handed over a half-crown, while the person who receives the money is equally positive that it was the smaller of the two coins which was given to him. Many conscientious persons are often highly irritated by a suspicion that they have really given the larger coin, although they are so much in doubt on the matter that they heattate to challenge the assertion on the other side. On the whole, then, it will probably be admitted that florins and half-crowns ought not to exist together. Each may claim the Oriental privilege of brooking no brother near his throne. They resemble each other too closely, and represent too nearly the same amount, to be in use at the same time. Their similarity gives rise to endless mistakes and most unpleasant controversies. One of other, therefore, must give way; and the question is, Which shall it be? The two principal qualities of a coin may be said

in the time it shall be handy to carry, and that it shall not be like to install wear and tear. The old crown piece—a noble wish to install wear and tear. The old crown piece—a noble wish had five shillings are wanted in one sum, and it is more convenient to carry the amount in smaller pieces. The smaller the coin the greater is the wear and tear; and three-peaky aid fourpenny pieces and sixpences get worn out much access than shillings or half-crowns. A florin is not very much more substantial than a shilling, and wears nearly as fast; and it is just as convenient to carry two separate shillings in one's purse or peoplet as a florin. The half-crown saves the use of many sixpences. It is a good solid coin, which wears well, and is at the same time beindy to carry. It is possible that a florin might be made better-looking; but as it is, it is a mean, flat, shabby coin, without character and dignity; and when we remember the omitted deigentis and other scandals of its birth, we cannot help thinking that it would be no loss if it were suppressed at once and for ever. It is impossible to say that it is a convenience to anybody, because, is impossible to say that it is a convenience to anybody, because, as we have said, two shillings are in every way as handy as a florin, and it is difficult to understand why it should ever have been intreduced. It is a bastard interloper in the family of British coins. We have some recollection that it was first brought forward in connexion with a great scheme for revolutionizing the whole coinage on the decimal system. New coins were to be invented, old values were to be changed. All nations were to be brought guarantee was suggested for the honesty of the metal which might be coined by other countries. The result would probably have been—especially as the little Gormen principalities. bean—especially as the little German principalities were then still in existence—a grand system of international damashing." The kindest thing that could be done for the decimal and other coinage reform ics would certainly be to get rid of a coin which may perhaps still afford baneful encouragement to their meddlesome crotchets. Take the half-crown, on the other hand. It is a respectable, hand-some piece of money, with a bold die and dignified aspect. The modesty of its name is also prepossessing. It is not a sum to be despised, yet it is content to be called only half-a-crown. Everybody knows the convenience of the odd stypence, and how naturally it takes its place in all sorts of reckonings. Without the half-crown every payment of a sum containing an odd super.ce would require the use of the sixpenny coin. What a lot of troublesome sixpences we should have to bear about with us but for this handy composite piece! English society could hardly go on without it, and if it were withdrawn there would probably be such an outcry that it would have to be speedily restored. At the time of the change from the old calendar to the new, brawling mobs used to follow the coaches of Ministers, demanding "Give us back our eleven days," of which they fancied they had somehow been robbed; and a similar cry might now be raised on behalf of our five sixpences in one piece, if the Master of the Mint should be so misguided as to try to suppress it.

Apart from such questions as relate to the counting and carrying of coin, there is another not less important question as to the influence of coins in determining prices and standards of remuneration. The half-crown, like the shilling, has left its mark on the general tariff of retail trade, and also on the scale of custom my gratuities. Books, fancy goods, and all sorts of articles me produced so that they may be sold for half-a-crown. Again, half-a-crown is a familiar fee for a great variety of small services. It is a sum which is often given for small subscriptions. At the present season the question as to floring and half-crowns At the present season the question as to floring and half-crowns is one of peculiar interest to a very large body of people. It is conceivable that the florin may muster support on the supportion that, if the half-crown were abolished, and the florin left master of the field, it would be necessary in many instances to give only two shillings instead of two-and-sixpence; but this line of argument is perhaps rather superficial. It may be doubted whether the consequence of abolishing half-crowns would not be rather the other sequence of abolishing half-crowns would not be rather the other way, so that, instead of two-and-sixpence, people would have to pay, not sixpence less, but sixpence more. It is hard to say what might not be the effect of a change of this kind on current parces and rates of payment. At first sight half-a-crown may seem a more extravagant coin than the florin, but on reflection it will probably be admitted that the compromise between two shillings and three is essentially economical; and it is on the whole much more likely that, if the halfway piece were struck off, people would be forced up another step than that they would be allowed peaceably to fall back on the lower one. Collections in church and charitable subscriptions might perhaps suffer: but an importunate personality back on the lower one. Collections in church and charitable subscriptions might perhaps suffer; but an importunate personality would have every chance of securing the additional shilling. It is wonderful how much sometimes depends on an accidental standpoint like the odd sixpenes of half-a-crown, and if it were to be moved we might find that a considerable increase had suddenly been made in our small expenses. The struggle between levelling up and levelling down might be assuming for a philosopher, but there can be little doubt that in the long run levelling up would early the day, and that philosophers and other people would find themselves out of pocket. Taking everything into consideration, we cannot help thinking that the balance of advantages is decidedly on the side of the half-crown, and hoping that before long we shall see the last of that poor, fist-faced, shall-p-looking intruder, the floring the forin.

THE THEATRES.

THE THEATRES.

THE new manager of Covent Garden Theatre has gone literally afield in search of fresh pantomissio talent, and with an enterprise worthy of success he has produced real live sheep upon the stage. Surveying the Christmas entertainments at the two great theatres, we find no feature so remarkable as the regulated wanderings of the little flock which lose, and mysteridusly recover, their tails. The plot of Red Riding Hood shows ingenuity in construction, and the puns with which the dialogue is interspersed are for the most part harmless in so large a house. Considering that the nuthor is also manager, he has shown commendable moderation in allowing much that he has written to remain unspoken. The success of one of these pieces depends not upon verbal jokes, good or bad, but upon "business," and especially upon an impressive first scene. The Wolf's den skilfully combines the comic with the terrible, and our young friends are likely to remember the blue—coat boy and the lady's page who, with trembling limbs and woeful visages, are waiting their turn to be devoured by the wolf. He asks Mrs. Wolf:—

With these two young uns what d'ye mean to do?

With them two young une what d'ye mean to do? Why ain't they baked?

And she answers, with grim humour :-

Because they're in a stew.

The little wolves are all in bed except the eldest son, who has The little wolves are all in bed except the eldest son, who has been allowed to sit up until papa comes home. This scene of domestic happiness is disturbed by the entrance of the Fox dressed as a lawyer, and carrying a blue bag. He has taken refuge in the cave to escape from hunters, and hopes he don't intrude. The Wolf receives him politely, introduces him to his wife, and remarks to himself that he never ate a fox in all his life. The Fox, overhearing this, urges that a child from the larder would the store tender eating, but the Wolf answers that he is sick of children. Sooner or later the wicked boys and girls all come to him. He has lately eaten one for lying, another for playing truant, another for diseaten one for lying, another for playing truant, another for dis-respect of parents; and last week he ate one only nine years old who tasted disagreeably of tobacco snoke. All the bad children he of course devours, but he begins to feel the need of a change of The Fox suggests a plan for decoying Red Riding Hood into the Wolf's power, and promises in the meantime to bring him Dame Durden's goose. The next scene represents a village, with a public-house and the Dame's school. Baron Blustrum and his huntsmen enter, and retresh themselves, and the dignitaries of the village request him to preside at an examination of the school children. While this is proceeding the Fox ascends to the roof of children. While this is proceeding the Fox ascends to the roof of the Dame's house, and with a rope catches her goose, and makes off with it, pursued by the villagers and huntsmen. He takes refuge in a hollow oak, and his tail being selved by an active villager, he cuts it off and escapes without it. Among his pursuers, who go mostly at a very moderate pace, is the Cander, wearing a white hat with a black band, and preserving all the decencies of mourning as a bereaved husband ought to do. The hunters reproach each other for the Poy's escape, and a desperate combat between two of them ends the scene. The Glowworm combat between two of them ends the scene. The Glowworm Glen, with waterfall and cave, in the next scene is much ap-Gien, with waterfall and cave, in the next scone is much applicated, and the business that goes on there is suitable to the wild and terribe grandeur of the locality. The sheep enteriest, cross a bridge, descend a winding path, and disappear. Then comes the Fox, feeling much lighter than he used to do, and carrying a knife to cut off the sheep's tails. He goes off in pursuit of them, and the Dragon enters counting fire. Then comes on flist Bo-peep, and afterwards Red Riding Hood. These children are under the protection of the Violet Queen and other deities of the place, but nevertheless the Wolf, guided by the Fox, serzes Red Riding Hood while she is asleep, and is carrying her away when place, but nevertheless the Wolf, guided by the Fox, seizes Red Riding Hood while she is asleep, and is carrying her away when he is met by a young knight Marmion, who fights with him. Meanwhile the Fox has been seized by the Dragon, who comes on when he has nearly swallowed his victim. We see only the Fox's boots and the lower part of his trousers sticking out of the Dragon's mouth, but afterwards the lox rips open the Dragon's houth the lower part of his trousers. body with the knife which he had brought to cut off the she tails, and escapes He next kills, and is carrying off the Gander, but he is caught by the villagers, and led in selemn procession to the gallows, from which however he again escapes now performs that part of the drama which is familiar in every nursery. He knocks at Dame Durden's door, wearing a red cloak, and imitating a child's voice. She admits him, and he kills and eats her, and then hes down in her bed, and awaits the arrival of her granddaughter. The trick succeeds, and Red Riding Hood is actually in his jaws, when the villagers and huntamen enter, deliver the innocent, and execute justice on the guilty. A grand transformation scene follows, and then the harlequinade, which is

transformation scene follows, and then the harloquinade, which is of the usual character. A performing dog displays only too much intelligence, for he omits to attack the Wolf when that most suspicious looking character appears on Dame Durden's promises, and waits quietly in his box until the moment arrives for him to seize the Fox by the place where his tail used to be.

Neither of the great theatres displays any particular talent in performance, but we think the pantominus at Covent Garden more ingeniously constructed than that of Drury Lane, where, to borrow one of the author's jokes, there is nothing out of the common except the mushrdoms in which fairles lurk. In "The Merry Tales of the Wise Men of Gotham" the merriment is almost equally hard to discover with the wisdom. The villagers of Gotham look for needles in bundles of hay, and raise a hedge to shut in the

cuckoo, and roll cheeses down the hill to Nottingham market, and cuctoo, and roll cheeses down the hill to Nottingham market, and build a boat and go to sea in it according to venerable tradition, without producing any remarkable sensation among the audience. Prince Felix of the Fortunate Islands, disquised as Tom Tucker, a travelling artisan, and Princess Peppet of Cockaigne, and her Royal Father, are characters which occur in every burlesque. The veteran author has done his best with an unfruitful subject, and he avoids the strocious puns which other writers seem to mistake for wit. But when the three wise men, after they have been wrecked, ramark.

Had our boat been stronger, No doubt our stay would have been much longer,

we feel that it is sometimes justifiable to send an unseaworthy ship to sea. The sayings and doings of the men of Gotham, either on land or water, have no visible connexion with the adventures, such as they are, of the Prince and Princess, who are changed by magic to children, and in that state learns lessons which are useful when they regain their proper age and stature. The title of Jack in the Box is justified by elever jumping and tumbling, which might with equal propriety be introduced into any pantomime whatever. "Even nursery tales may make us wise," but it is hardly to seek wisdom that we go to the theatre in the Christmas holidays. As two managers have a practical monopoly of pantomimes, it does not perhaps greatly matter so long as children are amused whether their parents and friends are more or less bored. We merely remark, therefore, that the Drury Lane entertainment is particularly dreary.

The dramatic version of Donbey and Son at the Globe Theatre may perhaps gratify the thoroughgoing admirers of Dickens, and everybody will admit that the character of Captain Cuttle is acted to perfection. As regards Mr. and Mrs. Dombey and Mr. Carker no acting could possibly make these personages interesting, and theremagic to children, and in that state learns lessons which are

acting could nossibly make these personages interesting, and therefore it is necessially make these personages interesting, and therefore it is necessach to Mr. Montague's company that they fail. The scenes of this play have no more connexion with one another than the voyage of the men of Gotham has with the adventures of Prince Felix in the pantomime. A more successful attempt in working metal from the same mine has been made at the Gniety Theatre, where nietal from the same mine has been made at the Gaiety Theatre, where the Battle of Life affords Mr. Toole a sufficient opportunity to amuse the audience in his peculiar way. There is a slight thread of story running through the scenes of this play, but probably nobody in the theatre cares for that part of it from which Mr. Toole is absent. All the company, however, do their best with the materials provided for them, and Mr. Lionel Brough in particular deserves credit for undertaking the small part of a country lawyer, which does not even allow him an opportunity of standing on his head. The burlesque of Nemesis at the Strand Theatre may be reconsuended to those persons at the Strand Theatre may be recommended to those persons who require a little relaxation after the labour of taking children to a pantomime. There is something irresistibly comic in the notion of a young gentleman engaged to two young ladies who happen to live next door, and endeavouring to take lunch simultaneously with both the expectant fathers-in-law. There is an nappen to he next door, and endeavouring to take lauch simultaneously with both the expectant fathers-in-law. There is an excellent scene at a seaside hotel, where this young gentleman, being already engaged to No. 1 (who is tall), indulges in a moonlight flirtation with No. 2 (who is short), and under terror of her military papa, proposes to her, and is accepted. There is another excellent scene at the Town Hall, where two wedding parties, including only one bridegroom, require various functionaries, and among them the County Court Judge, to perform a civil marriage, and the irascible parent of the short girl nearly gets committed for contempt of Court. The bare recital of these adventures has in it a certain amount of fun, whereas we can say nothing of the burlesque of Don Giovanni at the Gaiety, except that Mr. Toole is in it, and he is what he always is—sometimes irresistibly droll and sometimes intolerably tedious. A philosopher might illustrate the value of carefully formed mental habits, by remarking that you may bring yourself always to laugh at a particular actor, however dull the piece in which he appears. But it is not Mr. Toole's fault that he is not better supplied with characters, and he fully deserves the popularity which he enjoys. which he enjoys.

REVIEWS.

LOCKYER'S SOLAR PHYSICS.

IN the discoveries of late years that specially refer to the sun so important a part has been played by Mr. Lockyer that this book will doubtless be received with eagerness by the scientific public, who will expect to find it as comprehensive and authoritative as a treatise written by a thoroughly competent specialist on his favourite whatse writen systhoroughly competent specialist on his revolution subject should be. The matter it contains is so valuable that that few will regret having purchased it, but nevertheless it illustrates the defects that may be expected to exist in a work written upon a branch of science which is in a state of rapid development by one of those who are prominently working at it. The discoveries more alongly connected with the writer's name are treated at great length, while other parts of the subject receive only cursory treatment. Moreover, the author seldem troubles himself to secure the pleasest and most religion to doubt rest and most philosophical arrangement, begrudging, no doubt, time that he would otherwise have to take from his favourity

Contributions to Solar Physics. By J. Norman Lockyer, F.R.S. Lon Macmillan & Co. 1874.

pursuit. Some two-thirds of the volume consist of regulate articles and lectures diffuse in style and elementary in making pieced together with a few short chapters written in the factor of making the account a continuous one. The remainder of the book consists of reprints, with notes, of the original papers at tributed by Mr. Lockyer (alone or in conjunction with others) the Royal Society and the French Academy. These are thorough acceptable, and we trust that other specialists will follow a Lockyer's example, even before their original papers are sufficient fill a volume; for in no more effectual way can sound acceptable the scientific public generally, instead of confining them to a chest few. pursuit. Some two-thirds of the volume

The history of spectrum analysis is so closely bound up with that of solar physics that Mr. Lockyer has wisely refrained from restricting his notices of it to those parts which relate to solar phenomena alone. Had he done so, the completeness of the account pnenomena atone. Find he done so, the completeness of the account which he gives of it would have suffered seriously, while he would have saved but little space in return, inasmuch as nearly all the discoveries in spectrum analysis have either been made in direct connexion with solar observations, or have received from these their most striking illustrations. And this has led to incorrect notions of its nature and scope. Considered from a philosophical point of view, spectrum analysis is an exact analysis by means of colour, and has crystallography for its closust analogue if we colour, and has crystallography for its closest analogue, if we except the as yet undeveloped sound-analysis of Helmholz. The one is an exact form-analysis, the other an exact colouranalysis. From time immemorial men have recognized substances by the shape of the fragments in which they are usually found; but such determinations were in all cases finally dependent on the judgment of the observer until the discovery of the laws of crystallography. Indeed up to that time it must have seemed hopeless to render them exact and scientific; for, so long as the forms which a substance could assume were regarded as continuouely varying, and therefore infinite, they appeared to admit of no tabulation or certain recognition. All was changed as soon as it was discovered that each substance would assume one form alone was discovered that each substance would assume one form alone provided that, during the act of choosing its shape, it was proceed from external influences, and left free to obey the gentle but definite guidance of its own molecular forces—as, for instance, by its particles being held suspended at the time in a state of solution. Thenceforward it was only necessary to observe and record the facet-angles of the crystals of a substance to reader its subsequent receivition certain. List a stance to render its subsequent recognition certain. Just so is it with colour. So long as the particles that emit the light are Just so under those conditions of comparative restraint which are known as the solid and liquid states, we find the light emitted to be a mix-ture of lights of all colours. But when the particles are free to move in accordance with their own special molecular charactermove in accordance with their own special molecular characteristics in virtue of being in the gaseous state, they send forth certain definite kinds of light alone. Provided, then, that these separate kinds of light can be scientifically recognized, the problam of recognizing substances with scientific certainty by means of the colour of the light they emit is solved. The difficulty that here arises has no analogue in the case of analysis by form. Every one knows what form is, and how the shape of crystals must be measured; but a scientific definition of colour does not immediately present itself, and had therefore to be discovered; in other words, the discrete colours of the light from gaseous bodies must be connected with discrete quantities capable of observation. Though he little suspected to what his discovery would lead, Newton must be considered as having taken the first step in founding a colour-analysis when he rendered possible the step in founding a colour-analysis when he rendered possible the identification of any particular kind of homogeneous light by announcing that "lights which differ in colour differ in refrangiannouncing that "lights which differ in colour differ in refrangibility," a law which reduced the determination of colour to a measurement of refrangibility—i.c. to the measurement of a numerical quantity. But the discovery which was simultaneously announced by him of the compound character of the solar beam seemed to make yet more remote the probability that an exact colour-analysis would ever be arrived at, since it showed that colours the most simple might be due to a mixture of every kind of homogeneous light. Even had it occurred to the scientific men of those times that differently coloured bodies must have spectra differing from each other in the relative intensity of their various parts, the problem would have been no nearer solution; for it was reduced to quantitative measurement of the intensities of lights of various colours, and this has ever been found tensities of lights of various colours, and this has ever been found to present insuperable difficulties. Progress recommences with the discovery of the absence of light in definite parts of the solar spectrum, which, indicating as it did discrete and not continuous variation, pointed at once to causes distinct in kind and not merely in intensity, and to qualitative not quantitative determinations. Advance was now rapid. Kirchoff and Buneau investigated the spectra of the elements, showed that the presence of the characteristic bands indicated conclusively the presence of the stance in an incandescent gaseous state, and demonstrated thereby characteristic bands indicated conclusively the pressure of the substance in an incandescent gaseous state, and demonstrated thereby the existence of several of our best known metals in the solar atmosphere. They have fairly earned thereby the henour of being the inventors of this wonderful colour-analysis; but it is a estimated in the search faction to us as Englishmen to know that, so far as sodium is concerned, Professor Stokes had anticipated them in all these points by no less a period than seven years. An speech followed in which careful observers were chiefly needed to apply the new instruments of investigation to various obscurely understood phenomena, and it is here that Mr. Lockyer has so signally distinguished himself. How

placement is best learnt from his own took; but perhaps his greatest chains to our gratitude arises from his sharing with Janssen the standard of having independently invented the method of observations when the intenser glare of the disc, without whiches his base are occasions when the intenser glare of the photosphere is cut off from us by the interposition of the moon. This his enabled us to keep a constant watch on the stupendous phonomena which are ever going on in the lower parts of the sur's atmosphere, and has familiarized us with the idea of slames a stronghere, and has familiarized us with the idea of slames a stronghere, and has familiarized us with the idea of slames a stronghere. And it would seem that in the future we shall be able to observe the edge of the sun with yet greater case, for Mr. able to observe the edge of the sun with vet greater case, for Mr. Seabrooke has succeeded in cutting off the light of the photosphere by the interposition of a disc, so that the whole of the chromoare is seen at one view as it would appear were the sun in a

discrete is seen at one view as at womin and the control of the co can be brought into that state without being resolved into their descriptions as a crystallography treats only of such substitutes as are capable of being made to assume the crystalline form. This would of course sadly limit the applicability of spectrum analysis, since but few compound bodies can stand the presence in their spectra of the lines characteristic of their com-ponent elements together with others that seem peculiar to the compound is supposed to indicate partial dissociation. But the calendid discovery of the theory of exchanges (due independently to Kirchoff and Professor Balfour Stewart) taught physicists that spour colder than a luminous body would absorb from its light those kinds of luminous vibrations which it would itself have been se to give forth had it been hotter. The most familiar example of this siple is the well-known phenomenon of the reversal of the ines in the solar spectrum; the lines characteristic of the elements that we can detect in the sun appear us dark lines on an otherwise continuous spectrum, showing that we are viewing a dense luminous spectrum. body through a veil of cooler vapour in which these sub-stances exist. But the chief theoretical value of the discovery is that it enables us to bring within the reach of the new analysis all bodies that exist in a state of vapour, whether they are capable of standing a high temperature or not, since it allows us to substitute for the observation of the light given off by incandescent vapour the observation of that absorbed by the cool vapour when ordinary light is passed through it. A further extion of a most interesting kind is due to Professor Stokes. He has shown that certain substances (among which is cruorine, the colouring matter of the blood), if placed in the path of white light, absorb from it—not definite kinds of light, as is the case with vapours—but all the kinds of light whose refraugibilities (or colours) lie between certain definite limits, and thus they produce definite broad dark bands on the spectrum. To parallel this in our form-analysis would be difficult; for, as we have seen, crystallorrents deals only with discrete forms and not with forms that lography deals only with discrete forms, and not with forms that vary continuously between definite limits. It resembles most nearly the method so largely used by food analysers, in which they examine the suspected article under the microscope, and determine the nature of the substances present in the mixture from the general characteristics of the surface and shape of the particles. Indeed the spectroscope might justly be called a colour microscope, since it enables us to see the detail of the mixture of tints which to the eye produce but one general effect of colour. Such is the power given to spectrum analysis by these extensions of its range, that it seems probable that it could be made applicable to a vast number of cases of analysis which are at present dealt with by chemistry alone, were it thought worth while so to develop it. But this field has us yet been but little cultivated. Chemists have on very little interest in the development of the new analysis, taken very little interest in the development of the new analysis, treating it as a branch of physics but remotely connected with their own special work. This apathy will seem strange to outsiders who know that most of the problems of chemistry are problems of analysis, and who appreciate how powerful the new method of analysis might be made if sufficient labour were expended on it. But the fact is that chemistry has passed through the stage in which it lacked tests for determining the presence of newtivales substages of newtivales substages and though the stages in which it lacked tests for determining the presence of newtivales substages. pended on it. But the fact is that chemistry has passed through the stage in which it lacked tests for determining the presence or absence of particular substances, and though its methods of analysis still labour under the defect (from which colour-analysis is free) of proceeding by repeated trials and failures until all the possible cases are exhausted, yet the methods are soldom inferior in readiness of application to those of the spectrum enalysis. In the general advance of science from the determination of general relations to that of exact quantitative relations, chemistry has not failed to participate; and all the more serious analytical problems that perplex our chemists at the present time are of the nature of quantitative determinations. Much here spectroscopic institutes have hitherto been powerless to believe the amount of the substance present and the brightness of the lines produced, we should only have reduced the problem of quantitative spectroscopic analysis to the determination of the relative intensities of the lights due to different substances—i.e. of lights of different colours. That this is a issuaperable difficulty we have already stated, and the reason is not far to seak. As the main intensities of their can judge of lindness, so is the eye like their intensities of their can judge of lindness, so is the eye like their intensities of their can judge of lindness, so is the eye like their intensities of their can judge of lindness, so is the eye like their intensities of their can judge of lindness, so is the eye like their intensities of their can judge of lindness, so is the eye like their intensities of their can judge of lindness, so is the eye like their intensities of the can be a supported to be a like their factors.

the state of health and the natural qualifications of the electron that we must give up all hope of training it to give trainworthy quantitative estimations. As best it can only be trained to recognize equality of intensity when lights are of the same colour; but the very phress is unusering, so fir as sensation is sometimed, when applied to lights of different colours.

It is due to Mr. Lodwer that we have any prospect of avoiding this insuperable difficulty. We had previously been indebted to him for analogous discoveries. In conjunction with Dr. Frankiand, he showed that the details of discontinuous spectra depend on other circumstances than the substances incon-

Frankland, he showed that the details of discontinuous and depend on other circumstances than the substances whose descence produces them. If the pressure of the venour is issue the lines broaden out, and if the tenuity is extreme, some of the blank have found to have dis the lines broaden out, and if the pressure of the vapour is increased, the lines broaden out, and if the tenuity is extreme, some of the lines disappear. Some substances have been found to have distinct spectra according to the circumstances under which they are formed, just as carbon has two distinct crystalline forms. Nay, the very motion of the incandescent gas shows itself in the displacement or thickening of the lines of the spectrum, enabling us to estimate the unimaginable velocity of the solar cyclones. Valuable as these talckening of the lines of the spactrum, enabling us to estimate the unimaginable velocity of the solar cyclones. Valuable se these results are, they pale in importance before Mr. Lockyer's latest discovery, that certain lines will disappear from the spectrum of a substance if there are present the vapours of other substances in a certain proportion. Some such result had been shadowed forth by Mr. Huggins's discovery that the spectra of the planetary nebulse showed one of the lines of nitrogen but not the others—a phenomenon which was at first supposed to show that nitrogen is a compound body, or that compleal space is capable of selective absorption. If it is found that different observers agree closely as to the conditions under which the less permanent lines disappear, and if those conditions are so far independent of temperature that they can be made to give us definite results as to the relative density of the various vapours definite results as to the relative density of the various vapours present, then will quantitative spectrum analysis be a possibility, and will doubtless supplant other methods in the case of the analysis of certain kinds of inorganic mixtures, such as alloys; and Mr. Lockyer will then deserve to have his name associated with those of Stokes, Kirchoff, and Bunsen, as one of the inventors of spectrum analysis spectrum analysis.

CONSTABLE AND RIS CORRESPONDENTS.

A RCHIBALD CONSTABLE, the publisher of the Edinburgh Review, the promoter of the Encyclopedia Britannian, the projector of Constable's Magazine, the friend, adviser, and main support of the author of Waverley, and Mr. Constable's numerous espondents—the cream of a generation of interesting men and women now gone from among us—there are the subjects of this important memoir. Mr. Constable's life is a good instance, to be added to many others, of a Scotchman without help or patronage of any kind succeeding in the world by his own enterprise and judgment. He was born nearly a hundred own enterprise and judgment. He was born many a minured years ago, on the 24th of February, 1774, at Carnbee, in the country of Fife, and, like so many of his countrymen who have done something in the world, was educated at the ordinary parish school. At the age of fourteen he was apprenticed to a bookseller in Edinburgh; at twenty-one he was married, and had begun business in a small way on his own account. His wife's father, David Willison, a printer, gave his son-in-law be value of 300l., and he borrowed a sum of 150l in addition. With this little fortune he started a shop at the Cross, in the Old Town of Edinburgh. He printed a sale catalogue of his stock of books, and, to distinguish his place of business from the circulating libraries which surrounded him, he inscribed over the door "Scarce Old Books"; and this inscription his brother-tradesmen, the owners doubtless of the circulating libraries in question, interpreted, with a humour not altogether free from professional jealousy, into "Scarce o' Books." But the young bookseller succeeded. His shop became the resort of the literary men of the town that was beginning to arrogate to itself the title and conceits of the "Modern Athens"; and his sale catalogues, improving and expanding year by year, brought him into notice, and into correspondpanding year by year, brought him into notice, and into correspondence with leading book-collectors of the country. He became a publisher in 1795; his first publication, to which, however, he had the discretion not to affix his name, being a pampblet by a student of divinity, entitled "Anecdotes of the False Messias." The first payment that he made to an author was a sum of from 20L to 30L, which he paid to Mr. Dalzell for editing some fragments of Scottish History—a modest beginning for a man who a few years tish History—a modest beginning for a man who a few years later was paying twenty guineas a sheet to Edinburgh Reviewers, one thousand guineas for a poem by an almost unknown bard, a couple of thousand pounds for two philosophical dissertations from philosophers of not the highest order for his Encyclopedia, and lifteen hundred pounds for editing the works of an English classic. His first purchase of a copyright was a volume of Discourse by one Dr. Erskine, for which he paid 100l. Of this adventure he gave a share to another publisher, "finding it convenient," as he says, "to divide the risk, and as I felt at the time that his name would add respectability to the title-page." In 1823, three years before the crash came which ruined the firm of Constable and Co. and killed the subject of this Memoir, he had paid for his share of the copyrights of the Waverley Novels the sum of 22,500l., and hed made advances to the amount of 10,000l. more for "works of fiction"

[&]quot; Archibald Constable and his Literacy Correspondents. A Memorial by his Son, Thomas Constable. 3 vols. Edinburgh: Edmonston & Douglas

still unbern, though existing in the author's mind. In 1802 he was selected by Sydney Smith, Jeffrey, and the other projectors of the Elisburgh Review as their publisher, and about this time also, or a couple of years earlier, he had made the acquaintance of Sir Walter Scott, where or in what manner does not distinctly appear. The earliest record of their correspondence is a letter from Scott to Constable in 1800, and from that time, till the ruin of the firm Constable in 1800, and from that time, this the rum of the firm in 1826, the correspondence is kept up with little interruption. On the dissolution of the firm of Constable and Co., Scott elected to continue his literary connexion with Mr. Constable's former partner, and not with Mr. Constable himself; and although from that time until the death of the latter in July 1827 the intercourse was not until the death of the latter in July 1527 the intercourse was so friendly as it had been in the prosperous days, the intimacy was maintained, and both author and publisher appear to have entertained for each other warm feelings of regard till the very end.

Such is an outline of Archibald Constable's life. But the

Such is an outline of Archibald Constable's life. But the interest of the Memoir centres as much upon the lives and characters of his correspondents, as shown by their letters to him, as upon his own life. Throughout the three large volumes of which the book consists Constable remains in the background. He appears to have preserved nearly all the letters which he received represent to have preserved nearly all the letters which he received from any person of the smallest importance, but of his own letters there are comparatively few extant. Such as are here published show him to have been a man of self-reliance, enterprise, judgment, and some geniality—a helpful rather than a popular man. But, if not popular in the sense in which his partner, Hunter, was normally he was normally in this sense in the the was the first such popular, he was popular in the sense in which his partner, runter, was popular, he was popular in this sense—that he was the first publisher who trusted to public opinion for support rather than to private patronage, and he introduced the policy of paying his contributors and clients on a scale of liberality which, more than any other single cause, has given dignity and respectability to a profession of letters. profession of letters.

His correspondents were numerous, and some of them distinuished. Letters hitherto unpublished from Sydney Smith, Godwin, Jeffrey, Lockhart, and Sir Walter Scott, among other of lesser note, cannot fail to arrest attention. Such letters will be read by many who might pass over genial lucubrations from an unknown Forfarshire laird, or cynical complaints of unappreciated genius from a librarian in the family of Bruce the Abyssinian traveller, even if he did occupy the position of being one of "the two greatest linguists of Britain, two of the greatest linguists the world has ever known"—a position which the author of this book, with a heaty discrimination that ill-natured people might call provincial, claims for him; the other "greatest linguist" being John Leyden, of whose existence we fear very few of the uninitiated south of the Tweed have ever heard.

But the minor luminaries of this select circle should not be dismissed summarily. Too many of them are introduced into the Momoir, which would have been more effective, and more extensively read out of Scotland, if it had been curtailed one-half, and if that half had been more symmetrically arranged. But the letters from some of them are not uneutertaining. Those from Mr. Hunter, who for the seven most prosperous years of the firm was an active partner, are perhaps the best. Through them a curious insight into the manners and customs of Scotch county society in the end of the last and beginning of the present century is given; and very remarkable manners and customs to sober-minded men of the present day they appear to have been. BrechinCastle, the residence of Mr. Maule, afterwards Lord Pannure, is the scene of most of the exploits recorded, though some of them come off at Eskmount, Mr. Hunter's place. High living and hard drinking were the order of the day, and the man who drank the hardest without being "pounded" (Forfarshire for drunk and incapable) in the dining-room or useless next day, was most highly esteemed in the select coterie and worthy of emulation:—

Our turtle dinner [Hunter says] turned out admirably well. Graham was delighted; never saw anything better dressed. Blackwell, the cook, got vast recommendations. I cut a distinguished figure; are seven plates of calipash, and two of enlipse, besides about three of the firs. We had four kinds of Madeira, and claret till half-past eleven. . . . John Clerk, Sir Kvilliam Fettes, &c., were there in great force. Yesterday plenty of venison and moorfowl at Haggart's, with red champagne, hock, vintage 1727, and excellent claret till half-past ten with Sir A. Don, Maitland, &c.

A lot of Scotchmen eating nine platefuls each of turtle, "besides about three of the fins," and drinking each other into imbecility, was deemed good fun. But the best fun was to get an Englishman among them and ruin his health and happiness for a time. Mr. Longman, for his sins, paid Mr. Hunter a visit in the autuum of 1804, and on Monday, the 22nd of September, he and Mr. Hunter dined at Brechin Castle and stayed all night:—

Maule [we quote Hunter's letter] was, as usual, very attentive. We had a strong party to dinner, and a good drink till ten or so [the dinner hour in those days was generally four o'clock], but nobody completely pounded; Longman did very well. Yesterday we went to Balnamoon, and stayed there all night; excellent grubbing there as usual, with which our friends seemed well pleased, and surprised a few.

Ten days of plain living and high thinking carried on in this fashion nearly ended the useful career of Mr. Longman, and on the third of October we find Mr. Hunter writing as follows to his partner in Edinburgh :-

Mrs. Hunter has probably informed you of Mr. Longman's lilness.

He was taken ill on Saturday. Next morning he was much worse, and we were at one time afraid he was in for a fever. He lay in hed all that day, but next day was greatly better, having starved himself for a day. On Monday he was still sick; however, the day being fine, we made him rise him safe to Eskmount that night. There he is at present, carsoning, ladies take the best care possible of him. These Englishers will

never do in our country. They eat a great deal too much end drink the consequence is their stomachs give way, and they are knot

Some days afterwards we are glad to hear that "Mr. Longman is now greatly better, but still a little soft, and not quite free from complaints." But on the 22nd of October Mr. Longman writes from London, where he arrived "safe and well," and thankful for the attention paid him in Scotland, "particularly the friendship of Mr. Hunter during our journey to the North." Two years later, in 1806, Mr. John Murray, of Albemarle Street fame, was subjected to a similar ordeal. By good luck he and Mr. Hunter arrived at Eskmount one day later than they were expected, otherwise that enterprising publisher's existence might have been cut short: cut short :-

On Tuesday they had a devil of a go at Eskmount, expecting to have entertained us, with Maule, Skene, the Major, and Harry, with a femous haunch of venison, &c. Yesterday they gave a grand dinner at Brechin.

This we must have gone to, which would have finished poor

Murray.

The Bailie [i.e. Mr. Hunter's respected father] arrived in good time at home, very decent, and we all went to bed. Between one and two in the morning, however, the house was alarmed with tallyhoeing, hunting songs, &c., occasioned by Maule's arrival for me; so there was nothing for it but rising and putting on our clothes. I got Murray excused, however, so that he has hitherto escaped, I came here [to Brechin Castle] with them, where we had a go at the red champagne. How long it lasted I do not know; only I was afraid they would have finished me, though I started fresh, and they had been at it since dinner of course.

Mr. Murray's respite was but brief:-

Mr. Murray's respite was but brief:—

Wo had a most dreadful day at Brechin Castle that day I wrote to you; one of the most awful ever known even in that house. What think you of seven of us drinking thirty-one bottles of red champagne, besides Burgundy, three bottles of Madeira, &c.? Nine bottles were drunk by us after Maule was pounded (he had been living a terrible life for three weeks preceding), and of all this Murray contrived to take his share. How he got it over, God knows; but he has since paid for it very dearly. He was himself principally to blame, having been so rash as to throw out a challenge to the Scote from the Englishmen, in which he was encountered, as you may suppose. He has since been close at Eskinount, very unwell; but yesterday I got him physicked, and to-day we dine with Major Ramsay, from which God send us a happy deliverance. To-morrow we go to the Beef-steak Club and ball at Forfar, and to Balnamoon [the scene of Mr. Longman's disaster] on Saturday.

For some days after these festivities Mr. Murray either would not "come to table," or "went to the drawing-room, and so escaped," or "drank about one-third of what the others did," or by one device or another succeeded in surviving the hospitalities lavished on him without being absolutely disgraced by his abstinence. But, like Mr. Longman, he left but a sorry character behind

It is curious [says Mr Hunter) how ill the Angus air agrees with these Cockneys. I do not know how to account for it. Perhaps you should not say too much about it, lest M. should think we laugh at their weaknesses. The problem of England's weakness as thus exhibited is always before Mr. Hunter's mind. On a visit which he paid to London some time later he is sorely perplexed by it. But in the end he solves it satisfactorily. He declares himself shocked at the

horrible guzzling of these Londoners, and no drinking—a most unwhole-some plan I am new completely satisfied that the English have no proper genius or turn for that sort of thing [i.e. a good dinner] as we have in Scotland; nor even Scotsmen who have long dwelt in England. They are all much more taken up about the eating than about the drinking and the

Immediately after this passage Mr. Hunter describes a "very pleasant" dinner of Scotch dishes of which he partook:—"Sheep's heads, barley broth, whisky out of shells (à la Ossian, I suppose), Scotch collops, &c., &c., and abundance of nice oat-cakes with the descrit." The catalogue may perhaps explain a Scotchman's

preference for the drinking.

It would be unfair to Hunter's memory to leave the impression that his life was spent in eating and drinking. These things, no doubt, formed one not unimportant part of it. But he by no means neglected his business, nor did it neglect him. He threw into it all his energy, intelligence, and cultivated tasts both in literature and art, and though he remained only seven years in the business, he retired with the talent which he had brought into it augmented tenfold.

From one more of Mr. Constable's minor correspondents we shall take a passage. It is from the letters of our cynical friend, the great Oriental linguist. The passage is descriptive of a very different type of Scotch character, and one that is more common in the present day than the convivial, though Scotland, to her glory be it said, is not yet bereft even of the latter type. This letter is from Alexander Murray, who became Professor of Oriental Languages in the University of Edinburgh, and describes the mode in which he acquired a knowledge of the alphabet, and generally of his native language. Like many Scotchmen of some distinction, Murray was the son of a shepherd. His early youth was spent in the wilds of Galloway, herding sheep among the hills and glens that separate Ayrshire from Kirkcudbright, and he had completed his nineteenth year before "his genius secured for him a final outgate from his native glen."

Some time in autumn, 1787 [he says], my father bought a Catschism for me, and began to teach me the alphabet. As it was too good a book for me to handle at all times, it was generally locked up, and he, throughout the winter, drew the figures of the letters for me in his swritten hand, on the board of an old wool card, with the black end of an extinguished heather stem or root enactched from the first. I soon learned all the alphabet in this way, and became writer as well as reader. I wrote with the heard and brand continually; then the Catschism was presented, and in a month or

to a such read the uniter vents of it. In May 1760 he gave the a until this back, he which I testily abandoned the Catechian, which I did not he, and which I for into two please and concealed in the hole of a dyte, som get many peaker by memory, and longed for a new book. Here ficulties arise—the Ribbs, read every saids in the family, I was not perfected to open or testod; the rest of the books were locked up in chests. It length gut a New Testament, and read the historical parts with great pricety and aniour. But I longed to read the historical parts with great panels more pleasant book, and I actually went to where I knew an old one-leaved Bible lay, and carried it off piecewal.

The third volume of this Memoir is the one to which English readers will turn with most interest, as it moves in the rank of history rather than in that of Scotch biography. It deals with the relations which existed between Sir Walter Scott, the Bellentynes, and Constable, and may be considered almost a separate and independent work. The object which Mr. Thomas nstable has in view in this volume is to refute the calumnies, either express or implied, with which Lockhart, in his desire to clear the character of Scott, had blackened the reputation of his publishers. This is no place to weigh nicely and sift the different particles of evidence in favour of or against Lockhart's view of the business relations of author and publisher, or in favour of or against those of Mr. Constable. Lockhart's Life may be more readable. than this Memoir, but it certainly is not more veracious. But what the verdict of posterity may be upon the matter we cannot presume to prophesy. The impression left upon our mind after presume to prophesy. The impression left upon our mind after reading through the long series of interesting but painful transactions—the story of bills, and discounts, and ledgers, and renewals, and counter-bills and all the rest of it, and bankruptcy is this, that while nothing worse than recklessness and overweening confidence in the inexhaustible wealth of the great novelist's creative genius can be urged against any of the parties concerned, there is evidence sufficient to show that Scott, Constable, and the Ballantynes each worked from the beginning, though unconsciously, to bring about the ruin which ultimately enveloped them all.

MASTER SPIRITS.

THE title Master Spirits includes a variety of Mr. Buchanan's "lighter and more generally interesting contributions to periodical literature." The chief "Master Spirits" upon whom he here discourses are Mr. Tennyson, Mr. Browning, Dickens, Victor Hugo, and Mr. John Morley. There are also some studies on Danish literature and Mr. John Morley. There are also some studies on Panish literature and on obscure Scotch poets, and a couple of interesting aesthetical essays. We had almost used the word "critical" as descriptive of Mr. Buchanan's writing. Against this he would apparently protest. He is indignant with some luckloss reviewers who treated a former publication of his as "critical"; and he declares at the end of the essay upon Dickens that "criticism" is "a barbarity which he would wish to avoid." The opening essay of the volume gives his theory upon this subject. Criticism, he tells us, is a creative form of composition of which the real value is that it creative form of composition, of which the real value is that it reveals the tendencies, not of its subject, but of its author. "Scientific criticism is fudge, as sheer fudge as scientific poetry, or scientific painting; but criticism does belong to the Fine Arts, and for that reason its future prospects are positively unlimited." We demur a little to this last piece of logic; for surely the sciences have prospects as unlimited as the arts; but we demur also to the whole of Mr. Buchanan's ingenious theory. theory. If he merely meant to say that the science of criticism had still to be invented, we would not dispute his statement; but we hold in opposition to him that criticism is, or should be, an inchoate science, and not, properly speaking, an art. A critic, that is, should aim at discovering certain general laws, though at present he must be content with crude and empirical statements. Mr. Buchanan's arguments are amusingly stated, but strike us as irrelevant. He says that much modern criticism is written by utterly incompetent people. This is quite true; but the fact that people judge harshly and rashly of art is no more a reason for denying that there are rules about art than a parallel rashnear in moral judgments would be a reason for denying that there ness in moral judgments would be a reason for denying that there are invariable moral laws. It only proves that critics are not infallible. Voltaire judged wrongly of Shakspeare, and Johnson of Milton; just as some writers have maligned Cromwell, and others have made a hero of Richard III. It no more follows that a sane judgment about Shakspeare or Milton is unattainable than it follows that sound historical criticism cannot arrive at satisfactory conclusions about Cromwell and Richard. Again, Mr. Buchanan tells us that critical canons have varied from time to time; and that Shakspeare, for example, was damned for not adhering to the unities. So, as moralists tell us, the ethical standard has varied from time to time; duellists and ascetics have been alternately admired and condeclists and ascetics have been atternately admired and con-demned, and yet we do not doubt that some fixed principles are ascertainable as to the morality of both practices. The great mistake in the older criticism was the same which vitiated contemporary historical and moral judgments. People declared their own rules to be absolutely true for all time, and Shakspeare and Dante were condemned for not conforming to the practice of Voltaire and Pope. A sounder method shows the fallecy of such verdicts, but by no means destroys the value of the rules thus misapplied. The theories, for example, of the eighteenth-century critics were narrow and inadequate. When they measured the great

Master Spirits. By Robert Buchanan. London: Binry S. King & Go. 1303.

er days by their own foot-rule, they went hop man or former days by their own foot-rule, they went hopelstally wrong; but the rules were useful enough for testing the merit of those who were bound by them. Addison was an excellent judge of the merits of l'ope, though he blundered grievously when he tested Homer and Milton by the rules laid down in M. Bossu's treatise upon epic poetry. The science of criticism, whenever it is constituted, will not simply abolish the earlier rules, but find a place for them in wider generalizations, and show how far they were merely relative and temporary, and how far they were partial expressions of permanent truth. If art is the means by which a writer expresses the best sentiments and thoughts of his own age. writer expresses the best sentiments and thoughts of his own age, it is obvious that the rules for expression must vary from time to time with the changing modes of contemplating the world, and yet that there may be some general principles common to all forms of expression. Criticism should, therefore, in our view, be not an art, but an approximation to a scientific theory; and such it has been in the hands of its smaller maybe a Painte Baure been in the hands of its greater masters, such as Saints-Bouve. That even the greatest critics are fallible and biassod by personal prejudice is as true as that a deduction for personal error must be made even from the observations of astronomers, and much more

made even from the observations of astronomers, and much more from the teachings of the ablost men who deal with sciences more closely connected with human passions.

Whatever the truth may be, Mr. Buchanan should be the last man to deny the scientific character of criticism. It is true that he is primarily a poet and a man of intuition, and only secondarily a propounder of scientific formulas. And yet, though he gives a concrete form to his criticisms, he not only proclaims abstract theories, but can be as dogustic as any of the writers whom he denounces. We take, for example, the essay upon Dickens, where he guards himself against the barbarity of a possible lance into criticism. The essay is in every way charming: possible lapse into criticism. The essay is in every way charming: Dickens, according to him, is the "good genie" of fiction; and Mr. Buchanan deduces all his peculiarities from this fundamental definition as rigorously as M. Taine, though the logic is carefully concealed, instead of being obtrusively flourished in our faces. But it is there all the same. Mr. Buchanan has a distinct theory about Dickens, and is ready to call anybody who differs from him cynical or obtuse. Mr. Buchanan, for example, is a warm admirer of Dickens's humour. He calls it richer than the humour of Aristophanes; truer and more human than that of Rabelais, Swift, or tophanes; truer and more human than that of Rabelais, Swift, or Sterne; more "distinctively unctuous" than that of Chancer; more poetical than that of Thackeray; and inferior to Shakspeare only in pathos. Here are a set of definite propositions, each of which may be tested and may give rise to a series of intelligible arguments. We, for example, differ from Mr. Buchanan, because we hold that Dickens's humour is far shallower than that of any of these partitions. If always infinitellars regard partitions. of any of these great writers. It shows infinitely less passion, for example, than the humour of Swift, and less intellectual power than the humour of Thackerny; and we might proceed to urge that superficiality is fatal to the enduring power of any author. Thereupon Mr. Buchanan would join issue with us, and would insist, as he does with great skill, upon the fact that Dickens was to the end of his days a "great sain, upon the net that Directly to the end of his days a "great, grown-up, dreamy, impulsive child —just like that hateful creature (we beg Mr. Buchanan's pardon for expressing our opinion), little Paul Dombey. Mr. Buchanan, with possibly unconscious ingenuity, gives to an apology the air of an ealogy. We ought, he insinuates, to look upon Dickens as we look upon a child; to sympathize with his impulses, and forgive his foibles. We should reply that we are quite prepared to read him in that sense; but we cannot place so highly as he does a writer who asks us to be children and is a child himself. To praise him under cover of that name is simply to admit that Dickens's writings are wanting in intellectual interest, and to give to the admission the air of a compliment.
